FOR FURTHER INFORMATION CONTACT: Jeannine C. Fox, Chief, Refined Products Programs Management Branch, 324 East 11th Street, Kansas City, Missouri 64106. (phone) 816-374-5632.

SUPPLEMENTARY INFORMATION: On June 6, 1979, the Office of Enforcement of the ERA executed a Consent Order with Lyon County Co-Operative Oil Company of Marshall, Minnesota. Under 10 CFR 205.199J(b), a Consent Order which involves a sum of less than $500,000 in the aggregate, excluding penalties and interest, becomes effective upon its execution.

I. The Consent Order

Lyon County Co-Operative Oil Company (Lyon), with its home office located in Marshall, Minnesota, is a firm engaged in the marketing of motor gasoline and middle distillates to

resellers and end-users, and is subject to the Mandatory Petroleum Price and Allocation Regulations at 10 CFR, Parts 210, 211, 212. To resolve certain civil actions which could be brought by the Office of Enforcement of the Economic Regulatory Administration as a result of its audit of Lyon, the Office of Enforcement, ERA, and Lyon entered into a Consent Order.

The Consent Order encompasses Lyon's sale of covered products during the period November 31, 1974. As more fully described in the Remedial Order issued July 25, 1977 and upheld in the Office of Hearing and Appeals Decision and Order issued December 14, 1978, and applies specifically to Lyon's sales of motor gasoline and middle distillates to non-member resellers and end-users.

II. Disposition of Refunded Overcharges

In this Consent Order, Lyon agrees to refund, in full settlement of any civil liability with respect to actions which might be brought by the Office of Enforcement, ERA, arising out of the transactions specified in I. above, the sum of forty thousand dollars ($40,000) in five (5) installments scheduled over the first year the document is effective. Refunded overcharges will be in the form of a certified checks made payable to the United States Department of Energy and will be delivered to the Assistant Administrator for Enforcement, ERA. These funds will remain in a suitable account pending the determination of their proper disposition.

The DOE intends to distribute the refund amounts in a just and equitable manner in accordance with applicable laws and regulations. Accordingly, distribution of such refunded overcharges requires that only those "persons" (as defined at 10 CFR 205.2) who actually suffered a loss as a result of the transactions described in the Consent Order receive appropriate refunds. Because of the petroleum industry's complex marketing system, it is likely that overcharges have either been passed through as higher prices to subsequent purchasers or offset. In fact, the adverse effects of the overcharges may have become so diffused that it is a practical impossibility to identify specific, adversely affected persons, in which case disposition of the refunds will be made in the general public interest by an appropriate means such as payment to the Treasury of the United States pursuant to 10 CFR 205.199I(a).

III. Submission of Written Comments

A. *Potential Claimants.* Interested persons who believe that they have a claim to all or a portion of the refund amount should provide written notification of the claim to the ERA at this time. Proof of claims is not now being required. Written notification to the ERA at this time is requested primarily for the purpose of identifying valid potential claims to the refund amount. After potential claims are identified, procedures for the making of proof of claims may be established. Failure by a person to provide written notification of a potential claim within the comment period for this Notice may result in the DOE irrevocably disbursing the funds to other claimants or to the general public interest.

B. *Other Comments.* The ERA invites interested persons to comment on the terms, conditions or procedural aspects of this Consent Order.

You should send your comments or written notification of a claim to Robert D. Gerring, Central District Manager of Enforcement, Department of Energy, 324 East 11th Street, Kansas City, Missouri 64106. You may obtain a free copy of this Consent Order by writing to the same address or by calling 816–374–5932.

You should identify your comments or written notification of a claim on the outside of your envelope and on the documents you submit with the designation, "Comments on Lyon Consent Order." We will consider all comments we receive by 4:30 p.m., local time, on July 18, 1979. You should identify any information or data which, in your opinion, is confidential and submit it in accordance with the procedures in 10 CFR 205.9(f).

Issued in Kansas City, Missouri on the 6th day of June, 1979.

Robert D. Gerring,

District Manager of Enforcement.

BILLING CODE 6450-01-M

Polaris Production Corp.; Proposed Remedial Order

Pursuant to 10 CFR 205.192(c), the Economic Regulatory Administration (ERA) of the Department of Energy hereby gives notice of a Proposed Remedial Order which was issued to Polaris Production Corporation, P.O. Box 1749, Midland, Texas 79702. This Proposed Remedial Order charges Polaris Production Corporation (Polaris) with pricing violations in the amount of $297,902.55 caused by Polaris' having made sales of crude oil at prices in excess of those permitted by 10 CFR Part 212, Subpart D during the time period September 1, 1973 through April 30, 1977 in the State of New Mexico.

A copy of the Proposed Remedial Order, with confidential information deleted, may be obtained from Wayne I. Tucker, District Manager, Southwest District Enforcement, Department of Energy, Economic Regulatory Administration, P.O. Box 35228, Dallas, Texas 75235, or by calling (214) 749–7628. On or before July 2, 1979, any aggrieved person may file a Notice of Objection with Office of Hearings and Appeals, 2000 M Street, NW., Washington, D.C. 20461, in accordance with 10 CFR 205.193.

Issued in Dallas, Texas, on the 6th day of June 1979.

Wayne I. Tucker,

District Manager, Southwest District Enforcement.

BILLING CODE 6450-01-M

Federal Energy Regulatory Commission

[Docket No. RP79-65]

Equitable Gas Co.; Order Accepting for Filing and Suspending Proposed Rate Increase

Issued June 6, 1979.

On April 30, 1979, Equitable Gas Company (Equitable) filed tariff sheets [1] to effect an increase in the transportation rate set out under Rate Schedule X–2, applicable to Carnegie Natural Gas Company. Equitable's currently effective transportation rate for this service is 3.154 cents per Mcf, which has been in effect since 1964. In this filing, Equitable proposed a transportation rate for Carnegie of 18.2 cents per Mcf.

Equitable is primarily a gas distribution company operating in Pennsylvania, West Virginia and Kentucky with transmission facilities extending from West Virginia into Pennsylvania. Equitable makes one jurisdictional sale to Revere Natural Gas Company under Rate Schedule E–1. Total deliveries to Revere in 1978 were 108,481 Mcf (about 0.14% of total sales). In addition, Equitable renders a jurisdictional transportation service for Carnegie Natural Gas Company under Rate Schedule X–2. Deliveries thereunder constitute about 2% of transmission system deliveries.

Rate Schedule X–2 covers an exchange-transportation arrangement

[1] Third Revised Sheet Nos. 25 and 29 to FERC Gas Tariff First Revised Volume No. 2.

with Carnegie. The agreement provides that Carnegie may, from time to time, at its option, deliver up to 5,000 Mcf to Equitable and Equitable shall return an equal volume less 5% for leakage and unaccounted for gas. Carnegie pays 3.158 cents per Mcf delivered which represents the differential in value between gas delivered by Equitable and gas received by Equitable at a point more distant from the principal markets. The rate of 3.158 cents per Mcf has been in effect since 1954. The subject filing increases the rate from 3.158 cents to 16.2 cents per Mcf. This amounts to $198,539 per year.

Notice of the filing was issued on May 1, 1979, with comments due on or before May 17, 1979.

Based upon a review of Equitable's filing, the Commission finds that the proposed increase may be unjust, unreasonable, unduly discriminatory, or otherwise unlawful. Accordingly, we shall accept the tariff sheets for filing, grant waiver of the requirements of §§ 154.22 and 154.51, and suspend the effectiveness of the proposed rates until May 2, 1979. We shall also set the matter for hearing.

The Commission orders: (A) The effectiveness of Third Revised Sheet Nos. 25 and 29 to FERC Gas Tariff, First Revised Volume No. 2 is hereby suspended for one day, until May 2, 1979, at which time they will be made effective subject to refund.

(B) Equitable's case-in-chief in support of the proposed rate shall be filed with the Commission no later than July 6, 1979.

(C) Staff's statement of position shall be filed on or before August 3, 1979.

(D) A Presiding Administrative Law Judge to be designated by the Chief Administrative Law Judge (18 CFR 3.5(d)) shall convene a settlement conference in this proceeding to be held within 10 days after the service of Staff's statement of position in a hearing room of the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426. The Presiding Administrative Law Judge is authorized to establish such further procedural dates as may be necessary and to rule on all motions (except motions to sever consolidate or dismiss) as provided for in the rules of practice and procedure.

(E) The Secretary shall cause prompt publication of this order in the Federal Register.

By the Commission.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. GP79-21]

State of New Mexico, Section 108 NGPA Determination, Phillips Petroleum Co., Santa Fe No. 124 Well, API Well No. 30-025-24126; Notice of Preliminary Finding

Issued June 7 1979.

On April 23, 1979, the Oil Conservation Division of the New Mexico Department of Energy and Minerals (New Mexico) submitted to this Commission a notice of determination concerning a well for which classification as a stripper well under section 108 of the Natural Gas Policy Act of 1978 (NGPA) is sought. The notice states that the Phillips Petroleum Company (Phillips) Santa Fe No. 124 well does not qualify as a stripper well. The Commission published New Mexico's notice of determination on May 4, 1979. The notice then was published in the Federal Register on May 14, 1979.

On May 22, 1979, Phillips filed a protest with this Commission (pursuant to 18 CFR 275.203 and 204) contending that New Mexico misinterpreted the qualifying requirements of the Commission's regulations. According to Phillips, New Mexico "erroneously relied on [18 CFR 271.804(d)(4)(ii)], which states that the Agency shall make a negative determination if the production data submitted by the applicant indicates that for a 12-month period the well produced a nonassociated gas at a rate exceeding an average of 60 Mcf per production day." Phillips requests that the Commission issue a preliminary finding that the negative determination by New Mexico is not supported by substantial evidence and that the Commission reverse New Mexico's determination pursuant to 18 CFR 275.202 and 503(b)(1) of the NGPA.

Generally, to qualify as a stripper well under Section 108, a well must have produced nonassociated natural gas at an average rate not greater than 60 Mcf per day of production during a 90-day period. The well also must have been producing at its maximum efficient rate of flow during the same period.

Under our interim regulations, nonassociated gas is gas produced from a well that does not produce more than certain small quantities of crude oil during the production period on which the determination is based. For a well producing an average of less than 30 Mcf of gas per day during the 90-day production period, the allowable quantity of crude oil is an average of 3 barrels or less per day during that period 18 CFR 271.803(b). Moreover, in the absence of applicable recognized conservation practices designed to maximize the ultimate recovery of natural gas established by a jurisdictional agency for determining the maximum efficient rate of flows of wells producing natural gas, a well which has produced nonassociated gas at an average rate of 60 Mcf per day or less during the 90-day period is presumed to

be producing at its maximum efficient rate of flow, if during the 12-month period ending concurrently with the 90-day period, the well produced nonassociated gas at an average rate of 60 Mcf per day or less. 18 CFR 271.804(d)(2).

The production records accompanying the notice of determination show that the average daily production of natural gas from the Santa Fe No. 124 well did not exceed 10 Mcf for either the relevant 90-day or 12-month period. Moreover, the production records show that the average daily production of crude oil from the well did not exceed 3 barrels for the qualifying 90-day period, although the average daily production of crude oil did exceed 3 barrels for the 12-month period.

The evidence indicates that the Santa Fe No. 124 well produced natural gas and crude oil within the allowable limits, as noted, during the relevant 90 day period which determines whether the gas is nonassociated gas within the meaning of the Commission's regulations pertaining to stripper wells. Thus, it appears that New Mexico's negative determination is not supported by substantial evidence as Phillips contends.

Accordingly, the Commission hereby makes a preliminary finding (pursuant to 18 CFR 275.203(a)(1)(ii)) that the determination by the Oil Conservation Division of the New Mexico Department of Energy and Minerals, that Santa Fe No. 124 well does not qualify as a stripper well under Section 108 of the NGPA, is not supported by substantial evidence in the record on which the determination was made.

By direction of the Commission.

Kenneth F. Plumb,

Secretary.

[FR Doc. 79-18931 Filed 6-14-79; 8:45 am]

BILLING CODE 6450-01-M

[Docket Nos. CI75-45, et al.]

Tenneco Oil Co., et al.; Order Setting Matter for Oral Argument, Denying Motion and Granting Intervention

Issued June 5, 1979.

Tenneco Oil Company, Placid Oil Company, Hunt Petroleum Corporation, Hunt Industries, Hunt Oil Company, Kewanee Oil Company, Tenneco Oil Company, Shell Oil Company, Ashland Oil Inc., TransOcean Oil, Inc., Tennessee Gas Pipeline Company, a Division of Tenneco Inc., Trunkline Gas Company, Tennessee Gas Pipeline Company, Trunkline Gas Company, Southern Natural Gas Company, United Gas Pipe Line Company and Florida Gas Transmission Company, Southern Natural Gas Company, Tennessee Gas Pipeline Company, a Division of Tenneco Inc., and Tenneco Chemicals, Inc., Highland Resources; *Docket Nos.* CI75-45, CI75-89, CI75-90, CI75-97, CI75-98, CI75-99, CI75-105, CI75-904, CI75-107, CI75-122, CI75-128, CP73-330, CP75-330, CP75-19, CP76-23, CP75-119, CP75-129, CP75-148, CP75-316, CP75-151, CP75-252, CP75-182, CP75-256, CI-733.

On April 23, 1979, First Mississippi Corporation (FMC) filed an "emergency petition for extraordinary relief" in the above consolidated proceeding. The petition asks that the Commission sever from the proceeding the certificate applications in dockets No. CP75-330, CP75-316, CP75-99, CI75-98, CI75-97, and CI75-99 and reconsider its disapproval of interstate pipeline transportation of specified volumes of offshore natural gas for feedstock and process gas requirements at First Mississippi's AMPRO fertilizer plant at Donaldsonville, Louisiana. Among other things, FMC alleges that its AMPRO plant is deteriorating as a result of not being operated since its construction in 1977 and that other than the offshore gas for which FMC has a contract, there are not viable sources of gas for operating the plant.

On May 2, 1979, a letter order was sent to FMC concerning the need for information about the availability of gas to the AMPRO plant from onshore sources. In the letter, FMC was directed to supplement its petition by indicating (1) total gas supply available to the AMPRO plant from all onshore sources (including sources controlled by First Mississippi and its affiliates), (2) what conditions, if any, would make such sources inadequate or so impractical as to justify, as an alternative, the relief requested here, and (3) what efforts, if any, have been made to locate and obtain onshore gas for the AMPRO plant.

On May 18, 1979, FMC responded to the Commission's letter order with a filing indicating the various sources controlled by the Placid Group, FMC's partners in constructing the AMPRO plant.[1]

Upon review of FMC's May 18, 1979, response we find that it is not sufficient to allow a meaningful evaluation of whether the onshore gas available for the AMPRO plant and FMC's efforts to obtain such gas meet the criteria established in Opinion No. 10 for the relief provided therein.[2] FMC states, "There are no onshore supplies available for use in the AMPRO plant in substitution for the offshore South Marsh Island reserves . . ." From this statement, it is not clear to us whether there might be some gas available to reduce the amount of relief FMC says it needs, or whether FMC is unwilling to consider any source an adequate substitute unless it can provide the same amount of gas as the South Marsh Island reserve.

In response to the third question of the Commission's letter order FMC states in general that it engages in a continuing effort to locate new supplies. Nevertheless, there is no description of the nature or extent of FMC's effort to locate onshore gas for the AMPRO plant. FMC says that its exploration efforts are discussed and tabulated in Appendix I of its response. But this appendix lists only those reserves already controlled by FMC. It says nothing of any efforts to locate new reserves, much less of efforts to locate reserves specifically for the AMPRO plant.

FMC's response indicates that a significant amount of gas has been committed to other customers by FMC and its partners, the Placid Group, since Opinion No. 10 was issued. FMC, however, does not explain why none of this gas could have been made available to the AMPRO plant.

Further, FMC states simply that "it would have been difficult to persuade Transco to transport" any gas from onshore reserves to the AMPRO plant. FMC, however, does not explain whether it tried to negotiate with Transco in this regard and the results of those negotiations.

We are concerned about the allegations of the emergency conditions at the AMPRO plant and the need for special relief. We had hoped that the questions of FMC's qualification for special relief under Opinion No. 10 could be resolved on the basis of FMC's written submission. Unfortunately, we find, as discussed above, the information to be ambiguous. In an effort to resolve the matter with the expedition that the allegation of an emergency implies, we have decided to set this matter for oral argument. FMC will be expected to clarify the matters

---

[1] The Placid Group includes Placid Oil Co., Hunt Oil Co., Hunt Petroleum Corp., Hunt Industries, Hamilton Brothers Oil Co., and Hamilton Brothers Exploration Co.

[2] In this regard, the Commission fully realizes that Opinion Nos. 10 and 10-A are pending review in the Court of Appeals. Any decision to grant FMC's request for relief could not in the Commission's view amount to a modification of Opinion Nos. 10 and 10-A. Rather, it would be an exemption to the requirements of those opinions based on the particular facts presented.

set-out above and to respond to questions by the Commission relevant to FMC's petition that it requires and qualifies for Opinion No. 10's special relief provisions.

Certain issues have been raised by Trunkline Gas Company (Trunkline) and by Associated Gas Distributors (AGD) and the Public Service Commission of the State of New York (PSCNY) in answers filed opposing FMC's petition (see discussion at page 4, *infra*). Among other things, Trunkline challenges FMC's assertion that if relief is granted, interstate gas supplies will not be significantly affected. Trunkline also asks whether FMC's alleged emergency could have been alleviated by using short-term or other gas supplies following completion of the AMPRO plant. AGD and PSCNY argue that the corrosion that has occurred at the AMPRO plant is reparable at a cost that is slightly more than one percent of the $80 million investment in the facility. AGD and PSCNY also suggest that FMC could use a different insulating method to mothball the plant until onshore gas is available. We believe these arguments raise significant questions that FMC should address at oral argument.

The oral argument concerning FMC's petition will be held on June 15, 1979. It will not be a judicial or evidentiary type proceeding. Any party, including Commission Staff, interested in participating may make a presentation at the hearing provided a written request to participate is received by the Secretary of the Commission prior to 4:30 p.m. on June 12, 1979. The request should include a reference to Docket Nos. CI75-45, *et al.*, as well as a concise summary of the proposed oral presentation and a phone number where the person making the request may be reached. An original and fourteen copies of the party's proposed statement to be presented must be filed with the Secretary of the Commission prior to 4:30 p.m. on June 14, 1979. The Commission may limit the length and substance of the oral presentations.

There will be no cross-examination of parties participating, but the Commission may, of course, ask questions of those appearing before it. Any further procedural rules will be announced at the oral argument.

On April 26, 1979, motions in support of FMC's pleading were filed by the Louisiana Delegation [3] and by United States Senator Thad Cochran on behalf of himself and United States Senator John C. Stennis and United States Representatives David Bowen, John Hinson, Trent Lott, G. V. Montgomery, and Jamie L. Whitten. Answers opposing FMC's petition were filed on May 18, 1979, by AGD and PSCNY jointly and on May 21, 1979, by Trunkline. As noted, we believe that certain issues raised in these answers should be discussed by FMC at oral argument.

On May 25, 1979, FMC filed a response to Trunkline's answer opposing FMC's petition. The Commission's Rules of Practice and Procedure do not provide for replies to answers. FMC's response, therefore, will not be considered.

On May 25, 1979, FMC also filed a "Motion Ne Recipiatur" in which it urged that Trunkline's answer opposing FMC's petition should not be received. FMC points out that Trunkline is a party to a contract for transportation of part of the South Marsh Island reserves and should not be heard to argue in favor of an effective abrogation of that contract. FMC says that denial of its petition will benefit Trunkline financially and, in support of its motion, advances the equitable doctrines of estoppel and "clean hands."

The arguments advanced by FMC must give way in this instance to the Commission's need to be fully informed on all issues pertaining to FMC's petition. FMC is seeking an exemption from our recent decision eliminating producer reservations with respect to offshore gas (Opinion Nos. 10 and 10-A). Before we decide whether to grant such a petition, we should hear arguments on all sides of the issues involved. FMC's motion that Trunkline should not be heard on this matter is therefore denied.

On May 3, 1979, notice was issued of FMC's petition for relief. Transcontinental Gas Pipe Line Corporation (Transco) petitioned to intervene on May 18, 1979. On May 25, 1979, FMC filed a pleading opposing Transco's petition to intervene on the ground that Transco lacks a direct interest in the outcome of this proceeding.

The Commission's Rules of Practice and Procedure do not require a petitioner to show "direct interest" for intervention to be granted. It is only required that the interest be of such nature that petitioner's participation may be in the public interest.[4] In the circumstances of this proceeding, we find that Transco meets this standard.

The Commission finds: (1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that FMC's petition for relief be set for oral argument in accordance with the procedures set forth in the body of this order and hereinafter detailed.

(2) FMC's motion that we reject Trunkline's answer to FMC's petition for relief should be denied for the reasons set forth in the body of this order.

(3) Participation by Transco in this proceeding may be in the public interest.

The Commission orders: (A) An oral argument before the Commission as described in the body of this order, will be held on June 15, 1979, at 10:00 a.m. in a hearing room of the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426.

(B) This hearing is limited to the need for the relief requested by FMC and whether FMC qualifies for the special relief provided for in Opinion No. 10 as these issues are more specifically set out in the questions referred to above.

(C) FMC's motion to reject Trunkline's answer is denied.

(D) Transco is permitted to intervene subject to the rules and regulations of the Commission: *Provided, however,* that participation by Transco shall be limited to matters affecting asserted rights and interests as specifically set forth in the petition to intervene; and *Provided, further,* that the admission of Transco shall not be construed as recognition by the Commission that Transco might be aggrieved because of any order of the Commission entered in this proceeding.

By the Commission. *SMITH,* Commissioner, *concurs* with the decision to provide further explication of Applicants' efforts to develop alternative sources of natural gas, as a condition precedent to relief under Opinion No. 10, but believes that the procedure set out may deny procedural due process to intervenors.

Kenneth F. Plumb,
Secretary.

[Docket Nos. CP77-402 and CP77-435]

Transcontinental Gas Pipe Line Corp.; Notice of Proposed Change in FERC Gas Tariff

June 5, 1979.

Take notice that on May 31, 1979, Transcontinental Gas Pipe Line Corporation (Transco), P.O. Box 1396, Houston, Texas 77001, tendered for filing the following revised tariff sheets to its FERC Gas Tariff, Original Volume No. 2 for effectiveness on July 1, 1979:

1. *Rate Schedule X–157*
(Transportation Agreement between Transco and Florida Gas Transmission Company (Florida Gas), dated March 18, 1977, as amended August 30, 1978): First Revised Sheet Nos. 1417, 1419, 1420, 1421, 1426, 1428 and 1429

2. *Rate Schedule X–158*
(Transportation Agreement between Transco and Southern Natural Gas Company (Southern), dated April 5, 1977, as amended August 30, 1978): First Revised Sheet Nos. 1434, 1436, 1438, 1443, 1446 and 1447

3. *Rate Schedule X–159*
(Transportation Agreement between Transco and United Gas Pipe Line Company (United), dated May 20, 1977, as amended August 30, 1978): First Revised Sheet Nos. 1451, 1453, 1455, 1460, 1463 and 1464

Transco states that under the foregoing transportation arrangements, Transco provides transportation services for Florida Gas, Southern and United from a point of receipt on Transco's Central Louisiana Gathering System in the Pecan Island Area, Vermilion Parish, Louisiana to points of connection between the Transco system and these three pipelines, or to points of connection between Transco and other pipelines where delivery is made for such three pipelines' account. Transco further states that the principal purpose of the revised tariff sheets is to change the form of the rate for the transportation services rendered for Florida Gas, Southern and United from a demand charge based on a fixed daily Contract Demand Quantity to a commodity charge applied to the volume of gas actually transported for each of the three pipelines. The change in rate, Transco states, is in consideration for transportation services which Florida Gas and Sea Robin Pipeline Company propose to render for Transco pursuant to applications pending in Docket Nos. CP79–171 and CP79–172, utilizing, on a best efforts basis and without charge, a portion of their capacity in pipeline facilities jointly owned with Transco, extending from Shell Oil Company's production platform in Block 22, Vermilion Area, offshore Louisiana to a point of connection with Transco's Central Louisiana Gathering System in the Pecan Island Area, to assist Transco in delivering into its system gas supplies from Blocks 56 and 57, East Cameron Area which will be connected to Block 22 by pipeline facilities which Transco has been authorized to construct and operate in a certificate issued in Docket No. CP79–191.

Transco states that copies of the instant filing have been served upon Florida Gas, Southern and United.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before June 18, 1979. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Kenneth F. Plumb,
Secretary.

BILLING CODE 6450-01-M

FEDERAL TRADE COMMISSION

Donaldson, Lufkin & Jenrette, Inc.; Early Termination of Waiting Period of the Premerger Notification Rules

AGENCY: Federal Trade Commission.

ACTION: Granting of request for early termination of the 30-day waiting period of the premerger notification rules.

SUMMARY: Donaldson, Lufkin & Jenrette, Inc. is granted early termination of the 30-day waiting period provided by law and the premerger notification rules with respect to its proposed acquisition of certain voting securities of SEI Corporation. The grant was made by the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division of the Department of Justice in response to requests for early termination submitted by both parties to the transaction. Neither agency intends to take any action with respect to this acquisition during the waiting period.

EFFECTIVE DATE: June 6, 1979.

FOR FURTHER INFORMATION CONTACT: Malcolm R. Pfunder, Assistant Director for Evaluation, Bureau of Competition, Room 394, Federal Trade Commission, Washington, D.C. 20580 (202–523–3404).

SUPPLEMENTARY INFORMATION: Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by sections 201 and 202 of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Commission and Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act and § 803.11 of the rules implementing the Act permit the agencies, in individual cases, to terminate this waiting period prior to its expiration and to publish notice of this action in the Federal Register.

By direction of the Commission.
Carol M. Thomas,
Secretary.

[FR Doc. 79-18873 Filed 6-14-79; 8:45 am]
BILLING CODE 6750-01-M

Octane Certification and Posting

AGENCY: Federal Trade Commission.

ACTION: Extension of Time to Comply with Commission Rule.

SUMMARY: The Commission has responded to the petition of Amoco Oil Company requesting an extension of time to comply with the Commission's Octane Certification and Posting Rule. The Commission has granted the request for extension with respect to the posting requirements of the Rule until June 15, 1979.

EFFECTIVE DATE: June 1, 1979.

FOR FURTHER INFORMATION CONTACT: James Mills, Federal Trade Commission, PE–S–7317.

SUPPLEMENTARY INFORMATION: On March 30, 1979, the Commission published the Octane Certification and Posting Rule in the Federal Register (44 FR 19160). The Rule establishes procedures for determining, certifying and posting, by means of a label on the fuel dispenser, the octane rating of automotive gasoline intended for sale to consumers. The Rule took effect on June 1, 1979.

By letter, dated May 4, 1979, the Amoco Oil Company (Amoco) requested that the effective date of the Commission's Octane Certification and Posting Rule be extended from June 1 to June 15, 1979. Amoco has made a good faith effort to comply with the octane label posting provisions of the Rule by the effective date of June 1, 1979. However, due to circumstances beyond Amoco's control, Amoco will not be able to comply with the Rule until June 15, 1979.

Since Amoco has made a good faith effort to obtain and post labels in compliance with the Rule by the prescribed effective date and since the reasons Amoco could not post were beyond Amoco's control, the Commission has decided to grant to

Amoco an extension of the effective date of the duty to post under the Octane Certification and Posting Rule to June 15, 1979.

By direction of the Commission.

Carol M. Thomas,

Secretary.

GENERAL SERVICES ADMINISTRATION

[Intervention Notice 92; Docket No. 7305]

Proposed Intervention in Rate Increase Proceeding; Maryland Public Service Commission, Chesapeake & Potomac Telephone Co.

The Acting Administrator of General Services seeks to intervene in a proceeding before the Maryland Public Service Commission involving an application of the Chesapeake and Potomac Telephone Company for an increase in its annual telephone rates. The Acting Administrator of General Services represents the interests of the executive agencies of the United States Government as users of utility services.

Persons desiring to make inquiries of GSA concerning this case should submit them, in writing, to Mr. Spence W. Perry, Assistant General Counsel, Regulatory Law Division, General Services Administration, 18th & F Streets, NW., Washington, DC 20405, telephone (202) 566-0726, on or before July 16, 1979, and refer to this notice number.

Persons making inquiries are put on notice that the making of an inquiry shall not serve to make any persons parties of record in the proceeding.

[Section 201(a)(4), Federal Property and Administrative Services Act, 40 U.S.C. 481(a)(4)]

Dated: June 4, 1979.

Paul E. Goulding,

Acting Administrator of General Services.

BILLING CODE 6820-25-M

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Food and Drug Administration

[Docket No. 79M-0145]

Abbott Laboratories; Premarket Approval of HAVAB

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces its approval of the application for premarket approval under the Medical Device Amendments of 1976 of the HAVAB (Antibody to Hepatitis A Virus ^{125}I (Human)/Hepatitis A Virus (Primate)) sponsored by Abbott Laboratories. After reviewing the Clinical Chemistry and Hematology Device Panel's recommendation, FDA notified the sponsor that the application was approved because the device had been shown to be safe and effective for use as recommended in the submitted labeling.

DATE: Petitions for administrative review by July 16, 1979.

ADDRESS: Requests for copies of the summary of safety and effectiveness data and petitions for administrative review may be sent to the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Keith Lusted, Bureau of Medical Devices (HFK-402), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7550.

SUPPLEMENTARY INFORMATION: The sponsor, Abbott Laboratories, North Chicago, IL 60064, submitted an application for premarket approval of the HAVAB (Hepatitis A Virus ^{125}I (Human)/Hepatitis A Virus (Human)) to FDA on November 3, 1978. The application was reviewed by the Clinical Chemistry and Hematology Panel, an FDA advisory committee, which recommended approval of the application. On January 19, 1979, FDA approved the application by a letter to the sponsor from the Director, Bureau of Medical Devices, FDA.

A detailed summary of the information on which FDA's approval is based is available upon request from the Hearing Clerk (address above). Requests should be identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document.

Opportunity for Administrative Review

Section 515(g) of the act (21 U.S.C. 360e(g)) authorizes any interested person to petition for administrative review of the FDA decision to approve this application. A petitioner may request either a formal hearing under Part 12 (21 CFR Part 12) of the FDA administrative practices and procedures regulations or a review of the application and the agency's action by an independent advisory committee of experts. A petition shall be in the form of a petition for reconsideration of FDA action under § 10.33(b) (21 CFR 10.33(b)). A petition shall designate the form of review that the petitioner requests (hearing or independent advisory committee) and shall be accompanied by supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing any petition,

FDA will decide whether to grant or deny the petition by notice published in the Federal Register. If FDA grants the petition, the notice will state the issues to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place of the review, and other details.

Petitioners may at any time on or before July 16, 1979, file with the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, four copies of each petition and supporting data and information, identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document.

Dated: June 5, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110-03-M

[Docket No. 79M-0144]

Abbott Laboratories; Premarket Approval of CORAB

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces its approval of the application for premarket approval under the Medical Device Amendments of 1976 of the CORAB (Antibody to Hepatitis B Core Antigen ^{125}I (Human)/Hepatitis B Core Antigen (Human)) sponsored by Abbott Laboratories. After reviewing the Clinical Chemistry and Hematology Device Panel's recommendation, FDA notified the sponsor that the application was approved because the device had been shown to be safe and effective for use as recommended in the submitted labeling.

DATE: Petitions for administrative review by July 16, 1979.

ADDRESS: Request for copies of the summary of safety and effectiveness data and petitions for administrative review may be addressed to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Keith Lusted, Bureau of Medical Devices (HFK–402), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7550.

SUPPLEMENTARY INFORMATION: The sponsor, Abbott Laboratories, North Chicago, IL 60064, submitted an application for premarket approval of the CORAB (Antibody to Hepatitis B Core Antigen ^{125}I (Human)/Hepatitis B Core Antigen (Human)) to FDA on November 3, 1978. The application was reviewed by the Clinical Chemistry and Hematology Panel, an FDA advisory committee, which recommended approval of the application. On January 19, 1979, FDA approved the application by a letter to the sponsor from the Director, Bureau of Medical Devices, FDA.

A detailed summary of the information on which FDA's approval is based is available upon request from the Hearing Clerk (address above). Requests should be identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document.

Opportunity for Administrative Review

Section 515(g) of the act (21 U.S.C. 360e(g)) authorized any interested person to petition for administrative review of the FDA decision to approve this application. A petitioner may request either a formal hearing under Part 12 (21 CFR Part 12) of the FDA administrative practices and procedures regulations or a review of the application and the agency's action by an independent advisory committee of experts. A petition shall be in the form of a petition for reconsideration of FDA action under § 10.33(b) (21 CFR 10.33(b)). A petition shall designate the form of review that the petitioner requests (hearing or independent advisory committee) and shall be accompanied by supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing any petition, FDA will decide whether to grant or deny the petition by notice published in the Federal Register. If FDA grants the petition, the notice will state the issues to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place of the review, and other details.

Petitioners may at any time on or before July 16, 1979, file with the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857, four copies of each petition and supporting data and information, identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document.

Dated: June 5, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110-03-M

[Docket No. 79M-0103]

Barnes-Hind Pharmaceuticals, Inc.; Premarket Approval of Soft-Therm (Preserved Isotonic Saline)

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces approval of the application for premarket approval under the Medical Device Amendments of 1976 of Soft-Therm (Preserved Isotonic Saline) sponsored by Barnes-Hind Pharmaceuticals, Inc. After reviewing the Ophthalmology Device Classification Panel's recommendation, FDA notified the sponsor that the application was approved because the device had been shown to be safe and effective for use as recomended in the submitted labeling.

DATE: Petitions for administrative review by July 16, 1979.

ADDRESS: Requests for copies of the summary of safety and effectiveness data and petitions for administrative review may be addressed to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Keith Lusted, Bureau of Medical Devices (HFK–402), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7550.

SUPPLEMENTARY INFORMATION: The sponsor, Barnes-Hind Pharmaceuticals, Inc., Sunnyvale, CA 94086, submitted an application for premarket approval of Soft-Therm (Preserved Isotonic Saline) to FDA on September 15, 1977. The application was reviewed by the Ophthalmology Device Classification Panel, an FDA advisory committee, which recommended approval of the application. On January 26, 1979, FDA approved the application by a letter to the sponsor from the Director of the Bureau of Medical Devices.

Before enactment of the Medical Device Amendments of 1976 (Pub. L. 94–295; 90 Stat. 539–583) (the amendments), soft contact lenses and solutions were regulated as new drugs. Because the amendments broadened the definition of

the term "device" in section 201 (h) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321(h)) (the act), soft contact lenses and solutions are now regulated as class III devices (premarket approval). As FDA explained in a notice published in the Federal Register of December 16, 1977 (42 FR 63472), the amendments provide transitional provisions to ensure continuation of premarket approval requirements for class III devices formerly considered new drugs.

Furthermore, FDA requires, as a condition to approval, that sponsors of applications for premarket approval of soft contact lenses or solutions comply with the records and reports provisions of 21 CFR Part 310, Subpart D, until these provisions are replaced by similar requirements under the amendments.

A summary of the information on which FDA's approval is based is available upon request from the Hearing Clerk (address above). Requests should be identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document.

The labeling of the Soft-Therm (Preserved Isotonic Saline) Solution, like that of other approved solutions for use with soft contact lenses, states that the solution is for use with several named brands of soft contact lenses. Such restrictive labeling may be revised to refer to other lenses, if the sponsor conducts necessary tests and obtains FDA's approval. FDA is considering alternatives to the current restrictive labeling requirements for soft contact lenses and solutions.

Opportunity for Administrative Review

Section 515(g) of the act (21 U.S.C. 360e(g)) authorizes any interested person to petition for administrative review of the FDA decision to approve this application. A petitioner may request either a formal hearing under Part 12 (21 CFR Part 12) of the FDA administrative practices and procedures regulations or a review of the application and FDA's action by an independent advisory committee of experts. A petition shall be in the form of a petition for reconsideration of FDA action under § 10.33(b) (21 CFR 10.33(b)). A petition must designate the form of review that the petitioner requests (hearing or independent advisory committee) and must be accompanied by supporting data and information showing that there is a genuine and substantial issue of material fact for resolution through administrative review. After reviewing any petition, FDA will decide whether to grant to deny the petition by a notice published in the Federal Register. If FDA grants the petition, the notice will state the issues to be reviewed, the form of review to be used, the persons who may participate in the review, the time and place where the review will occur, and other details.

Petitioners may at any time on or before July 16, 1979 file with the Hearing Clerk (HFA-305), Food and Drug Administration, Rm. 4-65, 5600 Fishers Lane, Rockville, MD 20857, four copies of each petition and supportng data and information, identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document. Received petitions may be seen in the above office from 9 a.m. to 4 p.m., Monday through Friday.

Dated: June 5, 1979.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

Burton, Parsons & Co.; Premarket Approval of Preflex® and Flex-Care™ Solutions

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces approval of the application for premarket approval under the Medical Device Amendments of 1976 of the Preflex® and Flex-Care™ solutions as a two-part system sponsored by Burton, Parsons and Co., Washington, DC. After reviewing the Ophthalmology Device Classification Panel's recommendation, FDA notified the sponsor that the application was approved because the device had been shown to be safe and effective for use as recommended in the submitted labeling.

DATE: Petitions for administrative review by July 16, 1979.

ADDRESS: Requests for copies of the summary of safety and effectiveness data and petitions for administrative review may be addressed to the Hearing Clerk (HFA–305), Food and Drug Administration, Rm. 4–65, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Keith Lusted, Bureau of Medical Devices (HFK–402), Food and Drug Administration, Department of Health, Education, and Welfare, 8757 Georgia Ave., Silver Spring, MD 20910, 301–427–7550.

SUPPLEMENTARY INFORMATION: The sponsor, Burton, Parsons and Co., Washington, DC 20021, submitted an application for premarket approval of Preflex® and Flex-Care™ solutions to FDA on March 24, 1978. The application was reviewed by the Ophthalmology Device Classification Panel, and FDA advisory committee, which recommended approval of the application. On February 23, 1979, FDA approved the application by a letter to the sponsor from the Director of the Bureau of Medical Devices.

Before enactment of the Medical Device Amendments of 1976 (Pub. L. 94–295; 90 Stat. 539–583) (the amendments), soft contact lenses and solutions were regulated as new drugs. Because the amendments broadened the definition of the term "device" in section 201(h) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321(h)) (the act), soft contact lenses and solutions are now regulated as class III devices (premarket approval). As FDA explained in a notice published in the Federal Register of December 16, 1977 (42 FR 63472), the amendments provide transitional provisions to insure continuation of premarket approval requirements for class III devices formerly considered new drugs.

Furthermore, FDA requires, as a condition to approval, that sponsors of applications for premarket approval of soft contact lenses or solutions comply with the records and reports provisions of 21 CFR Part 310, Subpart D, until these provisions are replaced by similar requirements under the amendments.

A summary of the information on which FDA's approval is based is available upon request from the Hearing Clerk (address above). Requests should be identified with the name of the device and the Hearing Clerk docket number found in brackets in the heading of this document.

The labeling of the Preflex® and Flex-Care™ solutions, like that of other approved solutions for use with soft contact lenses, states that the solution is for use with several named brands of soft contact lenses. Such restrictive labeling may be revised to refer to other approved lenses, if the sponsor conducts necessary tests and obtains FDA's approval. FDA is considering alternatives to the current restrictive labeling requirements for soft contact lenses and solutions.

Advisory Committees; Meetings

AGENCY: Food and Drug Administration.
ACTION: Notice.

SUMMARY: This notice announces forthcoming meetings of public advisory committees of the Food and Drug Administration (FDA). This notice also sets forth a summary of the procedures governing committee meetings and methods by which interested persons may participate in open public hearings conducted by the committees and is issued under section 10(a) (1) and (2) of the Federal Advisory Committee Act (Pub. L. 92-463, 86 Stat. 770-776 (5 U.S.C. App. I)), and FDA regulations (21 CFR Part 14) relating to advisory committees. The following advisory committee meetings are announced:

Committee name	Date, time, place	Type of meeting and contact person
1. Hematology Devices Section and the Clinical Chemistry Section of the Clinical Chemistry and Hematology Devices Panel.	July 9, 9 a.m., Rm. 1409, 200 C St. SW., Washington, DC.	Open public hearing, 9 a.m. to 10 a.m.; open committee discussion, 10 a.m. to 5 p.m.; Kaiser Aziz (HFK-440), 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7550.

General function of the Committee. The Committee reviews and evaluates available data on the safety and effectiveness of devices currently in use and makes recommendations for their regulation.

Agenda—Open public hearing. Interested persons are encouraged to present data, information, or views, orally or in writing, on issues pending before the Committee. Those desiring to make formal presentations should notify Kaiser Aziz by June 29, 1979, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, references to any data to be relied upon, and also an indication of the approximate time required to make their comments.

Open committee discussion. The Committee will discuss current efforts by the Food and Drug Administration and the medical device industry to assure that currently marketed in vitro diagnostic radioassays for serum vitamin B_{12} determination are safe and effective.

Committee name	Date, time, place	Type of meeting and contact person
2. Physical Medicine Devices Section of the Surgical and Rehabilitation Devices Panel.	July 10 and 11, Claremont Hotel, Oakland, CA	Open public hearing July 10, 9 a.m. to 10 a.m.; open committee discussion July 10, 10 a.m. to 5 p.m. July 11, 9 a.m. to 5 p.m.; Johnsie W. Bailey (HFK-410), 8757 Georgia Ave., Silver Spring, MD 20910, 301-427-7236

General function of the Committee. The Committee reviews and evaluates available data on the safety and effectiveness of devices currently in use and makes recommendations for their regulation.

Agenda—Open public hearing. Interested persons are encouraged to present data, information, or views orally or in writing, on issues pending before the Committee. Those desiring to make formal presentations should notify Johnsie Bailey by June 26, 1979, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, references to any data to be relied upon, and also an indication of the approximate time required to make their comments.

Open committee discussion. The Committee will discuss new designs and innovations of wheelchairs to reduce the failure rate and identify existing safety problems of wheelchairs. There will be a site visit to the Center for Independent Living to view a wheelchair prototype model, and to discuss the major problems experienced by wheelchair users due to malfunctions and breakdowns of the wheelchair. Also, the Committee will classify breath and voice operated control units, cast accessories, cast cutter blades, ambulation safety belts, foot supports and molds, prosthesis suspension harness, hip socket belts and buckets, and any additional devices.

Committee name	Date, time, place	Type of meeting and contact person
3. Antimicrobial Panel	July 20 and 21, 9 a.m., Conference Rm. K, Parklawn Bldg., 5600 Fishers Lane, Rockville, MD (July 20); Holiday Inn, Bethesda, MD (July 21).	Open public hearing July 20, 9 a.m. to 10 a.m.; open committee discussion July 20, 10 a.m. to 4:30 p.m.; July 21, 9 a.m. to 4:30 p.m.; Lee Geissler (HFD-510), 5600 Fishers Lane, Rockville, MD 20857, 301-443-4057.

Committee name	Date, time, place	Type of meeting and contact person	General function of the Committee	Agenda—Open public hearing	Open committee discussion
4. Miscellaneous Internal Drug Products Panel	July 21 and 22, Holiday Inn, Bethesda, MD	Open public hearing July 21, 9 a.m. to 10 a.m.; open committee discussion July 21, 10 a.m. to 4:30 p.m., July 22, 8:30 a.m. to 3:30 p.m.; Armond Welch (HFD-510), 5600 Fishers Lane, Rockville, MD 20857, 301-443-4090.	*General function of the Committee.* The Committee reviews and evaluates available data concerning the safety and effectiveness of nonprescription drug products.	*Agenda—Open public hearing.* Any interested persons may present data, information, or views, orally or in writing, on issues pending before the Committee. Those who desire to make such a presentation should notify the contact person before July 17, 1979, and submit a brief statement of the general nature of the data, information, or views they wish to present, the names and addresses of proposed participants, and an indication of the approximate time desired for their presentation.	*Open committee discussion.* The Committee will review data submitted in response to the over-the-counter (OTC) review's call for data for this panel (see also 21 CFR 330.10(a)(2)). The Panel will be reviewing, voting upon, and modifying the content of summary minutes and categorization of ingredients and claims.

Committee name	Date, time, place	Type of meeting and contact person	General function of the Committee	Agenda—Open public hearing	Open committee discussion
5. Ophthalmic Drugs Subcommittee of the Anti-Infective and Topical Drugs Advisory Committee.	July 23, 9 a.m., Conference Rm. G, Parklawn Bldg., 5600 Fishers Lane, Rockville, MD.	Open public hearing 9 a.m. to 10 a.m.; open committee discussion 10 a.m. to 4:30 p.m.; Mary K. Bruch (HFD-148), 5600 Fishers Lane, Rockville, MD 20857, 301-443-4310.	*General function of the Committee.* The Committee reviews and evaluates available data on the safety and effectiveness of marketed and investigational prescription drugs for use in infectious diseases, dermatological disorders, and ocular disease.	*Agenda—Open public hearing.* Any interested persons may present data, information, or views, orally or in writing, on issues pending before the Committee.	Open committee discussion. The Committee will review the labeling claims for reduction of intraocular pressure with drugs used in glaucoma: Diopine (dipivalyl epinephrine) NDA 18-230; and Vasocon-A (naphazoline HCl, antazoline) NDA 8-340.

Committee name	Date, time, place	Type of meeting and contact person	General function of the Committee	Agenda—Open public hearing
6. Dermatologic Drugs Subcommittee of the Anti-Infective and Topical Drugs Advisory Committee.	July 24, 9 a.m., Conference Rm. G, Parklawn Bldg., 5600 Fishers Lane, Rockville, MD.	Open public hearing 9 a.m. to 10 a.m.; open committee discussion 10 a.m. to 4:30 p.m.; Mary K. Bruch (HFD-148), 5600 Fishers Lane, Rockville, MD 20857, 301-443-4310.	*General function of the Committee.* The Committee reviews and evaluates available data on the safety and effectiveness of marketed and investigational prescription drugs for use in infectious diseases, dermatological disorders, and ocular disease.	*Agenda—Open public hearing.* Any interested persons may present data, information, or views, orally or in

writing, on issues pending before the Committee.

Open committee discussion. The Committee will discuss topical hydrocortisone—discussion of OTC panel recommendation that hydrocortisone be marketed over-the-counter; consideration of adrenal suppression as part of guidelines for testing topical corticosteroids; Dapsone—development of labeling for use in dermatitis herpetiformis.

Any interested person who wishes to be assured of the right to make a oral presentation at the open public hearing portion of a meeting shall inform the contact person listed above, either orally or in writing, prior to the meeting. Any person attending the hearing who does not in advance of the meeting request an opportunity to speak will be allowed to make an oral presentation at the hearing's conclusion, if time permits, at the chairman's discretion.

Persons interested in specific agenda items to be discussed in open session may ascertain from the contact person the approximate time of discussion.

A list of committee members and summary minutes of meetings may be obtained from the Public Records and Documents Center (HFC–18), 5600 Fishers Lane, Rockville, MD 20857, between the hours of 9 a.m. and 4 p.m., and Monday through Friday. The FDA regulations relating to public advisory committees may be found in 21 CFR Part 14.

The Commissioner approves that scheduling of meetings at locations outside of the Washington, DC, area on the basis of the criteria of 21 CFR 14.22 of FDA's regulations relating to public advisory committees.

Dated: June 11, 1979.

William F. Randolph

Acting Associate Commissioner for Regulatory Affairs.

BILLING CODE 4110-03-M

[Docket No. 78N-0105]

GRAS Safety Review of Starter Distillate; Public Hearing

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration is announcing that public hearings will be held on starter distillate so that data, information, and views can be presented orally to determine if it is generally recognized as safe (GRAS) or subject to a prior sanction.

DATE: Hearings will be held on July 16, 1979 for starter distillate.

ADDRESS: The hearings will be held in the Conference Room, Lee Building, Federation of American Societies for Experimental Biology, 9650 Rockville Pike, Bethesda, MD 20014.

FOR FURTHER INFORMATION CONTACT:

Corbin I. Miles, Bureau of Foods (HFF–335), Food and Drug Administration, Department of Health, Education, and Welfare, 200 C St. SW., Washington, D.C. 20204, 202–472–4750, or George W. Irving, Jr., Life Sciences Research Office, Federation of American Societies for Experimental Biology, 9650 Rockville Pike, Bethesda, MD 20014, 302–530–7033.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of January 12, 1979 (44 FR 2687), the Commissioner of Food and Drugs issues a notice advising the public that an opportunity would be provided for the oral presentation of data, information, and views at public hearings to be conducted by the Select Committee on GRAS Substances of the Life Sciences Research Office, Federation of American Societies for Experimental Biology (hereafter referred to as the Select Committee), concerning the safety of the following five categories of food ingredients and the Select Committee's tentative determination of whether or not they are GRAS or subject to a prior sanction: starter distillate, hydrochloric acid, tartrates, riboflavin, and propionates.

No requests were received for hearings on propionates, tartrates, and riboflavin. Accordingly, no hearings will be held on these food ingredients.

The Select Committee received a request for a hearing on hydrochloric acid from Morton Chemical Co., Woodstock Research Center, 1275 Lake Ave., Woodstock, IL 60098, but the request was subsequently withdrawn. No other requests for a hearing on hydrochloric acid were received, and accordingly no hearing will be held on this food ingredient.

The Select Committee received a request from Chr. Hansen's Laboratory, Inc., 9015 West Maple St., Milwaukee, WI 53214, asking for an opportunity to appear at a public hearing on starter distillate to make an oral presentation. No other requests were received for a hearing on starter distillate.

In accordance with the procedures set forth in the January 12, 1979 Federal Register notice, the agency announces that a hearing on starter distillate will be held at 10:30 a.m., on July 16, 1979, in the Conference Room of Lee Building, Federation of American Societies for Experimental Biology, 9650 Rockville Pike, Bethesda, MD 20014. Those persons who have requested an opportunity to make oral presentations will be expected to complete their presentations within the period indicated and in accordance with the following schedule:

July 16, 1979, 10:30 a.m. to 11:15 a.m., Neil Dinesen, Chr. Hansen's Laboratory, Inc., Milwaukee, WI.—30 minutes.

Dated: June 11, 1979.

National Council on Health Care Technology; Meeting

Correction

In FR Doc. 79–18077, published in the issue of June 11, 1979, on page 33497 make the following correction. On page 33497, the last line of the first full

paragraph, the telephone number should have read: "(202) 472–4248".

BILLING CODE 1505-01-M

Public Health Service

Occupational Safety and Health Field Research Project

AGENCY: National Institute for Occupational Safety and Health (NIOSH), Center for Disease Control, PHS, HEW.

ACTION: Notice of Research Project Initiation.

SUMMARY: NIOSH announces that it is ready to begin data collection on a field research project entitled "Morbidity and Industrial Hygiene Study of Cement Workers". The study is designed to determine the risks of developing chronic lung disease in the cement industry in the United States. This project is part of the NIOSH industrywide research effort conducted under the Occupational Safety and Health Act of 1970.

This notice does not constitute a request for proposal.

DATES: Field work is scheduled to begin on or about July 15, 1979.

FOR FURTHER INFORMATION CONTACT: Alan L. Engelberg, M.D., Division of Respiratory Disease Studies, NIOSH, 944 Chestnut Ridge Road, Morgantown, West Virginia 26505, Telephone: (304) 599–7223.

SUPPLEMENTARY INFORMATION: On July 11, 1978, NIOSH published in the **Federal Register** (43 FR 29834) a list of proposed field research projects. That notice stated that more specific information would be provided to the public 6 weeks before starting field work on any of the proposed projects. Field investigation and data collection on the following study will begin on or about July 15, 1979:

Title: Morbidity and Industrial Hygiene Study of Cement Workers.

Project Officer: Alan L. Engelberg, M.D., Division of Respiratory Disease Studies, NIOSH.

Purpose: The purpose of this study is to determine the prevalence of lung disease in workers in the cement industry.

Background: The potential for lung disease among cement workers has been investigated for many years both in this country and abroad. The earliest studies searched primarily for fibrotic disease. Recent foreign studies searched primarily for fibrotic disease. Recent foreign studies suggest the possibility of an obstructive component to lung disease in these workers. This study will investigate the extent of both restrictive and obstructive lung disease and the relationship to occupational exposure to cement dust.

Study Description: The proposed study group will consist of approximately 2,500 workers from the cement industry.

A questionnaire covering occupational history, respiratory history and symptoms, and smoking history will be completed for each of the 2,500 workers.

Each of the 2,500 workers will be given a limited medical examination including a chest X-ray and spirometry test. Personal dust exposure data will be collected on a sub-group of these workers on days that will not coincide with the days chosen for their medical examinations. Participation in this study by employees is voluntary. The data from the study group will be compared with data from a comparison group of 3,000 workers from non-dusty industries. This comparison group will be selected as part of an ongoing NIOSH research project.

The NIOSH field research project described above will be conducted under the authority of section 20 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 669) and in accordance with the provisions of Part 85a of Title 42, Code of Federal Regulations. The protocol for this type of project has been reviewed by the Office of Management and Budget and determined to be in compliance with the Federal Reports Act.

Dated: June 8, 1979.

Anthony Robbins,

Director, National Institute for Occupational Safety and Health.

[FR Doc. 79-18081 Filed 6-14-79; 8:45 am]

BILLING CODE 4110-07-M

Occupational Safety and Health Field Research Project

AGENCY: National Institute for Occupational Safety and Health (NIOSH), Center for Disease Control, PHS, HEW.

ACTION: Notice of Research Project Initiation.

SUMMARY: NIOSH announces that it is ready to begin data collection on a field research project entitled "Reproductive History Study of Women Pharmaceutical Research Workers". This project is part of the NIOSH industrywide research effort conducted under the Occupational Safety and Health Act of 1970.

This notice does not constitute a request for proposal.

DATES: Field work is scheduled to begin on or about July 15, 1979.

FOR FURTHER INFORMATION CONTACT: Cynthia Robinson, Division of Surveillance, Hazard Evaluations and Field Studies, NIOSH, Robert A. Taft Laboratories, 4676 Columbia Parkway, Cincinnati, Ohio 45226, Telephone: (513) 684–2761.

SUPPLEMENTARY INFORMATION: On September 20, 1978, NIOSH published in the Federal Register (43 FR 42306) a list of proposed field research projects. That notice stated that more specific information would be provided to the public 6 weeks before starting work on any of the proposed projects. Field investigation and data collection on the following study will begin on or about July 15, 1979.

Title: Reproductive History Study of Women Pharmaceutical Research Workers.

Project Officer: Cynthia Robinson, Divison of Surveillance, Hazard Evaluations and Field Studies, NIOSH.

Purpose: To determine if women working in a pharmaceutical research laboratory are experiencing adverse reproductive effects.

Background: In 1976 NIOSH received a Health Hazard Evaluation request from women employed at a pharmaceutical research laboratory. The request alleged employees who worked in the laboratory area were experiencing adverse reproductive effects. In response, NIOSH conducted a walk-through survey at the facility. The survey revealed that the potential exposures to the women employees included many organic chemicals used in the production and testing of various drugs. Some of the chemicals are known or suspected carcinogens, embryotoxins, teratogens, and mutagens. The present study will examine what effects, if any, the potential exposures in the laboratory have had upon the reproductive outcomes of women.

Study Description: The proposed study population has been defined as 600 women who worked at the research laboratory facility for at least 6 months between January 1, 1966 and June 8, 1977 and who were between the ages of 18 and 45. The exposed group will consist of about 200 women who worked in the laboratory area. The comparison group will consist of 400 randomly selected women who worked in the clerical and administrative areas of the facility. The women will be interviewed using a questionnaire covering demographic data, medical, reproductive, and

occupational histories. Participation by employees in this study is voluntary.

The NIOSH field research project described above will be conducted under the authority of section 20 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 669) and in accordance with the provisions of Part 85a of Title 42, Code of Federal Regulations. The protocol for this type of project has been reviewed by the Office of Management and Budget and determined to be in compliance with the Federal Reports Act.

Dated: June 11, 1979.

John R. Froines,

Acting Director, National Institute for Occupational Safety and Health.

BILLING CODE 4110-87-M

INTERAGENCY REGULATORY LIAISON GROUP

Supplementary Agreement

I. Background

On September 28, 1977, four regulatory agencies charged with protecting the public and the environment from the adverse effects of toxic and hazardous substances—the Consumer Product Safety Commission (CPSC), the Environmental Protection Agency (EPA), the Food and Drug Administration (FDA) of the Department of Health, Education and Welfare, and the Occupational Safety and Health Administration (OSHA) of the Department of Labor—entered into an interagency agreement to increase their cooperative efforts as far as practicable to make the most efficient use of resources, achieve consistent regulatory policy, and improve the protection of the public health and environment. The agreement was published in the Federal Register of October 11, 1977 (42 FR 54856). Pursuant to the agreement, the four agencies formed the Interagency Regulatory Liaison Group (IRLG) to carry out their cooperative efforts.

The agencies now believe that the purposes of the original agreement will be better served by adding as a party to that agreement and as a full member of the IRLG a fifth agency that is charged with protecting the public and the environment from the adverse effects of toxic and hazardous substances: the Food Safety and Quality Service (FSQS) of the Department of Agriculture. FSQS already has participated in several IRLG activities.

II. Supplementary Agreement

The five agencies—CPSC, EPA, FDA, OSHA, and FSQS—hereby agree that FSQS is a party to the original interagency agreement and a full member of the IRLG.

The five agencies further agree that (a) whenever the original agreement (42 FR 54856) refers to "the four agencies" it is to be understood to be referring to all five agencies; (b) supplementary agreements of the kind referred to in Section IV.B. of the original agreement (42 FR at 54857) may be entered into by authorized representatives of any two, three or four of the five agencies; and (c) supplementary agreements of the kind referred to in Section IV.C. of the original agreement (42 FR 54857) may be entered into by authorized subordinate officials of the five agencies or of any two, three, or four of the agencies.

III. Agreement Authority

This supplementary agreement is entered into under the authority of the Economy Act of 1932, various provisions for interagency cooperation appearing in the legislative authorities of the five agencies, and Section IV of the original interagency agreement (42 FR at 54857).

IV. Effective Date

This agreement will take effect when it has been accepted by the five agencies.

For the Consumer Product Safety Commission:

Susan B. King,

Chairman.

For the Food and Drug Administration:

Donald Kennedy,

Commissioner.

For the Food Safety and Quality Service:

Carol Tucker Foreman

Assistant Secretary of Agriculture.

For the Environmental Protection Agency:

Douglas M. Costle,

Administrator.

For the Occupational Safety and Health Administration:

Eula Bingham,

Assistant Secretary of Labor.

May 24, 1979.

BILLING CODE 4110-03-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[Serial No. I-4445]

Idaho; Notice of Termination of Proposed Withdrawal and Reservation of Lands

June 7, 1979.

Notice of an application, serial number I-4445, for withdrawal and reservation of lands was published as Federal Register Document No. 71-11972 on Page 15763 of the issue for August 18, 1971. The applicant agency has cancelled its application insofar as it involved the lands described below. Therefore, pursuant to the regulations contained in 43 CFR, Subpart 2091, such lands will be at 10:00 a.m. on July 16, 1979, relieved of the segregative effect of the above mentioned application.

The lands involved in this notice of termination are:

Boise Meridian

T. 2 N., R. 4 W.,
Sec. 22, NW¼NW¼, S½NE¼NW¼.

The area described aggregates 60 acres in Owyhee County.

William E. Ireland,

Acting Chief, Branch of L&M Operations.

BILLING CODE 4310-84-M

Worland District Grazing Advisory Board Meeting

June 7, 1979.

Notice is hereby given in accordance with the Federal Advisory Committee Act (Pub. L. 92-463), that a meeting of the Worland District Grazing Advisory Board will be held at 1:00 p.m., August 1, 1979, in the Hospitality Room of the Stockgrowers State Bank, 700 Big Horn Avenue, in Worland, Wyoming.

The agenda for this meeting includes (1) review of fiscal year 1979 range improvement projects, (2) range improvement projects proposed for fiscal year 1980, and (3) communication on maintenance and the Allotment Management Plan (AMP).

The meeting will be open to the public. Interested persons may make oral statements to the board, or file written statements for the board's consideration. Anyone wishing to make an oral statement must notify the District Manager, Bureau of Land Management, 1700 Robertson, Worland, Wyoming 82401, by 4:30 p.m., July 27, 1979.

Summary minutes of this meeting will be on file in the district office and

available for public inspection (during regular business hours) within 30 days following the meeting.

John A. Kwiatkowski,

District Manager.

BILLING CODE 4310-55-M

Fish and Wildlife Service

California Department of Fish and Game; Notice of Correction

Notice is hereby given that an error occurred in a notice published in the Federal Register, May 14, 1979, Vol. 44, Number 94, page 28115, concerning an application for an amendment to PRT 2-319 to take sea otters as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361-1407), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR Part 18) and in a Notice of Correction published on May 29, 1979, Vol. 44, Number 104, page 30780. The applicant is the California Department of Fish and Game.

Item number three initally stated that the permit was for 100 sea otters and the first Notice of Correction stated that it was for 140 sea otters. This figure should read 240. This is the number of sea otters originally authorized to be taken in the permit. The amendment requested will not change the number of animals to be taken by the permittee, only some of the research activities to be carried out.

Concurrent with the publication of this notice in the Federal Register the Federal Wildlife Permit Office is forwarding copies of this notice to the Marine Mammal Commission and the Committee of Scientific Advisors.

The application has been assigned file number PRT 2-319A. Written data or views, or requests for copies of the complete application or for a public hearing on this application should be submitted to the Director, U.S. Fish and Wildlife Service (WPO), Washington, D.C. 20240, on or before July 16, 1979. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such a hearing is at the discretion of the Director.

Dated: June 4, 1979.

Donald G. Donahoe,

Chief, Permit Branch, Federal Wildlife Permit Office, U.S. Fish and Wildlife Service.

BILLING CODE 4310-55-M

Endangered Species Permit; Receipt of Application

The applicants listed below wish to be authorized to conduct the specified activity with the indicated Endangered Species:

PRT 2-4225

Applicant: Minnesota Zoological Garden, 12101 Johnny Cake Ridge Road, Apple Valley, Minnesota 55124.

The applicant requests a permit to import one (1) male captive born Bactrian camel (*Camelus bactrianus*) from the Calgary Zoo, Alberta, Canada for zoological exhibition and enhancement of propagation.

PRT 2-4246

Applicant: Dewey S. Bouldin, Route 2, Box 328, Ridgeway, Virginia 24148.

The applicant requests a permit to purchase in interstate commerce two (2) Scarlet-chested parakeets (*Neophema splendida*) from Herchel Frey, Pittsburgh, Pennsylvania for enhancement of propagation.

PRT 2-4268

Applicant: Thomas S. Carter, P.O. Box 875, Mertzon, Texas 76941.

The applicant requests a permit to purchase in interstate commerce four captive born masked bobwhite quail (*Colinus virginianus ridgwayi*) for enhancement of propagation.

PRT 2-4277

Applicant: Arlan R. Vaughn, 375 Midnight, Pueblo, Colorado 81005.

The applicant requests a permit to import two male Edward's pheasants (*Lophura edwardsi*) from British Columbia, Canada for enhancement of propagation.

PRT 2-4280

Applicant: Charles Sivelle, 41 Westcliff Drive, Dix Hills, New York 11746.

The applicant requests a permit to export in foreign commerce two male and two female white-eared pheasants (*Crossoptilon crossoptilon*) to Dr. Jesus Estudillo Lopez, Mexico City, Mexico for enhancement of propagation.

PRT 2-4287

Applicant: Zoological Society of Philadelphia, 34th Street and Girard Avenue, Philadelphia, Pennsylvania 19104.

The applicant requests a permit to import in the course of a commercial activity two (2) Indian rhinoceros from the Basel Zoological Garden, Switzerland for zoological exhibition and enhancement of propagation.

PRT 2-4272

Applicant: Chicago Zoological Park, Brookfield, Illinois 60513.

The applicant requests a permit to import on breeding loan one female Asian tapir (*Tapirus indicus*) from the Metropolitan Toronto Zoo, Ontario, Canada for zoological exhibition and enhancement of propagation.

Humane care and treatment during transport, if applicable, has been indicated by the applicant.

Documents and other information submitted with these applications are available to the public during normal business hours in Room 601, 1000 N. Glebe Road, Arlington, Virginia, or by writing to the Director, U.S. Fish and Wildlife Service, WPO, Washington, D.C. 20240.

Interested persons may comment on these applications within 30 days of the date of this publication by submitting written data, views, or arguments to the Director at the above address.

Dated: June 11, 1979.

BILLING CODE 4310-55-M

Receipt of Application for Permit

Notice is hereby given that an Applicant has applied in due form for a permit to take sea otters as authorized by the Marine Mammal Protection Act of 1972 (16 U.S.C. 1361-1407), and the Regulations Governing the Taking and Importing of Marine Mammals (50 CFR Part 18).

1. Applicant: a. Name: Donald B. Siniff and John R. Tester.

b. Address: Department of Ecology and Behavioral Biology, University of Minnesota, Minneapolis, MN 55455.

2. Type of permit: Marine Mammal and Threatened Species.

3. Name and number of animals: Sea otter (Enhydra lutris nereis), 20; E.l. lutris, 300.

4. Type of Activity: Scientific research.

5. Location of activity: California and Alaska.

6. Period of activity: Three years.

The purpose of this application *is to gain additional knowledge concerning the population dynamics of the sea otter. Some experimentation with oiling and cleaning compounds, behavior after cleaning, and the effects of immobilization drugs will be carried out with sea otters in Alaska.*

Concurrent with the publication of this notice in the Federal Register the Federal Wildlife Permit Office is forwarding copies of this application to the Marine Mammal Commission and the Committee of Scientific Advisors.

The application has been assigned file number PRT 2-4114. Written data or views, or requests for copies of the complete application or for a public hearing on this application should be submitted to the Director, U.S. Fish and Wildlife Service (WPO), Washington, D.C. 20240, within 30 days of the

publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular application would be appropriate. The holding of such hearing is at the discretion of the Director.

All statements and opinions contained in this application are summaries of those of the Applicant and do not necessarily reflect the views of the United States Fish and Wildlife Service.

Documents submitted in connection with the above application are available for review during normal business hours in Room 534, 1717 H Street NW., Washington, D.C.

Dated: June 11, 1979.

Donald G. Donahoo,

Chief, Permit Branch, Federal Wildlife Permit Office.

BILLING CODE 4310-55-M

Geological Survey

Draft Environmental Assessment—Oil and Gas; Public Hearing

The Conservation Division of the U.S. Geological Survey will hold a hearing to receive public comments on its Draft Environmental Assessment of the Cache Creek exploratory oil and gas test well proposed by National Cooperative Refinery Association. The proposed well is located 7 miles southeast of Jackson, Wyoming, in the Teton National Forest on Federal Lease No. W–20066.

The public hearing will be held July 31 and August 1, 1979, in the Grand Room of the Ramada Inn in Jackson, Wyoming. The hearing sessions will commence at 7:00 p.m. on Tuesday, July 31, and at 9:00 a.m. and 1:00 p.m. on Wednesday, August 1. The sessions will continue until all present have had a chance to speak or until 10:00 p.m. for the evening session on July 31, 12:00 noon for the morning session, and 5:00 p.m. for the afternoon session on August 1. Interested individuals, representatives of organizations, and public officials wishing to appear at the hearing should write to:

Conservation Division, Central Region, U.S. Geological Survey, MS609, Attention: Floyd Johnson, Box 25046, Denver Federal Center, Denver, Colorado 80225

no later than July 20, 1979, and designate the session during which they wish to give their comments. Written comments from those unable to attend and from those wishing to supplement their oral presentations at the hearings will be considered if received at the above address on or before August 13, 1979.

All written statements received pursuant to this notice will also be included in the hearing record. Oral statements at the hearing will be limited to a period of 10 minutes. Individuals will be allotted time for the specific session requested in the order their requests are received. Once a session is filled, individuals will be assigned a time in the next available session. To the extent that time is available after presentation of oral statements by those who have given advance notice, the hearings officer will give others present an opportuniy to be heard in the order that their names appear on the session register.

Notice is also given that copies of the Cache Creek Draft Environmental Assessment will be available for public inspection during regular business hours at the following locations:

U.S Forest Service, Hoback District, 140 E. Broadway, Jackson, Wyoming.

U.S. Forest Service, Bridger-Teton National Forest, 340 N. Cache Street, Jackson, Wyoming.

U.S. Geological Survey, District Oil and Gas Office, 126 Elk Street, Rock Springs, Wyoming.

U.S. Geological Survey, Area Oil and Gas Office, 100 E. B Street, Casper, Wyoming.

U.S. Geological Survey, Conservation Division, Central Region, Building 85, Denver Federal Center, Denver, Colorado.

Jackson Public Library, Jackson, Wyoming.

Dated: June 12, 1979.

Hillary A. Oden,

Acting Chief, Conservation Division.

[FR Doc. 79-18840 Filed 6-14-79; 8:45 am]

BILLING CODE 4310-31-M

Outer Continental Shelf (OCS) Order No. 5 Production Safety Systems

By Federal Register Notice of May 18, 1979, revised OCS Orders were published for all OCS Areas to be effective July 1, 1979. This Order requires that surface- and subsurface-safety valves installed on new installations or replaced on existing installations after July 1, 1979, conform to the American National Standards Institute/American Society of Mechanical Engineers Standards "Quality Assurance and Certification of Safety and Pollution Prevention Equipment Used in Offshore Oil and Gas Operations" ANSI/ASME SPPE–1–1977.

Due to the comparatively low number of valve manufacturers certified to date to the ANSI/ASME SPPE standards and the number of applications currently pending for certification, the U.S. Geological Survey has determined that, in order to proceed with the implementation of the quality assurance requirements of OCS Order No. 5 in an orderly and responsible manner, a modification of the July 1, 1979, date referenced above is necessary. Therefore, the requirement as modified is as follows:

"All subsurface- and surface-safety valves installed on new installations or replaced on existing OCS installations after February 1, 1980, shall conform to the requirements of ANSI/ASME SPPE–1–1977. After July 1, 1979, all such valves ordered from manufacturers for installation after February 1, 1980, shall conform to the requirements of ANSI/ASME SPPE–1–1977.

For the purposes of this requirement, the term replacement is defined as occurring when that portion of the valve assembly containing the serial number is removed from inventory and a new certified valve is placed in the inventory.

For further information, contact Mr. Richard B. Krahl, Chief, Branch of Marine Oil and Gas Operations, Conservation Division, U.S. Geological Survey, National Center, Mail Stop 620, Reston, Virginia 22092, Telephone: (703) 860-7531.

Dated: June 13, 1979.

J. R. Balsley,
Acting Director.

BILLING CODE 4310-31-M

DEPARTMENT OF JUSTICE

Law Enforcement Assistance Administration

Office of Juvenile Justice and Delinquency Prevention; Request for Comments on the LEAA Draft Guideline: Youth Advocacy Initiative

Notice is hereby given that the Office of Juvenile Justice and Delinquency Prevention, Law Enforcement Assistance Administration, pursuant to the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, proposes to announce competitive action grants for the Youth Advocacy Initiative.

The Office of Juvenile Justice and Delinquency Prevention invites any interested comments and will consider such comments before the final publication of this guideline. This guideline is being announced for 60 days. A 60–90 day notification period will allow applicants time to develop applications and permit award of funds in the early Spring of 1980. All comments must be received on or before August 14, 1979.

For any additional information, please contact Ms. Bettina Wallach at (202) 724–7765, Office of Juvenile Justice and Delinquency Prevention, 633 Indiana Avenue, N.W., Washington, D.C. 20531.

Juvenile Justice and Delinquency Prevention Programs

Youth Advocacy

a. *Program Objectives.* Pursuant to the 1977 Amendments to the Juvenile Justice and Delinquency Prevention Act of 1974, the Office of Juvenile Justice and Delinquency Prevention (OJJDP) is sponsoring a major program to develop, test and support methods of advocacy which stimulate and acilitate needed changes and enhanced accountability in the administration of juvenile justice, and the delivery of education and social services. The specific objectives are:

(1) To realize specific system reforms at the state and local levels leading to greater availability and better quality of services to youth by juvenile justice, education and social service agencies and institutions; and,

(2) To increase knowledge about elements essential to development and implementation of effective youth advocacy projects in order to facilitate replication of such projects in other states and localities.

b. *Program Description.* (1) *Background.* Youth advocacy is a process whereby the administration of juvenile justice, social service and education can be improved through the active support and representation of youth interests and needs by advocacy groups. Advocacy approaches which are the major thrust of this program include, but are not limited to: (1) Effective coalition building among public and private groups and organizations to impact the needs of youth; (2) meaningful youth participation in policy decisions affecting youth for the purpose of better defining youth needs and impacting on the policies, practices and utilization of funds in youth serving institutions.

(2) *Problem Addressed.* In an era of diminishing resources the effective use of existing funds takes on added significance. Moreover, advocacy on behalf of a disenfranchised population becomes of critical significance if they are to realize their fair share of available resources. In its passage of the JJDP Act of 1974, and in the 1977 Amendments, Congress recognized that the major youth serving institutions—the juvenile justice, educational and social service systems—have proven inadequate in meeting the needs of youth. This program is aimed at challenging policies and practices of youth serving institutions that systematically exclude youth from meaningful participation in programs that supposedly exist for them, and as a consequence provide services which are not responsive to the real needs of youth. These institutions have contributed to the inability of youth to survive and compete in society, and to their alienation, isolation and delinquency. The major areas of concern include: (a) Lack of accessibility to quality services, (b) lack of due process safeguards in agency proceedings (c) inequitable and improper classification and disposition of youth cases, (d) lack of accountability of agency officials, (e) adverse elements in statutes, agency regulations, and procedures affecting youth, and (f) lack of resources, and inequitable deployment of resources for youth programs.

(3) *Program Target.* The targets for this program are statutes, regulations, policies and practices of the juvenile justice system, education system and the social services system, which are insensitive or detrimental to the needs and best interests of youth.

(4) *Result Sought.* Results sought in this initiative are:

(a) *Juvenile Justice System Changes.* (1) The adoption of practices, procedures, policies, and statutes which provide accurate classifications and equitable disposition of cases handled by the juvenile justice system.

(2) Establishment of policies, practices, and statutes which safeguard the rights of youth, assure due process, strengthen family ties, and reduce inappropriate intervention into the lives of youth and their families.

(3) Adoption of statutes, policies, practices and procedures which provide for and safeguard the rights of institutionalized youth to quality rehabilitative services, education, vocational training and humane treatment.

(4) The allocation of new, and reallocation of existing Federal, state and local resources to increase and improve required services which reduce the inappropriate placement of juveniles outside of their homes and communities.

(b) *Social Service System Changes.* (1) Increase public support for increased resources for youth services, protection of the rights of youth, and quality services.

(2) Modification and adoption of procedures and eligibility criteria which increase access to social services for youth, and modification of those policies and practices of youth serving institutions which are adverse to the positive development of youth.

(3) Redefinition of agency priorities, and allocation of new and reallocation of existing public and private resources, to increase and improve appropriate services to which youth are entitled.

(4) Establishment of mechanisms for public accountability of youth serving agencies.

(c) *School System Changes.* (1) Modification of policies and practices which limit full educational opportunities for youth, e.g., tracking, ability-grouping.

(2) Adoption of school policies, procedures and practices which limit referrals of youth to the juvenile justice system.

(3) Adoption of school policies, procedures and practices which reduce pushouts and dropouts and limit the number of suspensions and expulsions.

(4) Establishment of policies, procedures and practices which provide for the protection of rights and assure due process in disciplinary actions.

(5) Establishment of innovative educational programs and approaches for youth who require special assistance.

(5) *Working Assumptions.* (a) Juvenile justice in the United States can be improved through advocacy in behalf of youth.

(b) Many problems associated with preventing juvenile delinquency and reducing youth crime involve youth serving institutions and organizations not located within the formal juvenile justice system. Therefore, advocacy activities must be aimed at the education system and the social services system as well as justice system agencies.

(c) Independent organizations employing methods of advocacy can stimulate and facilitate needed changes in juvenile justice agencies, social service agencies and schools. Such advocacy will complement and strengthen reform initiatives arising from within these agencies.

(d) Youth serving institutions' responses to the needs of youth will improve with meaningful youth involvement in the planning, operation and evaluation of policies and programs. Youth in the juvenile justice system, those alienated from school systems and those placed away from their families should play a vital role in youth advocacy programs.

c. *Program Strategy.* (1) *Program Design.* Applications are invited for action projects which influence one of the three systems described in b(4), i.e., juvenile justice, social service, or education. It is expected that by focusing on one system, other systems will also be impacted. Projects are to reflect the following characteristics:

(a) Selective, limited involvement in case advocacy for the purpose of contesting or establishing principles, policies and practices affecting classes of youth, as one element of the advocacy strategy is acceptable. Projects which focus *solely upon providing advocacy, representation or service to individual youth on a case by case basis will be considered unresponsive.*

(b) Goals and objectives must have primary impact upon: (1) Local juvenile justice, social service or education agencies or; (2) state legislatures, state elected and appointed officials and state juvenile justice, social service, or educational agencies. Applications that propose to focus on more than one state will not be considered; however, funds for coordination with other advocacy projects may be included in the budgets of both state and local projects.

(c) Projects must incorporate four key elements: (1) Organizational independence from the system(s) in which change will be sought; (2) extensive participation by influential and interested persons from various community sectors (government, business, political, industry, labor, churches, indigenous neighborhood groups, etc.); (3) extensive participation by youth of the population to be affected by the project in all aspects of the project, (e.g. staff, consultants, advisors, investigators, board members, negotiators, etc.); youth employed by projects must reside in neighborhoods having high levels of crime and socio-economic disadvantage; and (4) the employment of skillful staff, knowledgeable and experienced both with respect to the system in which change is sought and with respect to problems associated with system change and advocacy.

(d) Action plans must be specific and manageable with respect to anticipated change and must include but not be limited to the following:

(1) Community education activities which foster public understanding of the needs of youth, clarify the associated issues, and build consensus about what to do to meet these needs through the use of variety of communications and media techniques;

(2) Monitoring of public and private youth serving institutions to: protect the rights of youth, assure that existing laws and policies mandating appropriate services to which youth are entitled are enforced and, identify policies and practices which are harmful to youth;

(3) Review and analysis of existing and proposed statutes, and expert testimony to facilitate responsiveness of decision makers to the needs of youth for positive development; and,

(4) Approaches which utilize administrative negotiation to facilitate systems change.

(2) *Dollar Range, Duration of Grants.* The grant period for this program is three years with awards made in increments of 24 months and 12 months. Third year continuation awards are contingent upon satisfactory grantee performance in achieving stated objectives in the previous program year(s), availability of funds and compliance with the terms and conditions of the grants. Grants will range up to $200,000 for local projects and $300,000 for statewide projects for each project year with the amount of funding for each grant based upon: (a) the types of statutes, policies and practices to be addressed, (b) the potential for impact on large numbers of youth; and, (c) the cost-effectiveness of the project design. Funds for this program are allocated from the Juvenile Justice and Delinquency Prevention Act of 1974, as amended in 1977, and require no match. Grants may be terminated at any point for failure to meet program process objectives or grant requirements.

(3) *Applicant Eligibility.* Applications are invited from public and private non-profit agencies, and organizations which are in no way affiliated with the organizations, and institutions, they intend to impact.

(4) *Applicant Capability.* The applicant must: (a) demonstrate knowledge of and experience with juvenile justice and delinquency prevention issues, the system(s) in which changes are to be sought, and the problems, strategies and advocacy approaches necessary to meaningful change in youth serving institutions;

(b) have the demonstrated capability or experience to develop management and fiscal systems necessary for the administration of Federal funds; and,

(c) demonstrate the ability to generate public confidence and support for the proposed objectives.

d. *Application Requirements.* These requirements are to be used in lieu of Part IV—Program Narrative Instructions of the Federal Application Form 424. In order to be considered for funding, applications must include the following information. Applicants are requested to use the order outlined in this guideline:

(1) *Problem Definition and Data Needs.* (a) Provide statistical and qualitative documentation of the specific issues and problems to be addressed regarding the harmful effects on youth of the statutes, policies and practices that are to be targetted by the project. Describe the youth affected in terms of: Number, age range, sex, race, ethnic and economic status. Discuss anticipated difficulties and problem areas, together with recommended approaches for solutions.

(b) Provide a description of the area in which the project will operate in terms of: geographic boundaries, crime and delinquency rates, race/ethnic population and adult and youth unemployment rates.

(c) Provide a list of existing youth advocacy projects within the target jurisdiction, include a brief description of each, and indicate how coordination with these projects will be achieved in

order to complement existing programs and avoid any duplication of effort.

(d) Provide a description of the implementing organization as required in Paragraph c.(6), a copy of the governing by-laws, a list of board members, organizational chart, a description of experience with similar programs completed or now underway.

(e) Provide documentation with sufficient detail to make clear the applicant's public sanction for leadership, coordination, and standard setting.

(f) Describe the formal and informal decision-making structures which influence the systems targetted.

(g) Describe the social, economic and political relationships which will influence the targetted outcomes.

(h) Provide letters of written agreements which indicate the types of participation and resources available from the community sectors of political business, industry, labor, church, and indigenous neighborhood groups and organizations.

(i) Provide resumes of key staff and profiles of board members.

(2) *Project Objectives.* Project goal statements should be related to intended impact, and objective statements should be related to activities necessary to produce desired impact. Both statements should be written in measurable terms and specifically related to: (1) Specific statutes, policies, and practices which adversely effect large numbers of youth: (2) the target agencies, organizations, and local or state systems which will be affected, and (3) the specific problems addressed in *Problem Definition and Data Needs.*

(3) *Program Methodology.* The applicant must provide a definitive methodology with explanation of approaches and a detailed description of specific activities for implementing the project and achieving its objectives.

(a) Describe the advocacy strategies to be employed and the reason for believing that they will influence processes which shape the policies, programs, and practices in question as required in Paragraph c.(1)(d).

(b) Describe how the four elements required in Paragraph c.(1)(c) are incorporated in the proposed project design.

(c) Clearly describe the administrative and fiscal organizational structures, coordination mechanisms to be employed in implementation of the project, (including the role of other groups, agencies and systems in any phase of the project), and the information system which will be used to document change.

(4) *Workplan.* Prepare a detailed work schedule which outlines specific program objectives in relation to milestones, activities and timeframes for accomplishing the objectives. The workplan and budget should be prepared to allow for a three month start-up period.

(5) *Budget.* Prepare a budget of the total costs to be incurred in carrying out the proposed project over three years, with a detailed categorical itemization and narrative for the first two budget years. Include in the budget funds to support travel for three (3) staff persons (at least one must be a youth) to attend four (4) technical assistance and training sessions for the first grant period (two years) for an average of three (3) days per trip. Budget up to 15% of total projected outlays to cover the costs of a management information system. No match will be required for these grants. Travel budgeted for coordination with other advocacy projects must be confined to not more than two (2) trips over the two (2) year project period.

(6) *Management Information System.* Each application must include a proposed management information system. This system will seek aggregate data as opposed to information specific to individual groups or persons.

e. *Criteria for Selection of Projects.*

Applications will be rated and selected using the following criteria. Only those applications meeting criteria at the highest level will be considered for grant award.

(a) The extent to which applicants meet the capability and eligibility requirements as outlined in Paragraph c.(3)(4). (100 points)

(b) The extent to which the proposed project addresses the program targets of statutes, policies and practices and establishes that those selected for impact are harmful to large numbers of youth. (15 points)

(c) The extent to which the project design provides youth advocacy strategies and approaches which include youth, minorities, other citizen groups, and key leadership groups of the communities. (15 points)

(d) The extent to which the proposed activities are cost effective in relation to their potential for effecting changes in statutes, policies, and practices which adversely affect large numbers of youth and improve services to youth within youth serving institutions. (15 points)

(e) The extent to which the applicant demonstrates understanding of the problems associated with affecting change in the proposed program targets. (15 points)

(f) The extent to which the applicant demonstrates effective use of advocacy strategies, has available the skilled and experienced personnel essential to implementing these strategies, and establishes the ability to gain and maintain public support and confidence. (25 points)

(g) The extent to which the proposed strategy has the potential for modifying the targeted statutes, policies, priorities and practices. (15 points)

f. *Submission Requirements.*

(1) *Submission Procedures.* The Youth Advocacy initiative has been determined to be of national impact and awards will be made directly to the successful applicants. Applications must be submitted to the Office of Juvenile Justice and Delinquency Prevention in accordance with the form outlined in Appendix 2, Section 2, Paragraphs 4b and 5 Guide for Discretionary Grant Programs, M 4500.1G, September 30, 1978. Refer to Appendix 5, Part II and Part IV for instructions on how to prepare the budget, budget narrative and program narrative. Applicants must consult and coordinate the applications with the relevant State Planning Agencies as provided by M 4500.1G; Appendix 2, Section 2. Prior to submission of applications to the Office of Juvenile Justice and Delinquency Prevention, applicants must also submit applications to appropriate A–95 Clearinghouses in accordance with A–95 requirements. Letters of verification indicating appropriate contacts with State Planning Agencies and A–95 Clearinghouses must be included in the applications. Addresses are included in Appendices 1 and 2.

2. *Deadline for Submission of Applications.* One (1) original and two (2) copies of the application must be mailed or hand delivered to the Office of Juvenile Justice and Delinquency Prevention, LEAA, Room 442, 633 Indiana Avenue, NW., Washington, D.C. 20531, by ————. Applications sent by mail will be considered to be received on time if sent by registered or certified mail no later than ———— as evidenced by the U.S. Postal Service postmark on the original receipt from the U.S. Postal Service.

g. *Evaluation Requirements.* The projects funded under the program will be evaluated by an independent evaluator selected by the Office of Juvenile Justice and Delinquency Prevention. As stated in d. (6) *Application Requirements;* each applicant must submit a proposed management information system. The national evaluator will provide training and technical assistance in

implementing the management information system. All applicants must include assurances in their application agreeing to fully cooperate with the national evaluators.

h. *Technical Assistance.* Technical assistance will be provided to applicants in refining their application subsequent to final selection. Ongoing technical assistance in program implementation will be provided by OJJDP to the funded projects.

i. *Definitions.* (1) *Youth Advocacy*—is a method of positive intervention by individual advocates or by advocacy groups on behalf of large numbers of youth to assure that problems confronting youth are effectively solved or managed through existing youth serving entitles in the public, private and/or community sectors of society. A major objective of youth advocacy activities is to penetrate the blockages and obstacles between youth and service delivery systems which occur within complex social organizations. A further objective is the accomplishment of institutional (agency) change which results in improved service delivery to youths and reallocation of available resources. The level of effort required of advocacy in the representation process (negotiation, arbitration, contesting) is to support the needs and rights of youth as if they were the advocates' own.

(2) *Citizen Participation*—is active, continuous and meaningful involvement of youth, neighborhood residents and representatives of neighborhood organizations and city-wide institutions (minority, business, industry, labor, religious) in the planning, development and monitoring of programs affecting young people.

High Risk Communities—are communities where youth live that are characterized by high rates of crime and delinquency, high infant mortality rates, high unemployment and under employment, sub-standard housing, physical deterioration and low incomes.

(4) *Education System*—includes elementary, junior high schools and senior high schools, both public and private; also includes variations of the above as part of public educational systems or private educational systems or institutions (e.g. vocational schools, special education programs, including educational programs in juvenile correctional facilities, and alternative education prgrams); also, includes the governing bodies of the educational system (state/local boards of education, other authorities).

(5) *Social Service System*—(Youth Serving Agencies) includes the state and/or local private and public departments/agencies which provide services to youth (e.g. social services, welfare, mental health, health, employment, recreation, and others). Also includes private youth service bureaus, other service referral networks and specific services or programs such as crisis intervention, counseling, alcohol/drug treatment), coumminutiy-based prevention, treatment programs and others.

(6) *Juvenile Justice System*—refers to official structures, agencies, and institutions with which juveniles may become involved including, but not limited to, juvenile courts, law enforcement agencies, probation, aftercare, detention facilities, and correctional institutions.

(7) *Jurisdiction*—is any unit of general govenment such as a city, county, state township, borough, parish, village, or combination of such units.

(8) *Delinquency*—is the behavior of a juvenile, in violation of a statute or ordiance in a jurdisdiction, which would constitute a crime if committed by an adult.

(9) *Disposition*—is that procedure in the juvenile court process which results in the imposition of a sentence, e.g., probation or commitment.

(10) *Program*—refers to the National Youth Advocacy Initiative to establish programs supported by OJJDP and the overall activities related to implementing the Advocacy Program.

(11) *Project*—refers to the specific of advocacy activities at given site(s) designed to achieve the overall goal of improving services to youth and protection of the rights of youth.

(12) *Needs of Youth*—for the purposes of this Guideline is defined as family, education, employment, skills training, emotional support, health aids, medical care, legal advice and assistance in assuring recognition and enforcement of the rights of youth.

David D. West,

Acting Associate Administrator, Office of Juvenile Justice and Delinquency Prevention.

BILLING CODE 4410-18-M

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[Docket No. M-79-85-C]

Garden Creek Pocahontas Co.; Petition for Modification of Application of Mandatory Safety Standard

Garden Creek Pocahontas Company, P.O. Box 11430, Lexington, Kentucky 40575, has filed a petition to modify the application of 30 CFR 75.326 (airways and belt haulage entries) to its V.P. No. 6 Mine located in Buchanan County, Virginia. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977, Pub. L. 95-164. The substance of the petition follows:

1. The petitioner is developing its mine for use of longwall mining techniques.

2. Due to experience from other mines in the same coal bed and from early development of this mine the petitioner believes it will encounter large quantities of methane gas in the mine.

3. The methane gas will require large quantities of air for dilution.

4. Roof conditions and a maximum overburden of 2000 feet limit the number of airways that can be safely driven to supply these quantities of air.

5. For these reasons the petitioner requests permission to conduct air through the belt haulage entries to working places to assist in diluting the methane concentrations.

6. To provide the same measure of protection for its miners as provided by the standard, the petitioner proposed to install an early warning and telemetry system to detect carbon monoxide and excessive heat in the belt haulage entries.

Request for Comments

Persons interested in this petition may furnish written comments on or before July 16, 1979. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Dated: June 7, 1979.

Robert B. Lagather,

Assistant Secretary for Mine Safety and Health.

[FR Doc. 79-18695 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-43-M

[Docket No. M-79-86-C]

Garden Creek Pocahontas Co.; Petition for Modification of Application of Mandatory Safety Standard

Garden Creek Pocahontas Company, P.O. Box 11430, Lexington, Kentucky 40575, has filed a petition to modify the application of 30 CFR 75.1103-4 (automatic fire warning devices) to its V.P. #6 Mine located in Buchanan County, Virginia. The petition is filed under section 101(c) of the Federal Mine safety and Health Act of 1977, Pub. L.

95–164. The substance of the petition follows:

1. The petitioner proposes the use of an alternative automatic fire warning system in the belt haulage entries of its mine.

2. Within each belt flight carbon monoxide (CO) sensors will monitor the air conducted in the entries. These sensors will transmit an alarm through a telementry system to a central location if levels of more than 5 ppm of CO occur. At levels of 10 ppm above the warning level, the mine will be evacuated.

3. In addition to the CO sensor at the belt drive unit, three (3) point heat sensors will be installed. These sensors will automatically actuate deluge-type water sprays when they detect a temperature rise indicating a fire.

4. The petitioner states that this alternative system will provide its miners the same measure of protection as the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before July 16, 1979. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health administration, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Dated: June 7, 1979.

Robert B. Lagather,

Assistant Secretary for Mine Safety and Health.

BILLING CODE 4510-43-M

Pension and Welfare Benefit Programs

Notice of Proposed Exemption for Certain Transactions Involving Cochran Electric Co., Inc., Profit Sharing Trust

[Application No. D-241]

AGENCY: Department of Labor.

ACTION: Notice of proposed exemption.

SUMMARY: This document contains a notice of pendency before the Department of Labor (the Department) of a proposed exemption from certain of the prohibited transaction restrictions of the Employee Retirement Income Security Act of 1974 (the Act) and from certain taxes imposed by the Internal Revenue Code of 1954 (the Code). The proposed exemption would exempt a loan from Cochran Electric Co., Inc. Profit Sharing Trust (the Trust) to Cochran Electric Co., Inc. (the Employer) which was entered into before the effective date of the Act, but after July 1, 1974, the date specified in the transition rules contained in section 414 and 2003 of the Act. The proposed exemption, if granted, would affect participants and beneficiaries of the Trust, the Applicant, and other persons participating in the transaction.

DATES: Written comments and requests for a public hearing must be received by the Department of Labor on or before July 16, 1979.

EFFECTIVE DATE: If the proposed exemption is granted, the exemption will be effective January 1, 1975.

ADDRESS: All written comments and requests for a hearing (at least three copies) should be sent to: Office of Fiduciary Standards, Pension and Welfare Benefit Programs, Room C-4526, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20216, Attention: Application No. D-241. The application for exemption and the comments received will be available for public inspection in the Public Documents Room of Pension and Welfare Benefit Programs, U.S. Department of Labor, Room N-4677, 200 Constitution Avenue, N.W., Washington, D.C. 20216.

FOR FURTHER INFORMATION CONTACT: Gary H. Lefkowitz of the Department of Labor, (202) 523-8330. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: Notice is hereby given of the pendency before the Department of a proposed exemption from the restrictions of sections 406(a), 406(b)(1) and 406(b)(2) of the Act and from the taxes imposed by section 4975(a) and (b) of the Code, by reason of section 4975(c)(1)(A) through (E) of the Code. The proposed exemption was requested in an application filed by the Employer, pursuant to section 408(a) of the Act and section 4975(c)(2) of the Code, and in accordance with the procedures set forth in ERISA Procedure 75–1 (40 FR 18471, April 28, 1975). The application was filed with both the Department and the Internal Revenue Service. However, effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type requested to the Secretary of Labor. Therefore, this notice of pendency is issued solely by the Department.

Summary of Facts and Representations

The application contains facts and representations with regard to the proposed exemption which are summarized below. Interested persons are referred to the application on file with the Department for the complete representations of the applicants.

1. The Employer is a Washington corporation engaged in the electrical contracting business in Seattle, Washington. As of December 31, 1974 the Trust had 17 participants and net assets of $630,000. Investment decisions are made by an investment committee composed of employees elected by the Trust participants.

2. Prior to the effective date of the Act, the Employer regularly borrowed funds from the Trust to purchase construction equipment. Loans were made in an amount equivalent to 80% of the purchase price of the equipment being financed. Each piece of equipment acquired served as collateral for its underlying loan and each loan agreement was recorded with the clerk of King County, Washington. Interest was charged at prevailing bank rates with loans being repaid in monthly installments ranging from 24 to 36 months.

3. On September 5, 1974, the Trust loaned the Employer $3,700 at 10½% interest (which was the prevailing bank rate for a similar type transaction at the time), payable in 24 equal monthly installments beginning September 30, 1974. The loan was secured by property valued at $4,400. All payments were made in a timely fashion and the loan was repaid in full as of September 30, 1976.

4. In summary, the applicant represents that the statutory criteria contained in section 408(a) of the Act have been satisfied as follows: (1) the interest rate paid to the Trust was identical to the prevailing bank rate at the time of the transaction, (2) the loan was adequately secured at all times, and (3) all payments on the loan were made on schedule, and the loan has been repaid in full to the Trust.

Finally, the applicant represents that the loan was entered into prior to the effective date of the Act without knowledge that the transaction would become prohibited on January 1, 1975. As soon as the applicant realized that the loan was a prohibited transaction, the applicant submitted a good faith request for a exemption instead of terminating the loan transaction.

Notice to Interested Parties

Within ten days after the notice of proposed exemption is published in the Federal Register, a copy of the notice and a statement that interested persons have a right to comment within the thirty day period set forth in the notice

will be provided to interested parties. Notice to interested parties will be mailed by first class mail or delivered to them by hand.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 408(a) of the Act and section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of the Act and the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act which require, among other things, that a fiduciary discharge his duties respecting the plan solely in the interests of the participants and beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirement of section 401(a) of the Code that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) The proposed exemption, if granted, will not extend to transactions prohibited under section 406(b)(3) of the Act, and section 4975(c)(1)(F) of the Code;

(3) Before an exemption may be granted under section 408(a) of the Act and section 4975(c)(2) of the Code, the Department must find that the exemption is administratively feasible, in the interests of the plan and of its participants and beneficiaries, and protective of the rights of participants and beneficiaries of the plan; and

(4) The proposed exemption, if granted, will be supplemental to, and not in derogation of, any other provisions of the Act and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

Written Comments and Hearing Requests

All interested persons are invited to submit written comments or requests for a hearing on the proposed exemption to the address and within the time period set forth above. All comments will be made a part of the record. Comments and requests for a hearing should state the reasons for the writer's interest in the proposed exemption. Comments received will be available for public inspection with the application for exemption at the address set forth above.

Proposed Exemption

Based on the facts and representations set forth in the application, the Department is considering granting the requested exemption under the authority of section 408(a) of the Act and section 4975(c)(2) of the Code and in accordance with the procedures set forth in ERISA Procedure 75–1. If the exemption is granted, the restrictions of sections 406(a), 406(b)(1) and 406(b)(2) of the Act and the taxes imposed by section 4975(a) and (b) of the Code, by reason of section 4975(c)(1)(A) through (E) of the Code, shall not apply to the loan of $3,700 by the Trust to the Employer that was entered into on September 5, 1974 and was repaid in September 1976. The proposed exemption, if granted, will be subject to the express conditions that the material facts and representations are true and complete, and that the application accurately describes all material terms of the transaction.

Signed at Washington, D.C. this 8th day of June, 1979.

Ian D. Lanoff,

Administrator, Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor.

[FR Doc. 79-18607 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-29-M

[Prohibited Transaction Exemption 79–27]

Employee Benefit Plans; Exemption From Prohibitions for Certain Transactions Involving Drug City, Inc., Profit Sharing Plan and Drug City, Inc., Pension Plan

AGENCY: Department of Labor.

ACTION: Grant of individual exemption.

SUMMARY: This exemption would permit the sale of a one-third interest in a 40 acre parcel of unimproved real property by the Drug City, Inc. Profit Sharing Plan (the Profit Sharing Plan) and the Drug City, Inc. Pension Plan (the Pension Plan) (collectively, the Plans) to Martin Feldman, a trustee of both Plans and sole shareholder of Drug City, Inc. (the Employer), the sponsoring Employer of the Plans.

FOR FURTHER INFORMATION CONTACT: Mr. Robert N. Sandler of the Office of Fiduciary Standards, Pension and Welfare Benefit Programs, Room C–4526, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20216, (202) 523–8882. (This is not a toll-free number.

SUPPLEMENTARY INFORMATION: On April 10, 1979 notice was published in the **Federal Register** (44 FR 21399) of the pendency before the Department of Labor (the Department) of a proposal to grant an exemption from the restrictions of sections 406(a), 406 (b)(1) and (b)(2) of the Employee Retirement Income Security Act of 1974 (the Act) and from the taxes imposed by section 4975 (a) and (b) of the Internal Revenue Code of 1954 (the Code) by reason of section 4975(c)(1) (A) through (E) of the Code, for a transaction described in an application filed by the Employer. The notice set forth a summary of facts and representations contained in the application for exemption and referred interested persons to the application for a complete statement of the facts and representations. The application has been available for public inspection at the Department in Washington, D.C. The notice also invited interested persons to submit comments on the requested exemption to the Department. In addition, the notice stated that any interested person might submit a written request that a public hearing be held relating to this exemption. No public comments and no requests for a hearing were received by the Department.

This application was filed with both the Department and the Internal Revenue Service. However, the notice of pendency was issued and the exemption is being granted, solely by the Department because, effective December 31, 1978 section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type proposed to the Secretary of Labor.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption granted under section 408(a) of the Act and section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person with respect to a plan to which the exemption is applicable from certain other provisions of the Act and the Code. These provisions include any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which among other things require a fiduciary to discharge his or her duties respecting the plan solely in the interests of the participants and

beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does the fact the transaction is the subject of an exemption affect the requirement of section 401(a) of the Code that a plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries.

(2) This exemption does not extend to transactions prohibited under section 406(b)(3) of the Act and section 4975(c)(1)(F) of the Code.

(3) This exemption is supplemental to, and not in derogation of, any other provisions of the Act and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption or transitional rule is not dispositive of whether the transaction is, in fact, a prohibited transaction.

Exemption

In accordance with section 408(a) of the Act and section 4975(c)(2) of the Code and the procedures set forth in ERISA Procedure 75–1 (40 FR 18471, April 28, 1975), and based upon the entire record, the Department makes the following determinations:

(a) The exemption is administratively feasible;

(b) It is in the interests of the Plans and of their participants and beneficiaries; and

(c) It is protective of the rights of the participants and beneficiaries of the Plans.

The restrictions of section 406(a) and 406 (b)(1) and (b)(2) of the Act and section 4975 (a) and (b) of the Code by reason of section 4975(c)(1) (A) through (E) of the Code shall not apply to the sale of a one-third interest in a 40 acre parcel of real property legally described as the West one-half of the East one-half of the Southwest quarter of section 13, Township 49 South, Range 25 East, Collier County, Florida by the Plans to Martin Feldman, for an aggregate cash consideration of $59,667, each Plan receiving a portion of the consideration proportional to its fractional holding of the one-third interest, provided that the aggregate amount is not less than the fair market value of the one-third interest in the property.

The availability of this exemption is subject to the express conditions that the material facts and representations contained in the application are true and complete, and that the application accurately describes all material terms of the transaction to be consummated pursuant to this exemption.

Signed at Washington, D.C., this 8th day of June, 1979.

Ian D. Lanoff,

Administrator, Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor.

BILLING CODE 4510-29-M

[Application No. D-207]

Notice of Proposed Exemption for a Transaction Involving the Profit Sharing Plan of Allied Investment Credit Corp.

AGENCY: Department of Labor.

ACTION: Notice of proposed exemption.

SUMMARY: This document contains a notice of pendency before the Department of Labor (the Department) of a proposed exemption from certain of the prohibited transaction restrictions of the Employee Retirement Income Security Act of 1974 (the Act) and from certain taxes imposed by the Internal Revenue Code of 1954 (the Code). The proposed exemption would exempt the loan of $24,852.21 by the Allied Investment Credit Corporation Profit Sharing Plan (the Plan) to the Allied Investment Credit Corporation (the Employer). The loan was entered into before the effective date of the Act, but after July 1, 1974, the date specified in the transition rules contained in sections 414 and 2003 of the Act. The proposed exemption, if granted, would affect the Employer and participants and beneficiaries of the Plan.

DATES: Written comments and requests for a public hearing must be received by the Department of Labor on or before July 16, 1979.

EFFECTIVE DATE: If the proposed exemption is granted, the exemption will be effective January 1, 1975.

ADDRESS: All written comments and requests for a hearing (at least three copies) should be sent to Office of Fiduciary Standards, Pension and Welfare Benefit Programs, Room C–4526, U.S. Department of Labor, 200 Constitution Avenue, NW., Washington, D.C. 20216. Attention: Application No. D–207. The application for exemption and the comments received will be available for public inspection in the Public Documents Room of Pension and Welfare Benefit Programs, U.S. Department of Labor, Room N–4677, 200 Constitution Avenue, NW., Washington, D.C. 20216.

FOR FURTHER INFORMATION CONTACT: Gary H. Lefkowitz of the Department of Labor, (202) 523–8530. (This is not a toll-free number).

SUPPLEMENTARY INFORMATION: Notice is hereby given of the pendency before the Department of a proposed exemption from the restrictions of sections 406(a), 406(b)(1) and 406(b)(2) of the Act and from the taxes imposed by section 4975 (a) and (b) of the Code, by reason of section 4975(c)(1) (A) through (E) of the Code. The proposed exemption was requested in an application filed by the Employer, pursuant to section 408(a) of the Act and section 4975(c)(2) of the Code, and in accordance with the procedures set forth in ERISA Procedure 75–1 (40 FR 18471, April 28, 1975). This application was filed with both the Department and the Internal Revenue Service. However, effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type requested to the Secretary of the Labor. Therefore, this notice of pendency is issued solely by the Department.

Summary of Facts and Representations

The application contains facts and representations with regard to the proposed exemption which are summarized below. Interested persons are referred to the application on file with the Department for the complete representations of the applicants.

1. The Plan is a profit sharing plan which as of June 10, 1975, had 4 participants.

2. The Employer is exclusively engaged in the commercial loan business. It makes commercial loans to local businessmen, usually in amounts not in excess of $15,000. The average loan is about $10,000. All loans are secured by a first lien upon all of the business assets of the borrower, and are also usually secured by real estate owned by the borrower of the principals thereof. The Employer has been engaged in this business for over 20 years and has always made a profit.

3. On December 3, 1974, the Plan loaned $24,852.21 to the Employer. This sum represented approximately 25 percent of the Plan's assets. The interest rate for the loan was 10 percent per annum. The Employer could have borrowed the funds from a bank for about 8 percent.

4. As security for the loan of December 3, 1974, and two loans make in 1973, which comprise a total principal amount of $88,985.75, the Plan has had assigned to it nine notes, together with

security agreements and real estate mortgages, which the Employer had received from its debtors. The balances due on the notes totaled $100,357. The security for the nine notes given to the Employer and subsequently assigned to the Plan was appraised at $356,500. In addition, the Plan received the personal guarantee of the Employer's major shareholders, who have about 85 percent of the funds in the Plan allocated to their individual accounts.

5. The Employer will have repaid the loan of December 3, 1974 in full, plus accumulated interest thereon, not later than July 1, 1979.

6. In summary, the applicant represents that the statutory criteria contained in section 408(a) of the Act have been satisfied as follows: (1) interest rate paid to the Plan was higher than the rate the Employer would have been charged by an independent bank for such a loan, (2) the loan was adequately secured at all times by the assignment to the Plan of nine highly-collateralized notes due the Employer, as well as the personal guarantee of the Employer's major shareholders, and (3) the loan will have been repaid in full not later than July 1, 1979.

Finally, the applicant represents that the loan was entered into prior to the effective date of the Act without knowledge that the transaction would become prohibited on January 1, 1975. As soon as the applicant realized that the loan was a prohibited transaction, the applicant submitted a good faith request for an exemption instead of terminating the loan transaction.

Notice to Interested Persons

Within ten days after receipt by the Employer of a copy of this notice of proposed exemption, written notice will be provided to all employee participants and other interested persons by means of personal delivery or first class mail.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 408(a) of the Act and section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of the Act and the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act which among other things require that a fiduciary discharge his duties respecting the Plan solely in the interest of the participants and beneficiaries of the Plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirement of section 401(a) of the Code that the Plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) The proposed exemption, if granted, will not extend to transactions prohibited under section 406(b)(3) of the Act, and section 4975(c)(1)(F) of the Code;

(3) Before an exemption may be granted under section 408(a) of the Act and section 4975(c)(2) of the Code, the Department must find that the exemption is administratively feasible, in the interests of the Plan and of its participants and beneficiaries, and protective of the rights of participants and beneficiaries of the Plan; and

(4) The proposed exemption, if granted, will be supplemental to, and not in derogation of, any other provisions of the Act and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

Written Comments and Hearing Requests

All interested persons are invited to submit written comments or requests for a hearing on the proposed exemption to the address above, within the time period set forth above. All comments will be made a part of the record. Comments and requests for a hearing should state the reasons for the writer's interest in the proposed exemption. Comments received will be available for public inspection with the application for exemption at the address set forth above.

Proposed Exemption

Based on the facts and representations set forth in the application, the Department is considering granting the requested exemption under the authority of section 408(a) of the Act and section 4975(c)(2) of the Code and in accordance with the procedures set forth in ERISA Procedure 75-1. If the exemption is granted, the restrictions of sections 406(a), 406(b)(1) and 406(b)(2) of the Act, and the taxes imposed by section 4975(a) and (b) of the Code, by reason of section 4975(c)(1)(A) through (E) of the Code, shall not apply, effective January 1, 1975, to the loan agreement entered into on December 3, 1974, in which the Plan loaned $24,852.21 to the Employer. The proposed exemption, if granted, will be subject to the express conditions that the material facts and representations are true and complete, and that the application accurately describes all material terms of the transaction.

Signed at Washington, D.C. this 8th day of June, 1979.

Ian D. Lanoff,

Administrator, Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor.

BILLING CODE 4510-29-M

[Prohibited Transaction Exemption 79-25]

Exemption From the Prohibitions Respecting a Transaction Involving Restated Coburn Optical Industries, Inc. Profit Sharing Plan and Trust (D-492)

AGENCY: Department of Labor.

ACTION: Grant of individual exemption.

SUMMARY: This exemption enables the Restated Coburn Optical Industries, Inc. Profit Sharing Plan and Trust (the Plan) to sell certain parcels of real property to O. W. Coburn and/or Superior Investments, Inc., parties in interest with respect to the Plan.

FOR FURTHER INFORMATION CONTACT: Ronald D. Allen, Office of Fiduciary Standards, Pension and Welfare Benefit Programs, Room C-4526, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20216, telephone (202) 523-8883. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: On January 16, 1979, notice was published in the Federal Register (44 FR 3330) of the pendency before the Department of Labor (the Department) of an exemption from the provisions of sections 406(a)(1)(A) and (D) and 406(b)(1) and (b)(2) of the Employee Retirement Income Security Act of 1974 (the Act) and from the taxes imposed by sections 4975(a) and (b) of the Internal Revenue Code of 1954 (the Code) by reason of section 4975(c)(1)(A), (D) and (E) of the Code, for a transaction described in an application filed on behalf of the First National Bank and Trust Company of Muskogee, Oklahoma, Jim Liquidating Corp., and O. W. Coburn.

The notice set forth a summary of facts and representations contained in the application for exemption and referred interested persons to the application for a complete statement of the facts and representations. The application has been available for

public inspection at the Department in Washington, D.C. The notice also invited interested persons to submit comments on the requested exemption to the Department. In addition, the notice stated that any interested person might submit a written request that a hearing be held relating to the requested exemption.

One public comment was received by the Department and subsequently withdrawn. No requests for a hearing were received by the Department.

The application was filed with both the Department and the Internal Revenue Service. However, the notice of pendency was issued and the exemption is being granted, solely by the Department because, effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type proposed to the Secretary of Labor.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 408(a) of the Act and section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of the Act and the Code. These provisions include any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which among other things require a fiduciary to discharge his duties respecting the plan solely in the interests of participants and beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirements of section 401(a) of the Code that a plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries.

(2) This exemption does not extend to transactions prohibited under sections 406(a)(1) (B), (C), and (E), 406(a)(2) and 406(b)(3) of the Act and section 4975(c)(1) (B), (C), and (F) of the Code.

(3) This exemption is supplemental to, and not in derogation of, any other provisions of the Act and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

Exemption

In accordance with section 408(a) of the Act and section 4975(c)(2) of the Code, the procedures set forth in ERISA Proc. 75–1 (40 FR 18471, April 28, 1975) and based upon the entire record, the Department makes the following determinations:

(a) The exemption is administratively feasible;

(b) It is in the interests of the Plan and of its participants and beneficiaries; and

(c) It is protective of the rights of participants and beneficiaries of the Plan.

Accordingly, the following exemption is hereby granted under the authority of section 408(a) of the Act and section 4975(c)(2) of the Code and in accordance with the procedures set forth in ERISA Proc. 75–1.

The restrictions of sections 406(a)(1) (A) and (D) and 406(b)(1) and (b)(2) of the Act and the taxes imposed by sections 4975(c)(1) (A), (D) and (E) of the Code shall not apply to the cash sale of the remaining twenty-one lots in the Indian Drive subdivision at a price not less than the greater of either the 1977 appraised value of $135,000 or the fair market value at the time of sale, nor to the cash sale of the Tastee Freeze located at 604 East Side Boulevard, Muskogee, Oklahoma, at a price not less than the greater of either $58,500, or the fair market value of the property at the time of sale from the Plan to either O. W. Coburn or Superior Investments, Inc.

The availability of this exemption is subject to the express conditions that the material facts and representations contained in the application are true and complete and that the application accurately describes all material terms of the transaction consummated pursuant to the exemption.

Signed at Washington, D.C., 8th day of June, 1979.

Ian D. Lanoff,

Administrator, Pension and Welfare Benefit Programs, Labor-Management Services Administration, U.S. Department of Labor

BILLING CODE 4510-29-M

[Prohibited Transaction Exemption 79–28; Application No. D–854]

Exemption From the Prohibitions for Certain Transactions Involving the Retirement Plan for Employees of King Chevrolet Co.

AGENCY: Department of Labor.

ACTION: Grant of individual exemption.

SUMMARY: This exemption enables the Retirement Plan for Employees of King Chevrolet Company (the Plan) to sell a parcel of real property and the improvements thereon to King Chevrolet Company (the Employer).

FOR FURTHER INFORMATION CONTACT: Ronald D. Allen of the Office of Fiduciary Standards, Pension and Welfare Benefit Programs, Room C–4526, U.S. Department of Labor, 200 Constitution Avenue N.W., Washington, D.C. 20216, (202) 523–8883. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION: On April 13, 1979, notice was published in the Federal Register (44 FR 22226) of the pendency before the Department of Labor (the Department) of a proposal to grant an exemption from the restrictions of sections 406(a) 406(b) (1) and (2) of the Employee Retirement Income Security Act of 1974 (the Act) and from the taxes imposed by section 4975 (a) and (b) of the Internal Revenue Code of 1954 (the Code) by reason of sections 4975(c)(1) (A) through (E) of Code, for transactions described in an application filed by the Citizens First National Bank of Tyler, Texas, the Trustee of the Plan, the Plan and the Employer. The notice set forth a summary of facts and representations contained in the application for exemption and referred interested persons to the application for a complete statement of the facts and representations. The application has been available for public inspection at the Department in Washington, D.C. The notice also invited interested persons to submit comments on the requested exemption to the Department. In addition the notice stated that any interested person might submit a written request that a public hearing be held relating to this exemption. No public comments and no requests for a hearing were received by the Department.

This application was filed with both the Department and the Internal Revenue Service. However, the notice of pendency was issued and the exemption is being granted, solely by the Department because, effective December 31, 1978 section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type proposed to the Secretary of Labor.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption granted under section 406(a) of the Act and section

4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person with respect to a plan to which the exemption is applicable from certain other provisions of the Act and the Code. These provisions include any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which among other things, require a fiduciary to discharge his or her duties respecting the plan solely in the interest of the participants and beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does the fact the transaction is the subject of an exemption affect the requirement of section 401(a) of the Code that a plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries.

(2) This exemption does not extend to transactions prohibited under section 406(b)(3) of the Act and section 4975(c)(1)(F) of the Code.

(3) This exemption is supplemental to, and not in derogation of, any other provisions of the Act and the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption or transitional rule is not dispositive of whether the transaction is, in fact, a prohibited transaction.

Exemption

In accordance with section 408(a) of the Act and section 4975(c)(2) of the Code and the procedures set forth in ERISA Procedure 75-1 (40 FR 18471, April 28, 1975), and based upon the entire record, the Department makes the following determinations:

(a) The exemption is administratively feasible;

(b) It is in the interests of the plan and of its participants and beneficiaries; and

(c) It is protective of the rights of the participants and beneficiaries of the plan.

Therefore, the prohibitions of sections 406(a) and 406(b)(1) and (2) of the Act and the taxes imposed by section 4975(a) and (b) of the Code, by reason of section 4975(c)(1)(A) through (E) of the Code shall not apply to the sale by the Plan of real property, consisting of the land and building located at 517 West Irwin Street and legally described as lots 8, 9, and 10 in block 91, City of Tyler, Smith County, Texas, to the Employer for an aggregate cash consideration of $127,115, provided that this amount is not less than the fair market value of the property on the date of sale.

The availability of this exemption is subject to the express conditions that the material facts and representations contained in the application are true and complete, and that the application accurately describes all material terms of the transaction to be consummated pursuant to this exemption.

Signed at Washington, D.C., this 8th day of June, 1979.

Ian D. Lanoff,

Administrator, Pension and Welfare Benefit Programs Labor-Management Services Administration, U.S. Department of Labor.

[FR Doc. 79-18810 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-29-M

Office of the Secretary

[TA-W-5203]

Aberdeen Sportswear, Inc., Trenton, N.J.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 10, 1979 in response to a worker petition received on April 4, 1979 which was filed by the Amalgamated Clothing and Textile Workers' Union on behalf of workers and former workers producing men's outerwear (suits, jackets, shirts) at the Trenton, New Jersey plant of Aberdeen Sportswear, Incorporated. The investigation revealed that the plant produces primarily men's outer coats. It is concluded that all of the requirements have been met.

U.S. imports of men's and boys' non-tailored outer jackets increased both absolutely and relative to domestic production in 1977 compared to 1976 and increased absolutely in 1978 compared to 1977.

U.S. imports of men's, boys', women's, misses', juniors', and children's leather coats and jackets increased absolutely in 1977 compared to 1976 and increased both absolutely and relative to domestic production in 1978 compared to 1977.

A Departmental survey of Aberdeen's customers revealed that customers accounting for a significant proportion of the decline in Aberdeen's sales, in 1978 compared to 1977, increased purchases of imported outer coats during the same time period. Additionally, these customers have reduced orders placed with Aberdeen for delivery in 1979.

Conclusion

After careful reviw of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with men's outer coats produced at the Trenton, New Jersey plant of Aberdeen Sportswear, Incorporated contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of the Trenton, New Jersey plant of Aberdeen Sportswear, Incorporated who became totally or partially separated from employment on or after September 30, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 8th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

[FR Doc. 79-18807 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-28-M

[TA-W-5-527, et al.]

Act III; Spartanburg, S.C., et al.; Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, has instituted investigations pursuant to section 221(a) of the Act and 29 CFR 90.12.

The purpose of each of the investigations is to determine whether absolute or relative increases of imports of articles like or directly competitive with articles produced by the workers' firm or an appropriate subdivision thereof have contributed importantly to an absolute decline in sales or production, or both, of such firm or subdivision and to the actual or threatened total or partial separation of

a significant number or proportion of the workers of such firm or subdivision.

Petitioners meeting these eligibility requirements will be certified as eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act in accordance with the provisions of Subpart B of 29 CFR Part 90. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

Pursuant to 29 CFR 90.13, the petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not late than June 29, 1979.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than June 29, 1979.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

Signed at Washington, D.C. this 8th day of June 1979.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

[TA-W-5112]

Adkins Coal Co., McDowell County, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 5, 1979 in response to a worker petition received on April 2, 1979 which was filed by the United Mine Workers of America on behalf of workers and former workers mining coal at the Adkins Coal Company, Adkins Truck Mine, McDowell County, West Virginia. The investigation revealed that the correct name of the company is the Adkins Coal Company and that the firm mines metallurgical coal. In the following determination, at least one of the criteria has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

The Norfolk and Western Railroad is the only rail source is McDowell County where Adkins Coal Company is located. There was a strike at Norfolk and Western which lasted from July 7, 1978 until October 10, 1978, which forced the mine to reduce its operations during this time. There also was a strike by the United Mine Workers of America from December 6, 1977 until March 27, 1978 which caused Adkins Coal to cease operations for the duration for the Strike.

When the months unaffected by strikes are compared, employment did not decline in 1978 compared to 1977. As a contractor, Adkins' sales and production are equal. Production of metallurgical coal increased during the first quarter of 1979 compared to the first quarter of 1977.

Conclusion

After careful review, I determine that all workers of the Adkins Coal

Company, McDowell County, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of June 1979.

C. Michael Aho,

Director, Office of Foreign Economic Research.

BILLING CODE 4510-28-M

[TA-W-5270 and 5271]

Allied Chemical Corp., Harewood Mine and Preparation Plant, Montgomery, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with sectioni 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 23, 1979 in response to a worker petition received on April 18, 1979 which was filed by the United Mine Workers of America on behalf of workers and former workers producing metallurgical coal at the Harewood Mine and Preparation Plant of Allied Chemical Corporation's Semet-Solvay Division, Montgomery, West Virginia. In the following determination, without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

Coke is metallurgical coal at a later stage of processing. Since a domestic article may be "directly competitive" with an imported article at a later stage of processing, imports of both coke and metallurgical coal can be considered in determining import injury to workers producing metallurgical coal at Allied Chemical's Harewood mine and preparation plant.

Evidence developed during the course of the investigation revealed that none of the customers of Allied Chemical's Harewood mine purchased imported metallurgical coal and only one customer purchased imported coke. That customer represented an insignificant proportion of the mine's sales in 1977 and 1978 and has not purchased coal from Harewood since April 1978, one year before layoffs at the mine and preparation plant took place.

Conclusion

After careful review, I determine that all workers of the Harewood Mine and Preparation Plant of Allied Chemical Corporation's Semet-Solvay Division, Montgomery, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 7th day of June 1979.

Harry J. Gilman,

Supervisory International Economist, Office of Foreign Economic Research.

Apache Trucking Co.; Iaeger, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 5, 1979, in response to a worker petition received on April 2, 1979, which was filed by the United Mine Workers of America on behalf of workers and former workers of Apache Trucking Company, Iaeger, West Virginia, engaged in transporting coal.

Apache Trucking Company is engaged in providing the service of transporting coal by truck from a customer's mine to a tipple.

Thus, workers of Apache Trucking Company do not produce an article within the meaning of Section 222(3) of the Act. Therefore, they may be certified only if their separation was caused importantly by a reduced demand for their services from a parent firm, a firm otherwise related to Apache Trucking Company by ownership, or a firm related by control. In any case, the reduction in demand for services must originate at a production facility whose workers independently meet the statutory criteria for certification and that reduction must directly relate to the product impacted by imports.

Apache Trucking Company and its customers have no controlling interest in one another. The subject firm is not corporately affiliated with any other company.

All workers engaged in transporting coal by truck at Apache Trucking Company are employed by that firm. All personnel actions and payroll transactions are controlled by Apache Trucking Company. All employee benefits are provided and maintained by Apache Trucking Company. Workers are not, at any time, under employment or supervision by customers of Apache Trucking Company. Thus, Apache Trucking Company, and not any of its customers, must be considered to be the "workers' firm".

Conclusion

After careful review, I determine that all workers of Apache Trucking Company, Iaeger, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of June 1979.

Harry J. Gilman,

Supervisory International Economist, Office of Foreign Economic Research.

Aurora Products, Secaucus, N.J.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of Section 222 of the Act must be met.

The investigation was initiated on March 21, 1979, in response to a worker petition received on March 16, 1979, which was filed on behalf of workers and former workers producing plastic toys and model kits at Aurora Products, Secaucus, New Jersey. The investigation revealed that the plant produces primarily electric race car sets, model kits and air hockey games. In the

following determination, without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

A Departmental survey of Aurora Products' customers for 1976, 1977 and 1978 revealed that none of the respondents purchased any imported electric race car sets, model kits or air hockey games in the 1976–1978 period.

Conclusion

After careful review, I determine that all workers of Aurora Products, Secaucus, New Jersey are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 4th day of June 1979.

B & G Trucking Co., Inc., Princeton, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 5, 1979, in response to a worker petition received on April 2, 1979, which was filed by the United Mine Workers of America on behalf of workers and former workers of B & G Trucking Company, Incorporated, Princeton, West Virginia, a contract hauler.

B & G Trucking Company, Incorporated is engaged in providing the service of transporting coal by truck from a customer's mine to a tipple and transporting rock.

Thus, workers of B & G Trucking Company, Incorporated do not produce an article within the meaning of section 222(3) of the Act. Therefore, they may be certified *only if* their separation was caused importantly by a reduced demand for their services from a parent firm, a firm otherwise related to B & G Trucking Company, Incorporated by ownership, or a firm related by control. In any case, the reduction in demand for services must originate at a production facility whose workers independently meet the statutory criteria for certification and that reduction must directly relate to the product impacted by imports.

B & G Trucking Company, Incorporated and its customers have no controlling interested in one another. The subject firm is not corporately affiliated with any other company.

All workers engaged in transporting coal by truck at B & G Trucking Company, Incorporated are employed by that firm. All personnel actions and payroll transactions are controlled by B & G Trucking Company, Incorporated. All employee benefits are provided and maintained by B & G Trucking Company, Incorporated. Workers are not, at any time, under employment or supervision by customers of B & G Trucking Company, Incorporated. Thus, B & G Trucking Company, Incorporated, and not any of its customers, must be considered to be the "workers' firm".

Conclusion

After careful review, I determine that all workers of B & G Trucking Company, Incorporated, Princeton, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of June 1979.

BILLING CODE 4510-28-M

[TA-W-5,510 et al.]

Bethlehem Mine Corp.; Charleston, W. Va. et al.; Investigations Regarding Certifications of Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, has instituted investigations pursuant to section 221(a) of the Act and 29 CFR 90.12.

The purpose of each of the investigations is to determine whether absolute or relative increases of imports of articles like or directly competitive with articles produced by the workers' firm or an appropriate subdivision thereof have contributed importantly to an absolute decline in sales or production, or both, of such firm or subdivision and to the actual or threatened total or partial separation of a significant number or proportion of the workers of such firm or subdivision.

Petitioners meeting these eligibility requirements will be certified as eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act in accordance with the provisions of Subpart B of 29 CFR Part 90. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

Pursuant to 29 CFR 90.13, the petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than June 29, 1979.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than June 29, 1979.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Bureau of International Labor Affairs, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210.

Signed at Washington, D.C. this 7th day of June 1979.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

[TA-W-4747]

Bethlehem Steel Corp., Sparrows Point Shipyard, Sparrows Point, Md.; Revised Certification of Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on March 26, 1979, applicable to all workers of the Sparrows Point Shipyard of the Bethlehem Steel Corporation, Sparrows Point, Maryland. Notice of Certification was published in the Federal Register on March 30, 1979, (44 FR 19067).

On the basis of additional information, the Office of Trade Adjustment Assistance, on its own motion, reviewed the certification. The review of the case revealed that numerous layoffs occurred in certain Departments in May and June, 1978-of workers employed in the early phase of ship construction. These layoffs were not covered by the impact date of July 1, 1978.

The intent of the certification is to cover all workers who were affected by the decline in production of merchant vessels related to import competition. The certification, therefore, is revised to include workers in Departments 42, 82, 65, 58 and 75 who became separated from employment on or after May 1, 1978.

The revised certification applicable to TA-W-4747 is hereby issued as follows:

All workers in Departments 42, 82, 65, 58 and 75 of the Sparrows Point Shipyard of the Bethlehem Steel Corporation, Sparrows Point, Maryland, who became totally or partially separated from employment on or after May 1, 1978, and all other workers of the Sparrows Point Shipyard of the Bethlehem Steel Corporation, Sparrows Point, Maryland, who became totally or partially separated from employment on or after July 1, 1978, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C., this 6th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

[FR Doc. 79-18706 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-28-M

[TA-W-5162 and 5163]

Betty Coal Co., Betty Mine #13B, Betty Mine #8; Iaeger, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 6, 1979, in response to a worker petition received on April 2, 1979, which was filed by the United Mine Workers of America on behalf of workers and former workers mining metallurgical coal at the Betty Coal Company's Betty Mine #13B (TA-W-5162) and Betty Mine #8 (TA-W-5163), Iaeger, West Virginia. In the following determination, without regard to whether any of the criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

The Department's investigation revealed that the Betty Coal Company's customers export all of the coal they purchase from the subject firm, therefore any imports of coal or coke will have a negligible impact of employment.

Conclusion

After careful review, I determine that all workers of the Betty Coal Company's Betty Mine #13B and Bety Mine #8, Iaeger, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 8th day of June 1979.

James F. Taylor,

Director, Office of Management, Administrtion, and Planning.

BILLING CODE 4510-28-M

[TA-W-5116 and 5116A]

Black Mountain Coal Co., Inc., T/A Algoma Energy Corp., No. 16 Mine, No. 12 Mine, McDowell County, W. Va.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 5, 1979, in response to a worker petition received on April 2, 1979, which was filed by the United Mine Workers of America on behalf of workers and former workers mining coal at Black Mountain Coal Company, Incorporated, Black Mountain Truck Mine, McDowell County, West Virginia. The investigation revealed that the Black Mountain Coal Company operates two mines, #16 Mine and #12 Mine, in McDowell County, West Virginia and the investigation revealed that in West Virginia the company operates under the title of the Black Mountain Coal Company, Incorporated, T/A Algoma Energy Corporation. It is concluded that all of the requirements have been met.

U.S. imports of metallurgical coal are negligible. However, in accordance with section 222 of the Trade Act of 1974 and 29 CFR 90.2, a domestic article may be "directly competitive" with an imported article at a later stage of processing. Coke is metallurgical coal at a later stage of processing. Therefore, imports of coke as well as imports of metallurgical coal should be considered in determining import injury to workers producing metallurgical coal.

U.S. imports of coke increased absolutely and relatively in 1977 compared to 1976 and in 1978 compared to 1977.

Black Mountain Coal Company is a contract mining operation and must deliver all of its coal to the larger coal company with whom it contracts. This larger coal company reduced the amount of its orders from Black Mountain as a result of declines in its own sales of metallurgical coal in 1978 compared to 1977. A Department survey established that one major customer sharply reduced its purchases of metallurgical coal from the larger coal company in 1978 compared to 1977 due to a decline in its owns sales of metallurgical coal to two large U.S. steel producers. This customer accounted for the preponderance of the decline in sales in 1978 compared to 1977 by the larger coal company for whom Black Mountain contracts. Further investigation revealed that these steel producers increased imports of coke in 1978 compared to 1977.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with metallurgical coal produced at the #16 Mine and the #12 Mine of the Black Mountain Coal Company, T/A Algoma Energy Corporation contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of the #16 Mine and the #12 Mine of the Black Mountain Coal Company, T/A Algoma Energy Corporation, McDowell County, West Virginia who became totally or partially separated from employment on or after January 12, 1979, are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of June 1979.

C. Michael Aho,

Director, Office of Foreign Economic Research.

[FR Doc. 79-18707 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-28-M

[TA-W-5164]

Bowen Trucking Co., Bowen Mine, Maben, W. Va.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 6, 1979 in response to a worker petition received on April 2, 1979 which was filed by the United Mine Workers of America, District 29 on behalf of workers and former workers mining metallurgical coal at Bowen Trucking Company, Bowen Mine, Maben, West Virginia. It is concluded that all of the requirements have been met.

The petition was filed on behalf of workers mining metallurgical coal. In accordance with section 222 of the Trade Act and 29 CFR 90.2, a domestic article may be "directly competitive" with an imported article at a later stage of processing. Coke is metallurgical coal at a later stage of processing. Therefore, imports of coke as well as imports of metallurgical coal should be considered in determining import injury to workers mining metallurgical coal.

Although U.S. imports of metallurgical coal have been negligible, U.S. imports of coke increased absolutedly and relative to domestic production from 1976 to 1977 and from 1977 to 1978.

Bowen mines coal on a contract basis for a single coal company. A Departmental Survey of that coal company revealed that it had reduced its purchases of coal from Bowen as a result of a decline in its own sales of metallurgical coal to its customers. The Department of Labor also conducted a survey of the major customers purchasing metallurgical coal from the coal company. Several of these customers reduced purchases from the coal company and increased purchases of imported coke from 1977 to 1978.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with metallurgical coal mined by Bowen Trucking Company, Bowen Mine, Maben, West Virginia contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of Bowen Trucking Company, Bowen Mine, Maben, West Virginia who become totally or partially separated from employment on or after October 1, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 5th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

BILLING CODE 4510-28-M

[TA-W 5218, 5222, and 5228]

Brady Cline Coal Co., Gauley Coal Sales Co., Margaret Peerless Coal Co., Summersville, W. Va.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Act must be met.

The investigations were initiated on April 12, 1979 in response to worker petitions received on April 9, 1979 which were filed by the United Mine Workers of America on behalf of workers and former workers producing coal for Brady Cline Coal Company, Gauley Coal Sales Company and Margaret Peerless Coal Company, Summersville, West Virginia. It is concluded that all of the requirements have been met.

U.S. imports of metallurgical coal are negligible. However, in accordance with Section 222 of the Trade Act of 1974 and 29 CFR 90.2, a domestic article may be "directly competitive" with an imported article at a later stage of processing. Coke is metallurgical coal at a later stage of processing. Therefore, imports of coke as well as imports of metallurgical coal should be considered in determining import injury to workers producing metallurgical coal.

U.S. imports of coke increased in 1977 from 1976 and again in 1978 from 1977, both absolutely and relative to domestic production.

The Department of Labor conducted a survey of the major customers purchasing metallurgical coal from Brady Cline Coal Company and Margaret Peerless Coal Company. Some customers reduced purchases from Brady Cline and Margaret Peerless and increased imports of metallurgical coal and/or coke from 1977 to 1978.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with metallurgical coal produced at Brady Cline Coal Company, Gauley Coal Sales Company and Margaret Peerless Coal Company contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of Brady Cline Coal Company, Gauley Coal Sales Company and Margaret Peerless Coal Company engaged in employment related to the production of metallurgical coal who became totally or partially separated from employment on or after the respective impact dates (see below) are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

TA-W-	Facility	Impact date
5218	Brady Cline Coal Company.	
	Mine # 5	March 30, 1979.
	Mine # 7	December 22, 1978.
	Mine # 14	July 21, 1978.
5222	Gauley Coal Sales Company.	December 29, 1978.
5228	Margaret Peerless Coal Company.	March 1, 1979.

Brierwood Shoe Corp., De Witt Division, Clarendon, Ark., and De Witt, Ark.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Act must be met.

The investigation was initiated on April 6, 1979, in response to a worker petition received on April 3, 1979, which was filed on behalf of workers and former workers producing men's and boys' shoes at the DeWitt Division of Brierwood Shoe Corporation, Clarendon, Arkansas and DeWitt, Arkansas. It is concluded that all of the requirements have been met.

U.S. imports of men's dress and casual footwear, except athletic, increased absolutely and relative to domestic production from 1976 to 1977. Imports decreased absolutely but increased relatively from 1977 to 1978.

U.S. imports of youth's and boys' dress and casual footwear, except athletic, decreased absolutely and increased relative to domestic production from 1976 to 1977. Imports decreased absolutely and relatively from 1977 to 1978.

A survey of major customers of the DeWitt Division revealed that one major customer increased its purchases of imported men's and boys' footwear and decreased its purchases of footwear from DeWitt Division in 1978 compared to 1977.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with men's and boys' casual footwear produced at the DeWitt Division of Brierwood Shoe Corporation, Clarendon, Arkansas and DeWitt, Arkansas contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

All workers of the DeWitt Division of Brierwood Shoe Corporation, Clarendon, Arkansas and DeWitt, Arkansas who became totally or partially separated from employment on or after March 28, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 5th day of June 1979.

C. Michael Aho,

Director, Office of Foreign Economic Research.

BILLING CODE 4510-28-M

[TA-W-5219]

Buckeye Sugars, Inc., Ottawa, Ohio; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification

of eligibility to apply for adjustment assistance, each of the group eligibility requirements of Section 222 of the Act must be met.

The investigation was initiated on April 12, 1979 in response to a worker petition received on April 9, 1979 which was filed by the United Steelworkers of America on behalf of workers and former workers producing refined beet sugar at Buckeye Sugars, Inc., Ottawa, Ohio. It is concluded that all of the requirements have been met.

United States imports of refined sugar increased in value in 1977 from 1976, declined in 1978 from 1977 and increased in January–March 1979 compared to January–March 1978.

A survey conducted by the U.S. Department of Commerce revealed that some customers who reduced purchases from Buckeye Sugars, Inc. in 1978 from 1977 purchased imported refined sugar during the same period. On April 4, 1979 the Department of Commerce issued a certification of eligibility to Buckeye Sugars, Inc. to apply for firm adjustment assistance under the Trade Act of 1974.

The annual beet acreage harvested by independent growers for buckeye Sugars, Inc. declined in crop year 1977 from crop year 1976 and declined again in crop year 1978 from crop year 1977. No beet acreage will be harvested for Buckeye Sugars in crop year 1979.

Sales of refined beet sugar by Buckeye Sugars, Inc. declined in 1978 from 1977. Buckeye Sugars will not conduct a sugar campaign in 1979.

Compared to the same quarter of the previous year, average employment of production workers by Buckeye Sugars declined during three consecutive quarters from the third quarter of 1978 through the first quarter of 1979.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with refined beet sugar produced at Buckeye Sugars, Inc., Ottawa, Ohio contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

"All workers of Buckeye Sugars, Inc., Ottawa, Ohio engaged in employment related to the production of refined beet sugar who became totally or partially separated from employment on or after July 3, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974."

Signed at Washington, D.C. June 6, 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

Byars Trucking, McGraws, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 5, 1979, in response to a worker petition received on April 2, 1979, which was filed by the United Mine Workers of America on behalf of workers and former workers of Byars Trucking, McGraws, West Virginia, a contract hauler.

Byars Trucking was engaged in providing the service of transporting coal by truck from a customer's mine to a tipple. The company ceased operations in January 1979.

Thus, workers of Byars Trucking did not produce an article within the meaning of Section 222(3) of the Act. Therefore, they may be certified only if their separation was caused importantly by a reduced demand for their services from a parent firm, a firm otherwise related to Byars Trucking by ownership, or a firm related by control. In any case, the reduction in demand for services must originate at a production facility whose workers independently meet the statutory criteria for certification and that reduction must directly relate to the product impacted by imports.

Byars Trucking and its customers had no controlling interest in one another. The subject firm was not corporately affiliated with any other company.

All workers engaged in transporting coal by truck at Byars Trucking were employed by that firm. All personnel actions and payroll transactions were controlled by Byars Trucking. All employee benefits were provided and maintained by Byars Trucking. Workers were not, at any time, under employment or supervision by customers of Byars Trucking. Thus, Byars Trucking, and not any of its customers, must be considered to be the "workers' firm".

Conclusion

After careful review, I determine that all workers of Byars Trucking, McGraws, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 4th day of June 1979.

Harry J. Gilman,

Supervisory International Economist, Office of Foreign Economic Research.

[TA-W-5390]

Casey Manufacturing Co., Casey, Ill.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on May 15, 1979 in response to a worker petition received on May 14, 1979 which was filed on behalf of workers and former workers producing children's shoes at Casey Manufacturing Company, Casey, Illinois. In the following determination, without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

The average number of production workers at Casey Manufacturing increased in 1978 compared with 1977 and in each of the four quarters in 1978 compared to the same quarters of the

previous year. Casey experienced temporary declines in employment and production in early 1979 due to normal business fluctuations. Employment and production began increasing in March 1979 and have continued to increase to date.

Conclusion

After careful review, I determine that all workers at Casey Manufacturing Company, Casey, Illinois are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 5th day of June 1979.

C. Michael Aho,

Director, Office of Foreign Economic Research.

BILLING CODE 4510-28-M

[TA-W-5044]

Clausing Corp., Warsaw, Ind.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on March 28, 1979, in response to a worker petition received on March 23, 1979, which was filed by the United Steelworkers of America on behalf of workers and former workers producing lathes at Clausing Corporation, Warsaw, Indiana. It is concluded that all of the requirements have been met.

U.S. imports of engine lathes increased absolutely and relative to domestic production from 1976 to 1977 and decreased from 1977 to 1978. Despite the decrease, imports were greater in 1978 than in 1976.

The Department surveyed Clausing Corporation's major customers. Customers whose purchases of lathes from Clausing accounted for a significant proportion of its declines in production in 1978 increased their purchases of imported lathes in 1978 compared to 1977.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with lathes produced at the Warsaw, Indiana plant of Clausing Corporation contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

"All workers of Clausing Corporation, Warsaw, Indiana who became totally or partially separated from employment on or after March 21, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974."

Signed at Washington, D.C. this 5th day of June 1979.

C. Michael Aho,

Director, Office of Foreign Economic Research.

BILLING CODE 4510-28-M

[TA-W-5169]

Coal King Corp., Beckley, W. Va.; Matthew Meade Mine, Shady Spring, W. Va.; Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974, an investigation was initiated on April 6, 1979 in response to a worker petition received on April 2, 1979 which was filed on behalf of workers and former workers mining metallurgical coal at Matthew Meade Mine in Shady Spring, West Virginia of Coal King Corporation, Beckley, West Virginia.

The Notice of Investigation was published in the **Federal Register** on April 13, 1979 (44 FR 22209–10). No public hearing was requested and none was held.

During the course of the investigation, it was established that all workers of the Matthew Meade Mine of Coal King Corporation were separated from employment in November 1977. Section 223(b) of the Trade Act of 1974 states that no certification under this section may apply to any worker whose last total or partial separation from the firm or appropriate subdivision of the firm occurred more than one year prior to the date of the petition.

The date of the petition in this case is March 27, 1979 and, thus, workers terminated prior to March 27, 1978 are not eligible for program benefit under Title II, Chapter 2, Subchapter B of the Trade Act of 1974. The investigation of the Matthew Meade Mine is therefore terminated.

Signed at Washington, D.C. this 5th day of June 1979.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

[FR Doc. 79-18715 Filed 6-14-79; 8:45 am]

BILLING CODE 4510-28-M

[TA-W-5170-5172 et al.]

Coal King Corp., Beckley, W. Va., et al.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of investigations regarding certifications of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 6, 1979 in response to a worker petition received on April 2, 1979 which was filed by the United Mine Workers of America on behalf of workers formerly mining metallurgical coal at the following mines of Coal King Corporation, Beckley, West Virginia: Bonnie Beth Mine of Shady Spring, West Virginia; Tarrah Leigh Mine of Daniels, West Virginia; and LSQ #2 Mine of Daniels, West Virginia.

U.S. imports of metallurgical coal are negligible. However, coke is metallurgical coal in a later stage of processing, and is therefore "directly competitive" with metallurgical coal. U.S. imports of coke increased on an absolute basis and relative to domestic production in 1977 compared to 1976 and in 1978 compared to 1977.

Coal King Corporation sold all of its coal to one preparation plant. A Labor Department survey of the major customers who bought the coal from the preparation plant revealed that these customers significantly decreased purchases of metallurgical coal from that firm while increasing purchases of imported coke in 1978 as compared to 1977.

Conclusion

After a careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with metallurgical coal produced at the Bonnie Beth Mine, Shady Spring, West Virginia; the Tarrah Leigh Mine, Daniels, West Virginia; and the LSQ #2 Mine,

Daniels, West Virginia of Coal King Corporation contributed importantly to the decline in sales or production and to the total or partial separation of workers of these mines. In accordance with the provisions of the Act, I make the following certifications:

"All workers of the following mines of Coal King Corporation of Beckley, West Virginia who became totally or partially separated from employment on or after the indicated impact date are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974."

TA-W-	Mine location	Impact date
5170	Bonnie Beth Mine; Shady Spring, WV.	Oct. 6, 1978.
5171	Terrah Leigh Mine; Daniels, WV	Sept. 22, 1978.
5172	LSO No. 2 Mine; Daniels, WV	June 2, 1978.

Signed at Washington, D.C. this 5th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

BILLING CODE 4510-28-M

[TA-W-5173]

Coolridge Equipment & Mining Co., Shady Spring, W.Va.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 6, 1979 in response to a worker petition received on April 2, 1979 which was filed by the United Mine Workers of America on behalf of workers and former workers of Coolridge Equipment and Mining Company, Shady Spring, West Virginia who mine coal at the L & F Strip Mine, Raleigh County, West Virginia. It is concluded that all of the requirements have been met.

U.S. imports of metallurgical coal are negligible. However, coke is metallurgical coal in a later stage of processing, and is therefore "directly competitive" with metallurgical coal. U.S. imports of coke increased on an absolute basis and relative to domestic production in 1977 as compared to 1976 and in 1978 as compared to 1977.

Coolridge Equipment and Mining Company is a mining contractor which sells all its coal to a single coal company. A Departmental survey of that coal company revealed that it had reduced its purchases of coal as a result of a decline in its own sales of metallurgical coal to large U.S. steel producers. A secondary survey revealed that several of these steel producers had increased imports of coke in 1978 compared to 1977.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with metallurgical coal mined by Coolridge Equipment and Mining Company of Shady Spring, West Virginia, at the L & F Strip Mine in Raleigh County, West Virginia contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

"All workers of Coolridge Equipment and Mining Company, Shady Spring, West Virginia who became totally or partially separated from employment on or after December 1, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974."

Signed at Washington, D.C. this 5th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

Cooper-Wise, Maplewood, N.J.; Termination of Investigation

Pursuant to section 221 of the Trade Act of 1974 (19 U.S.C. 2273), an investigation was initiated on May 21, 1979 in response to a worker petition received on May 18, 1979 which was filed on behalf of workers and former workers producing pocket knives at Cooper Wise, Maplewood, New Jersey.

During the course of the investigation, it was established that all workers at the Cooper Wise, Maplewood, New Jersey plant were previously certified eligible under TA-W-3294. Since all workers separated, totally or partially, form the Cooper Wise, Maplewood, New Jersey plant on or after December 10, 1977 (impact date), and before October 20, 1980 (expiration date) are covered by an existing certification, a new investigation would serve no purpose. Consequently, the investigation has been terminated.

Signed at Washington, D.C. this 8th day of June 1979.

Marvin M. Fooks,

Director, Office of Trade Adjustment Assistance.

Crescent Sea Food Products Co., Paterson, N.J.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 6, 1979 in response to a worker petition received on April 4, 1979 which was filed on behalf of workers and former workers wholesaling fresh and frozen fish at Crescent Sea Food Products Company, Paterson, New Jersey. The investigation revealed that the company was also engaged in the distribution and filleting of fresh fish. In the following determination, without regard to whether any of the other criteria have been met, the following criterion has not been met:

That increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

Evidence developed during the course of the investigation revealed that the Crescent Sea Food Products Company is almost exclusively engaged in the wholesaling and distribution of fresh and frozen fish. Crescent was primarily engaged in the purchase of fish for resale. Filleting fish, which was the only production work Crescent performed, accounted for a minor portion of the firm's sales.

Conclusion

After careful review, I determine that all workers of Crescent Sea Food Products Company, Paterson, New

Jersey are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 5th day of June 1979.

Cyclops Corp., Detroit Strip Division, Hamden, Conn.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on April 12, 1979 in response to a worker petition received on April 10, 1979 which was filed by the United Steelworkers of America on behalf of workers and former workers producing cold rolled carbon steel strip at the Hamden, Connecticut plant of the Detroit Strip Division of the Detroit Steel Corporation. The investigation revealed that the correct name of the firm for which the petition was filed is the Detroit Strip Division of the Cyclops Corporation. In the following determination, at least one of the criteria has not been met:

That sales or production, or both, of the firm or subdivision have decreased absolutely.

Plant sales and production of cold rolled carbon steel strip increased in 1978 compared to 1977 and continued to increase in the first quarter of 1979 compared to the like quarter in 1978.

Conclusion

After careful review, I determine that all workers of the Detroit Strip Division of the Cyclops Corporation in Hamden, Connecticut are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 5th day of June 1979.

C. Michael Aho,

Director, Office of Foreign Economic Research.

[TA-W-5206]

Diego Trucking Co., Glen Jean, W. Va.; Negative Determination Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance each of the group eligibility requirements of section 22 of the Act must be met.

The investigation was initiated on April 10, 1979, in response to a worker petition received on March 30, 1979, which was filed by the United Mine Workers of America on behalf of workers and former workers of Diego Trucking Company, Glen Jean, West Virginia, engaged in coal transporting.

Diego Trucking Company is a contractor engaged in subcontracting the service of transporting coal by truck from a customer's mine to a tipple.

Thus, workers of Diego Trucking Company do not produce an article within the meaning of Section 222(3) of the Act. Therefore, they may be certified only if their separation was caused importantly by a reduced demand for their services from a parent firm, a firm otherwise related to Diego Trucking Company by ownership, or a firm related by control. In any case, the reduction in demand for services must originate at a production facility whose workers independently meet the statutory criteria for certification and that reduction must directly relate to the product impacted by imports.

Diego Trucking Company and its customers have no controlling interest in one another. The subject firm is not corporately affiliated with any other company.

All workers engaged in subcontracting coal transporting operations at Diego Trucking Company are employed by that firm. All personnel actions and payroll transactions are controlled by Diego Trucking Company. All employee benefits are provided and maintained by Diego Trucking Company. Workers are not, at any time, under employment or supervision by customers of Diego Trucking Company. Thus, Diego Trucking Company, and not any of its customers, must be considered to be the "workers' firm".

Conclusion

After careful review, I determine that all workers of Diego Trucking Company, Glen Jean, West Virginia are denied eligibility to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974.

Signed at Washington, D.C. this 8th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

BILLING CODE 4510-28-M

[TA-W-5090]

Essex Group, Inc., Wire Assembly Division, Lafayette, Ind.; Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents the results of an investigation regarding certification of eligibility to apply for worker adjustment assistance.

In order to make an affirmative determination and issue a certification of eligibility to apply for adjustment assistance, each of the group eligibility requirements of section 222 of the Act must be met.

The investigation was initiated on March 30, 1979 in response to a worker petition received on March 26, 1979 which was filed by the International Association of Machinists and Aerospace Workers on behalf of workers and former workers producing automotive wire harness assemblies at the Lafayette, Indiana plant of the Wire Assembly Division of Essex Group, Incorporated. It is concluded that all of the requirements have been met.

U.S. imports of automotive wire harnesses increased in value in 1978 from 1977.

All production activities by the Lafayette, Indiana plant of the Wire Assembly Division of Essex Group, Inc. were discontinued in March 1979. After the closing of the Lafayette plant, production of wire harnesses manufactured by the plant was transferred to a Canadian wire harness assembly plant operated by the Division.

Conclusion

After careful review of the facts obtained in the investigation, I conclude that increases of imports of articles like or directly competitive with automotive wire harness assemblies produced at the Lafayette, Indiana plant of the Wire Assembly Division of Essex Group, Inc. contributed importantly to the decline in sales or production and to the total or partial separation of workers of that firm. In accordance with the provisions of the Act, I make the following certification:

"All workers of the Layette, Indiana plant of the Wire Assembly Division of Essex Group, Inc. who became totally or partially separated from employment on or after September 18, 1978 are eligible to apply for adjustment assistance under Title II, Chapter 2 of the Trade Act of 1974."

Signed at Washington, D.C. this 8th day of June 1979.

James F. Taylor,

Director, Office of Management, Administration, and Planning.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Museum Advisory Panel; Amended Notice of Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), as amended, notice is hereby given that a meeting of the Museum Advisory Panel to the National Council on the Arts which appeared in the Federal Register, Vol. 44, No. 104, Tuesday, May 29, 1979, page 30783 is amended as follows:

The portion of this meeting which will be open to the public has been changed from June 11, 1979, from 9 a.m. to 5 p.m. to June 12, 1979, from 9 a.m. to 5 p.m.

The remaining sessions of this meeting on June 11, 1979, from 9 a.m. to 5 p.m. are for the purpose of Panel review, discussion, evaluation, and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including discussion of information given in confidence to the agency by grant applicants. In accordance with the determination of the Chairman published in the Federal Register March 17, 1977, these sessions will be closed to the public pursuant to subsections (c)(4), (6) and 9(b) of section 552b of Title 5, United States Code.

Further information with reference to this meeting can be obtained from Mr. John H. Clark, Advisory Committee Management Officer, National Endowment for the Arts, Washington, D.C. 20506, or call (202) 634-6070.

John H. Clark,

Director, Office of Council and Panel Operations, National Endowment for the Arts.

June 8, 1979.

BILLING CODE 7537-01-M

NUCLEAR REGULATORY COMMISSION

Advisory Committee on Reactor Safeguards, Subcommittee on the La Crosse Nuclear Power Plant; Meeting

The ACRS Subcommittee on the La Crosse Nuclear Power Plant, will hold a meeting on June 30, 1979 in Room 1046, 1717 H St., N.W., Washington, DC 20555.

The purpose of this meeting is to review the overall condition of the reactor plant, and the status of the NRC systematic evaluation. Notice of this meeting was published on May 24, 1979 (44 FR 30177).

In accordance with the procedures outlined in the Federal Register on October 4, 1978 (43 FR 45926), oral or written statements may be presented by members of the public, recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and Staff. Persons desiring to make oral statements should notify the Designated Federal Employee as far in advance as practicable so that appropriate arrangements can be made to allow the necessary time during the meeting for such statements.

The agenda for subject meeting shall be as follows: *Saturday, June 30, 1979, 8:30 a.m. until the conclusion of business.*

The Subcommittee may meet in Executive Session, with any of its consultants who may be present, to explore and exchange their preliminary opinions regarding matters which should be considered during the meeting and to formulate a report and recommendations to the full Committee.

At the conclusion of the Executive Session, the Subcommittee will hear presentations by and hold discussions with representatives of the NRC Staff, the Dairyland Power Cooperative, et al., and their consultants, pertinent to this review.

The Subcommittee may then caucus to determine whether the matters identified in the initial session have been adequately covered and whether any aspects need to be reviewed by the full Committee.

In addition, it may be necessary for the Subcommittee to hold one or more closed sessions for the purpose of exploring matters involving proprietary information. I have determined, in accordance with Subsection 10(d) of Pub. L. 92-463, that, should such sessions be required, it is necessary to close these sessions to protect proprietary information (5 U.S.C. 552b(c)(4)).

Further information regarding topics to be discussed, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the Designated Federal Employee for this meeting, Mr. John C. McKinley

(telephone 202/634-3265), between 8:15 a.m. and 5 p.m., EDT.

Background information concerning items to be considered at this meeting can be found in documents on file and available for public inspection at the NRC Public Document Room, 1717 H Street, N.W., Washington, DC 20555 and at the La Crosse Public Library, 800 Main Street, La Crosse, WI 54601.

Dated: June 11, 1979.

John C. Hoyle,

Advisory Committee Management Officer.

BILLING CODE 7590-01-M

[Docket Nos. 50-454 and 50-455]

Commonwealth Edison Co., Byron Station, Units 1 and 2; Special Prehearing Conference

Take notice that a special prehearing conference in this proceeding will be held on Wednesday, July 25, 1979, at 9:30 a.m., at the Industrial Commission Courtroom (4th Floor), Winnebago County Courthouse, 400 West State Street, Rockford, Illinois.

Those petitioners who have made adequate statements of their interest in the proceeding are reminded that, pursuant to § 2.714(b), no later than 15 days prior to the holding of this prehearing conference, they must "file a supplement to [their petitions] which must include a list of those contentions [the petitioners seek] to have litigated . . . and the bases for each contention [must be] set forth with reasonable specificity."

Members of the public may request permission to make a limited appearance pursuant to § 2.715(a) of the Commission's Rules of Practice, 10 CFR Part 2. A person making a limited appearance does not become a party but may state his position on the issues and may raise relevant questions which he wishes to have answered by the parties. Limited appearances will be received at the July 25 prehearing conference at the discretion of the Board within such limits and on such conditions as may be set by the Board.

Dated at Bethesda, Maryland this 8th day of June 1979.

Edward Luton,

Chairman.

BILLING CODE 7590-01-M

[Docket No. 50-255]

Consumers Power Co.; Issuance of Amendment to Provisional Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 49 to Provisional Operating License No. DPR-20, issued to Consumers Power Company (the licensee), which revised Technical Specifications for operation of the Palisades Plant (the facility), located in Covert Township, Van Buren County, Michigan. The amendment is effective as of its date of issuance.

The amendment increases the enrichment limit for fuel assemblies in the new and spent fuel storage racks.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR § 51.5(d)(4) an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action, see (1) the application for amendment dated December 18, 1978, and supplement thereto dated January 12, 1979, (2) Amendment No. 49 to License No. DPR-20, and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, N.W., Washington, D.C. and at the Kalamazoo Public Library, 315 South Rose Street, Kalamazoo, Michigan 49006. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Operating Reactors.

Dated at Bethesda, Maryland, this 29th day of May, 1979.

For the Nuclear Regulatory Commission.

Dennis L. Ziemann,

Chief, Operating Reactors Branch #2, Division of Operating Reactors.

[FR Doc. 79-18608 Filed 6-14-79; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-267]

Public Service Co. of Colorado; Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 21 to Facility Operating License No. DPR-34, issued to Public Service Company of Colorado, which revised Technical Specifications for operation of the Fort St. Vrain Nuclear Generating Station, located in

Weld County, Colorado. The amendment is effective as of its date of issuance.

The amendment revised the Technical Specifications to: (1) Modify the fire protection system for the three room complex, the Auxiliary Electric Room, the 480 Volt Switchgear Room and the congested cable areas; this constitutes Stage III fire protection implementation; (2) Convert the Interim Alternate Cooling method to the final Alternate Cooling Method; (3) Test the reactor building louver system on a quarterly basis; (4) Eliminate the manual isolation of the high pressure helium supply from the helium circulator buffer supply header; and (5) add two firewater booster pumps to the firewater system to provide adequate capacity to operate a circulator water turbine and supply emergency cooling water for safe shutdown cooling.

The applications for the amendment comply with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations. The Commission has made appropriate findings as required by the Act and the Commission's regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR 51.5(d)(4) an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action see: (1) the applications for amendment dated December 11, 1978, September 8, 1978, April 2, 1979, November 16, 1977, and October 5, 1978, (2) Amendment No. 21 to License No. DPR-34, and (3) the Commission's related Safety Evaluation. These items are available for public inspection at the Commission's Public Document Room, 1717 H Street, NW., Washington, D.C., 20555, and at the Greeley Public Library, City Complex Building, Greeley, Colorado 80631.

A copy of items (2) and (3) may be obtained upon request addressed to the United States Nuclear Regulatory Commission, Washington, D.C. 20555. Attention: Director, Division of Project Management, Office of Nuclear Reactor Regulation.

Dated at Bethesda, Maryland, this 8th day of June, 1979.

For The Nuclear Regulatory Commission

William P. Gammill,

Assistant Director for Standardization and Advanced Reactors, Division of Project Management, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-15803 File No. SR-BSECC-79-3]

Self-Regulatory Organizations; Proposed Rule Change, Boston Stock Exchange Clearing Corp.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. 94-29, 16 (June 4, 1975), notice is hereby given that on April 9, 1979 the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change imposes a 2 cents per share charge on members of Boston Stock Exchange Clearing Corporation ("BSECC") on trades made through the Intermarket Trading System ("ITS"), other than those executed on the Boston Stock Exchange ("BSE") as a result of commitments to trade received at the BSE.

Statement of Basis and Purpose

The proposed rule change would amend the proposed rule change, SR-BSECC-79-1, filed on March 8, 1979, and published at 44 FR 21512. The basis and purpose of the foregoing proposed rule change is as follows:

The purpose of the proposed rule change ("Rule Change") is to reimburse the clearing agency for certain additional costs which it incurs in connection with the clearance and settlement of trades made through ITS. The Rule Change imposes a fee for trades other than trades on the Boston Stock Exchange made through the ITS of 2 cents per share on settled transactions.

The Rule Change related to the capacity of the BSECC to facilitate the prompt and accurate clearance and settlement of securities transactions by enabling it to carry on its functions in a profitable manner. The clearing agency will incur additional expenses in connection with ITS trades principally for the additional personnel required to report and reconcile ITS trades.

The Rule Change is effective from its filing with the Commission until six months from March 8, 1979. However, the BSECC has also filed, contemporaneously with the filing of the Rule Change, an additional proposed rule change, to be considered by the Commission pursuant to section 19(b)(2) of the Securities Exchange Act of 1934, which would adopt the substance of the Rule Change on a permanent basis.

On August 30, 1978, the BSECC filed a rule change to impose a fee to recover both the personnel and finance expenses associated with the Boston Stock Exchange's participation in ITS. In addition to the 2 cents per share fee, the August 30, 1978 rule change imposed a fee equal to the interest rate, charged at the time of any ITS trade by the BSECC's principal lender, times the dollar amount of any such trade. *See* Securities Exchange Act Rel. No. 15120 (September 1, 1978), 43 FR 40968. The Commission summarily abrogated the August 30, 1978 rule change. *See* Securities Exchange Act Rel. No. 15192 (September 26, 1978), 43 FR 46391.

As indicated, in contrast to the August 30, 1978 rule change, the Rule Change is principally designed to recover personnel expenses, is effective for a limited period of time, and has been submitted to the Commission contemporaneously with a proposed rule change, to be considered pursuant to Section 19(b)(2), which would adopt the substance of the Rule Change on a permanent basis. The Rule Change is an interim measure to allow the BSECC to recover certain costs associated with clearing and settling ITS transactions while the Commission considers, pursuant to Section 19(b)(2), the questions such a fee raises regarding the financing of the costs of implementing and operating national market system facilities.

No comments have been or are to be solicited; however, an organization representing specialists on the floor of the Boston Stock Exchange has expressed opposition to the amendment.

No burden on competition is expected.

The foregoing rule change has become effective, pursuant to Section 19(b)(3) of the Securities Exchange Act of 1934. At any time within sixty days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Securities Exchange Act of 1934.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file 6 copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L St., NW., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before July 6, 1979.

For the Commission, by the Division of Market Regulations, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

June 6, 1979.

[FR Doc. 79-18819 Filed 6-14-79; 8:45 am]

BILLING CODE 8010-01-M

[Release No. 34-15905, File No. SR-NASD-79-2]

Self-Regulatory Organizations; Proposed Rule Change By National Association of Securities Dealers, Inc.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. 94-29, 16 (June 4, 1975), notice is hereby given that on June 1, 1979, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

NASD's Statement of the Terms of Substance of the Proposed Rule Change

The following is the text of proposed new Part IV of Schedule D of Article XVI of the Association's By-Laws, which replaces in full existing Part IV of Schedule D and existing Section 4 of Schedule G of Article XVIII of the Association's By-Laws

IV. Schedule of Charges

A. System Services

1. NASDAQ Level 1 Service. The charge to be paid by the subscriber for each terminal receiving NASDAQ Level 1 Service is $8.75 per month.

2. NASDAQ Level 2/3 Service. The charge to be paid by the subscriber for each terminal receiving NASDAQ Level 2 or NASDAQ Level 3 Service shall be $150 per month and $0.01 per quotation request, plus equipment related charges as detailed in Parts B, C and D below. Equipment related charges include an installation charge, a terminal charge and conversion, removal and relocation charges.

3. Consolidated Quotation Service. The charge to be paid by the subscriber for each terminal receiving Consolidated Quotation Service shall be $50 per month and $0.01 per quotation request plus the monthly charges established by the NYSE and AMEX for receiving last sale information and bid/ask quotations plus equipment related charges as detailed in Parts B, C and D below. Equipment related charges include an installation charge, a terminal charge and conversion, removal and relocation charges.

4. Transaction Reporting for Listed Securities. The charge to be paid by the subscriber for transactions required to be reported under Schedule G of the By-Laws shall be $0.10 per transaction reported, plus equipment related charges as detailed in Parts B, C and D below. Equipment related charges include an installation charge, a terminal charge and conversion, removal and relocation charges. There shall be no charge for transactions reported in writing in conformance with Schedule G.

B. Equipment Charges

The charge for using NASDAQ terminal equipment shall be $180 per month for the first terminal and $125 per month for each additional terminal where all terminals are located on the same premises.

C. Special Options

1. Receive only printer option		$175/month
2. Spare terminal equipment (uninstalled).	CRT/Keyboard-uninstalled (no cabling provided) usable only as a spare replacement for an already installed terminal for Level 2 or 3 Service.	
	Keyboard	$20/month
	CRT display	$30/month
3. Special CRT	For each special CRT ordered to replace the standard NASDAQ CRT, in addition to all other charges specified above.	$45/month
4. Local posting	Permits subscriber to use NASDAQ level 2 terminals to enter quotations simultaneously into an internal computer system.	$50/month

D. Installation, Conversion, Removal or Relocation

Upon installation, conversion, removal or relocation of terminal equipment, the subscriber shall pay the following charges:

1. Control unit	New installation or complete removal	$225/unit
	Relocation to new address (interoffice)	$225/unit
	Relocation within same address (intraoffice)	$200/unit
2. CRT terminal	New installation of complete removal:	
	Units 1–5	$175/terminal
	Units 6–10	$150/terminal
	Units 11 and over	$125/terminal
	Relocation to new address (interoffice):	
	Units 1–5	$200/terminal
	Units 6–10	$175/terminal
	Units 11 and over	$150/terminal
	Relocation within same address (intraoffice):	
	Units 1–15	$125/terminal
	Units 6–10	$110/terminal
	Units 11 and over	$105/terminal
	Conversion charge for replacement of standard CRT with the special CRT option (9-inch).	$25/unit
3. Local posting system option	New installation or complete removal	$150
	Relocation of new address (interoffice)	$175
	Relocation within same address (intraoffice)	$100
4. Receive only printer	New installation or complete removal	$175
	Relocation to new address (interoffice)	$200
	Relocation within same address (intraoffice)	$125

E. Other Services

1. Daily Reports to Newspapers. Reports for regular public release, such as market summary information for newspaper publication, shall be produced in a format acceptable to most publishers without charge. Should such information be transmitted to another location at the request of any firm, a charge may be imposed for such services by the Corporation.

2. Other Requests for Data. The Corporation may impose and collect

compensatory charges for data from the System, supplied upon request, where there is no provision elsewhere in this Part IV for charges for such service or sale.

3. Correspondents. The charge for registration and display of a correspondent firm for a registered market maker shall be $3.50 per month for each correspondent displayed per security.

F. Partial Month Charges

The charges for the month of commencement or termination of service will be a pro rata share of the full monthly charge computed by dividing the number of business days the service was provided during that month by a standard 20 business day month.

G. Late Fees

All NASDAQ charges which are past due for 60 days or more shall be subject to a late fee of 10% of the amount past due.

H. Minor Modifications in Charges

In order to compensate for minor variations in annual net income, the Board of Governors may increase or decrease the total charges in this Schedule by 10 percent from the base charges as adopted on ——— upon filing such change with the Commission pursuant to Section 19(b)(3) of the Act.

NASD's Statement of Basis and Purpose of Proposed Rule Change

The NASDAQ System was purchased by the Association on February 9, 1976. This decision by the Association's Board of Governors was based on (1) the financial soundness of the System; (2) the belief that Association ownership would allow more economical upgrading of the System and benefit regulatory functions related to the System; and (3) the probability that System charges to subscribers could be reduced after repayment of the loan used to buy the System.

Experience has demonstrated the financial soundness of the System, and upgrading of the System's functions has continued to keep pace with the industry's needs. Plans for further enhancements necessitated by the emergence of a National Market System have been considered and incorporated into the future budget for the NASDAQ System.

Experience has also demonstrated that the Association's goal of reduction of NASDAQ System charges to its users has now become fully attainable. During the past two years of System operation the Association has been able to accumulate from System charges a reserve to cover unforeseen operational expenses. During this same period, the Association has refunded $2.3 million to System users.

In order to fulfill its stated goal of reduction in System rates, the Association's Board, with the assistance of the NASDAQ Board and its Rate Review Committee, developed and proposed a revised rate structure for NASDAQ services which reduces the charges now being paid by all users of the NASDAQ System and revises and simplifies the structure of charges by placing a greater emphasis on usage based charges. The Board reviewed projected revenues and expenses for the next five years and arrived at a revenue projection which it believed sufficient to support operation of the System, implement future System development projects and to maintain a level of retained earnings equal to one year's expenses which will provide adequate working capital. The details of this projection are set forth in Exhibit 2.

The five year projection includes estimates for all projects and expenses which can reasonably be foreseen at this time. Even at the levels of expenditure necessary to implement the foregoing, the Association found that the cost savings experienced by it in operating the System over the past several years will permit an overall reduction of $5 million per year during the next five years without adverse impact on the System. Although the percentage of reduction under the proposed rule change will vary among individual System users, there will be an overall reduction in costs of approximately 32 percent to system users.

In order to assure a fair allocation of the reduction among all subscribers,[1] the Board adopted a simplified rate structure based on recovering the cost of Level 2 and 3 equipment and communication expenses and allocation of all other administrative and operating costs among all system users and services.

Level 1 charges are reduced from $20 for the first terminal and $10 for each additional terminal to one charge of $8.75 per terminal. For Levels 2 and 3 service, the standard, high and unlimited usage plans are eliminated and replaced by a terminal charge, a service charge and a usage charge. The terminal charge is $180 per month for the first terminal and $125 per month for each additional terminal. NASDAQ Level 2 or 3 service is $150 per month per terminal and CQS is $50 per month per terminal. The usage charge is $0.01 per quotation request with no maximum charge. The stock listing charge of $5 per month for each security in which a market maker is registered in excess of 5 per terminal has been eliminated. The charge for registration and display of a correspondent firm for a registered market maker has been reduced from $5 to $3.50 per month for each correspondent displayed per security. Special equipment charges, trade reporting charges and installation, removal and relocation charges remain the same except for minor changes.

The proposed rate structure also contains a provision which authorizes the Association's Board to increase or decrease the rates by a maximum of 10 percent. Changes in rates made pursuant to this provision will be filed pursuant to Section 19(b)(3) of the Act, and shall be effective upon filing with the Commission. This limited flexibility in the rate structure is intended to permit minor modifications in the rates to cover annual adjustments for fluctuations in revenues.

Section 15A(b)(5) provides that an association of brokers and dealers shall not be registered as a national securities association unless the Commission determines that the rules of the association provide for the equitable allocation of reasonable dues, fees, and other charges among members and issuers and other persons using any facility or system which the association operates or controls.

Comments from the membership were neither solicited nor received.

The Association believes that no burden on competition is imposed by the proposed rule change. Although the percentage of reduction under the proposed rule change will vary among individual system users, there will be an overall reduction in costs of approximately 32 percent to System users. Thus, the charges now being paid by all users of the NASDAQ System will be reduced and the structure of the charges revised and simplified by placing a greater emphasis on usage based charges.

Within 35 days of the date of publication of this notice in the Federal Register, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and

[1] NASDAQ issuers will not participate in the reduction in light of the fact that funds derived from NASDAQ issuers are Association revenues which are intended to provide a limited sharing by the NASDAQ companies of the Association's costs in connection with the regulation of the trading markets in NASDAQ-quoted securities. NASDAQ issuers do not and have not participated in the cost of operating and maintaining the System.

publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(a) By order approve such proposed rule change, or

(b) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file six (6) copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying at the Public Reference Room, 1100 L Street, N.W., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number referenced in the caption above and should be submitted on or before July 16, 1979.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

June 8, 1979.

BILLING CODE 8010-01-M

[Rel. No. 10720; 812-4479]

Steinroe Cash Reserves, Inc.; Application Pursuant to Section 6(c) of the Act for Order of Exemption From Rules 2a–4 and 22c–1 Under the Act

June 5, 1979.

In the matter of Steinroe Cash Reserves, Inc., 150 South Wacker Drive, Chicago, Illinois 60606.

Notice is hereby given that Steinroe Cash Reserves, Inc. ("Applicant"), registered under the Investment Company Act of 1940 ("Act") as an open-end, diversified management investment company, filed an application on May 23, 1979, for an order of the Commission, pursuant to Section 6(c) of the Act, exempting Applicant from the provisions of Rules 2a–4 and 22c–1 under the Act to the extent necessary to permit Applicant to compute its net asset value per share, for the purpose of effecting sales, redemptions and repurchases of its shares, to the nearest one cent on a share value of one dollar. Applicant represents that in all other respects, its protfolio securities will be valued in accordance with the views of the Commission, set forth in Investment Company Act Release No. 9786 (May 31, 1977) ("IC–9786"). All interested persons are referred to the application on file with the Commission for a statement of the representations contained therein, which are summarized below.

Applicant states that it is a "money market" fund that seeks to obtain maximum current income consistent with preservation of capital and the maintenance of liquidity by investing in short-term money market instruments such as United States government obligations and commercial paper. Applicant states that it values United States government obligations with a maturity of more than 60 days at the most recent bid price or yield equivalent at the time of valuation and other money market securities with a maturity of more than 60 days at a fair value using a procedure determined in good faith by Applicant's Board of Directors. Applicant represents that this procedure includes the use of a matrix prepared by its investment adviser which classifies money market instruments according to various characteristics, including type, maturity and quality, assigning valuations to each such security based on yield equivalent quotations obtained by the investment adviser from dealers. If the adviser believes that such a valuation does not represent a fair value, it presents, for approval by a committee of Applicant's Board of Directors, such other valuation (which may be a "readily available market quotation") as the adviser considers to represent a fair valuation. Applicant further states that securities having maturities of 60 days or less from the date of valuation are valued on an amortized cost basis. Applicant represents that it determines net asset value for purposes of effecting sales, redemptions and repurchase of its shares as of the close of trading on each day the New York Stock Exchange is open for trading.

Rule 22c–1 under the Act provides, in part, that no registered investment company issuing any redeemable security shall sell, redeem, or repurchase any such security except at a price based on the current net asset value of such security which is next computed after receipt of a tender of such security for redemption or of an order to purchase or sell such security. Rule 2a–4 under the Act provides, as here relevant, that "current net asset value" of a redeemable security issued by a registered investment company used in computing its price for the purposes of distribution and redemption shall be determined with reference to (1) current market value for portfolio securities with respect to which market quotations are readily available and (2) for other securities and assets, fair value as determined in good faith by the board of directors of the registered company. In IC–9786 the Commission expressed its view that it is inconsistent with Rule 2a–4 for certain money market funds to "round off" calculations of their net asset value of $1.00, because such a calculation might have the effect of masking the impact of changing values of portfolio securities and therefore might not "reflect" its portfolio valuation as required by Rule 2a–4.

Section 6(c) of the Act provides, in part, that the Commission may, upon application, exempt any person, security, or transaction, or any class or classes of persons, securities or transactions, from any provision or provisions of the Act and the rules thereunder, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

Applicant requests an exemption to permit it to maintain its net asset value at $1.00 per share by rounding off its calculation of net asset value to the nearest cent. Applicant submits that the granting of such exemption would be appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Applicant represents that many shareholders, including both financial institutions and individuals, have advised Applicant that they strongly favor a stable $1.00 net asset value per share, and that its management believes that a stable $1.00 net asset value would benefit Applicant and its shareholders because:

1. Shareholders would have the convenience of being able to determine the value of their holdings simply by knowing the number of shares they own. Consequently, their maintenance of investment records would be simplified.

2. Applicant could be more competitive with the increasing number of money market mutual funds that attempt to maintain a $1.00 net asset value per share.

3. Shareholders and potential shareholders generally are not concerned with the minor differences which might occur between yield achieved through "market" pricing and the yield computed by using the "penny

rounding" valuation method described herein.

4. If the net asset value were in fact maintained at a constant price, there would be no realization of nominal capital gains and losses that might otherwise occur with a "floating" net asset value.

Applicant represents that to maintain the stability of its net asset per share at $1.00, its Board of Directors may reduce or suspend the payment of dividends on Applicant's shares if the net asset value per share should decline below $.997 and may supplement such dividends with other distributions if the net asset value per share should arise above $1.003. Applicant states that, in addition, in order to maintain the stability of its price per share, Applicant will adhere to the following conditions:

1. Applicant's Board of Directors, in supervising Applicant's operations and delegating special responsibilities involving portfolio management to Applicant's investment adviser, undertakes (as a particular responsibility within the Board's overall duty of care owed to Applicant's shareholders) to assure, to the extent reasonably practicable, taking into account current market conditions affecting Applicant's investment objective, that Applicant's net asset value per share as computed for purposes of effecting sales, redemptions and repurchases of its shares, rounded to the nearest one cent, will not deviate from $1.00.

2. Applicant will seek to maintain a dollar-weighted average portfolio maturity appropriate to its objective of maintaining a stable price per share, and Applicant will not (i) purchase an instrument with a remaining maturity greater than one year, or (ii) maintain a dollar-weighted average portfolio maturity in excess of 120 days.

3. Applicant's purchases of portfolio investments will be limited to the following:

a. Securities issued or guaranteed by the United States government.

b. Obligations issued or guaranteed by agencies or instrumentalities of the United States government.

c. Certificates of deposit and bankers' acceptances of United States banks having total assets in excess of $1 billion and of foreign branches of such United States banks.

d. Commercial paper at time of purchase rated Prime-1 by Moody's Investors Service, Inc. ("Moody's"), A–1 by Standard & Poor's Corporation ("S&P") or, if unrated, issued or guaranteed by a corporation with outstanding debt rated Aa or better by Moody's or AA or better by S&P.

e. Corporate notes, bonds, and debentures rated Aa or better by Moody's or AA or better by S&P at time of purchase.

f. Repurchase agreements pertaining to securities issued or guaranteed by the United States government or its agencies or instrumentalities, provided that such agreements are limited to transactions with financial institutions believed by Applicant's investment adviser to present minimal credit risks.

Notice if further given that any interested person may, not later than July 2, 1979, at 5:30 p.m., submit to the Commission in writing a request for a hearing on the matter accompanied by a statement as to the nature of his interest, the reason for such request, and the issues, if any, of fact or law proposed to be controverted, or he may request that he be notified if the Commission shall order a hearing thereon. Any such communication should be addressed: Secretary, Securities and Exchange Commission, Washington, D.C. 20549. A copy of such request shall be served personally or by mail upon Applicant at the address stated above. Proof of such service (by affidavit or, in the case of an attorney-at-law, by certificate) shall be filed contemporaneously with the request. As provided by Rule 0–5 of the rules and Regulations promulgated under the Act, an order disposing of the application will be issued as of course following said date unless the Commission thereafter orders a hearing upon request or upon the Commission's own motion. Persons who request a hearing, or advice as to whether a hearing is ordered, will receive any notices and orders issued in this matter, including the date of the hearing (if ordered) and any postponements thereof.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

George A. Fitzsimmons,
Secretary.

BILLING CODE 8010-01-M

[Release 34–16067; File No. SR–NASD–78–14]

National Association of Securities Dealers, Inc., Proposed Rule Change

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94–29, 16 (June 4, 1975) notice is hereby given that on May 14, 1979 the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Text of Proposed Rule Change

The following is the full text of the proposed amendments to Article III, Section 2 and Article XVI, Section 3 and Schedule D thereunder of the By-Laws of the National Association of Securities Dealers, Inc. ("Association"). Brackets ([ ]) indicate deletions; *Italics* indicate new material.

By-Laws

Article III

Section 2

(a) Each member shall promptly furnish all information or reports requested by the Board of Governors in connection with the determination of the amount of admission fees, dues, assessments or other charges payable by members during any given fiscal year.

(b) Each member shall report promptly such information in connection with securities for which quotations are displayed on the NASDAQ System as the Board of Governors deems appropriate.

Article XVI

Section 3 (First Paragraph)

Taking into account relevant matters including the type of business done, securities traded, and service rendered, the Board of Governors may publish operating rules for the automated quotations systems, establish reasonable qualifications and classifications for registered market makers and other subscribers, provide standards for authorized securities, *require members to report promptly such information with respect to authorized securities as the Board of Governors deems appropriate* and specify and publish the charges to be collected from subscribers [by the operator of automated quotations systems]. Services shall be provided to members on a nondiscriminatory basis and at reasonable and uniform rates designed to encourage maximum utilization by all members, with due allowance for the geographic remoteness of members or their branch offices receiving service outside of the 48 contiguous states.

Schedule D

Part I

Section C.3.(c)

(iii) Reports of All Members.

(1) Each member shall report to the NASDAQ Department in New York City by 4:30 p.m. Eastern Time, each business day, its transactions of block-size in NASDAQ securities, other than convertible debentures, for which such member is not registered with the NASDAQ System as a market maker and which are executed with persons other than registered NASDAQ market makers in that security.

(2) "Block-size" shall mean 10,000 shares or more executed at a price of $1 or more.

(3) The report of each transaction shall include the following information:

a. Security name and NASDAQ symbol;

b. Number of shares;

c. Whether the transaction was a purchase or sale;

d. Whether the transaction was executed as principal, agent or dual agent; and

e. The name of the contra-broker/dealer or if the contra-side is a retail account, the symbol, "RA."

NASD's Statement on Purpose of Proposed Rule Change

The amendments to Article III, Section 2 and Article XVI, Section 3 of the By-Laws would give the Board of Governors specific authority to require members to report information related to NASDAQ securities. Currently, NASDAQ market makers are required to report, through the NASDAQ System, their daily volume in those securities in which they are registered market makers, but volume in NASDAQ securities that does not involve registered market makers is presently not required to be reported. The Association believes that volume reports as to block-size transactions constitute meaningful information for investors which should be incorporated into the NASDAQ volume data released for publication.

The proposed amendment to Schedule D would require all members who are not registered market makers to transmit, via telephone, Telex, TWX, their block-size purchases and sales in NASDAQ securities, other than convertible debentures, to the NASDAQ Department in New York City. The volume would be entered into the System and the data would be included in the individual security statistics, the aggregate NASDAQ statistics and the NASDAQ regulatory reports.

Members would report only that volume involved in principal or agency transactions of block-size executed with others who, at the time of execution of the transaction, were not registered market makers in the NASDAQ security. A block is defined as a transaction involving 10,000 shares or more, executed at a price of $1 or more.

For each transaction that meets or exceeds the definition of block-size a firm would report the following information:

1. Security name and NASDAQ symbol;
2. Number of shares;
3. Whether the transaction was a purchase or sale;
4. Whether the transaction was executed as principal, agent or dual agent; and
5. The name of the contra-broker/dealer or if the contra-side is a retail account, the symbol, "RA".

Members would be required to report their block purchases and sales by 4:30 p.m. Eastern Time in order to have the data entered into the System prior to the 4:45 p.m. Eastern Time volume cutoff deadline.

The Board of Governors has also proposed a technical amendment to Article XVI, Section 3 of the By-Laws to reflect the acquisition of the NASDAQ System by the Association. The amendment would delete a reference to the responsibility of the operator of the NASDAQ System to collect charges from subscribers since this function is now performed by the Association.

NASD's Basis Under the Act for Proposed Rule Change

Section 11A(a)(1) of the Act provides:

> The Congress finds that * * * [i]t is in the public interest and appropriate for the protection of investors and the maintenance of fair and orderly markets to assure . . . the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities * * *

Section 15A(b)(6) of the Act, which applies to registered securities associations, requires that "[t]he rules of the association [be] designed * * * to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest * * *" These provisions give the Association authority to require that all members report their volume in NASDAQ securities in order to provide more complete information to the investing public. Accordingly, the proposed amendments are consistent with the requirements of the Act.

Comments Received From NASD Members, Participants or Others on Proposed Rule Change

Comments from members were solicited in Notice to Members 78-8. Six comment letters were received. One expressed no objection to the rule change, and the others expressed general concern over the additional reporting burden. Specific questions focused on the need to report convertible bond transactions when trading activity is negligible. The Board of Governors considered these comments meritorious and, in view of the fact that volume in convertible debentures, although released by the Association, is not generally published, the Board eliminated this requirement. Two members questioned the need of reporting the name of the contra-broker/dealer. The Association requires this information in order to prevent double reporting. Finally, two comment letters expressed the view that the reporting of total volume for NASDAQ securities might mislead the public by giving the impression that all trading occurred over the NASDAQ System. The Association does not believe the public will be misled, since the inclusion of non-market maker volume in the volume release will more accurately disclose the changes of ownership in NASDAQ securities. The NASDAQ staff in New York City will maintain a log of all telephone reports and will enter volume from non-NASDAQ market makers into the NASDAQ System under a special code to identify it as block volume from non-registered market makers.

NASD's Statement on Burden on Competition

The Association has determined that the proposed rule changes do not impose a burden on competition which is not necessary or appropriate in furtherance of the purposes of the Act. As noted above, four comment letters expressed the view that the block volume reporting requirement would impose an operational and financial burden that would not be outweighed by the value of the information received. Three of these commentators, however, were concerned primarily with the reporting of convertible bond transactions in amounts greater than $100,000. After considering these comments, the Board of Governors decided not to require the reporting of block transactions in convertible debentures.

Only one member complained specifically that the proposed changes with regard to equity securities would require it to implement new operational and supervisory procedures. The member estimated that it experiences no more than one trade per month of the kind covered by the proposal, out of several hundred thousand transactions per year. The Association recogizes that

any change in reporting requirements necessarily requires some time and cost to implement. But since, as all commentators agreed, the daily number of reportable transactions per member will be relatively small, the Association has concluded that the reporting requirement does not outweigh the benefits of dissemination of more complete information to the public.

The proposed changes would not affect the present requirement that registered NASDAQ market makers report daily volume in the securities in which they are registered market makers. This volume is reported through the market maker's terminal. NASDAQ market makers who handle block transactions in securities for which they are not registered market makers will transmit their daily block volume figures in the same manner as do non-NASDAQ market makers: via telephone, Telex, or TWX. This method was chosen because the NASDAQ System cannot technically accommodate the entry of block volume data by non-registered market makers. The Board of Governors has concluded that the difference in reporting methods does not outweigh the benefits of dissemination of more complete information to the public.

On or before July 20, 1979, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(a) By order approve such proposed rule change, or

(b) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file six copies thereof with George A. Fitzsimmons, Secretary, Securities and Exchange Commission, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street, NW., Washington, D.C. Copies of the filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization.

All submissions should refer to the file number referenced in the caption above and should be submitted on or before July 16, 1979.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

June 11, 1979.

[FR Doc. 79-18855 Filed 6-14-79; 8:45 am]

BILLING CODE 8010-01-M

[Release No. 34-15918; June 11, 1979; File No. SR-PSE-79-6]

Pacific Stock Exchange Inc.; Proposed Rule Change

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), as amended by Pub. L. No. 94-29, (June 4, 1975), notice is hereby given that on June 4, 1979, the above-mentioned self-regulatory organization filed with the Securities and Exchange Commission a proposed rule change as follows:

Exchange's Statement of the Terms of Substance of the Proposed Rule Change

The Pacific Stock Exchange Incorporated ["PSE"] hereby requests to amend Rule VI, Section 37 by incorporating Commentary .03 as follows (brackets indicate deletions; italics indicate additions):

Rule VI. Exchange Options Trading

Trading Halts and Suspensions

Sec. 37. No Change.

Commentary:

.01 No Change.

.02 No Change.

.03 Pursuant to this rule, whenever a regulatory halt takes place on an exchange where more than 50 percent of the total volume in the underlying security over the past six months has been traded, trading in the options class will be halted coincident with the halt in the underlying security.

A situation may arise where a halt in the underlying security occurs and there is a delay in receiving the announcement by the proper Exchange authority. In such a situation, option transactions effected during the halt in the underlying security will be voided.

A regulatory halt includes trading halts for such reasons as dissemination of information concerning the company and suspension of trading by a regulatory body because of trading irregularities. It would not include, for instance, a trading halt because of an imbalance in orders at a specialist post.

Exchange's Statement of Basis and Purpose

The basis and purpose of the foregoing proposed rule change is as follows:

The purpose of the proposed rule change is to clarify the timing of the implementation of a trading halt in the event of a regulatory halt in the underlying security.

The proposed rule change promotes just and equitable principles of trade and fosters greater accuracy in trading halts and suspensions to prevent fraudulent and manipulative acts and practices as provided in Section 6(b)(5) of the Act.

Comments have neither been solicited nor received from members on the proposed rule change.

The proposed rule change imposes no burden upon competition.

On or before July 20, 1979, or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the above-mentioned self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons desiring to make written submissions should file six copies thereof with the Secretary of the Commission, Securities and Exchange Commission, Washington, D.C. 20549. Copies of the filing with respect to the foregoing and of all written submissions will be available for inspection and copying in the Public Reference Room, 1100 L Street, NW., Washington, D.C. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file referenced in the captain above and should be submitted on or before July 6, 1979.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

June 11, 1979.

BILLING CODE 8010-01-M

[Release No. 6078/June 7, 1979]

Regional Processing of Registration Statements on Form S-18

In Securities Act Release No. 6049 (April 3, 1979) [44 FR 21562] the Commission announced the adoption of Form S-18, a simplified form available to certain corporate issuers for the registration of securities to be sold to the public for cash not exceeding an aggregate offering price of $5 million. At that time the Commission indicated that processing of Form S-18 registration statements in the Commission's nine Regional Offices would be permitted subsequent to a brief training program. The first segment of the training program has been completed. The Regional Offices located in Atlanta, Boston, Chicago, Denver and Los Angeles will accept Form S-18 filings beginning on June 15, 1979. After completion of the second training program, the Regional Offices in Fort Worth, New York, Seattle and Washington will accept Form S-18 filings beginning September 15, 1979.

For further information contact Paul A. Belvin, Office of Small Business Policy, Division of Corporation Finance, Securities and Exchange Commission, 500 North Capitol Street, Washington, D.C. 20549 (202-755-1290).

By the Commission.

George A. Fitzsimmons,

Secretary.

June 7, 1979.

BILLING CODE 8010-01-M

DEPARTMENT OF STATE

[Public Notice 672]

Certain Foreign Passports; Validity

Costa Rica and Morocco are added to the list of countries which have entered into agreements with the Government of the United States whereby their passports are recognized as valid for the return of the bearer to the country of the foreign-issuing authority for a period of at least six months beyond the expiration date specified in the passport.

In addition, travel documents issued by the Government of the Trust Territory of the Pacific Islands are considered to be valid for the return of the bearer to the Trust Territory for a period of six months beyond the expiration date specified therein.

This notice amends Public Notice 633 of October 19, 1978 (43 FR 48751).

Dated: June 1, 1979.

Hume A. Horan,

Acting Assistant Secretary for Consular Affairs, Department of State.

BILLING CODE 4710-06-M

INTERSTATE COMMERCE COMMISSION

[Finance Docket No. 28905 (Sub-No. 18) and (Sub-No. 19)]

Consolidated Rail Corp. Acquisition of Baltimore & Ohio Railroad Co. Trackage and Acquisition of Chesapeake & Ohio Railway Trackage

Consolidated Rail Corporation (Conrail), Six Penn Center Plaza, Philadelphia, PA 19104, on May 16, 1979, filed with the Interstate Commerce Commission at Washington, DC, and the Commission has accepted, applications under 49 U.S.C. 11343 (formerly section 5(2) of the Interstate Commerce Act) for authority to purchase (a) in F.D. No. 28905 (Sub-No. 18), the line of railroad owned by the Baltimore and Ohio Railroad (B&O) from CB Junction to Clearfield, PA, subject to a reservation of trackage rights in the B&O to permit continued operation of its local and overhead freight trains, and (b) in F. D. No. 28905 (Sub-No. 19), the line of railroad owned by the Chesapeake and Ohio Railway Company (C&O) between Kanauga and Hobson, OH, a distance of 9.0 miles, in Gallia and Meigs County, OH, subject to a reservation in the C&O of trackage rights for the continued operation of its freight trains to serve power plant at Chesire, OH.

The proposed transactions allegedly involve no change in the operations of either Conrail, B&O, or C&O, and no change in service to the public and no effect on the employees of any of the railroads. The stated purpose of the transactions is to permit Conrail, principal user of the involved lines, to gain control of the dispatching of trains and the maintenance of each line.

Conrail's attorney is Charles E. Mechem, 1138 Six Penn Center Philadelphia, Philadelphia, PA 19104.

These applications were filed in response to the applications in Finance Docket No. 28905 (Sub-No. 1) *et. al., CSX Corp.-Control-Chessie System, Inc., and Seaboard Coast Line Industries, Inc.* In Finance Docket No. 28905 (Sub-No. 1), CSX Corporation (CSX) seeks to acquire control of the rail carriers subsidiary to Chessie System, Inc. (CSI), and Seaboard Coast Line Industries, Inc. (SCLI), by CSX engaging in a merger with CSI and SCLI. Notice of this application, as well as the directly related applications, was published in the Federal Register on February 15, 1979, at 44 Fed. Reg. 9639 (1979). The lines sought to be purchased by ConRail in Finance Docket No. 28905 (Sub-Nos. 18 and 19) are portions of CSI property.

These two applications will be consolidated for disposition with the applications in Finance Docket No. 28905 (Sub-No. 1) *et. al.* The latter matters will be the subject of an oral hearing to commence on June 25, 1979, before Administrative Law Judge David H. Allard. Interested parties will be advised when a prehearing conference on the applications in Finance Docket No. 28905 (Sub-Nos. 18 and 19) will be held.

The Commission will exercise its authority under 49 U.S.C. 11345 and waive the initial decision in these proceedings. The determination of the merits of the applications will be made by the entire Commission.

Conrail operates a railroad system serving the following states: CT, DE, IL, IN, KY, MD, MA, MI, MO, NY, OH, PA, RI, VA, NV, WV, DC, and two Canadian provinces.

The applications and exhibits are available for inspection in the Public Docket Room at the offices of the Interstate Commerce Commission in Washington, DC.

Because Conrail's applications themselves seek proposed conditions to approval of the application in Finance Docket No. 28905 (Sub-No. 1), the Commission will entertain no requests for affirmative relief to Conrail's proposals. Parties may only participate in direct support of, or direct opposition to, Conrail's applications as filed.

In filing comments pursuant to directions given in the last paragraph of this notice, interested persons must state specifically which application is the subject of the comments. Persons must file separate comments if they wish to comment on each application. In addition, commentators must also state specifically whether they intend to participate in the oral hearings or whether they wish only to be placed on the service list to receive all notices and decisions issued by the Commission. Failure to state an intention to

participate will result in the commentator being placed in the latter category.

Interested persons may participate formally in a proceeding by submitting written comments regarding the applications. Such submissions shall indicate the particular proceeding designation (F.D. No. 28905 (Sub-No. 18) or F.D. No. 28905 (Sub-No. 19)), and the original and ten copies shall be filed with the Secretary, Interstate Commerce Commission, Washington, D.C. 20423, not later than 45 days after the date notice of the filing of the application is published in the Federal Register. Such written comments shall include the following: the person's position, e.g., party protestant or party in support, regarding the proposed transaction, and specific reasons why approval would or would not be in the public interest. Additionally, interested persons who do not intend to participate formally in a proceeding but who desire to comment, may file such statements and informaton as they may desire, subject to the filing and service requirements specified. Persons submitting written comments to the Commission shall, at the same time, serve copies of such written comments upon Conrail and B&O in Finance Docket No. 28905 (Sub-No. 18), Conrail and C&O in Finance Docket No. 28905 (Sub-No. 19), the Secretary of Transportation, and the Attorney General.

Dated June 11, 1979.

By the Commission. Chairman O'Neal, Vice Chairman Brown, Commissioners Stafford, Gresham, Clapp and Christian.

H. G. Homme, Jr.,

Secretary.

[FR Doc. 79-18798 Filed 6-14-79; 8:45 am]

BILLING CODE 7035-01-M

[Finance Docket No. 29009 (Sub-Nos. 1, 2, 3, and 4)]

Norfolk & Western Railway Co.; Acquisition of Interest in the Louisville & Nashville Railroad Co.; Leasehold Control of Carolina, Clinchfield & Ohio Railway; Acquisition of Stock Interest in the Winston-Salem Southbound Railroad Co. and in Detroit, Toledo & Ironton Railroad Co.

Norfolk and Western Railway Company (N&W), 8 North Jefferson Street, Roanoke, VA 24042, on May 16, 1979, filed with the Interstate Commerce Commission at Washington, DC, four applications under 49 U.S.C. 11343 to acquire certain properties of the rail carrier subsidiaries of Chessie System, Inc., and Seaboard Coast Line Industries, Inc., as conditions to approval of the application in Finance Docket No. 28905 (Sub-No. 1), *et al., CSX Corporation—Control—Chessie System, Inc., and Seaboard Coast Line Industries, Inc.*, of which notice of acceptance of the application was published in the Federal Register on February 15, 1979, 44 FR 9839. N&W has filed its four applications as inconsistent applications to the proposal in Finance Docket No. 28905 (Sub-No. 1). The Commission has accepted N&W's applications conditioned upon the submission on or before August 14, 1979, of certain specified information otherwise required to be filed with the applications pursuant to 49 CFR Part 1111. By decision served May 10, 1979, the Commission granted to N&W this extension of time to file information.

N&W's attorney is John S. Shannon, Vice President-Law, Norfolk and Western Railway Company, 8 North Jefferson Street, Roanoke, VA 24042.

N&W's applications are as follows: (1) In Finance Docket No. 29009 (Sub-No. 1), N&W seeks to acquire a 50 percent interest in the lines of the Cumberland Valley Subdivision of Louisville and Nashville Railroad Company (L&N). The acquisition would be achieved through the creation of a joinly owned N&W–L&N subsidiary which would acquire and operate the lines as agent for N&W and L&N. The Cumberland Valley Subdivision of L&N's Corbin Division serves the Harman-Middlesboro coal fields in eastern Kentucky. The principal lines and branches of L&N'S Cumberland Valley Subdivision extend from Corbin, KY, to Norton, VA, via Loyall, KY; from Loyall to Lynch, KY; between Harbell and Hagans, KY; and between Harlan and Glenbrook, KY. N&W's point of interchange with L&N's Cumberland Valley Subidivision of its Corbin Division is at Norton, VA. (2) In Finance Docket No. 29009 (Sub-No. 2), N&W seeks to acquire all of the rights and properties of the Clinchfield Railroad Company (Clinchfield) and thereby acquire control over the Carolina, Clinchfield and Ohio Railway Company (CC&O). The Clinchfield is an unincorporated lessee organization, controlled by Seaboard Coast Line Railroad Company (SCL) and the L&N, which owns a leasehold interest in substantially all of the properties of CC&O. N&W proposes to operate the Clinchfield as a separate property in a manner similar to that of its present operation under SCL and L&N. N&W would grant overhead trackage rights to SCL and L&N over CC&O to and from Elkhorn City, KY. The principal line of the Clinchfield extends from Elkhorn City, KY, to Spartanburg, SC, via Dante and St. Paul, VA, and Kingsport, Johnson City and Erwin, TN. N&W's point of interchange with Clinchfield is at St. Paul, VA. (3) In Finance Docket No. 29009 (Sub-No. 3), N&W seeks to acquire all of the stock of the Detroit, Toledo and Ironton Railroad Company (DT&I) which the Baltimore and Ohio Railroad Company (B&O) will obtain if its joint application in Finance Docket No. 28480, now pending before the Commission, is approved. In Finance Docket No. 28499, N&W and B&O filed a joint application for each to purchase one-half of the stock of DT&I owned by Pennsylvania Company (PennCo). PennCo owns substantially all of the stock of DT&I. If the transactions in Finance Docket Nos. 28499 and 29009 (Sub-No. 3) are approved, N&W would own substantially all of the stock of DT&I. N&W proposes no changes in DT&I's present rail operations and facilities. N&W's interchange points with DT&I are at Detroit (Oakwood Junction), MI, and Delta, Toledo, Napoleon, Leipsic, Lima, Glen Jean, and Ironton, OH. (4) In Finance Docket No. 29009 (Sub-No. 4), N&W seeks to purchase all of the stock of the Winston-Salem Southbound Railway Company (WSSB) owned by the SCL, and thereby acquire 100 percent control over WSSB. N&W and SCL each presently own 50 percent of the outstanding stock of WSSB. N&W proposes to maintain WSSB as a separate operating subsidiary. WSSB operates 95 miles of line in North Carolina, the principal line extending from Winston-Salem via Lexington, High Rock and Albemarle to Wadesboro, NC. N&W's point of interchange with WSSB is at Winston-Salem, NC.

Those persons filing comments on one or more of N&W's inconsistent applications, pursuant to instructions in the last paragraph of this notice, must specifically state which subnumber is the subject of the comments. These applications will be consolidated for disposition with the applications in Finance Docket No. 28905 (Sub-No. 1), *et al.* Commentators, including those who wish to become parties, must address each application separately, however, in order to participate in its consideration.

N&W is the ony initiating applicant in these four applications. The Commission's Railroad Consolidation Procedures, however, define "applicants" to include all carriers with properties directly involved in the transaction, other than those carriers over which trackage rights are sought. Therefore the following carriers are considered applicants to one or more of

these applications, even though their inclusion is involuntary: Louisville and Nashville Railroad Company, 908 West Broad Street, Louisville, KY 40202; Winston-Salem Southbound Railway Company, Clinchfield Railroad Company, and Carolina, Clinchfield and Ohio Railway Company, all of 500 Water Street, Jacksonville, FL 32202; Seaboard Coast Line Railroad Company, 3600 West Broad Street, Richmond, VA 23230; the Baltimore and Ohio Railroad Company, 2 North Charles Street, Baltimore, MD 21201; and Detroit, Toledo and Ironton Railroad Company, One Parklane Boulevard, Dearborn, MI 48126.

N&W's properties are located in IL, IN, IA, KY, MD, MI, MO, NE, NY, NC, OH, PA, VA, WV, and in the Province of Ontario, Canada.

The applications and exhibits are available for inspection in the Public Docket Room at the offices of the Interstate Commerce Commission in Washington, D.C.

Any protestant who proposes to file traffic studies as evidence in opposition to these applications shall use studies that relate to the calendar year January 1, 1977, through December 31, 1977.

Because these applicaitons are themselves proposed conditions to approval of the applications in Finance Docket No. 28905 (Sub-No. 1), *et al.*, the Commission will entertain no requests for affirmative relief to N&W's proposals. Interested parties may only participate in direct support of, or direct opposition to, the applications as filed.

The Commission will exercise its authority under 49 U.S.C. 11345(e) and waive the initial decision in these proceedings. The determination of the merits of the applications will be made by the entire Commission.

All commentators must state specifically whether they intend to participate in the hearings on these applications, or whether they wish only to be placed on the service list to receive all Commission notices and decisions. Failure to indicate an intention to participate formally will result in the commentator being placed in the latter category.

Interested persons may participate formally in a proceeding by submitting written comments regarding an application. Such submissions shall indicate the proceeding designation (Finance Docket No. 29009 (Sub-Nos. 1, 2, 3, or 4)), and the original and ten copies shall be filed with the Secretary, Interstate Commerce Commission, Washington, D.C. 20423, not later than 45 days after the date notice of the filing of the application is published in the Federal Register. Any written comments shall include the following: the person's position, *e.g.*, party protestant or party in support, regarding the proposed transaction, and specific reasons why approval would or would not be in the public interest. Additionally, interested persons who do not intend to participate formally in a proceeding but who desire to comment, may file such statements and information as they may desire, subject to the filing and service reuqirements specified. Persons submitting written comments to the Commission shall, at the same time, serve copies of such written comments upon the applicants, the Secretary of Transportation and the Attorney General.

Dated: June 11, 1979.

By the Commission, Chairman O'Neal, Vice Chairman Brown, Commissioners Stafford, Gresham, Clapp and Christian.

H. G. Homme, Jr.,
Secretary.

[FR Doc. 79-18756 Filed 6-14-79; 8:45 am]
BILLING CODE 7035-01-M

[Finance Docket No. 28961 (Sub-No. 1)]

Southern Railway Co., Eastern Kentucky Railway Co., and Western Florida Railway Co.—Acquisition of Properties—Chessie System, Inc., and Seaboard Coast Line Industries, Inc.

Southern Railway Company (Southern), 920 15th Street, N.W., Washington, DC 20005, Eastern Kentucky Railway Company (EKR), 2600 Citizens Plaza, Louisville, KY 40202, and Western Florida Railway Company (WFR), 1500 American Heritage Life Building, Jacksonville, FL 32202, on May 16, 1979, filed with the Interstate Commerce Commission at Washington, DC, a joint application under 49 U.S.C. §§ 11343–11345 (formerly section 5(2) of the Interstate Commerce Act) seeking imposition by the Commission of certain conditions to any Commission approval of the pending application in Finance Docket No. 28905 (Sub-No. 1), *CSX Corporation—Control—Chessie System, Inc., and Seaboard Coast Line Industries, Inc.*, notice of which was published in the Federal Register on February 15, 1979, 44 FR 9839. The Commission has accepted the application, conditioned on the submission by applicants on or before August 14, 1979, of certain specified material required to be included in the application pursuant to the Commission's Railroad Consolidation Procedures, 49 CFR Part 1111. Applicants have filed the application in response to the Commission's directive contained in the Federal Register notice accepting the application in Finance Docket No. 28905 (Sub-No. 1) that all inconsistent applications to that proceeding had to be filed by May 16, 1979.

Applicants' attorneys are R. Allen Wimbish, Southern Railway Company, P.O. Box 1808, Washington, DC 20013, and Charles A. Horsky, Covington and Burling, 888 Sixteenth Street, N.W., Washington, DC 20006.

EKR and WFR are recently incorporated railroad companies established by Southern to facilitate several requested conditions if the consolidation application in Finance Docket No. 28905 (Sub-No. 1) is approved. Although they have no assets, liabilities, or income presently, these two companies would become carriers if the requested conditions are imposed, the Chessie/Seaboard consolidation is consummated, and the relevant acquisitions by EKR and WFR are consummated.

Southern, EKR, and WFR are the initiating parties in the application, but the Commission's Railroad Consolidation Procedures defines "applicants" to include all carriers with properties directly involved in the transaction, other than those carriers over which trackage rights are sought. The following carriers, therefore, are considered applicants also, although their inclusion in the application is involuntary:

Kentucky and Indiana Terminal Railroad (KIT), 2910 Northwestern Parkway, Louisville, KY 40212, Detroit, Toledo and Ironton Railroad Company (DTI), One Parklane Boulevard, Dearborn, MI 48126, the Baltimore and Ohio Railroad Company (B&O), 2 North Charles Street, Baltimore, MD 21201, Seaboard Coast Line Railroad Company (SCL), 3600 West Broad Street, Richmond, VA 23230, and Louisville and Nashville Railroad Company (L&N), 908 West Broad Street, Louisville, KY 40202.

By their application Southern, EKR, and WFR seek to acquire the following properties, rights, and interests from railroad subsidiaries of Chessie System, Inc., and Seaboard Coast Line Industries, Inc.:

(a) Acquisition by Southern of the Louisville and Nashville Railroad Company's (L&N) line from Louisville (Youngtown Yard), KY, to Hammond (State Line), IN, including South Hammond Yard and other yards at Bloomington and Lafayette, branch lines between Orleans and Paoli, IN, between Wallace Junction and Midland, IN, between Monon and Indianapolis, IN,

and all other appurtentant trackage, yards, rail properties, and rail facilities.

(b) Acquisition by Southern of the L&N's (former Monon Railroad) ownership interest in and right to operate over properties of the Chicago and Western Indiana Railroad Company (CWI) and the Belt Railway Company of Chicago (BRC).

(c) Acquisition by Southern of perpetual trackage rights over certain trackage of The Baltimore & Ohio Chicago Terminal Railroad Company (BOCT).

(d) Acquisition by Southern of sole control of the Kentucky & Indiana Terminal Railroad Company (KIT) through acquisition of the stock and other ownership interests in KIT of the Baltimore and Ohio Railroad Company (B&O) and of the L&N.

(e) Acquisition by Southern of joint control with the Norfolk and Western Railway Company (N&W) of the Detroit, Toledo and Ironton Railroad Company (DTI) through acquisition by Southern of B&O's 50 percent stock interest should the Commission approve the pending N&W/B&O application for joint control of DTI (Finance Docket No. 28499 (Sub. No. 1)).

(f) Acquisition by Southern of the Seaboard Coast Line Railroad Company's (SCL) line from Jacksonville, FL, via Sanford and Orlando, FL, to Uceta Yard in or near Tampa, FL, including the classification yard and piggyback facility at Uceta Yard and other yards at Sanford, Orlando, Lakeland, and Winston, branch lines from Deland Junction to Deland, FL, from Sanford to Aloma and Beck Hammock, FL, and from Haines City to Waverly, FL, and all appurtenant trackage, yard, properties, and facilities.

(g) Acquisition by Eastern Kentucky Railway Company (EKR) of all trackage, rail properties, yards, and appurtenant facilities constituting L&N's Cumberland Valley Subdivision (with the exception of lines between Cumberland Gap, TN, and Norton, VA), and certain locomotives now used in operations on the Cumberland Valley Subdivision.

(h) Acquisition by Southern of joint control with L&N of EKR through acquisition by Southern of 50 percent of the stock of EKR.

(i) Acquisition by Southern of perpetual trackage rights over trackage of EKR, in lieu of Southern's present trackage rights over L&N, between Cumberland Gap, TN, and Middlesboro, KY.

(j) Acquisition by Western Florida Railway Company (WFR) of certain trackage, rail properties, yards, and appurtenant facilities, including port facilities, constituting SCL's Tampa Division (with the exception of the main line and certain branch lines to be acquired by Southern between Jacksonville and Tampa, branch lines between Sanford and Umatilla, FL, between Orlando and Tavares, FL, and between Sanford and Dr. Phillips and Groveland, FL, and the line between Zephyrhills, FL, and Yeoman Yard in or near Tampa, FL, via Plant City, FL), and certain locomotives and specialized equipment now used in operations in the Tampa Division.

(k) Acquisition by WFR of perpetual trackage rights for the sole purpose of handling traffic originating at or destined to Central, Park, and Tenoroc, FL, over trackage of Southern between Auburndale, FL, and Uceta Yard.

(l) Acquisition by WFR of perpetual trackage rights over trackage of SCL between Central, FL, and Yeoman Yard in or near Tampa, FL, and between Tenoroc and Winter Haven, FL.

(m) Acquisition by Southern of joint control with SCL of WFR through acquisition by Southern of 50 percent of the stock of WFR.

Persons filing comments pursuant to instructions given in the last paragraph of this notice must state which of the lettered paragraphs above relating to Southern's proposed conditions are the subject of the comments, by referring to the letter designation specifically. For example, if a commentator wishes to opppose Southern's requests in paragraphs (a), (d), and (j), that person should identify those paragraphs in the comments.

Rail properties operated by Southern are located in AL, GA, IL, IN, KY, MS, NC, SC, TN, VA, and DC. Properties proposed to be operated by WFR are located in FL. Properties proposed to be operated by EKR are located in KY, VA, and TN.

If the application were approved in its entirety, Southern would acquire directly the following lines: Louisville (VI Tower), KY to Hammond (State Line), IN, main line (296.8 miles); Monon, IN, to Michigan City, IN, branch line (59.6 miles); Monon, IN, to Indianapolis, IN, branch line (82.0 miles); Wallace Jct., IN, to Midland, IN, branch line (42.0 miles); Orleans, IN, to Paoli, IN, branch line (7.6 miles); Jacksonville, FL, to Tampa, FL (Uceta Yard), main line (238.6 miles); Deland Jct., FL, to Deland, FL, branch line (10.0 miles); Stanford, FL, to Beck Hammock and Aloma, FL, branch line (27.8 miles); and Haines City, FL, to Waverly, FL, branch line (10.0 miles). Principal points of interchange on these lines would be Chicago, IL (Hammond, IN, via connections), Lafayette, IN, Louisville, KY, and FJ Junction (Jacksonville, FL).

Southern would acquire control through stock ownership of KIT which owns and operates 26.9 miles of track classified as main line and 69.25 miles of track classified industrial, yard, and sidd track, leases 26.22 miles of track, owns and operates jointly 4.92 miles of track, and operates jointly but does not own 3.22 miles of track. KIT interchanges traffic with linehaul railroads only in Louisville, KY.

Southern would also acquire trackage rights over approximately 170 miles of trackage owned or operated by BOCT in the Chicago terminal area. Also in the Chicago terminal area, Southern would obtain from L&N the former Monon's rights to operate, as a part owner, over approximately 25 miles of CWI trackage and over approximately 10 miles of BRC trackage.

WFR would acquire approximately 625 miles of track in Florida. In general, these lines extend north, south, and west of Tampa along the western coast of Florida. In addition, WFR would obtain trackage rights over Southern between Auburndale and Uceta Yard and over SCL between Tenoroc and Winter Haven.

EKR would acquire approximately 250 miles of line in eastern Kentucky, of which 23.6 miles (between Evarts and Glenbrook) are not operated currently. These lines include main line between Corbin and Loyall, KY (67.5 miles), between Loyall, KY, and Hagans, VA (20.7 miles), and between Harbell, KY, and Cumberland Gap, TN (13.9 miles).

The application and exhibits are available for inspection in the Public Docket Room at the office of the Interstate Commerce Commission in Washington, DC. As noted, applicants have until August 14, 1979, to submit certain information. This extension of time to file was granted by decision in Finance Docket No. 28961, served May 10, 1979. Included in that decision was approval to late-file directly related securities applications. When filed, these securities applications will be docketed as Finance Docket No. 28961 (Sub-Nos. 2, 3, and 4). The applications in Finance Docket No. 28961 (Sub-Nos. 1 through 4) will be consolidated for disposition with the application in the Chessie/Seaboard proceeding.

Any protestant who proposes to file traffic studies as evidence in opposition to any of the proposals in this application shall use studies that relate to the calendar year January 1, 1977, through December 31, 1977.

Because this application is itself filed in the form of conditional proposals to the consolidation application in Finance Docket No. 28905 (Sub-No. 1), the Commission will entertain no requests for affirmative relief in response to Finance Docket No. 28961 (Sub-No. 1). Parties' participation will be limited to direct support of or direct opposition to the various requested conditions as filed.

By statute the evidentiary phase of these proceedings must be concluded by February 15, 1981. The initial decision will be waived, and the determination of the merits of the applications will be made by the entire Commission, pursuant to 49 U.S.C. 11345(e).

Interested persons may participate formally in a proceeding by submitting written comments regarding the application. Such submissions shall indicate the proceeding designation (F.D. No. 28961 (Sub No. 1)), and the original and ten copies thereof shall be filed with the Secretary, Interstate Commerce Commission, Washington, D.C. 20423, not later than 45 days after the date notice of the filing of the application is published in the Federal Register. Such written comments shall include the following: the person's position, *e.g.*, party protestant or party in support, regarding the proposed transaction, and specific reasons why approval would or would not be in the public interest. Additionally, interested persons who do not intend to participate formally in a proceeding but who desire to comment thereon, may file such statements and information as they may desire, subject to the filing and service requirement specified herein. Persons submitting written comments to the Commission shall, at the same time, serve copies of such written comments upon the applicant, the Secretary of Transportation, and the Attorney General. Each commentator shall indicate clearly whether it seeks to be considered a formal party or whether it wishes only to receive all notices and decisions issued by the Commission. All commentors who do not specifically indicate their intention to participate formally in the proceeding will be placed in the latter category.

Dated: June 11, 1979.

By the Commission, Chairman O'Neal, Vice Chairman Brown, Commissioners Stafford, Gresham, Clapp and Christian.

H. G. Homme, Jr.,
Secretary.

BILLING CODE 7035-01-M

[Finance Docket No. 28115 (Sub-No. 5)]

Boston & Maine Corp.; Reorganization, Exemption Under 49 U.S.C. 10505 From 49 U.S.C. 11343-11347

AGENCY: Interstate Commerce Commission.

ACTION: Notice of proposed exemption.

SUMMARY: Boston and Maine Corporation, pursuant to the authority of its Reorganization Trustees and approval of the Reorganization Court, and the Northern Railroad intend to enter into a settlement agreement and a new lease. A petition was filed on January 17, 1979, seeking exemption from 49 U.S.C. §§ 11343–11347, which requires prior consideration and approval of the transaction by the Interstate Commerce Commission. Boston and Maine Corporation is seeking an exemption from these sections pursuant to 49 U.S.C. § 10505 on the basis that prior Commission review of the transaction is unnecessary.

DATES: Comments must be received on or before July 16, 1979.

ADDRESS: Send comments to the: Office of the Secretary, Interstate Commerce Commission, 12th St. and Constitution Ave., NW., Washington, DC 20423. The docket number should be indicated in the top right hand corner of all statements. All written statements will be available for public inspection during regular business hours at the same address.

FOR FURTHER INFORMATION CONTACT: Michael Erenberg, 202–275–7245.

SUPPLEMENTARY INFORMATION: On January 17, 1979, a petition was filed by the Boston and Maine Corporation (B&M) pursuant to 49 U.S.C. 10505, seeking to have its settlement agreement and new lease with the Northern Railroad (Northern) exempted from the requirement of obtaining prior Commission approval under 49 U.S.C. 11343–11347.

The B&M is the assignee of a lease ("Lowell Lease") entered into on December 30, 1889, between the Northern and the Boston and Lowell Railroad Corporation. The lease provided in pertinent part that the B&M shall make annual rental payments of $189,104.00; maintain the Northern property in as good condition as it was when the lease was entered into; at the termination of the lease, certain personal property must be returned in as good condition as it was when the lease was entered into; and, to pay certain real estate and franchise taxes assessed upon the Northern's property.

The present lease expires on December 31, 1979; the B&M will not be able to comply with the provision requiring that certain of the Northern's originally leased personal property be returned, due to the passage of time. In addition, since March 12, 1970, the B&M has not made any payments to the Northern. It was on that date that the B&M's creditors, seeking its reorganization, filed an involuntary petition in bankruptcy with the United Stated District Court for the District of Massachusetts (Reorganization Court).

On November 22, 1977, the Northern filed an objection to the B&M's petition which requested that the Reorganization Court set the priority of its creditors claims in accordance with a proposed schedule. In lieu of that petition, the Northern submitted its own proposal under which it would have priority over the First Mortgage Bondholders. In veiw of the B&M's desire to continue its operations over the Northern's property and in an effort to resolve the impasse, the Reorganization Court in an Order dated December 19, 1978, granted the Reorganization Trustees authority to enter into a cettlement agreement with the Northern and to enter into a new lease subject to the Court's approval and that of any governmental agency having jurisdiction over this transaction.

The Transaction

The Reorganization Trustees of the B&M and the Northern have agreed that it is in their best interests and that of the public to settle Northern's outstanding claims. These claims state that the Northern is the legal title owner of real, personal and mixed property leased to the B&M; that the B&M is in arrears to the Northern for the use of its property for the period March 12, 1970 to the date of the proposed agreement and from the date of the proposed agreement to December 31, 1989 and; for the B&M's failure to maintain the Northern property to satisfactory standards.

The new lease will be substantially the same as the "Lowell Lease" and is contingent upon approval of the settlement agreement. The lease changes are as follows:

1. The new lease will not contain the provision requiring the B&M to return all personal property originally leased from the Northern.

2. The original lease required the B&M to maintain the property and return it in the same condition without exception. The proposed lease will require the B&M to spend a minimum of $20,000 per year to maintain the Northern property to either Federal Railroad Administration Class 1 Track Standards or the present condition of the property, whichever is greater.

3. The annual rental payments of $188,109.00 would be reduced to $80,000.00 per year.

In consideration of the settlement agreement, the Northern agrees that all claims it now has or will ever have against the B&M for breaches of the lease shall be forever settled upon payment of $1,200,000.

The reorganization Trustees, in order that they may effectuate the settlement and the new lease, proposed to the Reorganization Court that they be allowed to withdraw the needed monies from Restricted Funds. By Order dated May 20, 1977, the Reorganization Court approved the request but made it subject to repayment.

Finally, the B&M will still be responsible for all federal, state, and local taxes, past due, present and future, including interest. One exception to that involves a 1969 Federal Income Tax Lien, totalling $24,461.00 which the Northern will waive.

The Statute

When two carriers enter into a lease, whereby one carrier will operate the other carriers treat and equipment, they must first seek the approval and authority of the Commission under 49 U.S.C. 11343. To seek Commission approval an application must be filed in compliance with the ICC *Railroad Acquisition, Control, Merger, Consolidation, Coordination Project, Trackage Rights and Lease Procedures*, 49 C.F.R. Part 1111 (1977) (Railroad Consolidation Procedures). B&M has requested an exemption from 49 U.S.C. 11343 so that it will not have to file an application under the Consolidation Procedures.

We can exempt a matter related to a rail carrier under 49 U.S.C. 10505. This section provides:

(a) In a matter related to a rail carrier providing transportation subject to the jurisdiction of the Interstate Commerce Commission under this subchapter, the Commission shall exempt a person, class of persons, or a transaction or service because of the limited scope of the transaction or service, when the Commission finds that the application of a provision of this subtitle—

(1) is not necessary to carry out the transportation policy of section 10101 of this title;

(2) would be an unreasonable burden on a person, class of persons, or interstate and foreign commerce; and

(3) would serve little or no useful public purpose.

(b) the Commission may begin a proceeding under this section on its own initiative or on application by the Secretary of Transportation or an interested party. The Commission may specify the period of time during which the exemption is effective.

(c) The Commission may revoke an exemption, to the extent it specifies, when it finds that application of a provision of this subtitle to the person, class, or transportation is necessary—

(1) to carry out the transportation policy of section 10101 of this title;

(2) to achieve effective regulation by the Commission; and

(3) to serve a useful public purpose.

(d) The Commission may act under this section only after an opportunity for a proceeding.

The Reorganization Trustees of the B&M believe that because the new lease will be substantially a mirror image of the present lease and because the proposed effective date of the new leave is January 1, 1978, we should exempt them from the requirements of the Railroad Consolidation Procedures. The Reorganization Trustees are also of the opinion that the proposed new lease will be in the public interest.

Before granting an exemption, we are required to provide the opportunity for a proceeding. This request for comments on the requested exemption of the proposed transaction is that opportunity. All comments filed in response to this notice, along with B&M's petition, will be used to determine whether or not the exemption under 49 U.S.C. 10505 should be granted.

This proceeding is instituted under the authority of 49 U.S.C. 10505 and pursuant to 4 U.S.C. 553, 559.

This proceeding is not a major Federal action significantly affecting energy consumption or the quality of the human environment.

H. G. Homme, Jr.,
Secretary.

BILLING CODE 7035-01-M

ENVIRONMENTAL PROTECTION AGENCY

[FRL 1216-6]

Petition to Remove 1,1,1-Trichloroethane and Methylene Chloride from List of Toxic Pollutants

AGENCY: United States Environmental Protection Agency.

ACTION: Notice of receipt and proposed denial of petition to remove 1,1,1-trichloroethane and methylene chloride (dichloromethane) from list of toxic pollutants under section 307(a) of the Clean Water Act, as amended, 33 U.S.C. 1317(a).

SUMMARY: This action gives notice of receipt of a petition from the Dow Chemical Company to remove 1,1,1-trichloroethane and methylene chloride from the toxic pollutant list. It reviews information available to the agency regarding these chemicals, and proposes that 1,1,1-trichloroethane and methylene chloride be retained on the toxic pollutant list.

DATES: Public comments on this petition will be received on or before August 14, 1979.

FOR FURTHER INFORMATION CONTACT: Mr. Kenneth M. Mackenthun, Director, Criteria and Standards Division (WH-585), Office of Water Planning and Standards, Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460 (202-755-0100).

SUPPLEMENTARY INFORMATION: This notice responds to a petition dated August 2, 1978 from Dow Chemical U.S.A. requesting that 1,1,1-trichloroethane, found under the general class chlorinated ethanes, and methylene chloride, found under the general class halomethanes, be removed from the toxic pollutant list. The argument presented by Dow was that these compounds fail to meet EPA's criteria for listing chemicals as toxic pollutants under section 307(a)(1) of Pub. L. 92-500. The petition also asserted that leaving these substances on the list dilutes the Agency's efforts and diverts attention from more serious environmental issues, introduces unwarranted barriers to the introduction of new products containing the compounds, and results in needless expenditures of funds by industry and Government for expensive monitoring, analysis, and reporting.

In support of its assertion that 1,1,1-trichloroethane does not meet EPA criteria for listing under section 307(a), Dow made the following assertions:

(1) 1,1,1-trichloroethane is not persistent in the aquatic environment.

(2) There is no evidence cited for the carcinogenicity or teratogenicity of 1,1,1-trichloroethane and it has only moderate fish toxicity.

In support of its petition, Dow chemical submitted the following references:

(1) Dilling, W.L. et al. 1975. Evaporation rates and reactivities of

methylene chloride, chloroform, 1,1,1-trichloroethane, trichloroethylene, tetrachloroethylene, and other chlorinated compounds in dilute aqueous solution. Environmental Science and Technology. 9:833.

(2) Rampy, L.W. et al. 1977 (abstract). Results of long-term inhalation toxicity studies on rats of 1,1,1-trichloroethane and perchloroethylene formulations. Presented at International Congress of Toxicology, Toronto, Canada, Apr., 1977.

(3) Schwetz, B.A. et al. 1975. The effect of maternally inhaled trichloroethylene, perchloroethylene, methyl chloroform, and methylene chloride on embryonal and fetal development in mice and rats. Toxicology and Applied Pharmacology 32:84.

In support of its assertion that methylene chloride does not meet EPA criteria for listing under section 307(a), Dow made the following assertions:

(1) Methleny chloride is not persistent in the aquatic environment. Removal mechanism is mainly by volatilization.

(2) Methylene chloride is the least toxic of the chloromethanes. No evidence has been cited for the carcinogenicity or teratogenicity of this compound from the results of laboratory animal studies. There is no reason to consider methylene chloride a potential human carcinogen based on the results of an epidemiology study.

(3) Methylene chloride has only low fish toxicity.

(4) Methylene chloride is not likely to be found in significant quantities in surface or ground water except as a result of accidental spills. Most end uses of this compound involve processes and applications where losses to the environment occur predominantly as vapors and nearly all of the small amount that does enter the aquatic environment rapidly evaporates.

In support of its petition, Dow Chemical submitted the following references:

(1) Dilling, W.L. et al. 1975. Evaporation rates and reactivities of methylene chloride, chloroform, 1,1,1-trichloroethane, trichloroethylene, tetrachloroethylene, and other chlorinated compounds in dilute aqueous solutions. Environmental Science and Technology. 9:833.

Background

The Clean Water Act of 1977 (the Act) directed the Administrator to publish as toxic pollutants those substances listed in table 1 of Committee Print Number 95–30 of the Committee on Public Works and Transportation of the House of Representatives. Substances on this list were classified as toxic pollutants pursuant to section 307(a) on January 31, 1978 (43 FR 4109). The list contained as item 15, "Chlorinated ethanes (including 1,2-dichloroethane, *1,1,1-trichloroethane* and hexachloroethane)" and as item 38, "Halomethanes (other than those listed elsewhere; includes *methylene chloride*, methyl chloride, methyl bromide, bromoform, dichlorobromomethane, trichlorofluoromethane and dichlorodifluoromethane)."

The Act also authoirizes the Administrator to add to or remove from such list any pollutant. In revising the toxic pollutant list, the Administrator is directed to take into account the toxicity of the pollutant, its persistence, degradability, the usual or potential presence of the affected organisms in any waters, the importance of the affected organisms, and the nature and extent of the effect of the pollutant on such organisms. It is not necessary that a pollutant meet any particular criteria within these categories in order to be listed under section 307.

The legislative history of the Clean Water Act of 1977 indicates Congress' clear intent that the Administrator have "the widest latitude" in designating pollutants as toxic and that "no pollutant listed in House Report 95–30 should be deleted without a clear finding that delisting will not compromise adequate control over the discharge of toxic pollutants" (Cong. Rec. daily ed. S. 19649). Thus, for instance, a pollutant which demonstrates high acute toxicity but low persistence may be listed under section 307, or conversely, a pollutant with low acute toxicity but high persistence may be so listed.

The Agency in 1979 published guidance on factors to be addressed in petitions to revise the toxic pollutant list (44 FR 18279 March 27, 1979). The purpose of this notice was to provide guidance relating to the information necessary to support any petition to the Environmental Protection Agency for a change in the toxic pollutant list.

The factors to be addressed by a petitioner include, but are not necessarily limited to, the following:

(1) Toxicity of the pollutant:

a. acute (96-hour LC50) toxicity to freshwater and marine organisms;

b. maximum acceptable toxicant concentration to freshwater and marine organisms;

c. embryo-larval and egg-fry tests on freshwater organisms;

d. information on dose-related, lethal or chronic sub-lethal effects on man, nonhuman mammals, vertebrates including aquatic vertebrates, and other aquatic organisms;

e. information relating to known or suspected carcinogenicity, teratogenicity, and mutagenicity in man or in other animals.

(2) Persistence of a pollutant including mobility and degradability in water of the substance.

(3) Bioconcentration, bioaccumulation, and biomagnification of a pollutant or of its degradation products or metabolites.

(4) Synergistic propensities and effects of the pollutant.

(5) Water solubility and octanol-water partition coefficient determinations for the pollutant.

(6) Extent of point source discharges into water including qualitative presence and quantitative concentrations of the pollutant in effluents, ambient water, benthic sediments, fish and other plant and animal aquatic organisms.

(7) Potential exposure of persons to the pollutant through drinking water, surface water, fish or shellfish consumption. Potential exposure of aquatic organisms and wildlife to the pollutant.

(8) Annual production of the pollutant in the United States.

(9) Use patterns.

(10) The capability of analytical methods to identify and quantitatively determine the presence of the pollutant in ambient water or wastewaters.

If data for any of the above are not known, the petition should indicate this fact. All significant information that is known to the petitioner regarding either a quantitative or qualitative measure for description of the above information factors, or that may relate to an assessment of the merit of the petition,

shall be submitted as a part of the petition.

The compounds on the list of 65 were themselves chosen on the basis of different sets of criteria. These criteria are described in Committee Print Number 95–32, Hearings before the Subcommittee on Investigations and Review of the Committee on Public Works and Transportation, U.S. House of Representatives, pages 389–405. Each of the 65 toxic pollutants was classified in one of three priority lists based upon three sets of overlapping criteria. The criteria described in the Committee Print Number 95–32 for the first two priority lists are:

Priority List I contains those chemicals for which human exposure via the water route gives rise to the greatest concern. This list contains some 28 substances and/or generic categories. Essentially chemicals on the Priority List Number I satisfy the following criteria:

(1) There is known occurrence of these compounds in point source effluents, in aquatic environments, in fish, and/or drinking water.

(2) There is substantial evidence of carcinogenicity, mutagenicity, and/or teratogenicity in human epidemiological studies or in animal bioassay systems.

(3) There is also a likelihood that point source effluents contribute substantially to human hazards, at least locally.

Priority List II contains 18 compounds and/or generic categories. These 18 satisfy the same first criteria as those on Priority List I, i.e., there is known occurrence in point source effluents, in aquatic environments, in fish and/or drinking water. However, the evidence with respect to the toxicity of these compounds differs from Priority List I. In some cases the evidence of carcinogenicity, mutagenicity, and teratogenicity is based primarily upon structural similarity to compounds in List I, or upon mutagenic activity in bacterial screening systems, in the absence of adequate confirmation in mammalian systems. In other cases, the testing has given some evidence regarding the carcinogenicity, mutagenicity, or teratogenicity, but these results presently appear to be incomplete or equivocal. Also, for these compounds the possibility of significant human exposure attributable to the point source effluent is judged to be less than that for compounds in List I. This judgment could be based on a relatively small volume of effluents, or relatively low propensity to persist in water or accumulate in organisms. In addition, several compounds included in List II are included on the basis of serious toxic effects other than carcinogenicity, mutagenicity, or teratogenicity, combined with evidence for substantial release in effluents and likely exposure of humans and aquatic organisms. These other toxic effects primarily refer to toxicity to aquatic organisms.

1,1,1-Trichloroethane as a member of the generic category "chlorinated ethanes" and methylene chloride as a member of the generic category "halomethanes" are both found on priority list II.

The following sections of this notice state and elaborate on the assertions used by Dow to support its request to remove 1,1,1-trichloroethane and methylene chloride from the toxic pollutant list and also present the Agency's response to these assertions.

1,1,1-Trichloroethane

Persistence

Dow Chemical states in its petition that 1,1,1-trichloroethane is not persistent in the aquatic environment and the removal mechanism from agitated surface waters is mainly by volatilization with a minor amount removed by hydrolysis.

They base these conclusions on a Dow study by Dilling et al., 1975 which suggests that 1,1,1-trichloroethane in a concentration of 1 ppm volatilizes from water to the extent of 50 percent in 17 minutes when stirred in an open container at a rate of 200 rpm and a temperature of approximately 25 degrees C.

Although the study shows that volatilization is a major pathway by which 1,1,1-trichloroethane is lost from water, there are reasons why this chemical could be more persistent in nature than is indicated by the experimentally—determined half-life. These reasons include differences in environmental and laboratory conditions, retransport of 1,1,1-trichloroethane from the atmosphere to water, and decreased volatilization rates in stagnant waters.

Dilling et al., 1975 caution that it is difficult to use their experimental data to predict actual loss rates from surface waters, where concentrations of 1,1,1-trichloroethane detected are significantly lower than those used experimentally. They also point out that variations in the amount of stirring/agitation (which directly influences loss rate) and free air space may account for different loss rates from environmental and experimental water systems.

The volatilization of 1,1,1-trichloroethane from water can be reversible because this chemical is stable in the atmosphere and is retransported to surface waters via precipitation. Tropospheric half-lives of 20 weeks (Pearson and McConnell, 1975) to 8 years (McConnell and Shiff, 1978) indicate that 1,1,1-trichloroethane is highly stable in the troposphere. Dilling et al. (1976) estimated the decomposition rate of 1,1,1-trichloroethane under simulated atmospheric conditions to be less than 5 percent after 23.5 hrs. (5 ppm NO_x) indicating stability in the atmosphere. 1,1,1-Trichloroethane has been detected in rainwater in the U.S. and in England (Pearson and McConnell, 1975) (Su and Goldberg, 1976) and is thus retransported to surface waters in this manner.

Dow stated that 1,1,1-trichloroethane is partially insoluble in water having a solubility of 700 mg/1 and is hydrolytically reactive having a half-life of approximately 415 days at 20 degrees C. Dow did not cite the source from which it got the data on the water solubility and hydrolytic half-life of 1,1,1-trichloroethane.

Various solubility and hydrolysis constants have been reported for 1,1,1-trichloroethane. Hardie (1964) reports the solubility of 1,1,1-trichloroethane in water at 20 degrees C to be 4,400 mg/1 (4,400 ppm) and a U.S. EPA (1976) study reported a solubility of 1,332 mg/1 at 25 degrees C. Hydrolytic half-lives of 6 to 9 months have been reported for 1,1,1-trichloroethane, indicating that this chemical has low hydrolytic reactivity (Dilling et al., 1975 Pearson and McConnell, 1975).

The appreciable water solubility of 1,1,1-trichloroethane coupled with its low rate of hydrolysis indicate a potential for greater persistence of this chemical in stagnant water.

Dow cites acetic and hydrochloric acids as the major hydrolytic products. Another potentially hazardous hydrolytic product of 1,1,1-trichloroethane is 1,1–dichloroethylene. 1,1–Dichloroethylene (vinylidene chloride), a known animal carcinogen with a water solubility of 2,500 mg/1 (Maltoni, 1977; Patty, 1963; Maltoni et al., 1977), has been reported as a minor product of hydrolysis at 25 degrees C by Dilling et al. (1975).

Pearson and McConnell (1975) report that at a lower temperature (10 degrees C) and under slightly alkaline conditions (pH 8), the major hydrolytic end product is vinylidene chloride.

The experimental evidence indicates that 1,1,1-trichloroethane, even though short-lived in water due to volatilization, has the potential for increased persistence and toxicity in the aquatic environment because of its appreciable water solubility, its long hydrolytic half-life, and its potentially hazardous, appreciably soluble hydrolytic product, vinylidene chloride.

Toxicity

Dow Chemical stated in its petition that no evidence has been cited for the carcinogenicity or teratogenicity of 1,1,1-

trichloroethane and that the compound has only moderate fish toxicity. They cited as evidence a National Cancer Institute (NCI, 1977) study (unpublished), a Dow report by Rampy et al. (unpublished), and a report by Schwetz et al., 1975. Dow did not present data on fish toxicity. They conluded that 1,1,1-trichloroethane does not meet EPA's criterion of toxicity for designating it a Toxic Pollutant under Section 307(a)(1) of Pub L. 92–500.

The 1977 NCI carcinogenic bioassay of 1,1,1-trichloroethane (cited by Dow as failing to establish any relationship between the dosage groups, the species, sex type, type of neoplasm, or site of occurrence) was considered inconclusive by the NCI, due to poor survival of treated animals.

Due to the problems associated with this study, the NCI Clearing House on Environmental Carcinogens concluded that the carcinogenicity of 1,1,1-trichloroethane could not be determined (NCI Clearing House minutes 3–25–77). A two-year carcinogenesis animal bioassay is being repeated at the National Cancer Institute.

The study cited by Dow of Rampy et al. (unpublished), which reported no increased tumor incidence in rats after 1,1,1-trichloroethane (1750 or 875 ppm) inhalation exposure, suffers from several drawbacks:

(1) The study doesn't show that animals were given highest does of 1,1,1-trichloroethane that they could tolerate. No adverse effects were observed at any point in the 12 month treatment period in animals treated with 1,1,1-trichloroethane, even at the higher does. NCI recommends that cancer studies be conducted with a known maximum tolerated doses (MTD), determined from a subchronic study. Maximum tolerated doses should be selected for each sex of each species used in the chronic study.

(2) Animals were treated for only 12 months. The NCI recommends that the test agent be given for the greater part of the animals' life spans to insure sufficient time to produce a maximum response. The carcinogen bioassay program at NCI usually requires a 24 month treatment period for both mice and rats.

(3) Only one animal species (Sprague-Dawley rats) was tested. NCI recommends the use of 2 species and both sexes of each species. A negative response in one species is not sufficient evidence to show that 1,1,1-trichloroethane is not carcinogenic.

Positive responses in two *in vitro* systems currently used to detect chemical carcinogens, indicate that 1,1,1-trichloroethane has the potential for carcinogenicity in animals. Fischer rat embryo cells (F1706) transformed by 1,1,1-trichloroethane produced fibrosarcomas in all animals (8/8) receiving injections of the cells (Price et al., 1978). Based on these results, 1,1,1-trichloroethane is a suspected carcinogen.

Another *in vitro* study of the mutagenicity of this chemical provided additional evidence that 1,1,1-trichloroethane is a potential carcinogen. 1,1,1-Trichloroethane was mutagenic to *Salmonella typhimurium* TA100 in the presence and absence of metabolic activation (Simon et al., 1977). Its mutagenic potency was similar to that of trichloroethylene, a know animal carcinogen (NCI, 1976).

The fact that 1,1,1-trichloroethane-transformed cells produced fibrosarcomas *in vivo* and the fact that 1,1,1-trichloroethane was mutagenic in the *Salmonella* test (McCann and Ames, 1976) indicate that 1,1,1-trichloroethane is suspect as an animal carcinogen.

Dow cites the teratology study by Schwetz et al., 1975 as evidence that 1,1,1-trichloroethane has no adverse effects on developing embryos and fetuses.

Schwetz et al. exposed pregnant mice and rats to 875 ppm 1,1,1-trichloroethane vapors for 7 hours daily on days 6–15 gestation. The authors concluded that this dose, which is twice the maximum allowable excursion limit for human industrial exposure, caused no maternal, embryonal or fetal toxicity, nor did it elicit a teratogenic response.

The Agency agrees with Dow's assertion that the Schwetz study presents no evidence of the teratogenicity of 1,1,1-trichloroethne. The Schwetz study highlights the need for further evaluation of the embryotoxic, fetotoxic, and teratogenic properties of this chemical. The Agency advises repeating the study at higher doses since increases in the incidence of certain fetal anomalies were observed in treated animals, although they were not considered statistically significant from controls. Although practical, the concentration of 1,1,1-trichloroethane tested was low.

Dow stated that 1,1,1-trichloroethane has only moderate fish toxicity but did not submit any aquatic toxicity data to support its assertion. Evidence available to the Agency indicates that 1,1,1-trichloroethane is toxic to marine and freshwater organisms, including commercially and recreationally important species in the United States. It is soluble in water at a level (4,400 mg/1) well above its toxicity to aquatic organisms, and therefore has the potential for toxicity under environmental conditions. The experimental results of acute toxicity test in fresh water and saltwater fish are presented below in Table 1.

Table 1.—*Acute Toxicity Test Results for 1,1,1-trichloroethane in Freshwater and Marine Aquatic Organisms*

Organism	Toxic effect	Test condition	Conc. (mg/1)	Reference
Bluegill (*Lepomis macrochirus*)	LC50 (96 hr)	Static	69.7	U.S. EPA, 1978a
Fathead minnow (*Pimephales promelas*)	LC50 (96 hr)	Static	105	Alexander et al., 1978
		Flow-through	52.8	
	EC50 (96 hr)	Flow-through	11.1	Alexander et al., 1978
Sheepshead minnow (*Cyprinodon variegatus*)	LC50 (96 hr)	Static	70.9	U.S. EPA, 1978a
Dab (*Limanda limanda*)	LC50 (96 hr)	Flow-through	33	McConnell et al., 1975

Contrary to Dow's assertion, 1,1,1-trichloroethane does meet EPA's criteria of toxicity for designating it a Toxic Pollutant based on the acute toxicity of 1,1,1-trichloroethane to freshwater and marine organisms and on information relating to the mutagenicity and suspected carcinogenicity of this chemical.

Usual and Potential Presence of the Compound in Water

Available evidence indicates that 1,1,1-trichloroethane is found in U.S.

water. It is estimated that 454,230 pounds of 1,1,1-trichloroethane are discharged into water annually (U.S. EPA, 1979a). The primary sources of waterborne 1,1,1-trichloroethane are effluents from publicly owned treatment works and direct industrial discharges to surface waters. Dow Chemical submitted data, which showed that when the drinking water of 14 cities was sampled and analyzed, all cities were found to have levels of 1,1,1-trichloroethane. The majority of these cities had 1 μg/1 or less 1,1,1-trichloroethane and 1 sample showed 17 μg/1 (reference unknown). Additional evidence shows that 1,1,1-trichloroethane has been detected in industrial effluents, surface waters, and drinking water (U.S. EPA, 1979d; U.S. EPA, 1977; Kopfler, et al., 1976). A concentration of 1,1,1-trichloroethane as high as 7,100 μg/1 has been detected in one industrial effluent (U.S. EPA, 1979d). Although 1,1,1-trichloroethane is found in water, the extent and severity of water contamination by this chemical can't be assessed without further monitoring.

Annual U.S. Production of the Pollutant and Use Patterns

1,1,1-Trichloroethane is produced in large volume and has several dispersive uses. The United States produced an estimated 600 million pounds of 1,1,1-trichloroethane in 1977 for use in metal degreasing and cleaning, for use as an intermediate in the manufacture of vinylidene chloride, for miscellaneous uses, and for exports (U.S. EPA, 1979a).

Methylene Chloride

Persistence

Dow Chemical states in its petition that methylene chloride is not persistent in the aquatic environment and that the removal mechanism from agitated natural water bodies is mainly through volatilization. Dow submitted a laboratory study by Dilling, et al. 1975 which showed that a system containing a 1 mg/l concentration of methylene chloride in water when stirred at 200 rpm in an open container at 25 degrees C lost 50 percent of its methylene chloride in less than 30 minutes and 90 percent of the compound in less than 90 minutes. In an attempt to simulate environmental conditions with respect to the presence of sediments, dissolved solids, or the presence of other pollutants, clay, limestone, sand, salt, peat moss, and kerosene were added to this laboratory system with little effect on the evaporation or disappearance rate of methylene chloride. While this study demonstrates the high volatility of methylene chloride from a stirred aqueous system under laboratory conditions, one cannot extrapolate this degree of volatilization to all natural water bodies under a variety of actual environmental conditions. For example this laboratory system is probably not predictive for a stagnant natural water body whereas this model might simulate conditions in fast flowing rivers or streams. Several field studies on methylene chloride volatilization from the aquatic environment must be performed before a definitive statement on its persistence can be made.

Toxicity

Dow Chemical states in its petition that methylene chloride does not meet reasonable toxicity criteria for listing chemicals under section 307. The following information based on data which was submitted by the Dow Chemical Co. and available to EPA in the literature questions this assertion and indicates that methylene chloride is toxic both to aquatic life and to humans and non-human mammals.

Dow Chemical states that no evidence has been cited for the carcinogenicity or teratogenicity of methylene chloride. They submitted a report by Klimmer (1970) in which the results of a study of Mosinger (1966) were reported. This chronic toxicity study involved both rats and hamsters in a two-year exposure to methylene chloride via pharyngeal tube administration. No abnormal incidence of tumors, no adverse effects on fertility and the pups of F_1 and F_2 generations, and no other adverse effects on the parent generation were observed. However in this study, methylene chloride was administered not as the pure compound but as a mixture with water and ground coffee so that the potential toxic effect of the compound alone could not be assessed. In addition, Mosinger's study was not submitted to the Agency for evaluation of the data and the test protocol used. The reported results of this study are therefore insufficient for toxicity evaluation of methylene chloride.

Dow also described a newly released *interim* report on another two-year chronic toxicity study on methylene chloride (Farber, 1978a,b; Anonymous, 1978). This study is being conducted by Dow and supported by four other companies. Rats and hamsters were exposed to methylene chloride vapor at 0, 500, 1,500, 3,500 ppm concentrations for 6 hours per day, 5 days per week, for 104 weeks to simulate lifetime exposure in human workers. Dow reported no increase in *malignant* tumors compared to controls in either species at any level of exposure. However, a significant increase in *benign* mammary tumors for both sexes in the rats were observed, especially at the higher methylene chloride exposure levels. Dow claimed that this increase in benign tumor formation for the treated rat groups was due to the rat strain used in the study which is prone to spontaneously develop benign and malignant tumors. Microscopic examination of the livers from the methylene chloride exposed rats showed some toxic effects although Dow claimed that these effects were not severe enough to be life-shortening. The Carcinogen Assessment Group (CAG) of the Agency will review the final report of this study when it is made available by Dow in September of 1979 (personal communication from Dr. Hugh A. Farber) to assess the adequacy of the data and experimental protocol. At that time a carcinogenic or unit risk calculation on methylene chloride will be performed by CAG (U.S. EPA, 1979b). Only then will the Agency be able to comment on Dow's conclusion from this study that the chemical should not be considered a potential human carcinogen.

A bioassay for carcinogenicity has been undertaken by the National Cancer Institute in a 2-year chronic gavage study with rats and mice. Again CAG will review this study when it is available (September, 1981) and another unit risk assessment will be performed at that time (U.S. EPA, 1979b).

Dow reported on a human epidemiological study (Friedlander, et al., 1978) conducted by the Eastman-Kodak Company. This study has been reviewed by CAG. This study involved examination of the mortality of male Kodak employees continuously exposed to methylene chloride vapor in the work environment for periods of up to 30 years. Air levels were measured at 5 intervals between 1959 and 1975 and were in the range of 30-120 ppm. From this study, Dow concluded that the mortality pattern of the study group was consistent with industrial controls (other Kodak employees). Dow also concluded that this study showed no increase in the incidence of cancer-related or other causes of death in the study group and was less than the New York State male population. CAG (U.S. EPA, 1979b) agrees with these conclusions, namely "no increase in neoplasms or heart disease or any other causes of death were found compared to 3 control groups, other Kodak employees, New York State males, and United States males". It should be noted however that the Kodak study does not reveal any

data on cancer incidence among living workers.

In a supporting document, Dow reports a joint human health study with Celanese Fibers Company (Anonymous, 1978). This study is in progress. Dow asserts that preliminary results of this study show no adverse effects related to methylene chloride exposure. Analysis of data is continuing with a final report anticipated by the end of 1978. To date, the Agency has not received this report an any comment on Dow's conclusion must be based on the Agency's review of the final report.

There is suggestive evidence for methylene chloride carcinogenicity based on marginally positive pulmonary adenoma response in a 24 week study in strain A mice (Theiss, 1977). At present, this has been the only positive mammalian *in vivo* test for carcinogenicity reported in the literature. The chemical was administered by interpertoneal injection 3 times per week for a total of 16 or 17 injections at doses of 0, 10, 400 and 800 mg/kg. The data obtained from this study is judged qualitatively informative but quantitatively inadequate for carcinogenic risk extrapolation.

Other suggestive evidence for carcinogenicity is based on positive responses in two short term tests. Methylene chloride was mutagenic in at least one bacterial strain, *Salmonella* TA 100, when the compound was run in the Ames test (Simon, et al., 1977). Methylene chloride demonstrated mutagenicity in this system without the requirement of metabolic activation and was approximately 8 times as potent as 1,1,1-trichloroethane and trichloroethylene, the latter compound being a known animal carcinogen.

A second test, an *in vitro* test of cell transformation, was performed using Fischer rat embryo cell line F 1706 (Price, et al., 1978). Methylene chloride transformed the cells and these transformed cells produced, when injected, fibrosarcomas in 5 out of 5 rats. Again methylene chloride was more potent than 1,1,1-trichloroethane and trichloroethylene in this test.

In summary, there are not adequate studies that completely describe the carcinogenic potential of methylene chloride. The data base for this compound is neither extensive of adequate. A long term animal bioassay is required and two are currently in progress at NCI and Dow Chemical Co. When final results from these tests are available, carcinogenic risk assessments will be performed for methylene chloride. Suggestive evidence for carcinogenicity is based on one positive animal bioassay and two *in vitro* tests one of which demonstrates mutagenic potential for the compound as well.

Dow asserts that a study by Schwetz, et al. (1975) has demonstrated that methylene chloride does not cause significant maternal, embryonal, or fetal toxicity, and is not teratogenic in mice or rats. The Agency agrees with this interpretation of the study. However, some minor toxic effects were observed in both dams and fetuses for both species during and after exposure to the chemical (inhalation of 1225 ppm, 7 hours per day on days 6–15 of gestation). Pregnant mice experienced an 11 to 15 percent increase in mean body weight. The absolute liver weights of pregnant females of both species were elevated compared to controls. Elevated carboxyhemoglobin content was observed in pregnant females of both species. In addition exposure to the chemical did cause effects on embryonal and fetal development in both species as evidenced by an increase in the incidence of variation of sternum development (both species) and an increase in soft tissue anomalies (rats).

Other questions arise from the above study. For pregnant rats, the daily intake of methylene chloride via inhalation was calculated to be approximately 800 mg/kg. Methylene chloride demonstrated an oral LD50 value of 945 mg/kg in the rat (Marhold, 1977). This datum when considered with the calculated daily intake of 800 mg/kg in the teratogenicity study suggests that the most sensitive and/or appropriate route of methylene chloride administration, i.e., oral, should also be used in assessing the toxicity and/or teratogenicity of the compound in rats. In addition, exposure data for other potentially more sensitive species should be gathered before a final determination of teratogenic potential can be determined for methylene chloride.

Dow assets that methylene chloride has only low fish toxicity. Dow did not submit any aquatic life toxicological data with its petition to support this assertion. Data available to the Agency (U.S. EPA, 1978a) show a moderate degree of methylene chloride toxicity toward aquatic life. Acute toxicity values (48 and 96 hour LC50 values) ranged from 224 mg/1 for the water flea, *Daphnia magna*, and the bluegill, *Lepomis macrochirus*, to 331 mg/1 for the sheepshead minnow, *Cyprinodon variegatus*.

Usual and Potential Presence of the Compound in Water

Dow asserts that with the exception of accidental spills, methylene chloride is not likely to be found in significant quantities in surface or ground waters. Dow submitted no monitoring data to support this assertion. The following information, available to EPA suggests that this assertion is inaccurate.

Even though methylene chloride is quite volatile with a vapor pressure of 426 mm Hg at 25 degrees C (Hardie, 1964), its potential for solubility in water, particularly stagnant and cool water bodies, is great (solubility of 19,800 mg/1 at 25 degrees C (Hardie, 1964)). Methylene chloride is one of the ten halogenated methanes identified in United States' finished drinking waters as of 1975 by the U.S. Environmental Protection Agency (U.S. EPA, 1975). In EPA's Region V Organics Survey at 83 sites, the Agency reported concentrations of methylene chloride in 8 percent of the finished municipal water sites with a median concentration for all sites surveyed of less than 1 ug/1 and a maximum concentration found of 7 ug/1 (U.S. EPA, 1975). U.S. EPA's National Organic Monitoring Survey (NOMS) conducted in 1976 and 1977 sampled 113 water supplies representing various sources and treatments (U.S. EPA, 1978b,c). Methylene chloride was found in 15 of 108 water supplies tested with a mean concentration for all positive samples of 6.1 ug/1.

Annual United States Production of the Pollutant and Use Patterns

Methylene chloride has a significant potential for environmental contamination because it is produced in large amounts in the U.S. (538,241,000 lbs in 1976) and because most of its uses are dispersive in nature (U.S. EPA, 1979c). Of the 580,577,000 lbs consumed in the U.S. in 1976, 470,547,000 lbs or 81% was discharged into the environment as airborne emissions as a result of its production and uses (U.S. EPA, 1979c). The compound's primary uses are as a paint remover, a solvent in plastic processing, an aerosol vapor pressure depressant, and a metal degreaser. Each of these uses are approximately 100 percent dispersive via volatilization involving high human exposure. Most of the chemical is released into home and factory air through these uses. The number of workers exposed is estimated at 2,500,000 (U.S. EPA, 1979b).

In 1976, approximately 27,000 lbs. of methylene chloride was discharged into the aquatic environment as a result of the chemical's production. Of this

amount, 90% was discharged directly into waterways and the balance injected into deep wells. Methylene chloride discharges from these production plants to publicly owned treatment works (POTWs) and to land-destined waste are believed to be negligible (U.S. EPA, 1979c). However, data on total direct aquatic discharges and discharges to POTWs from methylene chloride uses are not available, so that complete assessment of methylene chloride aquatic discharges cannot be made at this time.

Historically, annual growth for methylene chloride has been 8 to 10 percent over the past 10 years. Projections for future annual growth are 10 percent with prospects for even higher growth rates being achieved as new end-uses develop and existing ones expand (U.S. EPA, 1979c). Therefore the potential for increased annual environmental discharges exists.

Other Considerations

The petition states that leaving 1,1,1-trichloroethane and methylene chloride on the list of Toxic Pollutants dilutes the Agency's efforts and diverts attention from more serious environmental issues, introduces unwarranted barriers to the introduction of new products containing the compounds, and results in needless expenditures of funds by industry and Government for expensive monitoring, analysis, and reporting.

Listing chemicals under section 307(a) does not preclude a company from producing, marketing, and selling a product. The purpose of the section 307 list of toxic pollutants is to focus attention on the potential environmental harm which might result if such pollutants are discharged to the aquatic environment and to control such harmful discharges through the development and implementation of appropriate effluent limitations. Since 1,1,1-trichloroethane and methylene chloride are on the section 307(a) toxic pollutant list, they may be subject to effluent limitations sooner than if they were nonconventional pollutants, and they are not eligible for waivers on water quality or eocnomic grounds. However, 1,1,1-trichloroethane and mentylene chloride would be subject to BAT effluent limitations whether they are classified as toxic or nonconventional pollutants.

In summary 1,1,1-trichloroethane meets several of EPA's criteria for listing it as a Toxic Pollutant:

(1) It is acutely toxic to freshwater and marine organisms.

(2) There is evidence relating to its mutagenicity and suspected carcinogenicity.

(3) There is limited evidence of its presence in effluents, ambient water, and aquatic organisms.

(4) It has been detected in some drinking water supplies and there is potential for exposure of humans through drinking water and surface water.

(5) Annual production of 1,1,1-trichloroethane in the U.S. exceeds 600 million pounds.

In summary, methylene chloride meets several of EPA's criteria for listing it as a Toxic Pollutant:

(1) Methylene chloride does not persist in water under laboratory conditions but its large potential for solubility in water and lack of data for its persistence under field conditions warrant further study.

(2) Evidence exists for its carcinogenicity in at least two animal species. Results from one chronic toxicity test will not be available for Agency review and subsequent cancer risk calculations until September 1981.

(3) Evidence exists for its mutagenicity.

(4) One study submitted by the petitioner did not demonstrate teratogenicity although skeletal and soft tissue anomalies were found in two laboratory animal species.

(5) A human epidemiological study involving long term, low level exposure to the chemical via inhalation does not show the involvement of methylene chloride in cases of mortality but does not give information on contribution to incidences of cancer and other diseases in living workers. The results of another epidemiological study are preliminary and an Agency review of the study is expected pending receipt of the final results.

(6) Aquatic life toxicity is moderate.

(7) Methylene chloride has been found in some finished U.S. drinking waters.

(8) Discharges of this chemical into the environment represent a substantial percentage of its production and consumption volume. As methylene chloride use rises, increased environmental discharges can be expected.

Based on the physical and/or toxicological properties of 1,1,1-trichloroethane and methylene chloride and their large annual production volume and dispersive uses as discussed in this report, it is proposed that 1,1,1-trichloroethane and methylene chloride should remain on the toxic substances list under the general classification of chlorinated ethanes and halomethanes, respectively.

Dated: May 30, 1979.

Pesticide Programs; Notice of Establishment of a Temporary Tolerance for [*N*-(2,6-dimethylphenyl)-*N*-(methoxyacetyl)alanine methyl ester]

Ciba-Geigy Corp., Agricultural Div., PO Box 11422, Greensboro, NC 27409, submitted a pesticide petition (PP 8G2121) to the Environmental Protection Agency (EPA). This petition requested that a temporary tolerance be established for residues of the fungicide [*N*-(2,6-dimethylphenyl)-*N*-(methoxyacetyl)alanine methyl ester] in or on the raw agricultural commodity potatoes at 0.05 part per million (ppm). This temporary tolerance will permit the marketing of the above raw agricultural commodity when treated in accordance with an experimental use permit (100-EUP-1) that has been issued under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended in 1972, 1975, and 1978 (92 Stat. 819; 7 U.S.C. 136).

An evaluation of the scientific data reported and other material showed that the requested tolerance was adequate to cover residues resulting from the proposed experimental use, and it was determined that the temporary tolerance would protect the public health. The temporary tolerance has been established for the pesticide, therefore, with the following provisions:

1. The total amount of the pesticide to be used must not exceed the quantity authorized by the experimental use permit.

2. Ciba-Geigy Corp. must immediately notify the EPA of any findings from the experimental use that have a bearing on safety. The firm must also keep records of production, distribution, and performance, and on request make the records available to any authorized officer or employee of the EPA or the Food and Drug Administration.

This temporary tolerance expires January 30, 1981. Residues not in excess of 0.05 ppm remaining in or on potatoes after this expiration date will not be considered actionable if the pesticide is legally applied during the term of and in accordance with the provisions of the experimental use permit and temporary tolerance. This temporary tolerance may be revoked if the experimental use permit is revoked or if any scientific data or experience with this pesticide indicates such revocation is necessary to protect the public health. Inquiries concerning this notice may be directed to Mr. Henry Jacoby, Product Manager 21, Registration Division (TS-767), Office of Pesticide Programs, 401 M St., SW, Washington, DC 20460 (202/755-2562).

(Statutory Authority: Section 408(j) of the Federal Food, Drug, and Cosmetic Act [21 U.S.C. 346a(j)]).

Dated: June 7, 1979.

Douglas D. Campt,

Director, Registration Division.

Issuance of Experimental Use Permits

The Environmental Protection Agency (EPA) has issued experimental use permits to the following applicants. Such permits are in accordance with, and subject to, the provisions of CFR Part 172, which defines EPA procedures with respect to the use of pesticides for experimental purposes.

No. 464-EUP-55. Dow Chemical Company, Midland, Michigan 48640. This experimental use permit allows the use of 350 gallons of the herbicide Lontrel (700# a.e. of 2,4-D and 175# a.e. of 3,6-dichloro-2-pyridinecarboxylic acid) on wheat and barley to evaluate control of broadleaf weeds. A total of 1,400 acres is involved; the program is authorized only in the States of Montana, Nebraska, North Dakota, South Dakota, and Washington. The experimental use permit is effective

from May 7, 1979 to March 31, 1981. This permit is being issued with the limitation that all crops will be destroyed or used for research purposes only. (PM-23—Robert Ikeda, Room: E-351, Telephone: 202/755-1397)

No. 20964-EUP-11. Zoecon Corporation, Palo Alto, California 94304. This experimental use permit allows the use of 50 pounds of the insecticide methoprene on various mosquito breeding sites to evaluate control of mosquitoes. A total of 2,650 acres is involved; the program is authorized only in the States of Arizona, Arkansas, California, Florida, Georgia, Illinois, Louisiana, Minnesota, New Jersey, New Mexico, New York, North Carolina, Tennessee, Texas and Utah. The experimental use permit is effective from April 26, 1979 to April 25, 1980. (PM-17—Adam Heyward, Room: E-229, Telephone: 202/426-9425)

No. 27586-EUP-15. U.S. Department of Agriculture, Forest Service, Washington, D.C. 20250. This experimental use permit allows the use of 7 pounds of the insecticides α-cubebene, 4-methyl-3-heptanol, and α-multistratin in urban and forest areas to evaluate control of the Elm bark beetle. A total of 20,000 traps is involved; the program is authorized only in the States of California, Colorado, Connecticut, Delaware, District of Columbia, Illinois, Massachusetts, Michigan, Minnesota, New York, North Carolina, Rhode Island, South Carolina, South Dakota, Virginia, and Wisconsin. The experimental use permit is effective from March 30, 1979 to October 1, 1979. (PM-17—Adam Heyward Room: E-229, Telephone: 202/426-9425)

Interested parties wishing to review the experimental use permits are referred to the designated Product Manager (PM), Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M Street, S.W., Washington, D.C. 20460. The descriptive paragraph for each permit contains a telephone number and room number for information purposes. It is suggested that interested persons call before visiting the EPA Headquarters Office, so that the appropriate permit may be made conveniently available for review purposes. The files will be available for inspection from 8:30 a.m. to 4:00 p.m. Monday through Friday.

STATUTORY AUTHORITY: Section 5 of the Federal Insecticide, Fungicide, and Rodenticide, Act (FIFRA), as amended in 1972, 1975, and 1978 (92 Stat. 819; 7 U.S.C. 136)

Dated: June 7, 1979.

Pesticide Programs; Notice of Filing of Pesticide Petitions

Pursuant to section 408(d)(1) of the Federal Food, Drug, and Cosmetic Act, the Environmental Protection Agency (EPA) gives notice that the following petitions have been submitted to the Agency for consideration.

PP 9F2205. BASF Wyandotte Corp., 100 Cherry Hill Road, PO Box 181, Parsippany, NJ 07054. Proposes that 40 CFR 180 be amended by establishing a tolerance for the combined residues of the fungicide 3-(3,5-dichlorophenyl)-5-ethenyl-5-methyl-2,4-oxazolidinedione and its dichloroaniline-containing metabolites in or on the raw agricultural commodity strawberries at 10 parts per million (ppm). The proposed method for determining residues is by gas chromatography using an electron capture detector.
PM21-Mr. Henry Jacoby, Rm. E-305, 202/755-2562.

PP9F2206. Boots Hercules Agrochemicals Co., 910 Market St., Wilmington, DE 19899. Proposes that 40 CFR 180 be amended by establishing tolerances on the combined residues of the herbicide diethatyl-ethyl [*N*-chloroacetyl-*N*-(2,6-diethylphenyl) glycine ethyl ester] and its major metabolites, *N*-chloroacetyl-*N*-(2,6-diethylphenyl) glycine ethyl ester glutahione conjugate and *N*-chloroacetyl-*N*-(2,6-diethylphenyl) glycine ethyl ester cysteine conjugate in or on the raw agricultural commodities sugar beet roots and sugar beet tops at 0.05 ppm and soybeans at 0.2 ppm. The proposed analytical method for determining residues is a gas chromatography method.
PM23-Ms Willa Garner, Rm. E-353, 202/755-7012.

Interested persons are invited to submit written comments on these petitions. Comments may be submitted, and inquiries directed, to the designated Product Manager (PM), Registration Division (TS-767), Office of Pesticide Programs, EPA, 401 M St., SW, Washington, DC 20460, or by telephone at the numbers cited. Written comments should bear a notation indicating the petition number to which the comments pertain. Comments may be made at any time while a petition is pending before the Agency. All written comments filed pursuant to this notice will be available for public inspection in the Product Manager's office from 8:30 a.m. to 4:00 p.m. Monday through Friday.

Dated: June 11, 1979.

Douglas D. Campt,

Director, Registration Division.

BILLING CODE 6560-01-M

Availability of Environmental Impact Statements

AGENCY: Office of Environmental Review, Environmental Protection Agency.

PURPOSE: This Notice lists the Environmental Impact Statements which have been officially filed with the EPA and distributed to Federal Agencies and interested groups, organizations and individuals for review pursuant to the Council on Environmental Quality's Regulations (40 CFR Part 1506.9).

PERIOD COVERED: This Notice includes EIS's filed during the week of June 4 to June 8, 1979.

REVIEW PERIODS: The 45-day review period for draft EIS's listed in this Notice is calculated from June 15, 1979 and will end on July 30, 1979. The 30-day wait period for final EIS's will be computed from the date of receipt by EPA and commenting parties.

EIS AVAILABILITY: To obtain a copy of an EIS listed in this Notice you should contact the Federal agency which prepared the EIS. This Notice will give a contact person for each Federal agency which has filed an EIS during the period covered by the Notice. If a Federal agency does not have the EIS available upon request you may contact the Office of Environmental Review, EPA for further information.

BACK COPIES OF EIS'S: Copies of EIS's previously filed with EPA or CEQ which are no longer available from the originating agency are available from the Environmental Law Institute, 1346 Connecticut Avenue, Washington, D.C. 20036.

FOR FURTHER INFORMATION CONTACT: Kathi Weaver Wilson, Office of Environmental Review A-104, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460, (202) 755-0780.

SUMMARY OF NOTICE: Appendix I sets forth a list of EIS's filed with EPA during the week of June 4 to June 8, 1979, the Federal agency filing the EIS, the name, address, and telephone number of the Federal agency contact for copies of the EIS, the filing status of the EIS, the

actual date the EIS was filed with EPA, the title of the EIS, the State(s) and County(ies) of the proposed action and a brief summary of the proposed Federal action and the Federal agency EIS number if available. Commenting entities on draft EIS's are listed for final EIS's.

Appendix II sets forth the EIS's which agencies have granted an extended review period or a waiver from the prescribed review period. The Appendix II includes the Federal agency responsible for the EIS, the name, address, and telephone number of the Federal agency contact, the title, State(s) and County(ies) of the EIS, the date EPA announced availability of the EIS in the **Federal Register** and the extended date for comments.

Appendix III sets forth a list of EIS's which have been withdrawn by a Federal agency.

Appendix IV sets forth a list of EIS retractions concerning previous Notices of Availability which have been made because of procedural noncompliance with NEPA or the CEQ regulations by the originating Federal agencies.

Appendix V sets forth a list of reports or additional supplemental information on previously filed EIS's which have been made available to EPA by Federal agencies.

Appendix VI sets forth official corrections which have been called to EPA's attention.

Dated: June 12, 1979.

William N. Hedeman, Jr.,

Director, Office of Environmental Review.

Forest Service

Final

Boulder Planning Unit Land Mgmt. Plan, Boundary, Bonner County, Idaho, June 5: Proposed are eight alternatives for a land and resource management plan for the 58,000 acre Boulder Planning Unit, Idaho Panhandle National Forests in Boundary and Bonner Counties, Idaho. This revised final statement replaces the original final EIS, #70542, filed 5–22–77. This statement reflects changes in allocations for timber, big game summer range, and dispersed recreation. Roadless areas contiguous to the Boulder Unit have been reevaluated to determine whether they should be recommended for inclusion in the national wilderness preservation system. (USDA–FS–ADM–01—04—76—22). Comments made by: COE, DOI, EPA, FPC, State, and local agencies, individuals. (EIS Order No. 90569.)

Final Supplement

Oregon Dunes NRA Management Plan, Siuslaw National Forest, Coos, Douglas, and Lane Counties, Oreg., June 4: This statement supplements final EIS #70042, filed 1–11–77 concerning a management plan for the Oregon Dunes National Recreation area located in Coos, Douglas, and Lane Counties, Oregon. The purpose of the supplement is to: (1) delete references for the nonwilderness recommendation, (2) update information regarding land status, and (3) to indicate that the implementation of the management plan will recognize the reevaluation process, and that no developments or activities will be permitted on the unroaded areas which would adversely affect wilderness values that may be present. (USDA–FS–R6—FES(ADM)–75—01—SUPP.) (EIS Order No. 90554.)

U.S. ARMY CORPS OF ENGINEERS

Contact: Mr. Richard Makinen, Office of Environmenatl Policy, Attn: DAEN–CWR–P, Office of the Chief of Engineers, U.S. Army Corps of Engineers, 20 Massachusetts Avenue, NW, Washington, D.C. 20314, (202) 272–0121.

Draft

Folly Beach, beach erosion control, Charleston County, S.C., June 7: Proposed is a beach erosion control and hurricane protection project for Folly Beach on Folly Island, Charleston County, South Carolina. The improvements include restoration and periodic renourishment of a countinuous reach of beach for 16,860 feet, which would require 684,000 cubic yards of fill material. A berm 25 feet wide would be constructed along the entire length of the project. Additional sanitary facilities will also be constructed. (Charleston District.) (EIS order No. 90571.)

Final

West Des Moines-Des Moines Flood Protection, Polk County, Iowa, June 4: This statement proposes a Plan for Flood Protection for the Cities of West Des Moines and Des Moines, near the confluence of the Raccoon River and Walnut Creek in Polk County, Iowa. The project will protect an area of approximately 927 acres from the standard project flood of these watercourses. Project elements include refurbishment of existing levees and construction of new levees along the north bank of Jordon Creek. The original draft, No. 50416, filed 3–25–75, was replaced by revised draft No. 61241, filed 8–23–76. (Rock Island District.) Comments made by: EPA, DOI, USDA, DOT, HUD, AHP, HEW, State, and local agencies, groups and businesses. (EIS order No. 90556.)

Final

Fifth Unit Installation, Hartwell Lake, Savannah River, Hart County, S.C.: Anderson County, Ga., June 4: Proposed is the installation of an 80,000 kilowatt fifth generating unit at Hartwell Dam located on Hartwell Lake in Hart County, Georgia and in Anderson County, South Carolina. The installation would include modification and additions to the existing power intake works and powerhouse structure downstream; addition of a transformer and tower on the transformer deck; and oil circuit breakers, high voltage bus insulators, disconnect switches, turning tower, and pull-off tower at the switchyard. The original draft, No. 60302, filed 3–29–76 was replaced by revised draft, No. 61177, filed 10–30–76. (Savannah District) Comments made by: EPA, USDA, HEW, HUD, AHP, FERC, and State agencies. (EIS Order No. 90555.)

Final Supplement

Corpus Christi Ship Channel, M/D (FS–1), Aransas, Nueces, and San Patricia Counties, Tex., June 4: This statement supplements a final EIS No. 60074, filed 1–19–76. The proposed action involves use of the Tule Lake area from the Tule Lake turning basin to Viola turning basin for disposal of dredged material from maintenance of the Corpus Christi Ship Channel, Texas. The project provides deep draft navigation channels extending from the Gulf of Mexico through a jettied entrance channel in Aransas Pass to a turning basin at Harbor Island and thence across Corpus Christi Bay to turning basins at La Quinta, Corpus Christi, Avery Point, Chemical, Tule Lake, and Viola. This project is located in Aransas, Nueces, and San Patricia Counties, Texas. (Galveston District) Comments made by: DOC, DOI, EPA, USDA, AHP, DOT, State, and local agencies, individuals. (EIS Order No. 90569.)

Nat'l Oceanic and Atmospheric Admin.

Draft supplement

Surf Clam and Ocean Quahog Industries, FMP (DS–2), Atlantic Ocean, June 8: This statement supplements final EIS, No. 71292, filed Oct. 17, 1977. Proposed is amendment No. 2 to the Surf Clam and Ocean Quahog FMP for the Northwest Atlantic Ocean. This amendment would extend the current FMP through the end of calendar year 1980. The FMP remains in the existing form which includes: Rebuilding the declining Surf Clam populations; minimize short-term economic dislocations to the extent possible; and prevent the harvest of Ocean Quahog from exceeding maximum sustainable yield and direct the fishery toward maintaining optimum yield. (EIS Order No. 90573.)

Department of Energy

Contact: Dr. Robert Stern, Acting Director, NEPA Affairs Division, Department of Energy, Mail Station E–201 GTN, Washington, D.C. 20545, 202–376–5996.

Bonneville Power Administration

Draft supplement

BPA Okanogan Area Service, Facility Location (DS–2), Okanogan, Douglas County, Wash. June 8: This statement supplement the final EIS on the BPA 1976 Fiscal Year

program, No. 80040, filed March 14, 1975. Proposed are facility locations for transmission facilities to serve the Okanogan Valley area of Okanogan and Douglas Counties, Washington. The preferred alternative extends for 68 miles from the Chief Joseph Substation in Okanogan County to the Tonasket Substation in Douglas County. (DOE/EIS-0040-DS-1.) (EIS Order No. 90574.)

Environmental Protection Agency

Contact: Mr. Eugene Wojcik, Chief, EIS section, Region V, Environmental Protection Agency, 230 South Dearborn Street, Chicago, IL 60604, 312-353-2157.

Final

Metropolitan Area WWT Facilities, Columbus, Franklin County, Ohio, June 8: The subject action is the approval of the facilities plans for the city of Columbus in Franklin County, Ohio to expand and upgrade wastewater collection, treatment, and disposal facilities within the Columbus metropolitan area. The proposed project includes selection of additional liquid treatment facilities for sewage processing; construction of two sludge incinerators and dewatering facilities; and construction of separate sanitary sewer interceptors. (EPA-5-OH-Franklin-Columbus-WWTP+INT-79.) Comments made by: COE, HEW, DOI, DOT, State and local agencies, individuals. (EIS Order No. 90575.)

General Services Administration

Contact: Mr. Carl W. Penland, Acting Director, Environmental Affairs Division, General Services Administration, 18th and F Streets NW., Washington, D.C. 20405, 202-566-1416.

Draft

Key West Naval Air Station, Disposal of Property, Monroe County, Fla., June 5: Proposed is the disposition by GSA of surplus Federal properties at the Naval Air Station located at Key West, Monroe County, Florida. The Action will include portions of the Harry S. Truman Annex and Trumbo Point, Annex. It will also include the former Coast Guard Station at the north end of the Truman Annex. The properties include approximately 123 acres of land and improvements. The major alternatives considered include: (1) No action or delayed action; (2) disposition alternatives; and (3) reuse alternatives. (N-FLA-635-G-EIS-D-1.) (EIS Order No. 90558.)

Department of HUD

Contact: Mr. Richard H. Broun, Director, Office of Environmental Quality, Room 7274, Department of Housing and Urban Development, 451 7th Street, S.W., Washington, D.C. 20410, 202-755-6308.

Draft

Sunblest Subdivision, Mortgage Insurance, Fishers, Hamilton County, Ind., June 7: Proposed is the issuance of HUD home mortgage insurance for the Sunblest Subdivision located in Fishers, Hamilton County, Indiana. The insurance will apply to the installation of all infrastructure (sewers, water, roads) for the development of the first 502 residential building lots and for the acquisition of the entire 653.60 acre tract. The final project will consist of 545.80 acres developed for residential use and 113 acres developed for commercial industrial use. (HUD-R05-EIS-79-07.) (EIS Order No. 90566.)

Final

Lexington South Development, Eagan, Dakota County, Minn., June 6: Proposed is the issuance of HUD home mortgage insurance for a portion of the Lexington South Development located in Eagan, Dakota County, Minnesota. The area to be developed encompasses approximately 448 of the total 1,108 acre Lexington site. This EIS discusses the cumulative impacts of Lexington South and a related, nearby development known as Blackhawk Park for which a separate EIS will be prepared. (HUD-R05-EIS-79-12-(F).) Comments made by: COE, AHP, EPA, State and local agencies. (EIS Order No. 90561.)

Blackhawk Park Planned Unit Development, Eagan, Dakota County, Minn., June 6: Proposed is the issuance of HUD home mortgage insurance for the Blackhawk Park planned unit development located in Eagan, Dakota County, Minnesota. The insurance will apply to 542 acres of the 603 acre site which will be developed to provide a mixture of land uses and housing types. (HUD-R05-79-14-(F).) Comments made by: DUC, DOT, AHP, DOI, EPA, State agencies. (EIS Order No. 90562.)

Section 104(H)

The following are community development block grant statements prepared and circulated directly by applicants pursuant to section 104 (H) of the 1974 Housing and Community Development Act. Copies may be obtained from the office of the Appropriate local executive. Copies are not available from HUD.

Draft

High Service Transmission Main, Alexander City, Tallapoosa County, Ala., June 4: Proposed is the issuance of CDBG funds for the construction of a water main to connect the proposed new water treatment facility near Lake Martin, to the presently existing Alexander City Water Distribution System. The water main will be of adequate size to provide the households, businesses, and industries in Alexander City, Tallapoosa County, Alabama with sufficient potable water for their daily needs and will also provide fire protection. The alternatives considered include: (1) No action, (2) enlargement of present facilities, and (3) construction of new facilities with a new source of supply. (HUD-6-79-NH-01-0001.) (EIS Order No. 90557.)

Department of the Interior

Contact: Mr. Bruce Blanchard, Director, Environmental Project Review, Room 4256 Interior Bldg., Department of the Interior, Washington, D.C. 20240 (202) 343-3891.

Bureau of Land Management

Draft

East Roswell Grazing Management Program, Chaves, Lea, and Eddy Counties, N. Mex., June 8: Proposed is the implementation of a livestock grazing management program for the East Roswell area located in Chaves, Lea and Eddy Counties, New Mexico. The plan would: Exclude approximately 6,800 acres from livestock grazing; allocate 106,111 aums of forage to livestock and 2,[illegible] aums to big game animals; set a maximum forage utilization-level of 40 to 60 percent; treat approximately 54,300 acres with chemicals to control brush; develop grazing management systems; and specify livestock facilities necessary to implement systems. (DES-79-30.) (EIS Order No. 90563.)

Randolph Planning Unit Grazing Management Plan, Rich County, Utah, June 6: Proposed are livestock grazing management plans for the Randolph Planning Unit in Rich County, Utah. The purpose is to provide for the 140,296 acres, sustained, long term, productive use of natural resources which will be accomplished in two phases. The first phase includes: Allocation of 22,360 aums of livestock forage on 19 allotments; allotmentwide continuous grazing authorized on 15 allotments; and unchanged grazing management on 4 allotments. The second phase includes an increase of livestock forage on a sustained basis to 35,241 aums and long term management consisting of livestock grazing, vegetation treatments, fences, water developments, and cattleguards. (DES-79-31.) (EIS Order No. 90564.)

Draft Three Corners Area Grazing Management, Sweetwater County, Colo. and Uintah and Daggett Counties; Utah, June 6: Proposed is a grazing management program for 190,536 acres of public lands in the Three Corners planning unit located in Sweetwater County, Colorado and Uintah and Daggett Counties, Utah. The plan includes the following AUM allocations: 15,708 for cattle, 3,655 for sheep, 9,694 for deer, 4,834 for elk, and 378 for antelope. The plan also proposes to: Reserve one allotment for big game use, continue present allotment-wide grazing on 17 allotments, continue improved management on four allotments with existing amps, and implement improved management on 17 allotments. Other developments include: 30 miles of fencing, 52 water developments, and 1,620 acres of sage brush control. (DES-79-32). (EIS Order No. 90565.)

Department of Transportation

Contact: Mr. Martin Convisser, Director, Office of Environmental Affairs, U.S. Department of Transportation, 400 7th Street S.W., Washington, D.C. 20590, (202) 426-4357.

Federal Highway Administration

Final

Pine to Trade Street, Front Street bypass, Salem, Marion County, Oreg., June 7: The purpose of the proposed project is to divert through traffic around the Salem central business district by building connections at Ferry and Trade Streets and Division Street

to Front Street; increasing the capacity of Front Street by relocating existing railroad tracks and widening to six lanes and making traffic improvements on one or more of the alternatives north of Division Street. This project is located in the city of Salem, Marion County, Oreg. (FHWA-OR-EIS-78-06—F.) Comments made by: EPA, COE, DOT, DOE, DOI, State and local agencies, individuals, and groups. (EIS Order No. 90566.)

Final Supplement

I-393 Interchange, Fort Eddy Road, Concord, Merrimack County, N.H., June 5: This statement supplements final EIS, No. 40644, filed 5-21-74 concerning a proposed interchange on I-393 (formerly designated as relocated US-4, US-202, and NH-9) in Concord City, Merrimack County, New Hampshire. The recommended location is at relocated Fort Eddy Road. The proposed interchange is a partial cloverleaf facility which will service both east and westbound traffic to and from the bypass. This interchange will relieve traffic congestion at the Fort Eddy Road Bridge Street intersection and provide an alternate route for commercial traffic. (FHWA-NH-EIS-73-01-FS.) Comments made by: USDA, HUD, DOT, EPA, DOI, State and local agencies, groups, individuals, and businesses. (EIS Order No. 90559.)

Veterans Administration

Contact: Mr. Willard Sitler, Director, Environmental Affairs Office (66), Veterans Administration, 810 Vermont Avenue, Washington, D.C. 20420 (202) 389-2526.

Final

National Cemetary, Indiantown Gap, Lebanon County Pa., June 7: This action proposes the construction of a 675 acre national cemetery to be located on land on the south perimeter of the Fort Indiantown Gap Military Reservation in Lebanon County, 22 miles northeast of Harrisburg, Pennsylvania. The proposed development will include space for approximately 312,000 gravesites, an administration building, maintenance complex, memorial center, commital service buildings and other associated cemetery facilities. The proposed national cemetery will be an integral part of the national cemetery system and will provide burial benefits for approximately 1,500,000 veterans living within the service range of the facility. Comments made by: COE, USA, USDA, VA, DOI, USN, EPA, DOT, State and local agencies. (EIS Order No. 90567.)

Sunshine Act Meetings

Federal Register
Vol. 44, No. 117
Friday, June 15, 1979

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94–409) 5 U.S.C. 552b(e)(3).

CONTENTS

	Items
Council on Environmental Quality	1
Federal Election Commission	2
Federal Energy Regulatory Commission	3
Federal Home Loan Bank Board	4
Federal Reserve System	5

1

June 13, 1979.

COUNCIL ON ENVIRONMENTAL QUALITY.

TIME AND DATE: Thursday, June 21, 1979, 11:30 a.m.

PLACE: Conference Room, 722 Jackson Place, N.W., Washington, D.C.

STATUS: Open.

MATTERS TO BE CONSIDERED:

1. Old Business.
2. Status Report on Agricultural Lands Study.
3. Briefing on status of agency Endangered Species Act consultations involving proposed Pittston refinery.
4. Briefing on status of agency NEPA implementing procedures.
5. Briefing on Synfuels legislation.

CONTACT PERSON FOR MORE INFORMATION: Foster Knight, 395–4616.

[S–1191–79 Filed 6–13–79; 3:01 pm]

BILLING CODE 3125–01–M

2

FEDERAL ELECTION COMMISSION.

DATE AND TIME: Wednesday, June 20, 1979 at 10 a.m.

PLACE: 1325 K Street, NW., Washington, D.C.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED:
Compliance. Personnel.

* * * * *

DATE AND TIME: Thursday, June 21, 1979, at 10 a.m.

STATUS: Portions of this meeting will be open to the public and portions will be closed.

MATTERS TO BE CONSIDERED:

Setting of dates for future meetings.
Correction and approval of minutes.
Thresholds for review of Presidential disclosure reports.
Convention financing regulations.
1980 Elections and related matters.
Financial control and compliance manual for Presidential candidates.
Budget execution report.
Pending legislation.
Appropriations and budget.
Classification actions.
Routine administrative matters.

Portions closed to the public:

Any matters not concluded on June 20, 1979.

PERSON TO CONTACT FOR INFORMATION: Mr. Fred S. Eiland, Public Information Officer, Telephone: 202–523–4065.

Marjorie W. Emmons,
Secretary to the Commission.

5

FEDERAL RESERVE SYSTEM (BOARD OF GOVERNORS).

TIME AND DATE: 10 a.m., Wednesday, June 20, 1979.

PLACE: 20th Street and Constitution Avenue NW., Washington, D.C. 20551.

STATUS: Open.

MATTERS TO BE CONSIDERED:

Summary Agenda

Because of their routine nature, no substantive discussion of the following item is anticipated. These matters will be resolved with a single vote unless a member of the Board requests that an item be moved to the discussion agenda.

1. Proposed extension of the Survey of Six-Month Money Market Time Deposits (FR 2042).
2. Proposed extension of the Survey of Debits to Demand and Savings Deposits Accounts (FR 2573).
3. Report to the Comptroller of the Currency regarding the competitive factors involved in the proposed merger of The Peoples Bank, Cave City, Kentucky, with The New Farmers National Bank of Glasgow, Glasgow, Kentucky.
4. Proposed amendments to Regulation F (Securities of Member Banks) to maintain substantial similarity with rules of the Securities and Exchange Commission.

Discussion Agenda

1. Proposed regulation prescribing, among other things, certain exceptions for interlocking relationships that would otherwise be prohibited by Title II of the Financial Institutions Regulatory and Interest Rate Control Act. (Proposed earlier for public comment; docket no. R–0139).
2. Proposed revised amendments to Regulation H (Membership of State Banking Institutions in the Federal Reserve System) to require that State member banks that effect certain securities transactions for customers provide confirmation and maintain certain records with respect to such transactions. (Proposed earlier for public comment; docket no. R–0142).
3. Any agenda items carried forward from a previously announced meeting.

Note.—This meeting will be recorded for the benefit of those unable to attend. Cassettes will be available for listening in the Board's Freedom of Information Office, and copies may be ordered for $5 per cassette by calling (202) 452–3684 or by writing to: Freedom of Information Office, Board of Governors of the Federal Reserve System, Washington, D.C. 20551.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board: (202) 452–3204.

Dated: June 13, 1979.

Griffith L. Garwood,
Deputy Secretary of the Board.

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday). This is a voluntary program. (See OFR NOTICE FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/COAST GUARD	USDA/ASCS		DOT/COAST GUARD	USDA/ASCS
DOT/NHTSA	USDA/APHIS		DOT/NHTSA	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/OHMO	USDA/FSQS		DOT/OHMO	USDA/FSQS
DOT/OPSO	USDA/REA		DOT/OPSO	USDA/REA
DOT/UMTA*	MSPB/OPM		DOT/UMTA*	MSPB/OPM
DOT/FRA*	LABOR		DOT/FRA*	LABOR
CSA	HEW/FDA		CSA	HEW/FDA

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

*NOTE: As of June 14, 1979, the Urban Mass Transportation Administration and Federal Railroad Administration, Department of Transportation, will publish on the Monday/Thursday schedule.

REMINDERS

The items in this list were editorially compiled as an aid to Federal Register users. Inclusion or exclusion from this list has no legal significance. Since this list is intended as a reminder, it does not include effective dates that occur within 14 days of publication.

Rules Going Into Effect Today

CIVIL AERONAUTICS BOARD

28656 5-16-79 / Revocation of reporting data pertaining to freight loss and damage claims by certificated route air carriers

Part II

Department of Labor

Employment Standards Administration

Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination Decisions

DEPARTMENT OF LABOR

Employment Standards Administration, Wage and Hour Division

Minimum Wages for Federal and Federally Assisted Construction; General Wage Determination Decisions

General Wage Determination Decisions of the Secretary of Labor specify, in accordance with applicable law and on the basis of information available to the Department of Labor from its study of local wage conditions and from other sources, the basic hourly wage rates and fringe benefit payments which are determined to be prevailing for the described classes of laborers and mechanics employed on construction projects of the character and in the localities specified therein.

The determinations in these decisions of such prevailing rates and fringe benefits have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 1.1 (including the statutes listed at 36 FR 306 following Secretary of Labor's Order No. 24–70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of Part 1 of Subtitle A of Title 29 of Code of Federal Regulations, Procedure for Predetermination of Wage Rates, (37 FR 21138) and of Secretary of Labor's Orders 12–71 and 15–71 (36 FR 8755, 8756). The prevailing rates and fringe benefits determined in these decisions shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged on contract work of the character and in the localities described therein.

Good cause is hereby found for not utilizing notice and public procedure thereon prior to the issuance of these determinations as prescribed in 5 U.S.C. 553 and not providing for delay in effective date as prescribed in that section, because the necessity to issue construction industry wage determination frequently and in large volume causes procedures to be impractical and contrary to the public interest.

General Wage Determination Decisions are effective from their date of publication in the Federal Register without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5. Accordingly, the applicable decision together with any modifications issued subsequent to its publication date shall be made a part of every contract for performance of the described work within the geographic area indicated as required by an applicable Federal prevailing wage law and 29 CFR, Part 5. The wage rates contained therein shall be the minimum paid under such contract by contractors and subcontractors on the work.

Modifications and Supersedeas Decisions to General Wage Determination Decisions

Modifications and Supersedeas Decisions to General Wage Determination Decisions are based upon information obtained concerning changes in prevailing hourly wage rates and fringe benefit payments since the decisions were issued.

The determinations of prevailing rates and fringe benefits made in the Modifications and Supersedeas Decisions have been made by authority of the Secretary of Labor pursuant to the provisions of the Davis-Bacon Act of March 3, 1931, as amended (46 Stat. 1494, as amended, 40 U.S.C. 276a) and of other Federal statutes referred to in 29 CFR 1.1 (including the statutes listed at 36 FR 306 following Secretary of Labor's Order No. 224–70) containing provisions for the payment of wages which are dependent upon determination by the Secretary of Labor under the Davis-Bacon Act; and pursuant to the provisions of Part 1 of Subtitle A of Title 29 of Code of Federal Regulations, Procedure for Predetermination of Wage Rates (37 FR 21138) and of Secretary of Labor's Orders 13–71 and 15–71 (36 FR 8755, 8756). The prevailing rates and fringe benefits determined in foregoing General Wage Determination Decisions, as hereby modified, and/or superseded shall, in accordance with the provisions of the foregoing statutes, constitute the minimum wages payable on Federal and federally assisted construction projects to laborers and mechanics of the specified classes engaged in contract work of the character and in the localities described therein.

Modifications and Supersedeas Decisions are effective from their date of publication in the Federal Register without limitation as to time and are to be used in accordance with the provisions of 29 CFR Parts 1 and 5.

Any person, organization, or governmental agency having an interest in the wages determined as prevailing is encouraged to submit wage rate information for consideration by the Department. Further information and self-explanatory forms for the purpose of submitting this data may be obtained by writing to the U.S. Department of Labor, Employment Standards Administration, Wage and Hour Division, Office of Government Contract Wage Standards, Division of Construction Wage Determinations, Washington, D.C. 20210. The cause for not utilizing the rulemaking procedures prescribed in 5 U.S.C. 553 has been set forth in the original General Wage Determination Decision.

(Other than for work in Tunnels, Shafts and Raises)

Group 1: Air Compressor; Asphalt Screed; Oiler; Brakeman; Drill Operator - smaller than Williams MF and similar; Helper to Heavy Duty Mechanic and/or Welder; Operators of 5 or more light plants, Welding Machines, Generators, single unit conveyor; Pumps; Vacuum Well Point System; Tractor, under 70 HP with or without attachments Rodman, Chainman, Grade Checker

Group 2: Conveyor, handling building materials; Ditch Witch and similar Trenching Machine; Fireman or Tank Heater, road; Forklift; Haulage Motor Man; Pugmill; Portable Screening Plant with or without a spray bar; Screening Plants, with classifier; Self-propelled Roller, rubber-tired under 5 tons

Group 3: Asphalt Plant; Backfiller, Bituminous Spreader or Laydown Machine; Cableway Signalman; Caisson Drill; Williams MF, similar and larger; C.M.I. and similar; Concrete Batching Plants; Concrete finish Machine; Concrete Gang Saws on concrete paving; Concrete Mixer, less than 1 yd.; Concrete Placement Pumps, under 8 inches; Distributors, Bituminous Surfaces; Drill, Diamond or Core; Drill Rigs, rotary, churn, or cable tool; Elevating Graders, Equipment Lubricating and service Engineer; Engineer Fireman; Grout Machine; Gunnite Machine; Hoist, 1 drum; Hydraulic Backhoes, wheel mounted under 3/4 yd.; Loader, Barber Green, etc.; Loader up to and including 6 cu. yds.; Machine Doctor; Mechanic; Motor Grader/Blade, rough; Road Stabilization Machine; Rollers, self-propelled, all types over 5 tons; Sandblasting Machine; single unit portable crusher, with or without washer; Tie Tamper, wheel mounted; Tractor, 70 HP and over with or without attachments; Trenching Machine Operator; Welder; Winch on truck; Instrument Man

Group 4: Cable operated Crane, track mounted; Cable operated power Shovels, Draglines, Clamshells, and Backhoes, 5 cu. yds. and under; Concrete Mixer over 1 cu. yd.; Concrete Paver 34E or similar; Concrete Placement Pumps, 8 inches and over; Crane, 50 tons and under; Hoist, 2 drums; Hydraulic Backhoe, 3/4 yd. and over; Loader, over 6 cu. yds.; Mechanic-welder, heavy duty; Mixer mobile; Motor Grader/blade, finish; Multiple unit portable Crusher, with or without washer; Piledriver; Scrapers, single bowl under 40 cu. yds.; Self-propelled Hydraulic Crane; Tractor with sideboom; Truck mounted Hydraulic Crane

POWER EQUIPMENT OPERATORS (Cont'd)
(Other than for work in Tunnels, Shafts and Raises)

Group 5: Cable operated power Shovels, Draglines, Clamshells and Backhoes over 5 cu. yds.; Crane, over 50 tons carrier mounted; Derrick; Electric rail type Tower Crane; Hoist, 3 drum or more; Quad Nine and similar push unit; Scrapers - single bowl including pups 40 cu. yds. and tandem bowls and over

Group 6: Cableway; Climbing Tower Crane; Crawler or truck mounted Tower Crane; Wheel Excavator, Tower Crane, truck type

POWER EQUIPMENT OPERATORS (Cont'd)
(For work in Tunnels, Shafts and Raises)

Group 1: Brakeman

Group 2: Motorman

Group 3: Compressor (900 CFM and over) serving Tunnels, Shafts and Raises

Group 4: Air Tractors; Grout Machine; Gunnite Machine; Jumbo Form; Mechanic; Welder

Group 5: Concrete Placement Pumps, 8" and over discharge; Mechanic-Welder, heavy duty; Mucking Machines and Front End Loaders, underground; Slusher; Mine Hoist Operator

Group 6: Mole

DECISION NO. C079-5117 Page 11

ZONE DESCRIPTIONS

LABORERS

CITIES within ZONES 1, 2, and 3:

Boulder	Denver	Dillon
Eagle	Golden	Port Collins
Port Morgan	Leadville	Granby
Greeley	Littleton	Vail

ZONE 1 - That area encompassed by 0 to 30 driving miles from the Main Post Office

ZONE 2 - That area encompassed by 30 to 70 driving miles from the Main Post Office

ZONE 3 - That area encompassed by 70 driving miles and over from the Main Post Office

Power Equipment Operators and Truck Drivers

A. Counties entirely within Zone 1:

Boulder	Denver	Douglas
Clear Creek	Gilpin	Jefferson
Larimer	Morgan	Weld

B. Counties entirely within Zone 2:

Grand Lake Park Summit

C. Legal description of the portion sof Adams, Arapahoe, Eagle and Elbert Counties which are included within Zone 1, as follows:
All of Adams, Arapahoe, Wlbert Counties lying west of the Township line between R59W and R60W of the 8th Guide Meridian West; and all of Eagle County lying West of the Township line between R80W and R81W of the 10th Guide Meridian West

D. Legal description of the portions of Adams, Arapahoe, Eagle and Elbert Counties which are included within Zone 2, as follows:
All of Adams, Arapahoo, Elbert Counties lying East of the Township line between R59 and R60W of the 8th Guide Meridian West, and all of Eagle County lying East of the Township line between R80W and R81W of the 9th Guide Meridian West

SUPERSEDEAS DECISION

Group 14: Mechanic

Group 15: Dump trucks, over 54 cu. yds. to and including 79 cu. yds.

Group 16: Heavy Duty Diesel, Mechanic, Body Men, Welders or Combination Men

Group 17: Dump Trucks, over 79 cu. yds. to and including 104 cu. yds.

Group 18: Dump Trucks, over 104 cu. yds.

ZONE DEFINITIONS
Power Equipment Operators and Truck Drivers

A. Counties entirely within Zone 1:
Delta Garfield Mesa

B. Counties entirely within Zone 2:
Gunnison Pitkin

C. Legal description of the portion of Montrose County which is included within Zone 1, as follows:
All of Montrose County lying north of the North line of Ouray County and said North line extended West to the Township line between R11W and R12W, said part lying East of said Township line of the New Mexico Principal Meridian

D. Legal description of the portion of Montrose County which is included within Zone 2, as follows:
All of Montrose County except that part lying north of the North line of Ouray County and said North line extended West of said Township line between R11W and R12W, said point being East of said Township line of the New Mexico Principal Meridian

ZONE 2 - That area encompassed by 30 to 70 driving miles from the Main Post Office in the above named Cities

ZONE 3 - That area encompassed by 70 driving miles and over from the Main Post Office in the above named Cities.

LABORERS

Group 1: Watchman tending Heaters and Pumps

Group 2: Building Construction Laborer

Group 3: Laborers - Underpinning and Shoring eight (8) feet or more below working surface.
Power Tool Operators of all mechanical, air, gas and electrical tools, including Self-propelled Buggies and Cement Finishers Tenders. Laborers preparing and placing of stone or any other aggregate in sand bed to be used as exposed face of Tilt-up Panels.
Burners on Demolition and Welders, Gunnite Nozzleman and Sandblasters.

Group 4: Pipelayers on Building Construction

Group 5: Jackhammer Operator for Underpinning and Shoring over twelve (12) feet below working surface, Bellers and Stemmers on Caisson Work.

Group 6: Tender, Mason and Plaster

SUPERSEDEAS DECISION

STATE: Illinois
DECISION NUMBER: IL79-2051
COUNTY: Cook
DATE: Date of Publication

*ZONE DESCRIPTIONS
Power Equipment Operators and Truck drivers

A. Counties entirely within Zone 1:
Otero Pueblo

B. Portions of Las Animas County which are included within Zone 1, as follows:
All of Las Animas County lying west of the Township line between R59W and R60W of the 7th Guide Meridian West.

C. Portions of Las Animas County which are included within Zone 2, as follows:
All of Las Animas County lying East of the Township line between R59W and R60W of the 7th Guide Meridian West.

SEMI-SKILLED	10.27	.45	.60		.035
SKILLED	10.47	.45	.60		.035

UNSKILLED - Common Laborer, Carpenter Tenders, Tool Cribmen, Firemen or Salamander Tenders, Flagmen, Gravel Box Men, Dumpmen & Spotters, Form Handlers, Fencing Laborers, Cleaning Lumber, Pitmen, Material Checkers, Dispatchers, Landscapers, Unloading Explosives, Laying of Sod, Planting of Trees, Asphalt Plant Laborers, Wrecking Laborers, Writer of Scale Tickets, Fire Shop Laborers, Fireproofing Laborers, Janitors, Wrecking-Dismantling Building, Wallmen & Housemovers, Driving of Stakes, Stringlines for all Machinery

SEMI-SKILLED - Handling of Materials treated with Oil, Creosote, Asphalt or any Foreign Material, Track Laborers, Cement Handlers, Chloride Handlers, the Unloading and Laborers w/steel Workers & Rebars, Concrete Workers (wet), Tunnel Helpers in Free Air, Batch Dumpers, Mason & Plasterer Tenders & Material Wheelers, Kettlemen & Tarmen; Tank Cleaners, Plastic Installer, Scaffold Workers, Material, Buggies or Motorized unit used for Wet Concrete or Handling of Building Materials, Laborers w/dewatering Systems, All Sewer Workers plus depth, Rod of Chainmen with Land Surveyors, Vibrator Operators, Mortar Mixer Operator, Cement Silica, Clay, Fly Ash, Lime & Plasters, Handlers (bulk or bag), Cofferdam Workers plus depth, (on concrete paving) Placing Cutting & trying or Reinforcing, Deck Hand & Shore Laborers, Bankmen on Floating Plant, Asphalt Workers w/machine, Asphalt Raker, Grader Checker

SKILLED - Dynamite Men or Blasters, Caisson Workers plus depth, Gunnite Nozzle Men, Leadmen on Sewer Work, Welders, Cutters, Burners, Trochmen, Chain Saw Operators, Jackhammer & Drill Operators Layout Man, Steel Form Setters (Street & Highway); Air Tamping Hammerman, Signal Man on Crane, Concrete Saw Operator, Screenman on Asphalt Paver, Laborers Tending Machines w/hot Materials are used, Multiple Concrete Duct-Leadmen, Lutemen, Crib Asphalt Machine Operator, Ready-Mix Scaleman, Portable or Temporary Plant, Laborers Handling Waterplate or similar Materials, Laser Beam Operator, Coring Machine Operator

DECISION NO. 1L79-2054

POWER EQUIPMENT OPERATORS

KNOX, HENDERSON, WARREN, STARK COUNTIES; & EASTERN ½ of HENRY CO.	Basic Hourly Rates	Fringe Benefits Payments			
		H & W	Pensions	Vacation	Education and/or Appr. Tr.
GROUP 1	$13.08	.45	.80		.05
GROUP 2	12.88	.45	.80		.05
GROUP 3	12.505	.45	.80		.05
GROUP 4	12.23	.45	.80		.05
GROUP 5	11.62	.45	.80		.05

GROUP 1 - Cranes, Escalated Rate on Crane, Derricks, Booms, $.01 per hour, per foot after 80 feet or Boom including jib, Overhead Cranes, Gradall, Cherry Pickers (and similar types over 15 ton lifting capacity require oiler), Mechanics, Central Concrete Mixing Plant Operator, Road Pavers (27E-Dual Drum-Tri Batchers), Blacktop Plant Operators and Plant Engineers, 3 Drum Hoist, Derricks, Hydro Cranes, Shovels Skimmer Scoops, Koehring Scoopers, Draglines, Backhoe, Hoptoes-Crane-Type that require Oilers, Derrick Boats, Pile Drivers and Skid Rigs, Clamshells, Locomotive Cranes, Dredge (all types), Motor Patrol, Power Blades Dumore-elevating and similar types Tower Cranes (crawler mobile) and Stationary, Crane-Type Backfiller, Drott Yumbo and similar types considered as Cranes, Casisson Rigs (require oilers) Dozer, Tourna-dozer, Work Boats, Ross Carrier and Helicopter

GROUP 2 - Trench Machine, Pumperete-Belt Crete-Squeeze-Screw Type Pumps and Gypsum Bulker and Pump, Dinkeys, Power Launches, Tournapulls (all), Multiple Unit Earth Movers, $.25 per hour for each Scoop over one, Scoops (all sizes), Push Cats, Endloaders (all types), Side Boom, P-H one Pass Soil-Cement Machine (all similar types), Wheel Tractors (industrial or Farm Types w/dozer-hoe-end-loader or other attachments), Pugmill with Pump Backfillers, Asphalt Surfacing Machine, Euclid Loader, Forklifts, Formless Finishing Machine, Jeeps w/Ditching Machine or other attachments, Tunneluger, Rock Crushers, Automatic Cement and Gravel Batching Plants, Mobile Drills (soil testing and similar types), (requiring oiler), Flaherty Spreader or similar types (require oiler), Heavy Equipment Greaser (top greaser on spread), Curries and similar type, 1 and 2 Drum Hoists (Buck Hoists and similar types Freight and Passenger Elevators Chicago Boom, Boring Machine and Pipe Jacking, Machine Hydro Boom, Starting Engineer on Pipeline, C.M.I. and similar types (require oiler) Straw Blower, Hydro Seeder and F.W.D and similar types

DECISION NO. 1L79-2054

POWER EQUIPMENT OPERATORS (CONT'D)

GROUP 3 - Tractor (Track Type) without power unit pulling Rollers, Rollers on Asphalt, Brick or Macadam, Concrete Breakers, Concrete Spreaders, Mule Pulling Roller, Center Stripper, Cement Finishing Machines, Barber Greene or similar Loaders, Vibro Tamper (all similar types), Self-Propelled, Winch or Boom Truck, Mechanical Bull Floats, Mixer over 3 Bags to 27E, Tractor Pulling Power Blade or Elevating Grader, Porter Rex Rail, Clary Screed, Pugmill (without pump) Screed Man on Laydown Machine, Firemen on Spray Machine on Paving

GROUP 4 - Air Compressor, All Air and Steam Valves, Power Subgrader, Oil Distributor, Straight Tractor, Trac-Air without attachments, Curb Machines, Truck Crane Oilers, and Truck Type Hoptoe Oilers

GROUP 5 - Herman Nelson Heater, Dravo, Warner, Silent Glo and similar types, One Engineer will Operate 1-3 and After 3, Two Operators will be required, Self-Propelled Concrete Saws, Assistant Heavy Equipment Greaser on Spread, Roller, 5 tons and under on Earth or Gravel, Form Grader, Pump 1 or 2, Generator (1) or (2), Welding Machine (1) or (2) - 300 amp. or over, Mixer (3) Bag and under (standard capacity), Bulk Cement Plant, Crawler Crane and Skid Rig Oilers

DECISION NO. 11,79-2054

POWER EQUIPMENT OPERATORS:

ROCK ISLAND, MERCER & WESTERN ½ of HENRY COUNTY

	Basic Hourly Rates	Fringe Benefits Payments			
		H & W	Pensions	Vacation	Education and/or Appr. Tr.

CLASSIFICATION DEFINITIONS

POWER EQUIPMENT OPERATORS

GROUP 1 - Asphalt paver and spreader; asphalt plant mixer operator; asphalt plant operator; backfillers; backhoe, all types; barber-green loader (similar type); blade-power, all types; boats-power; boilers (2); boring machines (all types); cable ways; cherry pickers (all types); chip spreader; concrete ready-mixed plant,portable (job site); concrete mixer paver; crane overhead; crusher, rock; derricks and derrick cars (power operated); ditching machines; dozers; dredges-any type power; gradeall-similar type; hoist, endless chain power operator with power travel; loaders-all types; mechanic and welders; mucking machine; orange peels; pumps-material-all types; push cats; scoops-all types; self-propelled rotary drill; shovel, power; side boom; skimmer scoop; tonthole machine; throttle man

POWER EQUIPMENT OPERATORS CLASSIFICATION DEFINITIONS CONTD:

GROUP 2 - Boilers (1); brooms-power operator (all types); chip spreader (front man); clef plane operator; compressor (1) 105' or over; compressors (2) 105 ft. or over not more than 20' apart; compressors-tandem (any sizes); compressors single, truck mounted; concrete saws, self-propelled; crab-power operator; curb finishing machine; elevator; finishing machine; firemen on rigs; flex plane, floating machine; form grader; greaser; hoist, endless chain-power operated; hopper-power operated; hydra hamner (all types); lad-a-vator-similar typel rollers-all types; siphons, jets and jennies; sub-grader; tractors over 50 h.p.

GROUP 3 - Oiler

GROUP 4 - Fork lift-masonry; oiler driver-all types

GROUP 5 - "A" frame trucks; fork lift-all types and sizes (except masonry); mixers (with side loaders); pumps (with well points) dewatering systems, test or pressure pumps; tractors (except when hauling material) less than 50 h.p.

GROUP 6 - Clamshells, 80 ft. of boom or over (including jib); crane or rigs, 80 ft. of boom or over (including jib); draglines, 80 ft. of boom or over (including jib); pile drivers, 80 ft. of boom or over (including jib)

GROUP 7 - Crane or rigs, over 200 ft of boom

GROUP 8 - Hoists-each additional drum over 1 drum

GROUP 9 - Master mechanic

GROUP 10 - Crane-tower or climbing

GROUP 11 - Ready Mixed Concrete Plants:

(a) Crane operator.
(b) Loader operator
(c) Plant man
(d) Conveyor operator

POWER EQUIPMENT OPERATORS (CONTD) Site Preparation and Grading	Basic Hourly Rates	Fringe Benefits Payments			
		H & W	Pensions	Vacation	Education and/or Appr. Tr.

Group 7	10.60	.50	1.00	.75	.10
Group 8	10.10	.50	1.00	.75	.10

CLASSIFICATION DEFINITIONS

POWER EQUIPMENT OPERATORS:

GROUP 1 - Asphalt paver and spreader, asphalt plant console operator, auto grader, backhoe, blade operator, all types, boilers - 2; booster pump or dredge, boring machine (truck or crane mounted), bulldozer operator, clam-shell operator, compressor maintenance operator - 2; concrete plant operator, central mix, concrete mixer, paver, crane operator, derrick or derrick trucks, ditching machine, dragline operator, dredge engineman, dredge operator, drill cat with compressor mounted on cat, drilling or boring machine, rotary, self-propelled, high loader-fork lift, hoisting engine - 2 active drums, locomotive operator, standard gauge, mechanics and welders, field or shop, maintenance operator, mucking machine, piledriver operator, pitman crane operator, pump-2, quad-trac, scoop operator all types, scoops in tandem, self-propelled rotary drill (Leroy or equal - not air tac); shovel operator, side discharge spreader, sideboom cats, skimmer scoop operator, slip-form paver (CMI, REX, or equal), throttle man, truck crane welding machine maintenance operator - 2

GROUP 2 - A-frame truck asphalt hot mix silo, asphalt plant fireman, drum, or boiler, asphalt plant mixer operator, asphalt plant man, asphalt roller operator, backfiller operator, chip spreader, concrete batch plant, dry power operator, concrete mixer operator, skiploader, concrete pump operator, crusher operator, elevating grader operator, greaser, hoisting engine-1 drum, latourneau rooter, multiple compactor, pavement breaker, self-propelled, of the hydra-hammer or similar type, power shield, pug mill operator, stump cutting machine, towboat operator, tractor operator over 50 h.p.

GROUP 3 - Boilers - 1 chip spreader (front man), churn drill operator, compressor maintenance operator - 1, concrete saws, self-propelled, conveyor operator, distributor operator, finishing machine operator, firemen, oiler, float operator, form grader operator, pump, pump maintenance operator, other than dredge, roller operator, other than high type asphalt, screening and washing plant operator, self-propelled street broom or sweeper, siphons and jets, sub-grading machine operator, tank car heater operator operators - combination boiler and booster, tractor, 50 h.p. or less, without attachments, vibrating machine operator, not hand, welding machine maintenance operator-1

GROUP 4 - Mechanic's helpers, oiler

GROUP 5 - Oiler, driver, all types

GROUP 6 - Clamshells, 3 yds. capacity or over, crane or rigs, 80 ft. of boom or over (including jib), draglines, 3 yds. capacity or over, piledrivers, 80 ft. of boom or over (including jib), shovels, 3 yds. capacity or over

GROUP 7 - Cranes or rigs, over 200 ft. of boom (including jib)

GROUP 8 - Hoists (each additional drum over 1 drum)

Men working in tunnels or shafts (not air shafts or coffer dams) of twenty-five (25) ft. or more in length or depth will be paid fifty cents (50¢) per hour above the regular classification

Part III

Department of Health, Education, and Welfare

Office of the Secretary

HEW Day Care Requirements—Proposed Rules; Public Meetings

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Office of the Secretary

[45 CFR Part 71]

HEW Day Care Regulations

AGENCY: Office of the Secretary.

ACTION: Proposed rules.

SUMMARY: The Department of Health, Education, and Welfare proposes revisions to the Federal Interagency Day Care Requirements. The proposed regulations apply to all HEW funded day care services provided to children outside their own homes, except the Headstart program. (The Headstart program has its own regulations). Requirements for day care centers, for day care homes, and for State agencies administering out-of-home day care services are included. In addition to the requirements, the proposed regulations will include appendices which contain recommendations and examples for day care centers and day care homes, and for State agencies, as well as a description of the Federal role in certain areas relating to day care services.

DATES: Comments must be received on or before September 21, 1979. [For a list of public meetings on this proposed rule see F.R. Doc 79-18482 in this part of this Federal Register.]

ADDRESS: Send comments in writing to: Sylvester Ligsukis, Director, Day Care Task Force, Office of the General Counsel, HEW, Room 716-E, 200 Independence Avenue, S.W., Washington, D.C. 20201, (202) 245-6734

FOR FURTHER INFORMATION CONTACT: Sylvester Ligsukis (202) 472-7462.

SUPPLEMENTARY INFORMATION:

GENERAL INFORMATION

Background

The Federal Interagency Day Care Requirements (FIDCR)

The history of the Federal Interagency Day Care Requirements, known as the "FIDCR", began in 1967, with the enactment of the Economic Opportunity Amendments of 1967, P.L. 90-222. That legislation added a provision to the 1964 Economic Opportunity Act which directed the Secretary of HEW and the Director of the Office of Economic Opportunity to work towards a common set of day care program standards and regulations for child day care funded under programs within their jurisdictions (Section 522(d)). In 1968, HEW and OEO, with the approval of the Labor Department, jointly promulgated the FIDCR; they are located at 45 CFR Part 71.

The FIDCR were made applicable to day care programs receiving funds under the Social Security Act, the Economic Opportunity Act, the Manpower Development and Training Act, and, at the discretion of State and local education agencies, Title I of the Elementary and Secondary Education Act.

The FIDCR define day care as a comprehensive and coordinated set of activities necessary for providing care and protection to children outside their own homes. The requirements address eleven major day care service areas. These areas include types of facilities providing care, grouping of children, and the physical environment of day care facilities. The FIDCR also contain requirements for educational, social, health, and nutritional services, for staff training, and for program administration, coordination, and evaluation.

In 1972, Congress affirmed the FIDCR, amending section 522(d) of the Economic Opportunity Act to require that any standards applied to HEW or OEO day care programs be "no less comprehensive" than the 1968 requirements. Congress again amended Section 522(d) (now recodified as Section 582 (d) of the Headstart Follow Through Act) in 1975 to reflect the abolishment of the Office of Economic Opportunity. The requirement to work towards a common set of standards and regulations for child day care is now applicable only to HEW supported day care programs.

Day Care Under the Social Security Act

In 1974, in Pub. L. 93-647, Congress enacted title XX of the Social Security Act. Title XX authorizes cooperative Federal-State programs for the provision of social services to certain low income individuals. A State may choose to offer day care services under its social services program. The title XX legislation required States to implement a modified version of the 1968 day care requirements as a condition of receiving Federal reimbursement of payment for day care services under title XX and under title IV-A (social services in the territories, and supportive services in the Work Incentive (WIN) program) and title IV-B (child welfare services) of the Social Security Act (the Act). For those programs, in section 2002(a)(9)(A) of the Act, Congress modified the FIDCR to make educational services optional rather than mandatory, and to allow for the relaxation of certain FIDCR staffing requirements.

Congress also directed the Secretary of HEW to set staffing requirements for children under the age of three.

Congress has amended the day care provisions of Pub. L. 93-647 on several occasions since they became effective in October, 1975. In 1976, and again in 1977, Congress authorized an extra $200 million dollars in title XX funds to be made available to States at a matching rate of 100 percent, if used for day care services. Moreover, since 1974, Congress has made significant changes in title XX day care provisions which relate to staffing requirements. In 1975, 1976 and 1977 Congress passed legislation suspending the enforcement of Federal child/staff ratio requirements for children under the age of six in day care centers and group day care homes. Instead, States were permitted to enforce their own staffing standards for that age group, if those standards were no lower than those imposed by the State on September 15, 1975, and if, for any day care facility, they were no lower than those actually applied in the facility on that date. This Congressional "moratorium" on staffing requirements for children under 6 years of age remained in effect from October 1, 1975 to September 30, 1978. (HEW has extended the moratorium, by regulation, until the promulgation of revised day care regulations in final form. 44 FR 16399 (March 19, 1979).)

In 1976, Congress amended title XX to permit States, under certain specified conditions, to waive Federal staffing standards for *all* age groups in facilities in which not more than 20% (or for day care centers, not more than 5) of the children were receiving assistance under title XX. In order to qualify for the waiver the facility was required to comply with applicable State staffing standards. A State could use this title XX waiver authority only in cases where it was not feasible to furnish care for title XX eligible children in a facility which did meet Federal staffing requirements. In 1976, Congress also made a change in title XX day care provisions by requiring States to count the children of a family day care provider in determining compliance with applicable staffing standards, only if the children were under age six.

Development of New HEW Day Care Regulations

Section 2002(a)(9)(B) of title XX required the Secretary to submit to Congress a report on the appropriateness of the day care requirements. That section also

authorized the Secretary to "... by regulation, make such modifications in the [day care requirements] ... as he determines are appropriate", no sooner than 90 days after the submission of the "Appropriateness Report". HEW transmitted the Appropriateness Report to Congress in June, 1978.

In April 1978, the Department published a Notice of Intent to issue regulations governing HEW supported child day care services in the Federal Register, 43 FR 81 (April 28, 1978). The Notice of Intent identified certain major issues surrounding the development of new HEW day care regulations. It also raised some basic questions concerning the appropriate roles of HEW, and of State and local governments, with respect to the establishment and enforcement of day care standards, policies, and requirements for HEW supported child day care.

The Notice explained that in developing HEW day care regulations we would seek the widespread and active participation of the public. And, since last spring we have met informally with representatives of the day care community—providers, parents, State administrators, child advocates, and child welfare experts. We have also carefully studied numerous written suggestions and comments received in response to the Notice of Intent.

The proposed regulations, to be discussed in detail below, are based, in part, on what we have learned from these public contacts. They also reflect consideration of data from several studies of child day care, including our 1978 Appropriateness Report; a 5 year National Day Care Study commissioned by HEW, and prepared by Abt Associates; a 1979 HEW Report on Out-of-Home Child Day Care Monitoring by the Administration for Public Services, Office of Human Development Services (OHDS); and a Comparative Licensing Study completed in 1979 by the Administration for Children, Youth, and Families of OHDS.

Policy Background and Assumptions

Our proposed day care requirements are based on the following assumptions:

- The Federal government shares in the responsibility for providing leadership to enhance the emotional, physical, social, and intellectual development of children in day care.
- Federal leadership can be expressed in many different ways: regulations, education, resource materials, technical assistance, training aids, and model programs and model laws.
- Regulations for Federally funded day care are an important part of a total statement of national day care policy. However, regulations cannot be the full embodiment of that policy.
- Day care regulations should establish basic standards to protect children from harm, ensure that they are cared for in a healthy environment, and enhance their well-being.
- States may set day care policies which go beyond requirements established in Federal regulations.
- Federal regulations should leave room for decision making and the exercise of judgment by States, operators, and parents of children in day care.
- The Federal government should see that States adhere to Federal day care requirements by monitoring and providing assistance to the States. States should see that operators adhere to Federal requirements by monitoring and providing assistance to day care operators.
- The Federal government should conduct a review of the day care regulations within 36 or 48 months after they take effect.

Structure of the Proposed Regulations

The proposed day care requirements are divided into two subparts. Subparts A and B include sections defining certain terms used in the requirements, and provisions concerning applicability of the requirements. Subpart A contains requirements for day care centers which govern the major day care program elements, including program of activities, health and safety, physical environment, staff training, group composition, parent involvement, social services, and nutrition. We have proposed requirements in these areas both for day care centers and, where appropriate, for State agencies.

Subpart B of the proposed regulations includes requirements for day care homes and for State agencies, in the same program areas as for centers.

Both subparts contain requirements governing the overall administration and implementation of Federal day care requirements by State agencies, including Federal financial participation (FFP) provisions as well as provisions for monitoring, waiver, rates of payment, and future review by HEW of the requirements.

In many cases, our proposed requirements for day care homes and day care centers, though directed at the same goal, are not identical. Rather we have tried to develop regulations which are sensitive to the distinctive characteristics of each kind of day care. Requirements on a day care center—typically organized to serve larger numbers of children—may be inappropriate when applied to a day care home, which provides care in a family-like setting, in a caregiver's own home, for a small number of children. We are seeking public comment on our approach to requirements for the major forms of day care.

- Should the requirements for centers and homes remain separate?
- Should centers and homes be subject to the same requirements?
- Should some requirements be the same for home and center care?
- Which requirements should be the same?

We recognize that many of the issues surrounding the revision of HEW day care requirements are complex, sensitive, and controversial. For some of these difficult issues we have set forth options (alternative requirements) for public consideration. In this way we hope to obtain specific and focused guidance on which approach we should ultimately adopt in our final day care requirements.

Finally, we have included two Appendices with the proposed requirements (one for centers, and one for homes), which contain examples to illustrate the meaning of the requirements. The Appendices also include recommendations on steps day care facilities and State agencies may take voluntarily beyond the requirements to provide day care of high quality. The Appendices also contain a statement of the Federal role with respect to each day care program area.

Section Analysis

The proposed rules are set out below, followed in some instances by a brief discussion, and specific questions to to which the public is encourage to respond. The public is requested to specify the number of the section in the proposed regulations to which their comments refer.

Definitions (§ 71.4 and § 71.44)

Text of the Proposed Rule

As used in these regulations, the term:

Caregiver means a person who provides direct care, supervision, and guidance to children in a day care facility.

Day care means the care, supervision, and guidance of a child, on a regular basis, for periods of less than 24 hours per day, in a place other than the child's own home.

Day care center means a place in which day care is provided to 13 or more children.

Day care facility means a day care home or a day care center.

Day care home means a private residence in which day care is provided to 12 or fewer children.

Early and Periodic Screening, Diagnosis and Treatment (EPSDT) means a component of each State's medical assistance program mandated under title XIX of the Social Security Act (Medicaid) which provides preventive child health services to eligible low income children.

Family day care home means a day care home serving 6 or fewer children.

Group day care home means a day care home serving 7 to 12 children.

State agency means the agency that receives Federal funds for day care services and that has ultimate responsibility for the conduct of the day care services program.

Discussion

The above definitions section warrants no discussion here. However, public comments or suggested additions to the list are welcome and will be considered.

Applicability (§ 71.6 and § 71.46)

Text of the Proposed Rule

The regulations in this part apply to day care under the following HEW assisted programs:

- Social Security Act
  —Title IV–A (Social Services to Guam, Puerto Rico, Virgin Islands, and the Northern Marianas; and the Work Incentive Program (WIN))
  —Title IV–B (Child Welfare Services)
  —Title XX (Social Services)
- Title I, Elementary and Secondary Education Act (ESEA)
- Title V, Community Services Act (Follow-Through)
- Special Projects Act, Education Amendments of 1978 (Preschool Partnership)
- Adult Education Act (Adult Education)
- Education of the Handicapped Act (Education for the Handicapped)
- Title IV, Part C, Elementary and Secondary Education Act (Improvement in Local Educational Practices)
- Indian Elementary and Secondary School Assistance Act (Indian Elementary and Secondary School Assistance)
- Vocational Education Amendments of 1963 (Vocational Education)
- Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, Developmental Disabilities Services and Facilities Construction Act of 1970, Developmentally Disabled Assistance and Bill of Rights Act of 1975. (Developmental Disabilities Special Projects)

Discussion

We propose to apply these day care requirements to all HEW programs under which Federal financial assistance is provided for the care of children outside of their own homes. The regulations will not apply to the Headstart program, which has its own performance standards. Day care arrangements made by parents whose child care costs are taken into account under the title IV–A (AFDC) provision for work related expenses are not covered by these regulations.

Moreover, the proposed regulations do not apply to kindergarten programs. If a program provides both kindergarten *and* day care, the regulations will apply, but only to the day care services receiving Federal funds.

HEW lacks the authority to make these regulations applicable to Federally supported day care programs which are not under the Department's jurisdiction. However, we encourage other Federal agencies supporting day care to study and comment on the proposed regulations and, where possible, to adopt them for their programs

Office of Education Waiver (§ 71.6 and § 71.46)

Text of the Proposed Rule

The Commissioner of the Office of Education, Department of Health, Education, and Welfare may waive the requirements of this part for any day care program administered by the Office of Education. The Commissioner may also impose additional requirements for those programs.

Discussion

We propose to allow the Commissioner of the Office of Education discretion to waive the application of these requirements for any day care program under his or her jurisdiction, and to apply additional requirements for those Office of Education programs, where her or she so chooses. The waiver authority would be used in the case of a unique type of demonstration day care program designed to meet special educational goals.

Program of Activities for Children

Text of the Proposed Rule

Day Care Center (§ 71.10)

A day care center shall establish a planned program of age-appropriate activities which promotes the social, intellectual, emotional, and physical development of the children it serves. The planned program of activities shall be in writing, and shall contain a description of the daily activities children engage in and how those activities meet the developmental needs of the children.

Day Care Home (§ 71.50)

A day care home shall establish a planned program of age-appropriate activities which promotes the social, intellectual, emotional, and physical development of the children it serves. The plan shall be in writing, and shall contain a brief description of the children's activities in the home.

State Agency (§ 71.10 and § 71.50)

The State agency shall provide information and technical assistance to day care facilities on establishing and maintaining a planned program of age-appropriate activities.

Discussion

We propose to require a planned program of activities for children which promotes their social, intellectual, emotional, and physical development. We do not propose to specify the details of the program, but to require only that it include activities which are appropriate to the ages of children served. In addition, we propose to require that day care centers have a written plan for a program of activities which describes how the activities meet children's developmental needs. Day care homes would also be required to have their plans in writing. A day care home's plan would contain a brief description of the children's activities. Along with this requirement we have included in the Appendices examples of the kinds of activities which would be included in a day care center or day care home program.

At the same time, we propose to require that State administering agencies offer assistance to each facility in establishing and maintaining a program of activities.

We have chosen this approach, rather than to mandate the content of each day care program, in order to provide maximum flexibility to facility operators, and to the States, to create innovative day care programs which meet the developmental needs of

children of different ages cared for in a variety of different individual settings and types of communities. Under the proposed regulation, States would be free to specify further, more detailed requirements for an acceptable program of activities. For example, some States currently mandate the availability of indoor and outdoor activities and of appropriate toys and materials.

Questions for Public Consideration

- Should day care homes be required to have written program plans?
- Should we mandate any specific activities or curricula for day care facilities?

Training

Text of the Proposed Rule

Day Care Center (§ 71.12)

(1) A day care center shall provide to caregivers who have no previous experience or training in child care an on-site orientation on how to care for children in groups. This orientation shall occur before the caregiver assumes caregiving responsibilities.

(2) Each caregiver shall regularly participate in specialized training related to child care. Specialized training for each caregiver shall begin as early as possible, but in no case later than 6 months after initial employment.

Day Care Home (§ 71.52)

Each caregiver shall regularly participate in specialized training related to child care. Specialized training for each caregiver shall begin as early as possible, but in no case later than 6 months after caregiving duties begin.

State Agency (§ 71.12 and § 71.52)

Option A

The State agency shall establish and implement a statewide plan for providing or purchasing specialized training for day care personnel. The plan shall specify the nature and extent of the training required for day care center staff and day care home caregivers.

or

Option B

Same as option A, except that the specialized training shall address the following areas:

- Child Growth and Development
- Child Care Programming and Activities in Day Care Centers and Day Care Homes
- Day Care for Bilingual Children
- Handling Behavior Problems
- Health and Safety Practices
- Working with Parents
- Working with Developmentally Disabled Children and other Handicapped Children
- Nutrition and Good Eating Habits
- Design and Use of Space
- Community Health and Social Service Resources

Discussion

The National Day Care Center Study found a critical relationship between specialized caregiver training and the quality of the day care children receive. We propose to mandate specialized training related to child care for all day care personnel working directly with children in day care centers and day care homes. Our proposal does not contain an entry level training requirement and would not preclude the hiring of previously untrained or inexperienced individuals. We would, however, require that all caregivers, regardless of their previous education or work experience, begin to participate in specialized training, on a continuing basis, within 6 months of employment. In addition, we require day care centers to provide orientation in working with children in groups to each new caregiver without prior experience or training before the caregiver takes on child care responsibilities.

To support this requirement for regular specialized training of caregivers we are proposing two options for a training requirement applicable to State agencies. Under both proposed options a State agency must develop and implement a statewide plan for making training available to day care personnel. The plan must specify the kinds of training and the amount of training which the State requires of caregivers. The plan must also specify where the training is available.

Under option A the State agency determines the subject areas of the training available to day care personnel. However, HEW recommends several general areas which the plan should cover. Under option B, HEW mandates the general areas which the plan should cover—for example, child development and growth, child care programming, first aid, and nutrition. Under both options we recommend that a State agency make available innovative and flexible training opportunities which take into consideration the needs and time limitations of the caregivers in the State.

Our proposed training requirements do not mandate that caregivers participate in any specific number of training hours. Nor do they mandate the frequency or the source of the specialized training. Rather, they allow day care operators and State agencies to develop training content and training opportunities to fit the particular needs both of individual caregivers and day care programs.

Questions for Public Consideration

- Should the Federal government mandate the number of hours a caregiver must spend in specialized training? If so, what is a reasonable number of hours to require?
- Should the Federal government specify the subjects to be covered in specialized training? If so, what subjects should we mandate?
- Should our requirement for specialized training be different for caregivers in day care homes?
- Should we have an entry-level training requirement for caregivers? If so, what should the requirement be? Should it be different for centers and homes?

Nutrition

Text of the Proposed Rule

Day Care Center (§ 71.14)

Option A

A day care center shall provide adequate and nutritious meals and snacks prepared in a safe and sanitary manner

or

Option B

A day care center shall provide an adequate and nutritious breakfast (at parent request) and lunch prepared in a safe and sanitary manner. Snacks shall be provided both mid-morning and mid-afternoon. When children are in care during evening and night hours, the center shall provide an adequate and nutritious evening meal.

Day Care Home (§ 71.54)

Option A

A day care home shall provide adequate and nutritious meals and snacks prepared in a safe and sanitary manner.

or

Option B

A day care home shall provide an adequate and nutritious breakfast (at parent request) and lunch prepared in a safe and sanitary manner. Snacks shall be provided both mid-morning and mid-afternoon. When children are in care during evening and night hours, the home shall provide an adequate and nutritious evening meal.

State Agency (§§ 71.14 and 71.54)

The State agency shall make the consultative services of a qualified nutritionist or food service specialist available to day care homes.

Discussion

We propose two options for a nutrition requirement for day care centers and day care homes. Under both options (as under the current FIDCR), we require day care facilities to provide nutritious meals and snacks and to prepare them with attention to safety and sanitation. Option B specifies when meals and snacks must be provided to children in care and includes an additional option under which breakfast is required only at parent request. We do not mandate the specific content of the meals and snacks in either option, however we do offer in the Appendices several examples of what constitutes nutritious meals and snacks and how they may be provided, as well as several recommendations which suggest additional activities to promote sound nutrition in a day care setting. We also propose to mandate that State agencies make the services of a qualified nutrition specialist available to day care facilities.

Questions for Public Consideration

- Should the Federal government mandate the specific type and amount of food provided to children in day care?
- Should the Federal government mandate that day care facilities provide breakfast to children in care? Should the provision of breakfast be required only at parent's request?

Health and Safety of Children in Care

Text of the Proposed Rule

Day Care Center (§ 71.16)

(1) A day care center shall have on record for each enrolled child, within 30 (or 60) days of enrollment, a statement from a licensed health practitioner that the child has received a health assessment and all immunizations appropriate to his or her age. The statement for each child shall:

(i) Indicate any special precautions for diet, medication, or activity;

(ii) Indicate that the immunizations are in accordance with recommendations of the U.S. Public Health Service or the American Academy of pediatrics;

(iii) Indicate that the health assessment is in accordance with the standards of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan; and

(iv) Be updated according to the recommended schedule for routine health supervision of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan.

(2) A day care center shall have plans to respond to illness and to emergencies including fire, serious injury and ingestion of poison. These plans shall be in writing.

(3) A day care center shall not dispense medications to a child without the written consent of his or her parent. All medications shall be dispensed in accordance with instructions from a parent or physician. Medications shall be kept in labelled containers out of the reach of children.

(4) (Option A) A day care center shall provide information to parents, as needed, concerning child health services available in the community, and shall refer them to the needed health services.

or

(Option B) Same as option A, except that in addition to informing and referring, a day care center shall assist parents in obtaining needed child health services, and follow-up to assure that health care is secured.

Day Care Home (§ 71.56)

(1) A day care home shall have on record for each enrolled child, within 30 (or 60) days of enrollment, a statement from a licensed health practitioner that the child has received a health assessment and all immunizations appropriate to his or her age. The statement for each child shall:

(i) Indicate any special precautions for diet, medication, or activity;

(ii) Indicate that the immunizations are in accordance with recommendations of the U.S. Public Health Service or the American Academy of Pediatrics;

(iii) Indicate that the health assessment is in accordance with the standards of the American Academy of Pediatrics or the EPSDT National Recommended Health Assessment Plan; and

(iv) Be updated according to the recommended schedule for routine health supervision of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan.

(2) A day care home shall have plans to respond to illness and to emergencies including fire, serious injury, and ingestion of poison.

(3) A day care home shall not dispense medications to a child without the written consent of his or her parent. All medications shall be dispensed in accordance with instructions from a parent or physician. Medications shall be kept in labelled containers out of the reach of children.

(4) A day care home shall provide information to parents, as needed, concerning child health services available in the community, and shall refer parents to the needed health services.

State Agency (§ 71.26 and § 71.56)

Option A

(1) The State agency shall provide information to each day care facility about the availability of health services in the community, and about how the services may be obtained.

(2) The State agency shall establish and maintain health standards for day care personnel.

or

Option B

This option would include the two requirements in option A and would also include the following requirement:

(3) The State agency shall make arrangements (links) which assure that children in day care who are eligible for Federal, State, or locally funded health services receive those services when needed.

Discussion

For yound children cared for in groups there is often serious risk of injury and infectious disease. Several of the proposed health requirements are directed at minimizing these risks to the childrens' health. Others are aimed at making existing child health services more readily accessible to children in day care. We propose to require that day care facilities develop plans for handling illnesses and emergencies, and for dispensing and storing medications.

In addition, we propose to require that facilities acquire, within 30 (or 60) days of a child's enrollment, a statement for each child indicating that the child has had a health assessment in accordance with standards of the Medicaid Early and Periodic Screening, Diagnosis and Treatment (EPSDT) program of the American Academy of Pediatrics (AAP). The health assessment includes as health history, and vision and hearing screenings. Also, the required statement must indicate that the child has had the immunizations recommended by the AAP or U.S. Public Health Service. The statement must also note any special dietary or medication needs of the child, and any need for restrictions on his or her activities. The statement must be

updated in accordance with the AAP's recommended shcedule. (Both the AAP and EPSDT recommend a health assessment every two years for children three years old and older and more frequently for younger children.)

We propose to mandate that day care centers and day care homes inform parents about available community health services, and refer them to those services when needed. We also include an option under which, in addition to informing and referring, a day care center (but not a day care home) assists parents in obtaining needed child health services, and follows up to determine whether parents have been able to secure the health care their children need.

The proposed health requirements place on State agencies the responsibility for establishing and implementing health standards for persons working in day care facilities. The State agency must also furnish information about available community health services to each day care facility.

We include an option under which State agencies must make arrangements in order to assure that children in day care who are eligible for health services under any existing Federal, State, or locally funded program, obtain those services. This option does not require the creation of new health resources for day care children. Rather, we simply require State agencies to make use of already existing publicly funded child health programs for the children in HEW assisted day care who are now eligible for the programs. Our examples for this option emphasize the creation of cooperative arrangements, between tne State agency and a range of existing public and private community health resources as a means of making needed health resources accessible to children eligible for and in need of those services. Finally, we include in the Appendices several recommendations for facilities about good health and safety practices. Our examples and recommendations for State agencies encourage the provision of technical assistance to operators about day care health and safety.

Questions for Public Consideration

- Should the Federal government specify standards for the health' assessment and list the immunizations children in day care should receive?
- Should there be Federal standards for the health of day care personnel?
- Should the Federal government require that State agencies or providers identify a person responsible for coordinating health services for children in day care?
- Should the State agency be required to provide health services to children if those services are not otherwise available in the community?
- Should we require that children be immunized before enrollment in a day care facility? If not, how long after enrollment should immunizations be required?
- Should the health assessment and immunization requirement apply to the caregivers own children in a day care home?

Physical Environment

Text of the Proposed Rule

Day Care Center (§ 71.18)

A day care center shall meet State and local requirements for licensing or approval, and applicable State and local codes relating to health, sanitation, and building and fire safety.

Day Care Home (§ 71.58)

A day care home shall meet State and local requirements for licensing, registration, or approval, and any State or local health, sanitation, and building and fire safety codes applicable to residential occupancy.

State Agency (§ 71.18 and § 71.58)

The State agency shall assure that each day care facility meets applicable State and local requirements for licensing or approval, and applicable State and local codes relating to health, sanitation, and building and fire safety. The State agency shall assure that standards for day care centers which specifically address transportation, swimming, and equipment safety exist in the State, and that each day care facility meets those standards.

Discussion

Recent HEW studies have shown that serious and potentially dangeous deficiencies in safety and sanitation (for example, no fire or smoke alarms or fire extinguishers) now exist in some day care facilities supported by HEW funds. The proposed requirement mandates that each facility meet all applicable State and local requirements which address physical environment.

Under the proposed regulations it is the State agency's responsibility to assure that all State and local requirements are met in each day care facility. In addition, State agencies are required to see that swimming, transportation, and equipment safety are specifically addressed in State or local day care requirements, and that day care facilities meet the State requirements in these particular areas.

In the proposed rules we do not specify Federal requirements for physical environment which States must adopt in their codes. Rather, we require only that States adhere to their own State (and local) safety and sanitation requirements.

Questions for Public Consideration

- Should the Federal government require States to address specific areas, such as transportation safety, in their codes?
- Should the Federal government specify detailed physical environment requirements in these regulations? If so, what should those requirements be?

Social Services

Text of the Proposed Rule

Day Care Center (§ 71.20)

Option A

A day care center shall provide information to parents, as needed, concerning social services available in the community and refer parents to needed social services.

or

Option B

Same as option A except that, in addition to informing and referring, a day care center shall assist parents in obtaining social services, and follow up to assure the services are secured.

Day Care Home (§ 71.60)

A day care home shall provide information to parents, as needed, concerning social services available in the community, and refer them to needed social services.

State Agency

Option A

(1) The State agency shall provide information to each day care facility about the availability of social services in the community and about how the services may be obtained.

or

Option B

(1) Same as option A.

(2) The State agency shall make arrangements (links) which assure that children in day care who are eligible for Federal, State or locally funded social services receive those services when needed.

Discussion

We wish to develop a social services requirement which provides assistance

to parents in obtaining the social services which their children need, without placing an undue burden on day care facilities or duplicating social services that children already receive.

We propose to require both day care homes and day care centers to inform parents about necessary social services, and to refer them to those services. We also include an option which requires day care centers (but not day care homes) to help parents to obtain services by contacting agencies and making appointments for parents when necessary. In addition, under the second option, we require centers to follow up with parents to see if a needed social service has been secured.

Under either option facilities would, of course, be free to go beyond our requirement and, for example, provide a service not available elsewhere in the community.

At the same time we propose to mandate that State agencies furnish day care facilities with the information and assistance which the facilities need to enable them to provide meaningful information and referral to parents of children in day care. As an option, we propose to require that State agencies, in addition to providing information and assistance to facilities, also assume the responsibility for arranging for necessary services for children in day care who are eligible for existing Federal, State, or locally funded services.

As in the case of the proposed option B for a health requirement on State agencies, option B for social services does not mandate States to create new social service resources for children in day care. The examples and recommendations which we provide for State agencies encourage the use of existing resources and services, including day care centers with social service staff. The examples and recommendations emphasize the need for coordination of these existing resources in the delivery of sevices to children in day care centers and homes.

Parent Involvement

Text of the Proposed Rule

Day Care Center (§ 71.22)

A day care center shall:

Option A

(1) Provide parents with opportunities to observe the center and to discuss their children's needs before enrollment;

(2) Inform parents about the day care program and its policies;

(3) Regularly offer parents opportunities to observe their children, meet with caregivers, and advise and comment on their children's needs; and

(4) Regularly exchange information with parents about their children.

or

Option B

In addition to subsections (1)–(4) above, a day care center would also be required to:

(5) Maintain for a period of three years any monitoring reports or evaluations of the center prepared by and received from Federal, State, or local authorities;

(6) Provide parents upon request the opportunity to review any of the reports or evaluations referred to in paragraph (5) above; and

(7) Make available to parents upon request pending or approved applications for funds for the current program year filed with any Federal, State, or local authorities.

Day Care Home (§ 71.62)

A day care home shall:

(1) Provide parents with opportunities to observe the home and to discuss their children's needs before enrollment;

(2) Inform parents about the day care program and its policies;

(3) Regularly offer parents opportunities to observe their children, and talk about their children's needs; and

(4) Regularly exchange information with parents about their children.

State Agency (§ 71.22 and § 71.62)

(1) The State agency shall provide information and technical assistance to day care facilities on working with parents.

(2) The State agency shall offer parents their choice of day care facility whenever administratively feasible. The State agency shall make a copy of the HEW day care requirements available to parents using HEW-funded day care.

Discussion

There is general recognition of the fundamental right of parents of children in day care to be informed about their children's development and about the day care program. However, there has been controversy over the question whether parent involvement in making decisions about general day care program policy should be mandated. We require day care facilities to provide parents with information about the day care program. In addition, we require a facility to offer parents regular opportunities to observe their children, and consult with staff about them. Moreover, the facility must allow parents to visit, and talk about their children's needs, *before* they enroll the children in the program. We do not propose to require that day care facilities involve parents in general program policy making. We invite public comment on the possible advantages and disadvantages of requiring day care facilities to provide for the involvement of parents in making decisions which specifically concern their own children.

Under option B, we propose additional requirements for day care centers which mandate that centers maintain, for a period of three years, monitoring reports and evaluations of the center prepared by Federal, State, or local authorities, and pending or approved applications for public funds. This option allows parents to review these documents on request, and is intended to assist parents in deciding whether to enroll and maintain their children in a day care center.

For State agencies we have proposed a requirement under which assistance would be offered to facilities in working with parents. We have also included a proposal under which State agencies are required to permit parents, whenever possible, to choose the day care facility for their children. Under the proposal, agencies would also be required to make copies of Federal day care requirements available to parents of children in day care. We recommend that States develop ways for parents to be involved in the evaluation of their children's day care programs.

Questions for Public Consideration

- Should the Federal government require day care facilities to provide parents with opportunities to be involved in decision making about general program policy (e.g., hiring and personnel practices, funding, etc.)?
- Should day care centers be required to maintain and make available to parents monitoring and evaluation reports, and applications for public funding?

Group Composition

Text of the Proposed Rule

Day Care Center (§ 71.24)

(a) *Group Size*

(1) A day care center shall meet the following group size requirements at all times of the day, except during lunch, naptime, and special activities, such as field trips and playground activities: (The numbers are scheduled enrollment figures.)

Infant and Toddlers	0–2½ years
Option A	8
or	
Option B	10
Preschoolers	**2½–4 years**
Option A	14
or	
Option B	16
Preschoolers	**4–6 years**
Option A	18
or	
Option B	20
School Age	**6–10 years**
Option A	16
or	
Option B	18
School Age	**10–14 years**
Option A	20
or	
Option B	State Requirements

(2) Compliance with the group size requirements in paragraph (a)(1) above shall be determined on a group or cluster basis rather than a room or center-wide basis.

(3) For mixed age groups, group size shall be based upon the age of the youngest child in the group, if the children in the youngest age category make up twenty percent or more of that group. If children in the youngest age category make up less than twenty percent of that group, the groups size for the next highest age category shall be required.

(b) *Staffing Requirements*

(1) A sufficient number of staff shall be present at the center at all times and shall be assigned so as to protect the health and safety of the children at the center.

(2) A day care center shall meet the following staffing requirements:

(Option A) At all times of the day:

or

(Option B) Averaged over the course of the day: (The numbers are scheduled enrollment figures.)

Infants and Toddlers	0–2½ years
Option A	1:4
or	
Option B	1:5
Preschoolers	**2½–4 years**
Option A	1:7
or	
Option B	1:8
Preschoolers	**4–6 years**
Option A	1:9
or	
Option B	1:10
School Age	**6–10 years**
Option A	1:16
or	
Option B	1:18
School Age	**10–14 years**
Option A	1:20
or	
Option B	State Requirements

(3) Compliance with the staffing requirements in paragraph (b)(2) above shall be determined using the total number of hours children are scheduled to be at the center and the total number of hours staff are scheduled to work directly with children.

(4) To calculate the required staff hours, divide the total scheduled child hours for each age category by the age appropriate staffing requirement in number (b)(2) above.

(5)(i) Staffing requirements in paragraph (b)(2) above may be met by averaging the staff required for the 2½ to 4 and 4 to 6 years old age categories. (For example, if a center determines that it needs 5 caregivers to meet the staffing requirement for its 2½ year old children at the center, and 10 caregivers for its 5 year old children at the center, the center would meet the staffing requirement so long as it had 15 caregivers scheduled to care for children in both categories. It need not necessarily assign 5 caregivers to care for its 2½ year old children, nor assign 10 caregivers to care for its 5 year old children.)

(ii) Staffing requirements in paragraph (b)(2) above may be met by averaging the staff required for the 6 to 10 and 10 to 14 year old age categories.

(6) (Option A) Hours scheduled to be spent providing direct care to children by a volunteer may be counted toward meeting the staffing requirements, if the volunteer participates in specialized child care training.

or

(Option B) Hours scheduled to be spent providing direct care to children by a volunteer may be counted toward meeting the staffing requirements, if the volunteer works 10 hours or more each week and participates in specialized child care training.

(7) Hours scheduled to be spent providing direct care to children by a staff member who performs non-caregiving duties, such as a cook or a driver, may be counted toward meeting the staffing requirements, if he or she participates in specialized child care training.

(8) A day care center shall obtain substitutes in care of caregiver absences.

Day Care Home (§ 71.64)

Family Day Care Home

(1) At least one caregiver shall be present at all times.

(2) In a family day care home that serves children of all ages, including children under the age of 24 months, the group size at any given time shall not exceed 5. No more than two of these children may be under the age of 24 months. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

(3) In a family day care home that serves children under the age of 24 months only, the group size at any given time shall not exceed 3. There may be no other children in the home besides the caregiver's own children over the age of 6 years.

(4) In a family day care home that serves no children under 24 months, the group size at any given time shall not exceed six. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

Group Day Care Home

(1) At least two caregivers shall be present at all times.

(2) In a group day care home that serves children of all ages, including children under 24 months, the group size at any given time shall not exceed 10. No more than two of these children may be under the age of 24 months. The caregivers' own children younger than six and not yet in first grade shall count towards the group size requirement.

(3) In a group day care home that serves no children under the age of 24 months, the group size at any given time shall not exceed 12. The caregivers' own children younger than 6 and not yet in first grade shall count towards the group size requirement.

Discussion

Day Care Centers

The staff standards in the 1968 FIDCR, and in the title XX statute and regulations, have been the focus of sustained controversy. The availability

of sufficient staff to provide care and supervision to children is fundamental to quality day care. At the same time, caregiver/child ratio has been identified as the single most important factor in determining the cost of providing day care services. Some State administrators and day care operators regard the caregiver/child ratios in the current Federal day care requirements, particularly those that apply to children under the age of 6, as unnecessarily stringent and costly. As indicated earlier, the controversy surrounding the title XX staffing requirements led Congress to impose a moratorium on the under 6 year old requirements, and to allow waiver of Federal staffing requirements for all age groups in certain day care facilities.

In 1974, HEW commissioned a nationwide study of day care centers. The National Day Care Study (NDCS), released in March 1978, concentrated on day care provided in centers to children 3 to 5 years of age. The findings of the NDCS indicate that less emphasis on child/staff ratios, and a greater emphasis on the size of groups in which children are cared for can lead to a less costly Federal staffing requirement, without any decrease in the quality of care children receive. In addition, the NDCS report made recommendations for policies to be used in applying group size and staffing requirements.

The current requirements do not state whether group size and staffing requirements are based on scheduled enrollment or on actual attendance of children. One recommendation in the National Day Care Study was that group size and staffing requirements be determined on the basis of scheduled enrollment of children rather than their actual attendance. Our proposed regulations adopt this suggestion. We believe that the use of scheduled enrollment will simplify staffing calculations for facilities and State agencies.

We also propose to require that group size requirements in paragraph (a)(1) in the proposed requirements apply at all times of the day except during lunch, nap time, and special activities, such as field trips and playground activities. For example, under option B for infants and toddlers in paragraph (a)(1), children under 2½ years old in a day care center could never be cared for in groups larger than 10, except during the parts of the day specified above.

We propose two alternatives for a requirement relating to how the staffing requirements in paragraph (b)(2) must be met. Under option 1 they would be met at all times of the day on a continuous basis. Under option 2, the staffing requirements do not have to be met at any given point during the day. Rather, a center meets the requirements if, on the average for the day it schedules the correct amount of staff time. For example, a center could schedule less than the required number of staff hours during one part of the day, if it schedules a correspondingly greater number of staff hours during another part of the day.

Under paragraphs (b)(3) and (b)(4) a center would use the total number of hours children are enrolled at the center and the total number of hours staff are scheduled to work directly with children in figuring staffing needs. In calculating required staff time, the child hours in each age category would be divided by the appropriate requirement in paragraph (b)(2).

Paragraph (b)(5) above allows for flexibility in making staff assignments. It also provides assurance that younger children are adequately supervised. Under that paragraph, the center determines the staff hours required in paragraph (b)(2) for each age group. The center could then assign staff required for children from 0–2½ years old, 2½–6 years old, and 6 years and older within those age groupings as it saw fit.

The center would then have three staffing pools from which to make assignments: one staffing pool must be used for children 0–2½ years old; another staffing pool must be used for children 2½–6 years old; the third staffing pool must be used for children over 6 years.

Furthermore, to clarify what staff time may be counted in calculating staffing requirements, we propose, as one alternative, to allow *all* staff hours spent providing direct care to children, including time spent by volunteers, cooks, and others to be counted. We also include an option, suggested by the NCDS, under which volunteer hours could be counted only if the volunteer regularly spends at least 10 hours per week working directly with children. Under either alternative, the time spent by any volunteers or other non caregiver staff could not be counted unless they participate in specialized training in child care. The proposed group composition regulation requires that day care centers find substitutes to replace absent staff scheduled to provide direct care to children.

We include a proposal which addresses group size and staffing requirements for groups containing children of different ages. Under the proposal, where a center director places a child with a group of older children (for example, a 2 year old with 3 and 4 year old children) the group size and staffing requirement of the youngest child (or 2 year old) applies if the youngest children make up more than 20 percent of the group. The requirements for the next older age group (or 3 year olds) would apply if the youngest children make up less than 20 percent of the group. In developing a requirement for mixed age groups, we wish to be sensitive to the individual developmental needs of children, whatever their chronological age. For example, we do not wish to discourage a center from placing older, more mature 2 year olds with a 3 to 4 year old group where that would be sensible and appropriate, and not merely for the sake of convenience. At the same time we wish to ensure that the needs of the younger children can be met in any mixed age group.

The proposed staffing requirements mandate that an adequate number of adults to protect their physical safety, be with children at all times. Thus, we recognize that under some circumstances—for example, on field trips or when children are swimming—more staffing than that required in paragraph (b)(2) may be necessary to protect children. In the proposed group size and staffing requirements set forth in paragraphs (a)(1) and (b)(2) above, we include two options for each age group. These proposed requirements are presented in terms of scheduled enrollment.

Requirements for Infants and Toddlers

The National Day Care Study contains a finding that, for infants and toddlers, *both* staffing requirements *and* group size are strongly associated with indicators of quality care. The NDCS also suggests that the current 4 children to 1 adult staffing requirement should be retained for infants and toddlers.

Unlike the current regulations which treat children up to 3 years old as infants and toddlers, the proposed regulations include in the infant and toddler category children from 0–2½ years. For these children we include two staffing options for public consideration.

Each of the options contain staffing requirements which, because they are based on enrollment and not actual attendance, are at least as stringent as those in the current title XX regulations, except that the present 1 child to 1 adult requirement for children 0 to 6 weeks old has been dropped. Current Federal standards applicable to infants and toddlers do not include group size requirements. We have proposed two group size options for children 0–2½

years old. We recognize that children of different ages within the broad 0–2½ year age category have different needs. We recommend that centers arrange groups of infants and toddlers so that younger children are cared for in smaller groups, with more adults, than older children.

Requirements for Preschool Children

The options which we are proposing for group size and staffing requirements for preschool children are based upon alternatives recommended in the National Day Care Study. However, unlike the NDCS, which treated children from 3 up to 6 years old alike, we have decided to establish requirements for children 2½ to 4 years old which are separate from those applicable to children who are 4 to 6 years old.

The National Day Care Study suggests that each of the proposed options for 2½ to 6 years olds would produce good quality day care with some cost reduction. Each option A has a better impact on children; each option B could result in greater cost savings. Each option contains staffing requirements less stringent than those in the 1968 and title XX day care requirements. However, each also calls for group size limits which are lower than those in the current requirements.

Requirements for School Aged Children

Congress has taken a particular interest in the staffing and group size requirements for school-age children 6 years and over. The ratios permitted for such children by Congress in the title XX legislative were: 1 adult to 15 children for 6 to 10 year olds, and 1 adult to 20 children for 10 to 14 year olds. As explained above, HEW has the authority to change these requirements.

For each school age category, option A reflects the Congressionally established group size and staffing requirements. We have also proposed for public comment, a further less stringent, option for school-aged children between 6 and 10, and an option under which there is no Federal requirement for children 10 and older. Instead, centers are required to meet State requirements for those children.

As an alternative to the proposed staffing requirements discussed above, we could require adoption of the staffing recommendations included in an appendix to the Child Fire Life Safety Code of the National Fire Protection Association. The Code bases its fire safety standards for day care centers on the following staff to child ratios:

Age	Staff ratio
0 to 2	1:3
2 to 3	1:5
3 to 5	1:10
5 to 7	1:12
7 and older	1:15

For children of some age categories, the Child Life Safety Code recommends staffing requirements which are more stringent than those in our proposed requirements; for others they are less stringent.

Day Care Homes

Our proposed group composition requirement recognizes two types of day care homes, family and group. In both family and group day care homes there may not be more than 6 children with one caregiver at any caregiver's own children who are younger than 6 years old and not attending first grade.

One exception to this requirement is when a home cares for children under 24 months. In those cases there may not be more than 5 children with one caregiver at any given time, including a caregiver's own children who are younger than 6 years old and not attending first grade.

In any event, there may not be more than 2 children under the age of 24 months in a day care home which also includes older children, except that there may be up to three children under 24 months in a home in which there are no other children besides the caregiver's own children 6 years or older.

Questions for Public Consideration

- What practical problems would result from computing child/staff ratios and group size on the basis of enrollment rather than on attendance? e.g. would a new record system be required?
- Should the staffing requirements apply at all times or on a daily basis?
- What rules should apply when younger children are grouped with older children?
- Should we allow centers the flexibility to average staffing requirements on a center wide basis across age groups?
- Are the age categories which we have proposed appropriate?
- Should we make any special provision for full day, summer and vacation programs for school age children?
- Should we limit the number of children under 24 months old who may be cared for in a day care home which includes older children?
- Are the staff/child ratios suggested in the Child Fire Safety Code preferable to the staffing requirements proposed in paragraph (b)(2)?

Monitoring (§ 71.20 and § 71.70)

Test of the Proposed Rule

Option A

The State agency must determine each facility's compliance with the requirements of this part at least annually.

or

Option B

Same as option A plus the requirement that:

The State agency shall make an on-site visit to a day care facility whenever the State has reason to believe that the facility fails to meet the requirements of this part.

Discussion

The proposed regulations place the responsibility for monitoring day care facilities on the States. The Federal government would monitor State performance.

Under the proposed regulation States would be required to make an annual review of each facility's compliance with Federal, State, and local day care requirements. The review need not be done through an onsite visit to each facility but could be made through a monitoring system which includes an examination of a facility's records and facility self-evaluation supplemented by on-site visits each year to different facilities in the State.

We have included an option under which, in addition to annual compliance determinations described above a State would be require to visit a facility if it had reason to believe that the facility does not meet Federal requirements—for example, if the State has received complaints from parents.

Questions for Public Consideration

- Should the Federal government spell out a more detailed monitoring requirement for States?
- Should annual on-site visits to all day care facilities be mandated?

Availability of Federal Financial Participation (FFP) (§ 71.32 and § 71.72)

Text of the Proposed Rule

(a) FFP is available in the costs of day care services, only if the care meets the requirements of this part.

(b) The care is considered to meet the requirements of this part if:

(1) It is provided by a facility which:

(i) Meets applicable State standards for licensing, registration, or approval; and

(ii) Has been approved by the State agency as meeting the requirements of this part, or has submitted to the State agency a plan of correction acceptable to the State agency for any requirement that the facility has been found not to meet. The State agency may accept a plan of correction only if the plan specifies a reasonable time period for meeting the requirements of this part. The facility must meet the requirements of this part within the time period specified in its plan of correction; and

(2) The State agency meets its requirements as provided in this part, or has submitted to HEW a plan of correction acceptable to HEW for any requirement that the State agency has been found not to meet. HEW will accept a plan of correction only if the plan specifies a reasonable time period for meeting the requirements of this part. The State agency must meet the requirements of this part within the time period specified in its plan of correction.

Discussion

Under title XX of the Social Security Act there can be no Federal reimbursement of State child day care costs unless the day care has been furnished in a facility which meets all Federal requirements. We propose, in accordance with the title XX statute, to require, as a condition of Federal financial participation (FFP), that child day care services be furnished in facilities which meet all applicable State requirements for licensing, registration, and approval and which have been approved by State agencies as meeting Federal day care requirements. We proposed to allow FFP in State expenditures for day care services provided by facilities which do not meet the Federal day care requirements only if the facilities have submitted plans satisfactory to the administering agency for meeting the Federal requirements.

Under the proposal whether a plan of correction is accepted for any particular facility is a matter for State agency discretion. However, we would require, as an FFP condition, that each plan of correction accepted by an agency specify a reasonable period of time within which Federal requirements would be met. The facility must implement its plan within the specified time period to continue to be eligible for Federal funds.

We do not intend by this proposal to permit the "waiver" by State agencies of any Federal day care requirements. Rather, in proposing this requirement, we seek to allow for the continuation of FFP for a reasonable period of time with respect to facilities which may not fully meet Federal standards, but which evidence a clear intent to meet all standards as promptly as possible and under a fixed time schedule. We believe that allowing some opportunity for State agencies to work with facilities to improve their programs before Federal funds are withdrawn will ultimately benefit children and families in need of Federally assisted day care services.

Further, our proposed FFP requirements include a provision under which FFP in a State's day care costs would also be conditioned on the State's meeting its responsibilities under this part. HEW could approve a plan of correction for any requirements which a State has been found not to meet. Again, the plan must be implemented within a reasonable time period for FFP to continue.

Questions for Public Consideration

- Should we specify detailed criteria for plans of correction?
- Are there any requirements, in addition to State standards, which facilities should be required to meet without provision for a plan of correction?

Rates of Payment (§ 71.34 and § 71.74)

Text of the Proposed Rule

In establishing rates of payment for child day care services, the State agency shall take into account the costs to the facility of meeting the requirements of this part.

Discussion

States have traditionally had a great deal of discretion in determining the rates to be paid to facilities furnishing day care to children eligible for HEW assisted day care services. Concerns have been raised about whether the amounts which States offer to providers are sufficient to cover the costs of meeting Federal day care requirements. We do not propose to dictate to States how much they must pay to providers.

However, we do propose to require that States take into consideration the costs associated with our requirements in setting day care rates of payment. A State could recognize local variations in costs to particular facilities (or types of facilities), or it could use a reasonable statewide cost standard. Costs would be reviewed periodically to reflect any changes resulting from inflation or otherwise.

Again, our requirement does not mandate that States actually pay any particular amount to day care providers. Rather, we simply require that States consider and acknowledge the costs of meeting Federal requirements as part of their rate setting procedures.

Questions for Public Consideration

- Should States be specifically required to make public how they have taken the costs of meeting Federal requirements into account in setting rates of payment?
- Should the Federal government develop a model rate setting procedure as guidance for States?

State Agency Waiver (§ 71.36)

Text of the Proposed Rule

The State agency may waive the staffing requirements at § 71.24(b) for a day care center in which not more than 10% of the children in the center are children whose care is paid for wholly or in part with Federal funds, if the day care center meets applicable State staffing requirements.

Discussion

We propose to build a provision into our requirements under which States would be permitted to waive grouping requirements for day care centers in which not more than 10% of the children are recieiving HEW assisted care. A center would not be eligible for the waiver unless it met all applicable State staffing requirements *and* all other Federal requirements, including group size requirements proposed in § 71.24(a). In allowing for this waiver we seek to encourage centers not otherwise willing to offer care to HEW assisted children to enroll small numbers of those children, without being subject to Federal grouping requirements. We believe this will help to promote socio-economic integration in those day care centers.

Clearly we expect States to exercise this waiver authority in a responsible manner. Accordingly, States must, first and foremost, see that the interests of the children in centers not meeting Federal grouping requirements are protected.

Questions for Public Consideration

- Should we allow waiver of grouping requirements for day care homes serving only a few HEW assisted children as well as for day care centers?

Future Review of Day Care Regulations (§ 71.38 and § 71.78)

Text of the Proposed Rule

The Secretary will review the effectiveness of these regulations. As part of this review, 36 (or 48) months after the effective date of these regulations, the Secretary will publish a notice of opportunity for public comment on the effectiveness of the regulations. The Secretary will assess the comments and publish the results of the review and assessment in the Federal Register.

Discussion

We propose to undertake a review of these Federal day care regulations in 3 (or 4) years after they take effect. The review may or may not result in revisions to the regulations. Moreover, this requirement would not preclude HEW from making appropriate changes in the regulations before the review begins.

State Agency Advisory Council (§ 71.40 and § 71.80)

Text of the Proposed Rule

Day Care Center (§ 71.40)

The State agency shall establish a Day Care Advisory Council to advise on the interpretation and implementation of HEW day care requirements.

Day Care Home (§ 71.80)

The State Agency Advisory Council required to be established under section 71.40 of this part shall advise on the interpretation and implementation of HEW day care requirements for day care homes as well as day care centers.

Discussion

We propose to require that the State agency establish an advisory council to assist States in interpreting and implementing the HEW day care requirements. Councils exist in many States now and have been considered effective in assisting States to upgrade the quality of day care.

Questions for Public Consideration

- Should the State agency be required to establish a State Agency Advisory Council?
- If so, should the Federal government specify who should be represented on the Council?

Effective Date (§ 71.40 and § 71.80)

Text of Proposed Rule

These regulations will take effect six months from the date of publication in final form in the Federal Register, except that the following requirements will take effect one year from that date.

(a) The training requirements at § 71.12 and § 71.52;

(b) The requirements at § 71.56(a)(4) on day care homes to inform and refer parents to child health services; and

(c) The requirements at § 1.60(a) on day care homes to inform and refer parents to social services.

Discussion

We recognize that States and day care facilities need time to learn about the revised day care requirements and to make plans for putting them into effect. In particular, we believe that the training requirement will take time to fully implement. Accordingly, we propose to delay the effective date of the new regulations for six months from the date of their publication in the Federal Register in final form. The training requirements at § 71.12 and § 71.52 would not take effect until a year after final promulgation. We also propose to allow a year for day care homes to meet the information and referral requirements in our health and our social services provisions. This delay should allow caregivers in day care homes adequate time to learn about available resources and about how to develop the ability to provide effective referral for parents of children in their care.

Questions for Public Consideration

- Should we allow more than 6 months for States and providers to meet all the requirements. If so, for which requirements, in addition to the one included in our proposed rule, should we allow further time?
- Is one year sufficient for implementation of the training requirements? Is one year too much time?
- Is one year sufficient for implementation of the health and social services requirements on day care home to inform parents about and refer them to needed services? Is one year to much time?

Regulatory Analysis

In accordance with the requirements of Executive Order No. 12044, the Department has prepared a Regulatory Analysis of these proposed rules. This analysis is available from the Department.

Dated: May 31, 1979.

Frank Peter S. Libassi,

General Counsel, Department of Health, Education, and Welfare.

Dated: June 7, 1979.

Joseph A. Califano, Jr.,

Secretary, Department of Health, Education, and Welfare.

The Department of Health, Education, and Welfare proposes to revise Part 71 of Title 45 of the Code of Federal Regulations, as set forth below:

PART 71—HEW DAY CARE REQUIREMENTS

Subpart A—Day Care Center Requirements

Sec.
71.4 Definitions.
71.6 Applicability.
71.8 Office of Education Waiver.
71.10 Program of Activities for Children.
71.12 Training.
71.14 Nutrition.
71.16 Health and Safety of Children in Care.
71.18 Physical Environment.
71.20 Social Services.
71.22 Parent Involvement.
71.24 Group Composition—Day Care Center.
71.30 Monitoring.
71.32 Availability of Federal Financial Participation (FFP).
71.34 Rates of Payment.
71.36 State Agency Waiver.
71.38 Future Review of Day Care Regulations.
71.40 State Agency Advisory Council.
71.42 Effective Date.

Subpart B—Day Care Home Requirements

Sec.
71.44 Definitions.
71.46 Applicability.
71.48 Office of Education Waiver.
71.50 Program of Activities for Children.
71.52 Training.

71.56 Health and Safety of Children in Care.
71.58 Physical Environment.
71.60 Social Services.
71.62 Parent Involvement.
71.64 Group Composition—Day Care Home.
71.70 Monitoring.
71.72 Availability of Federal Financial Participation (FFP).
71.74 Rates of Payment.
71.76 Future Review of Day Care Regulations.
71.80 State Agency Advisory Council.
71.82 Effective Date.
Appendix A—Day Care Center.
Appendix B—Day Care Home.

Authority: Title XX of the Social Security Act, Section 2002(a)(9)(B), 42 U.S.C. 1397a(a)(9)(B); and Title V of the Headstart, Economic Opportunity, and Community Partnership Act of 1974 (Headstart-Follow Through Act), Section 582(d), 42 U.S.C. 2932(d).

Subpart A—Day Care Center Requirements

§ 71.4 Definitions.

As used in these regulations, the term:

Caregiver means a person who provides direct care, supervision, and guidance to children in a day care facility.

Day care means the care, supervision, and guidance of a child, on a regular basis, for periods of less than 24 hours per day, in a place other than the child's own home.

Day care center means a place in which day care is provided to 13 or more children.

Day care facility means a day care home or a day care center.

Day care home means a private residence in which day care is provided to 12 or fewer children.

Early and Periodic, Screening, Diagnosis and Treatment (EPSDT) means a component of each State's medical assistance program mandated under title XIX of the Social Security Act (Medicaid) which provides preventive child health servides to eligible low income children.

Family day care home means a day care home serving 6 or fewer children.

Group day care home means a day care home serving 7 to 12 children.

State agency means the agency that receives Federal funds for day care services and that has ultimate responsibility for the conduct of the day care services program.

§ 71.6 Applicability.

The regulations in this part apply to day care under the following HEW assisted programs:

(a) Social Security Act

—Title IV–A (Social Services to Guam, Puerto Rico, Virgin Islands, and the Northern Marianas; and the Work Incentive Program (WINP))

—Title IV–B (Child Welfare Services)

—Title XX (Social Services)

(b) Title I, Elementary and Secondary Education Act (ESEA)

(c) Title V, Community Services Act (Follow-Through)

(d) Special Projects Act, Education Amendments of 1978 (Preschool Partnership)

(e) Adult Education Act (Adult Education)

(f) Education of the Handicapped Act (Education for the Handicapped)

(g) Title IV, Part C, Elementary and Secondary Education Act (Improvement in Local Educational Practices)

(h) Indian Elementary and Secondary School Assistance Act (Indian Elementary and Secondary School Assistance)

(i) Vocational Education Amendments of 1963 (Vocational Education)

(j) Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, Developmental Disabilities Services and Facilities Construction Act of 1970, Developmentally Disabled Assistance and Bill of Rights Act of 1975 (Developmental Disabilities Special Projects).

§ 71.8 Office of Education Waiver.

The Commissioner of the Office of Education, Department of Health, Education, and Welfare may waive the requirements of this part for any day care program administered by the Office of Education. The Commissioner may also impose additional requirements for those programs.

§ 71.10 Program of Activities for Children.

(a) *Day Care Center*

A day care center shall establish a planned program of age-appropriate activities which promotes the social, intellectual, emotional, and physical development of the children it serves. The planned program of activities shall be in writing, and shall contain a description of the daily activities children engage in and how those activities meet the developmental needs of the children.

(b) *State Agency*

The State agency shall provide information and technical assistance to day care centers on establishing and maintaining a planned program of age-appropriate activities.

§ 71.12 Training.

(a) *Day Care Center*

(1) A day care center shall provide caregivers who have no previous experience or training in child care, an on-site orientation on how to care for children in groups. This orientation shall occur before the caregiver assumes caregiving responsibilities.

(2) Each caregiver shall regularly participate in specialized training related to child care. Specialized training for each caregiver shall begin as early as possible, but in no case later than 6 months after initial employment.

(b) *State Agency*

Option A

The State agency shall establish and implement a statewide plan for providing or purchasing specialized training for day care center personnel. The plan shall specify the nature and extent of the training required for day care center staff.

or

Option B

Same as option A, except that the specialized training shall address the following areas:

(1) Child Growth and Development

(2) Child Care Programming and Activities

(3) Day Care for Bilingual Children

(4) Handling Behavior Problems

(5) Health and Safety Practices

(6) Working with Parents

(7) Working with Developmentally Disabled Children and other Handicapped Children

(8) Nutrition and Good Eating Habits

(9) Design and Use of Space

(10) Community Health and Social Service Resources

§ 71.14 Nutrition.

(a) *Day Care Center*

Option A

A day care center shall provide adequate and nutritious meals and snacks prepared in a safe and sanitary manner.

or

Option B

A day care center shall provide an adequate and nutritious breakfast (at parent's request) and lunch prepared in a safe and sanitary manner. Snacks shall be provided both at mid-morning and mid-afternoon. When children are in care during evening and night hours, the center shall provide an adequate and nutritious evening meal.

(b) *State Agency*

The State agency shall make the consultative services of a qualified nutritionist or food service specialist available to day care centers.

§ 71.16 Health and Safety of Children in Care.

(a) *Day Care Center*

(1) A day care center shall have on record for each enrolled child, within 30 (or 60) days of enrollment, a statement from a licensed health practitioner that the child has received a health assessment and all immunizations appropriate to his or her age. The statement for each child shall:

(i) Indicate any special precautions for diet, medication, or activity;

(ii) Indicate that the immunizations are in accordance with recommendations of the U.S. Public Health Service or the American Academy of Pediatrics;

(iii) Indicate that the health assessment is in accordance with the

standards of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan; and

(iv) Be updated according to the recommended schedule for routine health supervision of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan.

(2) A day care center shall have plans to respond to illness and to emergencies including fire, serious injury, and ingestion of poison. These plans shall be in writing.

(3) A day care center shall not dispense medications to a child without the written consent of his or her parent. All medications shall be dispensed in accordance with instructions from a parent or physician. Medications shall be kept in labelled containers out of reach of children.

(4) (OPTION A) A day care center shall provide information to parents, as needed, concerning child health services available in the community, and shall refer parents to the needed health services.

or

(OPTION B) Same as option A, except that in addition to informing and referring, a day care center shall assist parents in obtaining needed child health services, and follow-up to assure that health care is secured.

(b) *State Agency*

Option A

(1) The State agency shall provide information to each day care center about the availability of child health services in the community, and about how the services may be obtained.

(2) The State agency shall establish and maintain health standards for day care center personnel.

or

Option B

This option would include two requirements in option A and would also include the following requirements:

(3) The State agency shall make arrangements (links) which assure that children in day care centers who are eligible for Federal, State, or locally funded health services receive those services when needed.

§ 71.18 Physical environment.

(a) *Day Care Center*

A day care center shall meet State and local requirements for licensing or approval, and applicable State and local codes relating to health, sanitation, and building and fire safety.

(b) *State Agency*

The State agency shall assure that each day care center meets applicable State and local requirements for licensing or approval, and applicable State and local codes relating to health, sanitation, and building and fire safety. The State agency shall assure that standards for day care centers which specifically address transportation, swimming, and equipment safety exist in the State, and that each day care center meets those standards.

§ 7120 Social services.

(a) *Day Care Center*

Option A

A day care center shall provide information to parents, as needed, concerning social services available in the community, and refer parents to needed social services.

or

Option B

Same as option A except that, in addition to informing and referring, a day care center shall assist parents in obtaining social services, and follow up to assure that the services are secured.

(b) *State Agency*

Option A

(1) The State agency shall provide information to each day care center about the availability of social services in the community and about how the services may be obtained.

or

Option B

(1) Same as option A

(2) The State agency shall make arrangements (links) which assure that children in day care centers are eligible for Federal, State, or locally funded social services receive those services when needed.

§ 71.22 Parent involvement.

(a) *Day Care Center*

A day care center shall:

Option A

(1) Provide parents with opportunities to observe the center and to discuss their children's needs before enrollment;

(2) Inform parents about the day care program and its policies;

(3) Regularly offer parents opportunities to observe their children, meet with caregivers, and advise and comment on their children's needs; and

(4) Regularly exchange information with parents about their children.

or

Option B

In addition to subsections (1)–(4) above, as day care center would also be required to:

(5) Maintain for a period of three years any monitoring reports or evaluations of the center prepared by and received from Federal, State, or local authorities;

(6) Provide parents upon request the opportunity to review any of the reports or evaluations referred to in paragraph (5) above; and

(7) Make available to parents upon request pending or approved applications for funds for the current program year filed with any Federal, State, or local authorities.

(b) *State Agency*

(1) The State agency shall provide information and technical assistance to day care centers on working with parents.

(2) The State agency shall offer parents their choice of day care facility whenever administratively feasible. The State agency shall make a copy of the HEW day care requirements available to parents using HEW funded day care.

§ 71.24 Group composition—day care center.

(a) *Group Size*

(1) A day care center shall meet the following group size requirements at all times of the day, except during lunch, naptime, and special activities, such as field trips and playground activities: (the numbers are scheduled enrollment figures.)

Infants and Toddlers	0–2½ years
Option A	8
or	
Option B	10
Preschoolers	**2½–4 years**
Option A	14
or	
Option B	16
Preschoolers	**4–6 years**
Option A	18
or	
Option B	20
School Age	**6–10 years**
Option A	16
or	
Option B	18
School Age	**10–14 years**
Option A	20
or	
Option B	State Requirements

(2) Compliance with the group size requirements in paragraph (a) (1) above shall be determined on a group or cluster basis rather than a room or center-wide basis.

(3) For mixed age groups, group size shall be based upon the age of the youngest child in the group, if children in the youngest age category make up twenty percent or more of that group. If children in the youngest age category make up less than twenty percent of that group, the group size for the next highest age category shall be required.

(b) *Staffing Requirements*

(1) A sufficient number of staff shall be present at the center at all times and shall be assigned so as to protect the health and safety of the children at the center.

(2) A day care center shall meet the following staffing requirements

(OPTION A) At all times of the day:

or

(OPTION B) Averaged over the course of the day: (The numbers are scheduled enrollment figures.)

Infants and Toddlers	0–2½ years
Option A	1:4
or	
Option B	1:5
Preschoolers	**2½–4 years**
Option A	1:7
or	
Option B	1:8
Preschoolers	**4–6 years**
Option A	1:9
or	
Option B	1:10
School Age	**6–10 years**
Option A	1:16
or	
Option B	1:18
School Age	**10–14 years**
Option A	1:20
or	
Option B	State Requirements

(3) Compliance with the staffing requirements in paragraph (b)(2) above shall be determined using the total number of hours children are scheduled to be at the center and the total number of hours staff are scheduled to work directly with children.

(4) To calculate the required staff hours, divide the total scheduled child hours for each age category by the age appropriate staffing requirement in paragraph (b)(2) above.

(5) (i) Staffing requirements in paragraph (b)(2) above may be met by averaging the staff required for the 2½ to 4 and 4 to 6 year old age categories. (For example, if a center determines that it needs 5 caregivers to meet the staffing requirement for its 2½ year old children at the center, and 10 caregivers for its 5 year old children at the center, the center would meet the staffing requirement so long as it had 15 caregivers scheduled to care for children in both categories. It need not necessarily assign 5 caregivers to care for its 2½ year old children, nor assign 10 caregivers to care for its 5 year old children.)

(ii) Staffing requirements in paragraph (b)(2) above may be met by averaging the staff required for the 6 to 10 and 10 to 14 year age categories.

(6) (OPTION A) Hours scheduled to be spent providing direct care to children by a volunteer may be counted toward meeting the staffing requirements, if the volunteer participates in specialized child care training.

or

(OPTION B) Hours scheduled to be spent providing direct care to children by a volunteer may be counted toward meeting the staffing requirements, if the volunteer works 10 hours or more each week and participates in specialized child care training.

(7) Hours schedled to be spent providing direct care to children by a staff member who performs non-caregiving duties, such as a cook or a driver, may be counted toward meeting the staffing requirements, if he or she participates in specialized child care training.

(8) A day care center shall obtain substitutes in case of caregiver absences.

§ 71.30 Monitoring.

Option A

The State agency must determine each center's compliance with these requirements at least annually.

or

Option B

Same as option A plus the requirement that: The State agency shall make an on-site visit to a day care center whenever the State has reason to believe that the facility fails to meet the requirements of this part.

§ 71.32 Availability of Federal financial participation (FFP).

(a) FFP is available in the costs of day care services, only if the care meets the requirements of this part.

(b) The care is considered to meet the requirements of this part if:

(1) It is provided by a center which:

(i) Meets applicable State standards for licensing, registration, or approval; and

(ii) Has been approved by the State agency as meeting the requirements of this part, or has submitted to the State agency a plan of correction acceptable to the State agency for any requirement that the facility has been found not to meet. The State agency may accept a plan of correction only if the plan specifies a reasonable time period for meeting the requirements of this part. The center must meet the requirements of this part within the time perod specified in its plan of correction;

and

(2) The State agency meets its requirements as provided in this part, or the State agency has submitted to HEW a plan of correction acceptable to HEW for any requirement that the State agency has been found not to meet. HEW will accept a plan of correction only if the plan specifies a reasonable time period for meeting the requirements of this part. The State agency must meet the requirements of this part within the time period specified in its plan of correction.

§ 71.34 Rates of payment.

In establishing rates of payment for child day care services, the State agency shall take into account the costs to the day care center of meeting the requirements of this part.

§ 71.36 Waiver.

The State agency may waive the staffing requirements at § 71.24(b) for a day cae center in which not more than 10% of the children in the center are children whose care is paid for wholly or in part with Federal funds, if the day care center meets applicable State staffing requirements.

§ 71.38 Future review of day care regulations.

The Secretary will review the effectiveness of these regulations. As part of this review, 36 (or 42) months after the effective date of these regulations, the Secretary will publish a notice of opportunity for public comment on the effectiveness of the regulations. The Secretary will assess the comments and publish the results of

the review and assessment in the Federal Register.

§ 71.40 State Agency Advisory Council.

The State agency shall establish a day care advisory council to advise on the interpretation and implementation of HEW day care requirements.

§ 71.40 Effective date.

These regulations will take effect six months from the date of publication in final form in the Federal Register, except that the training requirements at § 71.12 will take effect one year from that date.

Subpart B—Day Care Home Requirements

§ 71.44 Definitions.

As used in these regulations, the term:

Caregiver means a person who provides direct care, supervision, and guidance to children in a day care facility.

Day care means the care, supervision, and guidance of a child, on a regular basis, for period of less than 24 hours per day, in a place other than the child's own home.

Day care center means a place in which day care is provided to 13 or more children.

Day care facility means a day care home or a day care center.

Day care home means a private residence in which day care is provided to 12 or fewer children.

Early and Periodic, Screening, Diagnosis and Treatment (EPSDT) means a component of each State's medical assistance program mandated under title XIX of the Social Security Act (Medicaid) which provides preventive child health services to eligible low income children.

Family day care home means a day care home serving 6 or fewer children.

Family day care home means a day care home serving 6 or fewer children.

Group day care home means a day care home serving 7 to 12 children.

State agency means the agency that receives Federal funds for day care services and that has ultimate responsibility for the conduct of the day care services program.

§ 71.46 Applicability.

The regulations in this part apply to day care under the following HEW assisted programs:

(a) Social Security Act

—Title IV–A (Social Services to Guam, Puerto Rico, Virgin Islands, and the Northern Marianas; and the Work Incentive Program (WIN))

—Title IV–B (Child Welfare Services)

—Title XX (Social Services)

(b) Title I, Elementary and Secondary Education Act (ESEA)

(c) Title V, Community Services Act (Follow-Through)

(d) Special Projects Act, Education Amendments of 1978 (Preschool Partnership)

(e) Adult Education Act (Adult Education)

(f) Education of the Handicapped Act (Education for the Handicapped)

(g) Title IV, Part C, Elementary and Secondary Education Act (Improvement in Local Educational Practices)

(h) Indian Elementary and Secondary School Assistance Act (Indian Elementary and Secondary School Assistance)

(i) Vocational Educational Amendments of 1963 (Vocational Education)

(j) Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963, Developmental Disabilities Services and Facilities Construction Act of 1970, Developmentally Disabled Assistance and Bill of Rights Act of 1975 (Developmental Disabilities Special Projects).

§ 71.48 Office of Education waiver.

The Commissioner of the Office of Education, Department of Health, Education, and Welfare may waive the requirements of this part for any day care program administered by the Office of Education. The Commissioner may also impose additional requirements for those programs.

§ 71.50 Program of activities for children.

(a) *Day Care Home*

A day care home shall establish a planned program of age-appropriate activities which promotes the social, intellectual, emotional, and physical development of the children it serves. The plan shall be in writing, and shall contain a brief description of the children's activities in the home.

(b) *State Agency*

The State agency shall provide information and technical assistance to day care homes on establishing and maintaining a planned program of age appropriate activities.

§ 71.52 Training.

(a) *Day Care Home*

Each caregiver shall regularly participate in specialized training related to child care. Specialized training for each caregiver shall begin as early as possible, but in no case later than 6 months after caregiving duties begin.

(b) *State Agency*

Option A

The State agency shall establish and implement a statewide plan for providing or purchasing specialized training for day care home personnel. The plan shall specify the nature and extent of the training required for day care home caregivers.

or

Option B

Same as option A, except that the specialized training shall address the following areas:

(1) Child Growth Development

(2) Child Care Programming and Activities in Day Care Homes

(3) Day Care for Bilingual Children

(4) Handling Behavior Problems

(5) Health and Safety Practices

(6) Working with Parents

(7) Working with Developmentally Disabled Children and other Handicapped Children

(8) Nutrition and Good Eating Habits

(9) Design and Use of Space

(10) Community Health and Social Service Resources

§ 71.54 Nutrition.

(a) *Day Care Home*

Option A

A day care home shall provide adequate and nutritious meals and snacks prepared in a safe and sanitary manner.

or

Option B

A day care home shall provide an adequate and nutritious breakfast (at parent request) and lunch prepared in a safe and sanitary manner. Snacks shall be provided both mid-morning and mid-afternoon. When the children are in care during the evening and night hours, the home shall provide an adequate and nutritious evening meal.

(b) *State Agency*

The State agency shall make the consultative services of a qualified nutritionist or food service specialist available to day care homes.

§ 71.56 Health and safety of children in care.

(a) *Day Care Home*

(1) A day care home shall have on record for each enrolled child, within 30 (or 60) days of enrollment, a statement from a licensed health practitioner that the child has received a health assessment and all immunizations appropriate to his or her age. The statement for each child shall:

(i) Indicate any special precautions for diet, medication, or activity;

(ii) Indicate that the immunizations are in accordance with recommendations of the U.S. Public Health Service or the American Academy of Pediatrics;

(iii) Indicate that the health assessment is in accordance with the standards of the American Academy of Pediatrics or the EPSDT National Recommended Health Assessment Plan; and

(iv) Be updated according to the recommended schedule for routine health supervision of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan.

(2) A day care home shall have plans to respond to illness and emergencies including fire, serious injury, and ingestion of poison.

(3) A day care home shall not dispense medications to a child without the written consent of his or her parent. All medications shall be dispensed in accordance with instructions from a parent or physician. Medications shall be kept in labelled containers out of the reach of children.

(4) A day care home shall provide information to parents, as needed, concerning child health services available in the community, and shall refer parents to the needed health services.

(b) *State Agency*

Option A

(1) The State agency shall provide information to each day care home about the availability of health services in the community, and about how the services may be obtained.

(2) The State agency must establish and maintain health standards for day care home personnel.

or

Option B

This option would include the two requirements in option A and would also include the following requirement:

(3) The State agency shall make arrangements (links) which assure that children in day care homes who are eligible for Federal, State, or locally funded health services receive those services when needed.

§ 71.58 Physical environment.

(a) *Day Care Home*

A day care home shall meet State and local requirements for licensing, registration, or approval, and any State or local health, sanitation, and building and fire safety codes applicable to residential occupancy.

(b) *State Agency*

The State agency shall assure that each day care home meets State and local requirements for licensing, registration, or approval, and the requirements of State or local health, sanitation, building and fire safety codes applicable to residential occupancy. The State agency shall assure that standards for day care homes which specifically address transportation, swimming, and equipment safety exist in the State, and that each day care home meets those standards.

§ 71.60 Social services.

(a) *Day Care Home*

A day care home shall provide information to parents, as needed, concerning social services available in the community, and refer parents to needed social services.

(b) *State Agency*

Option A

(1) The State agency shall provide information to each day care home about the availability of social services in the community, and about how the services may be obtained.

or

Option B

(1) Same as option A.

(2) The State agency shall make arrangements (links) which assure that children in day care homes who are eligible for Federal, State, or locally funded social services receive those services when needed.

§ 71.62 Parent involvement.

(a) *Day Care Home*

A day care home shall:

(1) Provide parents with opportunities to observe the home and to discuss their children's needs before enrollment;

(2) Inform parents about the day care program and its policies:

(3) Regularly offer parents opportunities to observe their children, and talk about their children's needs; and

(4) Regularly exchange information with parents about their children.

(b) *State Agency*

(1) The State agency shall provide information and technical assistance to day care homes on working with parents.

(2) The State agency shall offer parents their choice of day care facility whenever administratively feasible. The State agency shall make a copy of the HEW day care requirements available to parents using HEW-funded day care.

§ 71.64 Group composition—day care home.

(a) *Family Day Care Home*

(1) At least one caregiver shall be present at all times.

(2) In a family day care home that serve children of all ages including children under the age of 24 months, the group size at any given time shall not exceed 5. No more than two of these children may be under the age of 24 months. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

(3) In a family day care home that serves children under the age of 24 months only, the group size at any given time shall not exceed 3. There may be no other children in the home besides the caregiver's own children over the age of 6 years.

(4) In a family day care home that serves no children under 24 months the group size at any given time shall not exceed six. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

(b) *Group Day Care Home*

(1) At least two caregivers shall be present at all times.

(2) In a group day care home that serves children of all ages, including children under 24 months, the group size at any given time shall not exceed 10. No more than two of these children may be under the age of 24 months. The caregiver's own children younger than size and not yet in first grade shall count towards the group size requirement.

(3) In a group day care home that serves no children under the age of 24 months, the group size at any given time shall not exceed 12. The caregiver's own children younger than 6 and not yet in first grade shall count towards the group size requirements.

§ 71.70 Monitoring.

Option A

The State agency must determine each facility's compliance with these requirements at least annually.

or

Option B

Same as option A plus the requirement that: The State agency shall make an on-site visit to a day care facility whenever the State has reason to believe that the facility fails to meet the requirements of this part.

§ 71.72 Availability of Federal financial participation (FFP).

(a) FFP is available in the costs of day care services, only if the care meets the requirements of this part.

(b) The care is considered to meet the requirements of this part only if:

(1) It is provided by a facility which:

(i) Meets applicable State standards for licensing, registration, or approval; and

(ii) Has been approved by the State agency as meeting the requirements of this part, or has submitted to the State agency a plan of correction acceptable to the State agency for any requirement that the facility has been found not to meet. The State agency may accept a plan of correction only if the plan specifies a reasonable time period for meeting the requirements of this part. The facility must meet the requirements of this part within the time period specified in its plan of correction;

and

(2) The State agency meets its requirements as provided in this part, or the State agency has submitted to HEW a plan of correction acceptable to HEW for any requirement that the State agency has been found not to meet. HEW will accept a plan of correction only if the plan specifies a reasonable time period for meeting the requirements of this part. The State agency must meet the requirements of this part within the time period specified in its plan of correction.

§ 71.74 Rates of payment.

In establishing rates of payment for child day care services, the State agency shall take into account the costs to the facility of meeting the requirements of this part.

§ 71.76 Future review of day care regulations.

The Secretary will review the effectiveness of these regulations. As part of this review, 36 (or 48) months after the effective date of these regulations, the Secretary will publish a notice of opportunity for public comment on the effectiveness of the regulations. The Secretary will assess the comments and publish the results of the review and assessment in the Federal Register.

§ 71.80 State Agency Advisory Council.

The State Agency Advisory Council required to be established under section 71.40 of this part shall advise on the interpretation and implementation of HEW day care requirements for day care homes as well as for day care centers.

§ 71.80 Effective date.

These regulations will take effect six months from the date of publication in final form in the Federal Register, except that the following requirements will take effect one year from that date:

(a) The training requirements at § 71.52;

(b) The requirements at § 71.56(a)(4) to inform parents about, and refer them to child health services; and

(c) The requirements at § 71.60(a) to inform parents about and refer them to social services.

Appendix A—Day Care Center

[Note.—The Appendix is to be included in the Code of Federal Regulations.]

This appendix contains examples to illustrate the meaning of the day care center requirements specified in Part 71, and recommendations on the steps day care centers and State agencies may take voluntarily, beyond those requirements. The Federal role is also specified.

Program of Activities for Children [§ 71.10]

Purpose

The intent of this requirement is to ensure that a day care program is more than custodial. Rather, the program must promote the social, intellectual, emotional, and physical development of the children served.

Requirements on Day Care Center

A day care center shall establish a planned program of age-appropriate activities which promotes the social, intellectual, emotional, and physical development of the children it serves. The planned program of activities shall be in writing, and shall contain a description of the daily activities children engage in and how those activities meet the developmental needs of the children.

Examples of What a Planned Program of Activities May Include

A planned program of activities may include:

- Conversation among children and caregivers;
- A pattern of daily activities which children can count on;
- An opportunity for child initiated play;
- Time for rest and play, including outdoor play when possible;
- Participation in a variety of activities, such as cooking, looking at books and magazines, taking walks, playing games and singing songs;
- An adequate supply of play materials for all children;
- Opportunities for school-aged children to participate in normal neighborhood activities;
- Opportunities for infants to crawl about freely;
- Holding and talking to infants;
- Feeding each infant according to his or her schedule; and
- Holding the infant while feeding.

Recommendations for Day Care Center

It is recommended that in developing and reviewing a program of planned activities, each day care center give careful consideration to the concerns of parents, the unique culture of the communities children come from, the individual needs of each child, and the special needs of children who are developmentally disabled or otherwise handicapped.

Requirements on State Agency

The State agency shall provide information and technical assistance to day care centers on establishing and maintaining a planned program of age-appropriate activities.

Examples of State Agency Technical Assistance

State agency technical assistance may include:

- Purchasing, providing or arranging consultation with a day care program specialist for day care centers; and
- Making manuals, pamphlets, and materials available to day care facilities to assist them in developing good programs in day care.

Recommendations for State Agency

It is recommended that each State agency establish or support local day care resource centers which loan equipment and materials to day care centers, and make available to day care centers information about community resources.

The Federal Role

HEW will make available:

- Research findings about the development of children and good day care programs; and
- Guides and publications describing model programs of activities.

Training [§ 71.12]

Purpose

Continuous participation by caregivers in training related to child growth and development is critical to quality day care. The intent of this requirement is to ensure that children are cared for by individuals who develop and sustain the skills necessary to meet the children's needs.

Requirements on Day Care Center

(1) A day care center shall provide caregivers who have no previous experience or training in child care an on-site orientation on how to care for children in groups. This orientation shall occur before the caregiver assumes caregiving responsibilities.

(2) All caregivers shall regularly participate in specialized training related to child care. Specialized training for each caregiver shall begin as early as possible, but in no case later than 6 months after initial employment.

Example of How Specialized Training May Be Obtained

Caregivers may participate in specialized training courses purchased, provided, or arranged by the State agency.

Recommendations for Day Care Center

It is recommended that, in addition to having its staff participate in specialized training, each day care center provide regular on the job training to its staff.

Requirements on State Agency

Option A

The State agency shall establish and implement a statewide plan for providing or purchasing specialized training for day care personnel. The plan shall specify the nature and extent of the training required for day care center staff.

Recommendations for State Agency

It is recommended that specialized training for day care center staff consist of both instruction and supervised field experience, and that innovative, flexible opportunities for participating in training be made available.

It is also recommended that specialized training address the following areas:

- Child Growth and Development
- Child Care Programming and Activities
- Day Care for Bilingual Children
- Handling Behavior Problems
- Health and Safety Practices
- Health Education for Children
- Working with Parents
- Working with Developmentally Disabled Children and other Handicapped Children
- Nutrition and Good Eating Habits
- Design and Use of Space
- Community Resources for Health and Social Services

or

Option B

This option would be the same as option A, except that the list of training subject areas recommended under option A immediately above would be made mandatory.

Examples of Methods for the Delivery of Specialized Training

- Training sessions offered by State agency staff;
- Extension, television or correspondence courses in a child related subject;
- Specialized training sessions at a day care facility led by a child care specialist;
- Training provided by a family day care system or association;
- Child care courses offered by a college, vocational-technical school, or other adult education program;
- Training for a Child Development Associate (CDA) credential; or
- A series of seminars or workshops.

The Federal Role

HEW will provide materials and publications about training in day care, including CDA training programs and training opportunities under Vocational Education programs. HEW also supports the Child Development Associate Consortium, which awards a national credential to day care center caregivers.

Publications available from the Administration for Children, Youth and Families

A Prescriptive Guide to CDA Training Materials, Volumes 1 and 2

Nutrition [§ 71.14]

Purpose

The intent of this requirement is to ensure that children in day care receive meals and snacks which meet their nutritional needs while in care.

Requirements on Day Care Center

Option A

A day care center shall provide adequate and nutritious meals and snacks prepared in a safe and sanitary manner.

or

Option B

A day care center shall provide an adequate and nutritious breakfast (at parent's request) and lunch prepared in a safe and sanitary manner. Snacks shall be provided both mid-morning and mid-afternoon. When children are in care during evening and night hours, the center shall provide an adequate and nutritious evening meal.

Examples of How Nutritious Meals and Snacks May be Provided

Ways in which a day care center may provide nutritious meals and snacks include:

- Participating in the U.S. Department of Agriculture (USDA) Child Care Food Program when eligible;
- Offering meals and snacks prepared from the four food groups—dairy, meat, fruits and vegetables, and grain; or
- Following the standards of the National Research Council's Recommended Dietary Allowances; and
- Feeding infants formula received from parents.

Recommendations for Day Care Center

It is recommended that each day care center:

- Prepare and make available to parents written weekly menus for meals and snacks;
- Have menu plans periodically reviewed by a food service specialist;
- Recognize the personal, cultural, and ethnic food preferences of the children;
- Participate in the USDA Child Care Food Program when eligible.

Requirements on State Agency

The State agency shall make the consultative services of a qualified nutritionist or food service specialist available to day care centers.

Examples of Providing Consultation

Ways in which a State agency may make consultation available include:

- Providing or arranging for consultation from a USDA nutrition specialist for a facility which participates in the USDA Child Care Food Program;
- Providing the telephone number of a qualified nutritionist or food service specialist to answer questions about nutrition from caregivers.

Recommendations for State Agency

It is recommended that each State agency:

- Obtain and disseminate information on child nutrition to day care centers from the U.S. Public Health Service, Project Head Start, the U.S. Department of Agriculture, USDA Cooperative Extention Agents, schools of home economics, 4–H Centers, and local health programs, etc.;
- Furnish all dare care centers with sample menus; and
- Help and encourage eligible day care centers to participate in the USDA Child Care Food Program.

The Federal Role

The Department of Agriculture currently makes avaiable funding for food service in non-profit day care facilities (including family day care homes sponsored by a non-profit organization under its Child Care Food Program). USDA provides publications, assistance in obtaining food preparation equipment, and information about nutrition. HEW in consultation with the Department of Agriculture, will make available information and technical assistance in planning a nutrition program in day care. Information on how day care facilities can obtain financial and other assistance to support a high quality nutrition program is also available.

Health and Safety of Children in Care [§ 71.16]

Purpose

The intent of this requirement is to protect children in day care from risks to their health and safety, and to assure children receive needed health services.

Requirements on Day Care Center

(1) A day care center shall have on record for each enrolled child, within 30 (or 60) days of enrollment, a statement from a licensed health practitioner that the child has received a health assessment and all immunizations appropriate to his or her age. The statement for each child must:

- Indicate any special precautions for diet, medication, or activity;
- Indicate that the immunizations are in accordance with recommendations of the U.S. Public Health Service or the American Academy of Pediatrics;
- Indicate that the health assessment is in accordance with the standards of the American Academy of Pediatrics or the EPSDT National Recommended Health Assessment Plan; and
- Be updated according to the recommended schedule for routine health supervision of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan.

(2) A day care center shall have plans to respond to illness and to emergencies including fire, serious injury, and ingestion of poison. These plans shall be in writing.

(3) A day care center shall not dispense medications to a child without the written consent of his or her parent. All medications shall be dispensed in accordance with instructions from a parent or physician. Medications shall be kept in labelled containers out of the reach of children.

(4) [OPTION A] A day care center shall provide information to parents, as needed, concerning health services available to the community, and shall refer parents to needed health services.

or

(OPTION B) Same as option A, except that in addition to informing and referring, a day care center shall assist parents in obtaining needed health services, and follow-up to assure that health care is secured.

Examples of Plans to Respond to Illness and Emergencies

Plans to respond to illness and emergencies may include provision for:

- Removing children from the day care center quickly in case of fire;
- Periodic fire drills;
- Contacting police, fire, rescue or poison control services;
- Contacting a health care source (such as a local health department or a Visiting Nurse Association) for advice about handling child illness or injury;
- Identifying what medical service would be used for serious illness or injury, how the child will be transported, and who will remain with the other children; and
- Informing parents about illness or emergency, and obtaining parental permission for emergency treatment.

Examples of Informing and Referring

A day care center may provide information to parents which it receives from State and local agencies about health services and how they may be obtained. A day care center may suggest to parents, when a health problem arises, agencies or clinics where health care is available.

Examples of Assisting and Following Up

A day care center may assist parents in obtaining needed health services by:

- Offering to make an appointment for the parent at the health agency; and
- Offering to arrange for transportation.

A day care center may follow-up to assure that health services are secured by:

- Checking back with the parent; or
- Calling the health agency with parent permission.

Recommendations for Day Care Center

It is recommended that a day care center:

- Establish a relationship with a health care professional who can advise on appropriate care for sick children;
- Have on hand first aid materials recommended by the American Red Cross;
- Display emergency numbers by each telephone;
- Provide for regular health education for children;
- Insure that facilities are free of lead-based paint;
- Require that children be immunized before enrollment in the facility;
- Have a procedure for reporting suspected cases of child abuse and neglect to the proper authorities;
- Provide an infant seat restraint for each child under 24 months, and a seat belt for each child 24 months or older where transportation is provided, and an adequate number of adults to supervise children being transported;
- Have an adequate number of adults to supervise children during swimming activities;
- Assure that all toys, playground equipment and other materials are safe for children;
- Assure that children brush their teeth regularly; and

• Maintain a record of each child's health history at the center.

Requirements on State Agency

Option A

(1) The State agency shall provide information to each day care center about the availability of child health services in the community, and about how the services may be obtained.

(2) The State agency shall establish and maintain health standards for day care center personnel.

or

Option B

This option would include the two requirements in option A and would also include the following requirement:

(3) The State agency shall make arrangements (links) which assure that children in day care who are eligible for Federal, State, or locally funded health services receive those services when needed.

Examples of State Agency Arrangements for Needed Health Services

Ways in which a State agency may arrange for needed health services for eligible children include:

• Making cooperative arrangements with existing public health resources such as the Early and Periodic Screening, Diagnosis and Treatment program (EPSDT) under Medicaid, or immunization and preventive health services funded under the Maternal and Child Health provisions of title V of the Social Security Act, and other public and private health clinics or providers, such as free care in Hill-Burton hospitals; or

• Reimbursing a day care center or association or other local agency (such as a coordinating council) for arranging and assuring the provision of health services for which children are eligible.

Recommendations for State Agency

It is recommended that the State agency assure that technical assistance is provided to day care facilities in health and safety practices.

The Federal Role

HEW will make available:

• Manuals and guides describing effective ways of coordinating EPSDT and other public health services with day care services;

• Guides and other resources about child health and safety; and

• Model plans for responding to illness and emergency.

Day Care #6: Health Services

Day Care #7: Administration

Physical Environment [§ 71.18]

Purpose

The intent of this requirement is to ensure that children in day care are cared for in safe environments.

Requirements on Day Care Center

A day care center shall meet State and local requirements for licensing or approval, and applicable State and local codes relating to health, sanitation, and building and fire safety.

Requirements on State Agency

The State agency shall assure that each day care center meets applicable State and local requirements for licensing or approval, and applicable State and local codes relating to health, sanitation, building and fire safety. The State agency shall assure that standards for day care centers which specifically address transportation, swimming, and equipment safety exist in the State, and that each day care center meets those standards.

Recommendations for State Agency

It is recommended that a State agency:

• Promote the adoption of day care center physical environment standards which are reasonably in accord with HEW's Guides for Day Care Licensing.

• In conjunction with local agencies, periodically review and update State and local codes for health, sanitation, fire, and other safety requirements to ensure that the requirements are not contradictory, and that they are appropriate for day care centers.

The Federal Role

HEW will make available model licensing codes which address health and safety in day care centers.

Publications Available from the Administration for Children, Youth and Families:

The HEW Model Licensing Act

Young Children & Accidents in the Home (Spanish on hand)

Auto Safety and Your Child (Spanish and English)

Social Services [§ 71.20]

Purpose

The intent of this requirement is to assist parents of children in day care in locating and obtaining necessary social services.

Requirements on Day Care Center

Option A

A day care center shall provide information to parents, as needed, concerning social services available in the community and refer parents to needed social services.

or

Option B

Same as option A except that, in addition to informing and referring, a day care center shall assist parents in obtaining social services, and follow up to assure that services are secured.

Examples of Informing and Referring

A day care center may provide information to parents which it receives from State and local agencies about social services and how they may be obtained.

Day care center staff may talk with parents seeking social services, and suggest agencies or programs in the community.

Examples of Assisting and Following Up

A day care center may assist parents in obtaining social services by:

• Offering to make an appointment for the parent at the Social Service agency; or

• Offering to arrange for transportation.

A day care center may follow-up to assure that services are secured by:

• Checking back with the parent.

Recommendations for Day Care Center

It is recommended that at least one staff member in each day care facility be knowledgeable about social services commonly needed by the families it serves, about the Title XX social services delivered in its State, and about existing community resources and services.

Requirements on State Agency

Option A

(1) The State agency shall provide information to each day care center about the availability of social services

in the community and about how the services may be obtained.

or

Option B

(1) Same as option A

(2) The State agency shall make arrangements (links) which assure that children in day care centers who are eligible for Federal, State, or locally funded social services receive those services when needed.

Examples of Making Arrangements for Needed Social Services

Ways in which a State agency may arrange for social services for eligible children include:

- Providing services included in the State's Title XX social services plan to children in day care eligible for them;
- Contracting with a day care center or association or other local agency (such as a coordinating council or United Way) to link children with needed social services; or
- Making cooperative arrangements with other agencies that provide social services, such as mental health agencies.

The Federal Role

HEW will encourage mental health agencies and social services agencies funded by HEW to cooperate with State agencies responsible for children in day care.

Publications available from the Administration on Children, Youth and Families:

Responding to Individual Needs in Head Start (Pt. 1)

Raising a Family Alone

Parent Involvement [§ 71.22]

Purpose

The intent of this requirement is to ensure that parents receive information about and access to day care programs, and to encourage parental involvement in the operation of day care programs.

Requirements on Day Care Center

A day care center shall:

Option A

(1) Provide parents with opportunities to observe the center and to discuss their childrens' needs before enrollment;

(2) Inform parents about the day care program and its policies;

(3) Regularly offer parents opportunities to observe their children, meet with caregivers and advise and comment on their children's needs; and

(4) Regularly exchange information with parents about their children.

Option B

In addition to Subsection (1)–(4) above, a day care center would also be required to:

(5) Maintain for a period of three years any monitoring reports or evaluations of the center prepared by and received from Federal, State, or local authorities;

(6) Provide parents upon request the opportunity to review any of the reports or evaluations referred to in paragraph (5) above; and

(7) Make available to parents upon request pending or approved applications for funds for the current program year filed with any Federal, State, or local authorities.

Examples of Parent Involvement

Ways in which a day care center may involve parents include:

- Communicating regularly with parents;
- Organizing periodic meetings to enable parents to advise and comment on their children's needs and the day care program;
- Inviting parents to observe the day care program before and after enrollment;
- Having periodic parent-caregiver conferences; and
- Working with a parent advisory council to provide opportunities for advice and comment on the children's needs in the day care program.

Recommendations for Day Care Center

It is recommended that each day care center:

- Involve parents in evaluating the child care program;
- Provide parents with opportunities to be involved in general policy making;
- Provide parents with opportunities to review budgeting and funding activities;
- Develop parent education activities, in consultation with parents;
- Use parent skills to benefit the day care program;
- Provide information in the primary language of the parents.

Requirements on State Agency

(1) The State agency shall provide information and technical assistance to day care centers on working with parents.

(2) The State agency shall offer parents their choice of day care facility whenever administratively feasible. The State agency shall make a copy of the HEW day care requirements available to parents using HEW-funded day care.

Recommendations for State Agency

It is recommended that the State agency provide:

- Checklists for parents to assist them in assessing the quality of their children's day care.
- Procedures by which parents may raise concerns with the State agency about the day care provided their children; and
- Information and referral services that assist parents in locating and selecting day care facilities.

The Federal Role

HEW will provide material on parent involvement in day care to day care facilities and State agencies.

Publications helpful to parents available from the Administration for Children, Youth and Families:

Day Care for Your Children

Education for Parenthood (fact folder)

So you're Going to be a New Father (English and Spanish)

One Parent Families (English and Spanish)

Group Composition—Day Care Center [§ 71.24]

Purpose

Group composition—the number of caregivers and the number of children—has a crucial impact on day care quality. The intent of this requirement is to ensure sufficient numbers of adults to provide care and supervision to children, and to ensure that children are cared for in grouping arrangements which promote their development.

Requirements on Day Care Center

(a) *Group Size*

(1) A day care center shall meet the following group size requirements at all times of the day, except during lunch, naptime, and special activities, such as field trips and playground activities: (The numbers are scheduled enrollment figures.)

Infants and Toddlers	0–2½ years
Option A	8
or	
Option B	10
Preschoolers	**2½–4 years**
Option A	14
or	
Option B	16
Preschoolers	**4–6 years**
Option A	16
or	
Option B	20

School Age	6–10 years
Option A	16
or	
Option B	18

School Age	10–14 years
Option A	20
or	
Option B	State Requirements

(2) Compliance with the group size requirements in parapraph (a) (l) above shall be determined on a group or cluster basis rather than a room or center-wide basis.

(3) For mixed age groups, group size shall be based upon the age of the youngest child in the group, if children in the youngest age category make up twenty percent or more of that group. If children in the youngest age category make up less than twenty percent of that group, the group size for the next highest age category shall be required.

(b) *Staffing Requirements*

(1) A sufficient number of staff shall be present at the center at all times and shall be assigned so as to protect the health and safety of the children at the center.

(2) A day care center shall meet the following staffing requirements

(OPTION A) At all times of the day:

or

(OPTION B) Averaged over the course of the day: (The numbers are scheduled enrollment figures.)

Infants and Toddlers	0–2½ years
Option A	1:4
or	
Option B	1:5

Preschoolers	2½–4 years
Option A	1:7
or	
Option B	1:8

Preschoolers	4–6 years
Option A	1:9
or	
Option B	1:10

School Age	6–10 years
Option A	1:8
or	
Option B	1:18

School Age	10–14 years
Option A	1:20
or	
Option B	State Requirements

(3) Compliance with the staffing requirements in parargraph (b) (2) above shall be determined using the total number of hours children are scheduled to be at the center and the total number of hours staff are scheduled to work directly with children.

(4) To calculate the required staff hours, divide the total scheduled child hours for each age category by the age appropriate staffing requirement in paragraph (b) (2) above.

(5) (i) Staffing requirements in paragraph (b) (2) above may be met by averaging the staff required for the 2½ to 4 and 4 to 6 year old age categories. (For example, if a center determines that it needs 5 caregivers to meet the staffing requirement for its 2½ year old children at the center, and 10 caregivers for its 5 year old children at the center, the center would meet the staffing requirement so long as it had 15 caregivers scheduled to care for children in both categories. It need not necessarily assign 5 caregivers to care for its 2½ year old children, nor assign 10 caregivers to care for its 5 year old children.)

(ii) Staffing requirements in paragraph (b)(2) above may be met by averaging the staff required for the 6 to 10 and 10 to 14 year old age categories.

(6) (OPTION A) Hours scheduled to be spent providing direct care to children by a volunteer may be counted toward meeting the staffing requirements, if the volunteer participates in specialized child care training.

or

(OPTION B) Hours scheduled to be spent providing direct care to children by a volunteer may be counted toward meeting the staffing requirements, if the volunteer works 10 hours or more each week and participates in specialized child care training.

(7) Hours scheduled to be spent providing direct care to children by a staff member who performs non-caregiving duties, such as a cook or a driver, may be counted toward meeting the staffing requirements, if he or she participates in specialized child care training.

(8) A day care center shall obtain substitutes in case of caregiver absences.

Appendix B—Day Care Home

Note.—The Appendix is to be included in the Code of Federal Regulations.

This appendix contains examples to illustrate the meaning of the day care home requirements specified in Part 71, and recommendations on the steps day care homes and State agencies may take voluntarily, beyond those requirements. The Federal role is also specified.

Program of Activities for Children [§ 71.50]

Purpose

The intent of this requirement is to ensure that a day care program is more than custodial. Rather, the program must promote the social, intellectual, emotional, and physical development of the children served.

Requirements on Day Care Home

A day care home shall establish a planned program of age-appropriate activities which promotes the social, intellectual, emotional, and physical development of the children it serves. The plan shall be in writing, and shall contain a brief description of the children's activities in the home.

Examples of What a Planned Program of Activities May Include

A planned program of activities may include:

- Conservation among children and caregivers;
- A pattern of daily activities which children can count on;
- An opportunity for child initiated play;
- Time for rest and play, including outdoor play when possible;
- Participation in a variety of activities, such as cooking, looking at books and magazines, taking walks, playing games and singing songs;
- An adequate supply of play materials for all children;
- Opportunities for school-aged children to participate in neighborhood activities;
- Opportunities for infants to crawl about freely;
- Holding and talking to infants;
- Feeding each infant according to his or her schedule; and holding the infant while feeding.

Recommendations for Day Care Home

It is recommended that in planning activities for children, each day care home consider the concerns of the parents and the special needs of the children in the home.

Requirement on State Agency

The State agency shall provide information and technical assistance to day care homes on establishing and

maintaining a planned program of age-appropriate activities.

Examples of State Agency Technical Assistance

State agency technical assistance may include:

- Purchasing, providing, or arranging consultation with a day care program specialist for day care facilities; and
- Making manuals, pamphlets, and materials available to day care homes to assist them in developing good programs in day care.

Recommendations for State Agency

It is recommended that each State agency establish or support local day care resource centers which loan equipment and materials to day care facilities, and make available to day care facilities information about community resources.

The Federal Role

HEW will make available:

- Research findings about the development of children and good day care programs; and
- Guides and publications describing model programs of activities.

Training [§ 71.52]

Purpose

Continuous participation by caregivers in training related to child growth and development is critical to day care. The intent of this requirement is to ensure that children are cared for by individuals who develop and sustain the skills necessary to meet the children's needs.

Requirements on Day Care Home

All caregivers shall regularly participate in specialized training related to child care. Specialized training for each caregiver shall begin as early as possible, but in no case later than 6 months after caregiving duties begin.

Examples of How Specialized Training May be Obtained

Caregivers may participate in specialized training courses purchased, provided, or arranged by the State agency.

Recommendations for Day Care Homes

It is recommended that each day care home caregiver make use of magazines and other publications related to caring for children in a home.

Requirements on State Agency

Option A

The State agency shall establish and implement a statewide plan for providing or purchasing specialized training for day care personnel. The plan must specify the nature and extent of the training required for day care home caregivers.

Recommendations for State Agency

It is recommended that specialized training for day care home caregivers consist of both instruction and supervised field experience, and that innovative, flexible opportunities for participating in training be made available.

It is also recommended that specialized training address the following areas:

- Child Growth and Development
- Child Care Programming and Activities
- Handling Behavior Problems
- Health and Safety Practices
- Health Education for Children
- Working with Parents
- Working with Developmentally Disabled Children and other Handicapped Children
- Nutrition and Good Eating Habits
- Design and use of Space
- Community Resources for Health and Social Services

or

Option B

This option would be the same as option A, except that the list of training subject areas recommended under option A immediately above would be made mandatory.

Examples of Methods for the Delivery of Specialized Training

- Training sessions offered by State agency staff;
- Extension, television, or correspondence courses in a child related subject;
- Specialized training sessions at a day care facility led by a child care specialist;
- Training provided by a family day care system or association;
- Child care courses offered by a college, vocational-technical school, or other adult education program;
- Training for a Child Development Associate (CDA) credential; or
- A series or seminars or workshops.

The Federal Role

HEW will provide materials and publications about training in day care, including CDA training programs and training opportunities under Vocational Educational programs.

Publications available from the Administration for Children, Youth and Families:

Day Care #5: Staff Training

Nutrition [§ 71.54]

Purpose

The intent of this requirement is to ensure that children in day care receive meals and snacks which meet their nutritional needs while in care.

Requirements on Day Care Home

Option A

A day care home shall provide adequate and nutritious meals and snacks prepared in a safe and sanitary manner.

or

Option B

A day care home shall provide an adequate and nutritious breakfast (at parent request) and lunch prepared in a safe and sanitary manner. Snacks shall be provided both mid-morning and mid-afternoon. When children are in care during evening and night hours, the home shall provide an adequate and nutritious evening meal.

Examples of How Nutritious Meals and Snacks May be Provided

Ways in which a day care home may provide nutritious meals and snacks include:

- Participating in the U.S. Department of Agriculture (USDA) Child Care Food Program when eligible;
- Offering meals and snacks prepared from the four food groups—dairy, meat, fruits and vegetables, and grain;
- Following the standards of the National Research Council's Recommended Dietary Allowances; or
- Feeding infants formula received from parents.

Recommendations for Day Care Home

It is recommended that each day care home:

• Recognize the personal, cultural, and ethnic food preferences of children; and

• Join a day care home sytem or be sponsored by a USDA Child Care Food Program.

Requirements on State Agency

The State agency shall make the consultative services of a qualified nutritionist or food service specialist available to day care homes.

Examples of Providing Consultation

Ways in which a State agency may make consultation available include:

• Providing or arranging for consultation from a USDA nutrition specialist for a home which participates in the USDA Child Care Food Program;

• Providing the telephone number of a qualified nutritionist or food service specialist to answer questions about nutrition from caregivers.

Recommendations for State Agency

It is recommended that each State agency:

• Obtain and disseminate information on child nutrition to day care facilities from the U.S. Public Health Service, Project Head Start, the U.S. Department of Agriculture, USDA Cooperative Extension Agents, schools of home economics, 4–H Centers, and local health programs, etc.;

• Furnish all day care homes with sample menus; and

• Help and encourage eligible day care homes to participate in the USDA Child Care Food Program and assist in developing umbrella agencies where needed for such participation.

The Federal Role

The Department of Agriculture currently makes available funding for food service in non-profit day care facilities (including family day care homes sponsored by a non-profit organization) under its Child Care Food Program. USDA provides publications, assistance in obtaining food preparation equipment, and information about nutrition. HEW in consultation with the Department of Agriculture, will make available information about technical assistance in planning a nutrition program in day care. Information on how day care facilities can obtain financial and other assistance to support a high quality nutrition program is also available.

Health and Safety of Children in Care [§ 71.56]

Purpose

The intent of this requirement is to protect children in day care from risks to their health and safety, and to assure that children receive needed health services.

Requirements on Day Care Home

(1) A day care home shall have on record for each enrolled child, within 30 (or 60) days of enrollment, a statement from a licensed health practitioner that the child has received a health assessment and all immunizations appropriate to his or her age. The statement for each child shall:

• Indicate any special precautions for diet, medication, or activity;

• Indicate that the immunizations are in accordance with recommendations of the U.S. Public Health Service or American Academy of Pediatrics;

• Indicate that the health assessment is in accordance with the standards of the American Academy of Pediatrics or the EPSDT National Recommended Health Assessment Plan; and

• Be updated according to the recommended schedule for routine health supervision of the American Academy of Pediatrics, or the EPSDT National Recommended Health Assessment Plan.

(2) A day care home shall have plans to respond to illness and to emergencies including fire, serious injury, and ingestion of poison.

(3) A day care home shall not dispense medications to a child without the written consent of his or her parent. All medications shall be dispensed in accordance with instructions from a parent or physician. Medications shall be kept in labelled containers out of the reach of children.

(4) A day care home shall provide information to parents, as needed, concerning child health services available in the community, and shall refer parents to the needed health services.

Examples of Plans to Respond to Illness and Emergencies

Plans to respond to illness and emergencies may include provision for:

• Removing children from the day care home quickly in case of fire;

• Periodic fire drills;

• Contacting police, fire, rescue or poison control services;

• Contacting a health care source (such as a local health department or a Visiting Nurse Association) for advice about handling child illness or injury;

• Identifying what medical service would be used for serious illness or injury, how the child will be transported, and who will remain with the other children; and

• Informing parents about illness or emergency, and obtaining parental permission for emergency treatment.

Examples of Informing and Referring

A day care home may provide information to parents which it receives from State and local agencies about child health services and how the services may be obtained.

Recommendations for Day Care Home

It is recommended that a day care home:

• Establish a relationship with a health care professional who can advise on appropriate care for sick children;

• Have on hand first aid materials recommended by the American Red Cross;

• Display emergency numbers by each telephone;

• Provide for regular health education for children;

• Ensure that facilities are free of lead-based paint;

• Require that children be immunized before enrollment in the facility;

• Have a procedure for reporting suspected cases of child abuse and neglect to the proper authorities;

• Provide an infant seat restraint for each child under 24 months, and a seat belt for each child 24 months or older where transportation is provided, and an adequate number of adults to supervise children being transported;

• Have an adequate number of adults to supervise children during swimming activities;

• Assure that all toys, playground equipment and other materials are safe for children; and

• Assure that children brush their teeth regularly.

Requirements on State Agency

Option A

(1) The State agency shall provide information to each day care home about the availability of child health services in the community, and how they may be obtained.

(2) The State agency shall establish and maintain health standards for day care personnel.

or

Option B

This option would include the two requirements in option A and would also include the following requirement:

(3) The State agency shall make arrangements (links) which assure that children in day care who are eligible for Federal, State or locally funded health services receive those services when needed.

Examples of State Agency Arrangements for Needed Health Services

Ways in which a State agency may arrange for needed health services for eligible children include:

• Making cooperative arrangements with existing public health resources such as the Early and Periodic Screening, Diagnosis and Treatment program (EPSDT) under Medicaid, or immunization and preventive health services funded under the Maternal and Child Health provisions of title V of the Social Security Act, and other public and private health clinics or providers, such as free care in Hill-Burton hospitals; or

• Reimbursing a day care home or association or other local agency (such as a coordinating council) for arranging and assuring the provision of health services for which children are eligible.

Recommendations for State Agency

It is recommended that the State agency assure that technical assistance is provided to day care homes in health and safety practices.

The Federal Role

HEW will make available:

• Manuals and guides describing effective ways of coordinating EPSDT and other public health services with day care services;

• Guides and other resources about child health safety; and

• Model plans for responding to illness and emergency.

Publications available from the Administration for Children, Youth and Families:

Day Care #6 Health Services
Day Care #9 Family Day Care

Physical Environment [§ 71.58]

Purpose

The intent of this requirement is to ensure that children in day care are cared for in safe environments.

Requirements on Day Care Home

A day care home shall meet State and local requirements for licensing, registration, or approval, and any State or local health, sanitation, and building and fire safety codes applicable to residential occupancy.

Requirements on State Agency

The State agency shall assure that each day care home meets State and local requirements for licensing, registration, or approval, and the requirements of State or local health, sanitation, and building and fire safety codes applicable to residential occupancy. The State agency shall assure that standards for day care homes which specifically address transportation, swimming, and equipment safety exist in the State, and that each day care home meets those standards.

Recommendations for State Agency

It is recommended that a State agency:

• Promote the adoption of day care home standards which are reasonably in accord with HEW's Guides for Day Care Licensing.

• In conjunction with local agencies, periodically review and update State and local codes for health, sanitation, fire, and other safety requirements to ensure that the requirements are not contradictory, and that they are appropriate for day care homes.

The Federal Role

HEW will make available model licensing codes which address health and safety in day care homes.

Publications available from the Administration for Children, Youth and Families:

Young Children & Accidents in the Home

HEW Model Licensing Act

Social Services [§ 71.60]

Purpose

The intent of this requirement is to assist parents of children in day care in locating and obtaining necessary social services.

Requirements on Day Care Home

A day care home shall provide information to parents, as needed, concerning social services available in the community, and refer parents to needed social services.

Examples of Informing and Referring

A day care home may provide information to parents which it receives from State and local agencies about social services and how they may be obtained.

Recommendations for Day Care Home

It is recommended that each day care home caregiver become familiar with local social service resources and agencies.

Requirements on State Agency

Option A

(1) The State agency shall provide information to each day care home about the availability of social services in the community, and about how the services may be obtained.

or

Option B

(1) Same as option A.

(2) The State agency shall make arrangements (links) which assure that children in day care homes who are eligible for Federal, State or locally funded social services receive those services when needed.

Examples of Making Arrangements for Needed Social Services

Ways in which a State agency may arrange for social services for eligible children include:

• Providing services included in the State's title XX social services plan to children in day care eligible for them;

• Contracting with a day care home or day care home association or other local agency (such as a coordinating council) to link children with needed social services; or

• Making cooperative arrangements with other agencies that provide social services, such as mental health agencies.

The Federal Role

HEW will encourage mental health agencies and social services agencies funded by HEW to cooperate with State agencies responsible for children in day care.

Publications available from the Administration for Children, Youth and Families:

A Handicapped Child in Your Home (English and Spanish)

Parent Involvement [§ 71.62]

Purpose

The intent of this requirement is to ensure that parents receive information about and access to day care programs, and to encourage parental involvement in the operation of day care programs.

Requirements on Day Care Home

A day care home shall:

(1) Provide parents with opportunities to observe the home and to discuss their childrens' needs before enrollment;

(2) Inform parents about the day care program and its policies;

(3) Regularly offer parents opportunities to observe their children, and to talk about their children's needs; and

(4) Regularly exchange information with parents about their children.

Examples of Parent Involvement

Ways in which a day care home may involve parents include:

- Arranging for brief communications when parents bring and pick up their children; and
- Inviting parents to observe the home while in operation.

Recommendations for Day Care Home

It is recommended that each day care home:

- Use parent skills to benefit the day care program when possible.

Requirements on State Agency

(1) The State agency shall provide information and technical assistance to day care homes on working with parents.

(2) The State agency shall offer parents their choice of day care facility whenever administratively feasible. The State agency shall make a copy of the HEW day care requirements available to parents using HEW-funded day care.

Recommendations for State Agency

It is recommended that the State agency provide:

- Checklists for parents to assist them in assessing the quality of their children's day care.
- Procedures by which parents may raise concerns with the State agency about the day care provided their children; and
- Information and referral services that assist parents in locating and selecting day care facilities.

The Federal Role

HEW will provide material on parent involvement in day care to day care homes and State agencies.

Group Composition—Day Care Home [§ 71.64]

Purpose

Group composition—the number of caregivers and the number of children—has a crucial impact on day care quality. The intent of this requirement is to ensure sufficient numbers of adults to provide care and supervision to children, and to ensure that children are cared for in grouping arrangements which promote their development.

(a) *Family Day Care Home*

(1) At least one caregiver shall be present at all times.

(2) In a family day care home that serves children of all ages including children under the age of 24 months, the group size at any given time shall not exceed 5. No more than two of these children may be under the age of 24 months. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

(3) In a family day care home that serves children under the age of 24 months only, the group size at any given time shall not exceed 3. There may be no other children in the home besides the caregiver's own children over the age of 6 years.

(4) In a family day care home that serves no children under 24 months the group size at any given time shall not exceed six. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

(b) *Group Day Care Home*

(1) At least two caregivers shall be present at all times.

(2) In a group day care home that serves children of all ages, including children under 24 months, the group size at any given time shall not exceed 10. No more than two of these children may be under the age of 24 months. The caregiver's own children younger than six and not yet in first grade shall count towards the group size requirement.

(3) In a group day care home that serves no children under the age of 24 months, the group size at any given time shall not exceed 12. The caregiver's own children younger than 6 and not yet in first grade shall count towards the group size requirements.

BILLING CODE 4110-92-M

[45 CFR Part 71]

Child Day Care Regulations; Public Meetings

AGENCY: Office of the Secretary, HEW.

ACTION: Proposed rules, notice of public meetings.

SUMMARY: The Department of Health, Education, and Welfare will conduct public meetings to review proposed HEW child day care regulations. The proposed regulations would apply to all HEW assisted day care services provided to children outside their homes except the Headstart program. The proposed regulations contain requirements for State agencies administering out-of-home day care services operators. They would specify the type of day care services HEW wished to purchase for children served with its funds. The oral and written comments received at the meetings will be considered in the drafting of the final regualtions.

DATES: Public meetings will be held in 10 cities and the District of Columbia. See Supplementary Information section for the address of each meeting.

FOR FURTHER INFORMATION CONTACT: See Supplementary Information section for the person to contact in each region and in Washington, D.C.

SUPPLEMENTARY INFORMATION: The schedule of meetings is set forth below. The date and location of each meeting is provided in addition to the name and address of the person to contact for further information.

Region I

July 19, 1979, Boston, Massachusetts
Contact: Ms. Tina Burrell, Administration for children, Youth and Families, Room 2000, John F. Kennedy Federal Building, Government Center, Boston, Massachusetts 02203. Telephone (617) 223-6450.

Region II

July 25, 1979, New York, New York
Contact: Ms. Gloria Sanger, Administration for Public Services, Federal Building, 26 Federal Plaza, New York, New York 10007. Telephone (212) 264-4628.

Region III

July 10, 1979, Philadelphia, Pennsylvania
Contact: Mr. Donald Barrow, Administration for Public Services, P.O. Box 13716, 3535 Market Street, Philadelphia, Pennsylvania 19101. Telephone (215) 596-6776.

Region IV

July 19, 1979, Memphis, Tennessee
Contact: Mr. James K. Vaughn, Administration for Public Services, 101 Marietta Tower, Suite 903, Atlanta, Georgia 30323. Telephone (404) 242-2128.

Region V

July 23, 1979, Chicago, Illinois
Contact: Ms. Ruth Born or Ms. Thelma Thompson, Administrator for Children, Youth and Families, 300 South Wacker

Drive, 15th Floor, Chicago, Illinois 60606. Telephone (312) 353–6503.

Region VI

July 23, 1979, San Antonio, Texas
Contact: Mr. Pat Murphy, Administration for Children, Youth and Families, 1200 Main Tower Building, Dallas, Texas 75205. Telephone (214) 767–2976.

Region VII

July 11, 1979, St. Louis, Missouri
Contact: Mr. Al Byers, Administration for Public Services, 601 East 12th Street, Kansas City, Missouri 64106. Telephone (816) 374–5975.

Region VIII

July 9, 1979, Denver, Colorado
Contact: Ms. Oneida Little, Administration for Public Services, Federal Office Building, Room 9017, 19th and Stout Streets, Denver, Colorado 80202. Telephone (303) 327–2144.

Region IX

July 26, 1979, Los Angeles, California
Contact: Mr. Warren Jones, Administration for Public Services, HEW Regional Office, 50 United Nations Plaza, San Francisco, California 94102. Telephone (415) 556–7806.

Region X

July 26, 1979, Seattle, Washington
Contact: Ms. Enid Welling, Administration for Public Services or Ms. Margaret Sanstad, Administration for Children, Youth and Families, Arcade Plaza Building, 1321 Second Avenue, Mail Stop 620, Seattle, Washington 98101. Telephone (206) 399–0526.

September 10, 1979, Washington, D.C.
Contact: Ms. Nina Sazer, Chief, Public Participation Task Force, Office of the General Counsel, Room 716E, 200 Independence Avenue, S.W., Washington, D.C. 20201. Telephone (202) 472–7461.

These meetings are being held to solicit the views and comments of individuals and organizations with respect to issues raised by the proposed day care regulations. Requests to participate in the meetings should be made in writing to the above addresses and should include the name, address and telephone number of the participant and organization represented, if any, as well as the issues each participant would like to address. Each participant will have the opportunity to submit a written statement and other data for the record. In the event that time does not permit all interested persons to make oral presentations, persons will be selected to assure that all points of view are fairly represented. The meetings will be conducted in an informal manner.

In addition, individuals or organizations wishing to sponsor a State or local meeting to review the proposed regulations may write to the above addresses to request information which will assist them in planning meetings.

Persons who are unable to attend the meetings may submit statements in writing to: Sylvester Ligsukis, Director, Day Care Task Force, U.S. Department of HEW, Office of the General Counsel, Room 716E, 200 Independence Avenue, S.W., Washington, D.C. 20201. Telephone (202) 245–6734.

Dated: May 31, 1979.

Frank Peter S. Libassi,

General Counsel, Department of Health, Education and Welfare.

Dated: June 7, 1979.

Joseph A. Califano, Jr.,

Secretary, Department of Health, Education, and Welfare.

Part IV

Environmental Protection Agency

Modification of Secondary Treatment Requirements for Discharges Into Marine Waters

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 125

[1214-3]

Modification of Secondary Treatment Requirements for Discharges Into Marine Waters

AGENCY: Environmental Protection Agency ("EPA").

ACTION: Final rule.

SUMMARY: This final rulemaking establishes the criteria which will be applied by EPA in acting upon applications for issuance of a National Pollutant Discharge Elimination System ("NPDES") permit which modifies the requirements of secondary treatment under section 301(h) of the Clean Water Act ("the Act"), 33 U.S.C. 1311(h).

EFFECTIVE DATE: 1:00 P.M. Eastern time on June 22, 1979.

FOR FURTHER INFORMATION CONTACT: Scott Berdine, 301(h) Task Force, Office of Water Program Operations (WH-546), Environmental Protection Agency, 401 M St., SW., Washington, D.C. 20460, 202/426-8973.

SUPPLEMENTARY INFORMATION: In 1972 the Federal Water Pollution Control Act (33 U.S.C. 1251 *et seq.*) was amended to require all publicly owned treatment works ("POTWs"), to achieve by July 1, 1977, secondary treatment as defined by EPA (see sections 301(b)(1)(B) and 304(d)(1) of the Act). In 1973, EPA defined secondary treatment in terms of four parameters—biochemical oxygen demand (BOD), suspended solids (SS), pH and fecal coliform bacteria—and established national uniform minimum effluent limitations for these pollutants to be attained by all POTWs by the 1977 deadline (38 FR 22298, August 17, 1973, as amended by 41 FR 30785, July 26, 1976 (deletion of fecal coliform bacteria limitations)).

Since the enactment of the 1972 amendments and the promulgation of EPA's secondary treatment regulations, a number of municipalities, primarily from the West Coast, argued to both Congress and EPA that secondary treatment of municipal ocean discharges is not necessary to protect the marine environment or to assure the attainment and maintenance of water quality in ocean waters.

Those same municipalities contended that secondary treatment traditionally has been defined in terms of pollutant parameters and levels of pollutant reduction which are important for freshwater ecology where the discharge of oxygen-demanding wastes and sedimentation of suspended solids results in distinct environmental degradation, but which have little significance for oceanic and saline estuarine waters where wastes are rapidly assimilated and dispersed by strong currents and tidal action. POTW discharges located in West Coast estuaries exhibiting a high degree of flushing also argued that secondary treatment provides no significant environmental benefit because discharges are rapidly oxygenated, dispersed and carried into the open ocean. On this basis, these municipalities have maintained that they should be exempted from the Act's secondary treatment requirement, and the associated capital, maintenance, and operating costs. These municipalities also claimed that they had accumulated sufficient evidence to demonstrate the scientific basis for exemptions from secondary treatment requirements.

As a result of their testimony, Congress, in amending the Clean Water Act in 1977, added section 301(h), which allows a municipal marine discharger to present its case to EPA. Section 301(h) provides that the Administrator, upon application of a POTW and with the concurrence of the State, may issue an NPDES permit which modifies EPA's secondary treatment requirements if the applicant: (1) discharges into certain ocean and estuarine waters; and (2) demonstrates, to the satisfaction of the Administrator, that the modification will not result in any increase in the discharge of toxic pollutants or otherwise impair the integrity of the receiving waters.

EPA's proposed regulations governing both the criteria and procedures [1] to be used in implementing this provision were published on April 25, 1978 (43 FR 17484). On May 10, 1978, EPA announced public hearings, which were held on June 2, and June 3, 1978, in Washington, D.C. and Seattle, Washington, respectively, to receive comment on the proposal (43 FR 20024). Prior to publication of the proposal, EPA also solicited written comments and held a public meeting in San Francisco to receive oral and written comments on how it should implement the statutory criteria of section 301(h) prior to proposal of regulations (43 FR 4675, February 3, 1978). To the extent possible, pre-proposal comments were considered in developing the proposal.

In response to these requests for public participation, EPA received written and oral comments on its proposal from over a hundred groups and individuals. Based on these comments, a number of changes have been made to the proposal. A summary of the section 301(h) program is provided in Section I, below. Major generic changes, including EPA's response to comments, are discussed by topic in Section II below.

EPA also received a number of inquiries concerning various aspects of the section 301(h) program (e.g., the relationship between sections 301(h), 301(b)(2)(B) and 301(i), enforcement, and grant eligibility) which were not specifically addressed in the proposal. In response to these concerns, EPA has included Section III, which discusses how EPA intends to implement the section 301(h) program and how the section 301(h) program relates to other programs within EPA.

In response to requests that EPA provide justification for the key tests used in the section 301(h) process and to provide guidance to applicants, a draft Technical Support Document was developed and made available for public review and comment on March 21, 1979 (43 FR 17194). This document is discussed in Section IV.

The revisions and reorganization of individual sections are addressed in the section-by-section analysis in Section V. This section includes EPA's response to major comments received by EPA on the proposed regulations.

I. Program Summary

These regulations (40 CFR 125 Subpart G) establish the criteria and standards to be applied by EPA in acting upon section 301(h) applications for modifications to the requirements of secondary treatment for biochemical oxygen demand (BOD), suspended solids (SS), and pH. They also establish special permit conditions which must be imposed and terms and conditions required by the NPDES regulations under Part 122 of this Chapter. As explained in section III. A. of this preamble, these regulations were originally proposed as 40 CFR Part 233. Cross-references to the proposed regulation sections are provided throughout this preamble.

A. Scope

The opportunity to obtain a modification of applicable secondary treatment requirements is available only to publicly owned treatment works (POTWs), which do not include federal facilities. In order to be eligible for application, a POTW must have had an existing discharge into marine waters as

[1] The procedures governing section 301(h) decisionmaking are now found in 40 CFR Part 124.

of December 27, 1977. Additionally, the POTW must have submitted a preliminary application to EPA by September 24, 1978. Preliminary applications postmarked no later than September 25, 1978 were accepted as September 24th was a Sunday (43 FR 39399, September 5, 1978). POTWs which submitted preliminary applications are eligible to submit final applications as required by this Subpart, no later than September 13, 1979.

Although POTWs in communities which are considered to be Native Alaskan Villages or small coastal communities in Puerto Rico and the U.S. Territorial Possessions in the Caribbean and Pacific may apply if they so desire, a special policy has been adopted with respect to these communities as an alternative to their submitting completed section 301(h) applications. This policy was adopted to provide a better means than the section 301(h) program to assist these communities in addressing their sanitary and public health priorities in a manner consistent with their more limited economic resources and different degree of development. The regulations contain no other special provisions or exemptions based on size, location, or economic activity, and will be applied equally to all other eligible applicants. Applicants should keep in mind, however, that the amount of data and analyses required to obtain and maintain a section 301(h) permit will very likely vary with the size of the discharge, the amount and kind of industrial waste in the effluent and the nature of the receiving waters into which the waste is discharged. Accordingly, small, purely domestic POTWs discharging into open coastal waters may need less data to establish the merits of their case than that required of larger POTWs with industrial waste in their influent.

B. Application Requirements

Eligible POTWs have up to 90 days to submit a final and complete application to EPA. The final application must consist of: (1) a signed, completed NPDES application Standard Form A, Parts I, II, and III; (2) a completed application which corresponds to EPA's Application Format for Modification of the Requirements of Secondary Treatment; and (3) certification in accordance with 40 CFR § 122.5 that the information contained in the application and Standard Form A is true, accurate, and correct. The final application must be signed by either a principal executive officer of the POTW or a ranking elected official of the municipality. EPA will, on a limited basis, extend the time for submission of additional information, where the application is otherwise complete.

EPA has developed an Application Format, approved by the Office of Management and Budget, which, by establishing a specific and uniform information reporting system, will improve the review process and avoid unnecessary application expenses. Since a uniform format will enable the Agency to expedite its review of applications, applicants must adhere to this format.

EPA has prepared a Technical Support Document and has made it available for public review and comment. This document, which explains the technical rationale for certain requirements, is intended to provide guidance and background information on the regulation and application requirements. It is intended to be instructive, but will not serve as a substitute for meeting the requirements of these regulations; only the criteria in this Subpart will be used as the basis for final EPA decisions. Applicants must pass all "threshold" requirements (see discussion on "prohibitions", below) as a first step toward obtaining a modification.

An application may be based either on a current discharge or an improved discharge. A current discharge means the discharge as it exists (volume, composition and point of discharge) at the time the application is submitted. An improved discharge refers to a discharge as it is projected to exist at some future date following construction of planned improvements and/or implementation of operation and maintenance programs. In both cases applicants may submit only *one* proposal, not alternative proposals; and, most important, the discharge for which the modification is requested *must* be into ocean or saline estuarine waters.

C. Prohibitions on Issuance of a Section 301(h) Modified Permit

In addition to the eligibility requirements, a POTW must meet certain other requirements as a prerequisite for EPA issuing a modified permit under section 301(h). The applicant must meet all requirements set forth in this Subpart and applicable requirements of the NPDES Permit program as set forth in 40 CFR 122.

These requirements are "threshold" criteria which, if not met, will constitute grounds for denial of the modification. POTWs are advised to review these requirements and determine if one or more present a problem before undertaking the expense and time of preparing an application. EPA will not issue a modified permit for any discharge for which the applicant proposes to apply less than primary treatment, nor for the discharge of sewage sludge. Applicants currently meeting effluent limitations based on secondary treatment will not be considered for a modified permit for less than secondary treatment. A modification will not be granted where: (1) a State or local law, regulation or ordinance requires, at a minimum, secondary treatment, unless the definition of secondary treatment is less stringent than the EPA definition; or (2) there is a conflict with applicable Federal laws and Executive Orders.

D. Application Review Criteria

Section 125.58 contains definitions of terms which are important for a clear understanding of the application requirements and criteria. Sections 125.60 through 125.67 contain the criteria and application requirements which will be the basis for EPA review of applications for modification of secondary treatment requirements. These sections implement the eight statutory requirements in section 301(h)(1)–(8) of the Act. A brief discussion of the contents of the sections which are major factors in approving or denying an application follows.

Section 125.60 (formerly section 233.12)—Section 301(h)(1) of the Act provides that there must be an applicable State water quality standard specific to the pollutant for which the modification is requested. Under § 125.60, the applicant must demonstrate not only the existence of, but compliance with such standard under section 301(b)(1)(C) of the Act. Only State water quality standards approved by EPA under section 303 of the Act are considered water quality standards for purposes of section 301(h)(1).

EPA currently defines the minimum level of effluent quality attainable by secondary treatment in terms of BOD, suspended solids and pH. If a State has no water quality standard for BOD, the applicant may satisfy the requirements of section 301(h)(1) by demonstrating compliance with an approved standard for dissolved oxygen. Similarly, if a State has no standard for suspended solids, that requirement may be met by a showing that the applicant meets an approved standard or standards for turbidity, light transmission, light scattering or maintenance of the photic zone. If a State has not promulgated and obtained EPA approval of a water quality standard for BOD, suspended solids or pH (on an appropriate surrogate or related parameter) at the

time the final application is submitted, no modification may be granted for those pollutants. For purposes of determining such dischargers' compliance with section 301(b)(1), EPA will accept State certification that its standards are applicable to the territorial seas and contiguous zone.

Section 125.61 (formerly §§ 233.13–15). An applicant must demonstrate that its modified discharge will not interfere with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and which allows recreational activities in and on the water. This requirement may pose significant difficulties for some applicants because of the complexities of determining and assuring protection of a balanced, indigenous population (BIP).

Several sections of the Application Format deal with factors affecting the physical transport, dispersion, and impact of pollutants, including the physical and spatial characteristics of the discharge plume, recreational activities, water supply, and marine biology. Since the request for a modification is limited to BOD, suspended solids, and pH, an analysis of impacts on State and Federal water quality requirements for these pollutants is mandatory.

The test for maintenance of a balanced, indigenous population requires a comparison of the ecological characteristics between sites with no pollution with those of the current or planned discharge. The BIP test for any biological parameter of concern is whether or not it falls within the range of natural variability found in comparable, but unpolluted habitats. Thus, the section 301(h) applicant must compare the biological conditions at the reference (control) site with those in the area immediately beyond the zone of initial dilution (ZID). The applicant must also survey conditions within the ZID. Certain ecological perturbations are not permissible within the ZID, *e.g.*, destruction or reduction of coral reefs, kelp beds, etc. Some biological alterations such as increases in the density of opportunistic species can occur within the ZID.

The Application Format includes a questionnaire that addresses specific kinds of biological perturbations. All of the data necessary to answer the questions must be included in a Biological Conditions Summary. The questions concern the occurence of: mass mortalities, disease epicenters, and toxic phytoplankton blooms near the outfall; adverse effects on fisheries and distinctive habitats; bioaccumulation of toxic materials; and changes in the structure and function of benthic, planktonic, demersal and intertidal communities. The extent of documentation required to answer the questions is dependent on the quality and quantity of the discharge and the characteristics of the receiving environment.

There are special requirements concerning the BIP test for certain situations. For saline estuarine discharges additional restrictions are placed on impacts within the ZID. These restrictions concern bioaccumulation, interference with migratory pathways, and alterations in benthic populations. For POTWs that plan to modify or relocate their discharge, an applicant must also show that any present, unacceptable impacts on the BIP will be alleviated by the proposed modification. For discharges into stressed waters, if environmental conditions are stressed by pollution from sources other than the applicant's discharge, the applicant must demonstrate that its discharge is not contributing to or enhancing the stressed condition and will not contribute to further degradation or retard recovery if the levels of pollution from other sources increase or decrease in the future.

The BIP test requirements are summarized in Table 1. The table divides applications into eight categories depending upon whether the applicant's discharge is into the ocean or an estuary, into stressed or unstressed waters, and whether the applicant's proposal is based on its current discharge or a planned improved discharge. The BIP test is least complicated for a current discharge through an ocean outfall into unstressed waters. The biological assessment necessary to support such an application is based on descriptive surveys within and beyond the zone of initial dilution and at the unstressed control sites. Additional requirements are placed on the other seven classes of applications. The most rigorous BIP test is placed on an applicant who proposes to modify his current discharge into stressed estuarine waters. Within each class of application the complexity of the BIP test is a function of effluent quantity and quality and the sensitivity of the receiving environment.

Table 1.—*Balanced Indigenous Population Requirements Based on Classification and Location of Discharge and the Nature of the Receiving Waters*

BIP requirements	Ocean outfall				Estuarine outfall			
	Current discharge		Improved discharge		Current discharge		Improved discharge	
	Unstressed waters	Stressed waters	Unstressed waters	Stressed waters	Unstressed waters	Stressed waters	Unstressed waters	Stressed waters
BIP Comparisons								
1. ZID boundary and unstressed control	X		X		X		X	
2. ZID boundary and stressed control		X		X		X		X
3. Stressed control and unstressed control		X		X		X		X
4. New ZID boundary control			X	X			X	X
BIP Predictions								
1. Impact on recovery and degradation		X		X			X	X
2. Improvements due to modifications			X	X			X	X
ZID Restrictions								
1. Major perturbations	X	X	X	X	X	X	X	X
2. Migration, benthos, bioaccumulation					X	X	X	X

"X" indicates balance, indigenous population requirements that must be addressed in the application depending upon conditions at the outfall location(s).

Section 125.62 (formerly § 233.16). An applicant must submit a monitoring program for biological, water quality and toxic pollutant parameters. The overall monitoring system must satisfy, to the extent practicable, four objectives: (1) to monitor effluent quality; (2) to assure compliance with pretreatment standards and programs to control the introduction of toxic pollutants from non-industrial sources; (3) to assure compliance with water quality standards; and (4) to measure the impact of the discharge upon indigenous populations of marine biota.

Since implementation of the monitoring program will be necessary only if a modified permit is issued under section 301(h), an applicant need not show that the program is in place at the time of application, but instead that it has the capability to implement the proposed program at the time a modified permit is issued.

The data generated by the biological monitoring program will be used by EPA to determine: (1) whether modification of the requirements of secondary treatment has adverse impacts on marine biota and ecosystems in ocean or estuarine waters; (2) whether, in any case where such adverse impacts are demonstrated, the discharger's modification should be revoked; and (3) whether upon its expiration, the discharger's modification should be extended. Similarly, the modification would be revoked if the water quality standards or toxic pollutant control requirements were violated. The monitoring program must focus on critical events (such as low flow conditions or periods of inadequate flushing, and spawning activity). The Biological Conditions Summary in the Application Format is a basis for identification and selection of the representative biota to be monitored.

An acceptable monitoring program must address not only the methods but also the frequency of monitoring and should be based on consideration of a number of factors, including the nature and volume of the wastes discharged, the nature of the receiving waters, and the nature of the ecosystem in the vicinity of the discharge. Thus a POTW which discharges toxic pollutants into an area where there are sensitive marine communities will be required to develop a more sophisticated monitoring program (requiring more frequent data gathering and analysis) than a POTW which discharges small amounts of purely domestic wastes into a relatively uninhabited area. In cases where toxic pollutants are detected in the applicant's discharge, additional requirements such as *in situ* bioassays and bioaccumulation studies are imposed.

Water quality and toxic pollutant monitoring programs must be designed in conjunction with the biological monitoring program. The purpose of the water quality monitoring program is to collect data on characteristics of the discharge and receiving water quality in order to ascertain compliance with effluent and water quality standards. The toxic pollutant monitoring program focuses on the chemical composition of the applicant's discharge during both wet and dry weather conditions. Its purpose is to aid in establishing cause and effect relationships regarding impacts on marine biota, as revealed by the biological monitoring program, and also to measure the effectiveness of all industrial pretreatment and non-industrial toxic pollutant reduction measures required by the applicant's toxic control program.

Section 125.63 (formerly § 233.17). An applicant must demonstrate that the modified discharge, by itself, will not result in additional requirements for pollutant reductions on any other point or non-point sources. This demonstration must be made by obtaining written certification from the State agency which establishes wasteload allocations, and also other agencies which advise the State agency in the wasteload allocation process.

Section 125.64 (formerly §§ 233.14(b), 233.18 and 233.19). A section 301(h) applicant must submit a program for the control of toxic pollutants from industrial and non-industrial sources. Industrial sources refer only to those sources of pollutants regulated under section 307 (b) or (c) of the Act which discharge into a POTW. Non-industrial sources means all other sources of toxic pollutants. Toxic pollutants refer to the specific list of pollutants published by the Administrator under section 307(a) of the Act.

The objective of the toxic control program is to control toxic pollutants and provide for their elimination from the applicant's discharge. It consists of a chemical analysis, an industrial pretreatment program, and a schedule of activities for the reduction and elimination of non-industrial sources of toxic pollutants.

All applicants must submit a chemical analysis, under wet and dry weather conditions, of their current discharge. Since this data is a basis for design and review of the industrial and non-industrial source control programs at least a preliminary analysis of the sources of toxic pollutants must accompany data resulting from the chemical analysis.

The industrial and non-industrial source control submissions are the main elements of the toxic control program. Because of the relationship between suspended solids and toxic pollutants, applicants who receive a section 301(h) modification may be required to implement a more rigorous pretreatment program than POTWs with secondary or greater treatment. Applicants who, on the basis of their chemical analysis and preliminary source identification, certify that they have no industrial sources of toxic pollutants, do not have to submit an industrial pretreatment program; however, all applicants are required to submit a program for the development of non-industrial source controls, to the extent practicable.

EPA will require an accelerated eighteen month schedule for implementing a pretreatment program for POTWs qualifying for a section 301(h) modification. This is because Federal pretreatment standards assume that toxic pollutants introduced into POTWs by industrial sources will receive at least secondary treatment before being discharged. In addition, secondary biological treatment systems normally provide an early warning of the discharge of many toxic pollutants by exhibiting upsets and inhibitions. Unlike such secondary treatment systems, less than secondary or primary treatment may allow discharges (accidental or otherwise) of highly toxic pollutants to go unnoticed and to cause significant stress to the marine environment; thus an accelerated schedule is required.

The schedule of compliance submitted by an applicant should include, as necessary to conform with 40 CFR Part 403, identification of industrial contributors, notification of pretreatment standards, submission of an industrial discharger inventory, or a quantitative and qualitative characterization of undesignated sources of toxic pollutants. It is critical that the completion date not extend beyond eighteen (18) months from the date of approval of the section 301(h) modification.

As part of the toxic control program, an applicant for a modified permit must demonstrate that it has a schedule of activities designed to eliminate, to the extent practicable, the entrance of toxic pollutants from non-industrial sources

into its facility. To assure compliance with this requirement, the applicant must furnish a schedule of activities for identifying and monitoring toxic pollutants from non-industrial sources and their potential impacts, along with an effective control program. Additionally, the applicant must demonstrate that it has the necessary technical capability and the necessary personnel and institutional arrangements to assure that these activities and programs are fully implemented according to schedule. The program period, like that for the pretreatment schedule, is eighteen months from the issuance of the modified permit.

The applicant must ascertain the practicability of implementing certain best management practices to control toxic pollutants which may be carried into combined sewers by stormwater runoff, including street and catch basin cleaning and trash pickup. The applicant must also initiate programs to control pesticide runoff, which may include diking, banning the sale and use of certain pesticides or requiring the adoption of non-chemical pest management practices.

Section 125.65 (formerly § 233.20). An applicant must demonstrate that there will be no new or substantially increased discharges of the pollutant to which the modification applies, above the volume of discharge specified in the modified permit. Since increases in either the volume of effluent discharged or in pollutant loadings may affect the impact of the discharge upon the quality of the receiving waters and marine biota or ecosystems, both volume of effluent and mass emission limitations are addressed in this section.

Effluent volumes and mass pollutant loadings will be limited to the applicant's projected five year discharge, only if those volumes and loadings are approved by EPA for a section 301(h) modified permit. There are no restrictions on service area or system configuration.

To assure that pollutant loadings from combined sewer overflows are adequately controlled, a POTW with combined storm and sanitary sewers should submit as part of its application an analysis of its combined sewer overflow situation. The analysis should, among other things, identify the corrective measures which will be taken to eliminate or minimize these discharges in the event a modification is granted.

Section 125.66 (formerly § 233.21). Under section 301(h)(8), any funds available to a POTW under Title II of the Act are to be used to achieve the degree of effluent reduction required by sections 201(b) and 201(g)(2)(A) or to carry out the requirements of section 301(h).

Under § 125.66, an applicant with an active grant under section 201 must submit a program which delineates the manner in which funds will be used to comply with the requirements of section 301(h). In order to be eligible for construction funding under 40 CFR Part 35, an applicant must have a plan based on secondary treatment, or greater if required under the existing permit, in order to assure that any works constructed for less than secondary treatment will be compatible with a cost-effective, secondary configuration. This will enable an applicant to complete secondary treatment construction with minimal additional problems, if secondary treatment proves necessary after reviewing monitoring data obtained by the applicant during the period of the permit.

The applicant's revised funding program must include provisions which assure that alternative waste management techniques will be studied and evaluated and that the works proposed for grant assistance will be cost-effective and will provide for application of Best Practicable Wastewater Treatment Technology (BPWTT) especially reclamation and recycling of wastewater, and confined pollutant disposal. An applicant will be eligible for Title II funds in developing monitoring, pretreatment, and toxic pollutant source control programs and other activities necessary to assure compliance with the requirements of section 301(h). Operation and maintenance costs for pretreatment, non-industrial source control, biomonitoring, and other programs, however, will not be federally funded.

Section 125.67. This is a new provision which lists the special conditions which may be required in a section 301(h) permit, but are not generally found in other section 402 permits, including compliance schedules, monitoring requirements and reporting requirements. These permit terms and conditions will be based on data contained in an applicant's submission for a section 301(h) modified permit.

E. 301(h) Decision Making

Permitting under section 301(h) will follow the procedures set forth in 40 CFR Part 124. (See section III.A., below).

II. Major Issues

A. Existing Discharge

1. *Definition of "existing discharge".* Section 301(h) states that an NPDES permit modifying EPA's secondary treatment requirements may be issued only "with respect to the discharge of any pollutant in an existing discharge from a publicly owned treatment works into marine waters." In its proposed regulations, EPA construed "existing discharge" not only to limit section 301(h) eligibility to POTWs with an existing marine discharge as of the December 27, 1977, enactment date of the provision, but also to require those dischargers to demonstrate compliance based on the nature, volume, and location of the discharge as of the September 24, 1978, statutory application date.

The "existing discharge" definition was the subject of more comment than any other aspect of the proposed regulations. Some commenters took the position that the proposed definition represented the only legally acceptable interpretation of the Act. Others, by contrast, argued that this definition was contrary to the legislative history and would, in effect, nullify section 301(h), in that virtually no coastal discharger would be able to meet the requirements for a modification without some improvement to its current treatment system, relocation of its outfall, or both.

In response to these comments, EPA has re-examined the legislative history on this point. It seems clear, on the one hand, that Congress did intend to limit section 301(h) eligibility to existing coastal dischargers. *e.g.*, 1977 Leg. Hist. at 257, 1047.[2] It is not as clear whether Congress meant to allow EPA to take into consideration future outfall and treatment system improvements in determining whether a permit modification should be granted. The communities which sought the modification provision had planned for and studied a less than secondary treatment alternative—in some cases for five or ten years—and had accumulated the data to make their case. In making the studies, many of these communities built in the assumption of improvements in their current systems which would allow them to utilize less than secondary treatment with minimal environmental impact.

In light of the foregoing, EPA believes that the most reasonable way to construe the term "existing discharge" is

[2] Citations are to the legislative history of the Clean Water Act of 1977, as reprinted in the Committee Print for the Committee on Environment and Public Works, Serial No. 95-14 (October 1978).

to allow consideration of thoroughly studied and *planned* outfalls and/or treatment system improvements in evaluating a section 301(h) application. Accordingly, EPA has revised the definition of "existing discharge" as follows. No POTW will be eligible for a section 301(h) modification unless, on December 27, 1977, it was an existing discharger into waters of the territorial sea, contiguous zone, or saline estuarine waters, as defined in § 125.59. Such an eligible POTW may base its application on either (1) the existing volume, nature, and location of its discharge; or (2) a proposed outfall and/or treatment improvement (e.g., upgrading treatment from primary to advanced primary or relocating an outfall which has been thoroughly planned and studied by the applicant).

This revised two-part definition implements Congressional intent in a more reasonable manner than would have been the case under the proposed definition. As Congress intended, it will limit eligibility for section 301(h) modifications to existing coastal dischargers, since it requires that an applicant have had an actual marine discharge as of December 27, 1977. In contrast to the proposed definition, it will not be so inflexible as to bar permit modifications for large categories of existing dischargers—a result Congress could hardly have intended.

For example, the proposed definition was so rigid that it would have excluded even dischargers making only minor treatment or outfall improvements necessary to meet statutory requirements; those POTWs would have been required, instead, to go to secondary treatment. Additionally, many coastal communities were on NPDES permit compliance schedules for construction of improvements necessary to meet State water quality standards or other requirements at the time that section 301(h) was enacted. Congress could not have ignored—or meant to exclude—these communities.

Many POTWs simply were not able to construct planned improvements in time to meet the September 24, 1978, deadline. It would serve no purpose to penalize these communities, especially where there had been some delay on the part of EPA in providing promised funds. Finally, it makes no sense to exclude any community which has thoroughly planned and studied a less than secondary alternative, regardless of the stage of construction. The real concern of section 301(h) is that dischargers have accumulated sufficient information to make their case to the Agency.

The revised definition of "existing discharge" removes one barrier to applying for a modification. It does not, however, relax the criteria to be applied in either granting a modification or complying with the requirements of the Act once a permit is issued. EPA believes that this course of action which offers communities an opportunity to present their case for a modification based on either existing systems or thoroughly studied and planned outfall and/or treatment system improvements, is more reasonable than completely eliminating these POTWs from consideration based on a less than unequivocal Congressional mandate.

EPA's two-part construction of the term "existing discharge" is based on its conviction that the most reasonable interpretation of the term should include preliminary studies, facilities planning, design, or construction in progress at the time the final section 301(h) regulations were promulgated. Thus applicants seeking a section 301(h) modification on the basis of a thoroughly studied and planned outfall or treatment system *improvement* will be expected to show, first, that there was an existing discharge as of December 27, 1977, and second, that such an improvement was in the planning, design or construction stage as of the publication date of these final regulations. This demonstration may be made in a number of ways, for example, by showing: (1) that the improvement was actually under construction; (2) that it was considered or being considered under a Step 1 grant under Title II; (3) that it was necessary to meet a condition in the applicant's existing NPDES permit (*e.g.*, a State water quality standard); or (4) that it was part of staged construction consistent with secondary treatment facilities.

As a practical matter, it is highly unlikely that applicants which have not already undertaken extensive studies of less than secondary treatment options will be able to complete a section 301(h) application or make the showings required by this Subpart.

A number of commenters suggested that EPA's proposed definition of "existing discharge" be broadened to include planned outfall/treatment system improvements, but only those which have been proposed and approved under Step 1, 2, or 3 grants issued under Title II of the Act. Since the Act does not require a section 301(h) determination to be based solely on data generated as part of a Title II grant, and since there may be communities which have undertaken to collect such data with their own funds, EPA has not placed such a limitation in the second part of the broadened "existing discharge" definition.

A few commenters suggested that EPA's definition of "existing discharge" be revised to allow POTWs which currently discharge into inland waters, but which are considering constructing, or now have under construction, an ocean or estuarine outfall, to apply for section 301(h) modifications. While the legislative history does not unequivocally define the term "existing discharge," it does state that Congress intended that section 301(h) modifications be limited to POTWs who were discharging into *marine* waters as of December 27, 1977. *e.g.*, 1977 Leg. Hist., at 257, 639. Therefore, the suggested definition is not consistent with Congressional intent.

In the preamble to the proposed regulations, EPA was concerned about the practical ramifications of construing the statutory term "existing discharge" to include outfall and treatment system improvements. In this connection, EPA requested commenters to address several issues, set out below. The following summarizes the comments received and EPA's responses.

2. *The difficulty of predicting the impacts of future outfalls or treatment system improvements.* EPA received numerous comments on the issue of whether it was possible to make an accurate predictive judgment as to whether future construction would enable an applicant to meet the stringent water quality, physical, chemical and biological criteria set forth in Subpart B of the regulations. Some commenters felt that the predictive judgments which would be associated with assessing section 301(h) applications based on proposed improvements would be no more difficult than those required to be made in other aspects of the NPDES permit program or EPA's construction grant program. Others felt that making predictions would be difficult, but that techniques such as modeling, extrapolation, and simulation could be utilized to predict impacts. Still others expressed the view that it would be extremely difficult, if not impossible, to accurately predict the impacts of future discharges on the marine environment.

A number of commenters suggested that the accuracy of predictive judgments would vary according to the specific assessment being made (*e.g.*, physical, chemical or biological) and the volume and composition of wastes being discharged, the nature of the receiving waters, and the nature of the affected ecosystem. Some commenters felt, for

example, that it would be fairly easy to calculate the chemical composition of the effluent from a proposed treatment system, and others felt that reasonably accurate assessments of waste dispersion and other physical impacts could be made using appropriate plume and dispersion models. On the other hand, there seemed to be some agreement that making accurate predictions of biological impact could be extremely difficult.

While it is more difficult to predict the effects of a proposed discharge on the marine environment, a certain amount of predictive judgment is required for assessing the effects of an existing as well as proposed discharge; both depend on several factors such as the amount of data available, the nature of the discharge, the receiving water, and the affected biota. For this reason, EPA has concluded that the difficulty of making accurate predictive judgments of environmental impacts does not, in itself, warrant exclusion of applications for section 301(h) modifications which are based on proposed outfall and treatment system improvements.

However, applicants seeking section 301(h) modifications based on future improvements should be aware that, as a result of greater difficulty in making predictive judgments of environmental impact, they bear an additional burden in demonstrating that their proposed discharge will meet the requirements of section 301(h) of the Act and § 125.61 of these regulations. EPA cannot, as suggested by some commenters, resolve questionable assessments of future impact in favor of issuing a permit, while allowing a more accurate assessment of impacts to be developed on the basis of monitoring data compiled during the life of the permit. The Act clearly requires that the necessary showings under section 301(h) be made at the time of application. Accordingly, if a section 301(h) applicant fails to demonstrate that its improved discharge will meet these requirements, its appication will be denied.

3. *Effect of pretreatment and non-industrial source control programs.* EPA also received a large number of comments on the question of the extent to which EPA should consider the effect of pretreatment and non-industrial source control programs in evaluating an applicant's section 301(h) application. Many commenters felt that both existing and future source control efforts should be evaluated by EPA, especially where the discharge of toxic pollutants could pose a problem.

EPA recognizes that the implementation of effective source control programs will reduce the amount of toxic pollutants in POTW effluent, and may therefore lessen the impact of the discharge on the marine environment. To the extent such programs are now in place and are causing an actual, measurable reduction of pollutants in the applicant's discharge, they will be considered in EPA's evaluation of the section 301(h) application. Where such programs are not operational, however, EPA believes that it is very difficult, if not impossible, to predict their effect on the chemical composition of a POTW's waste stream. Since most major Federal pretreatment standards will not be promulgated for several years (See consent decree entered in *Natural Resources Defense Council, Inc.* v. *Train*, 8 ERC 2120 (D.D.C. 1976) as modified by *Natural Resources Defense Council* v. *Costle*, 12 ERC 1833 (D.D.C. March 9, 1979), the Agency is unable at the present time, to predict the effect of Federal pretreatment standards on the composition of individual POTW effluent. Similarly, it is impossible to assess the impact of a non-industrial source control program on a municipal discharge until non-industrial sources of pollutants have been located, their contribution to the POTW has been ascertained, the degree to which they can be controlled has been determined, and an enforceable control program has been developed.

EPA recognizes, however, that some section 301(h) applicants may now be in a position to demonstrate that a given effluent limitation will in fact be achieved by a source control program which is based on their existing pretreatment rules and regulations. In order to make this showing, the applicant is required to provide evidence of its record of enforcement and the effectiveness of existing programs. In addition, an applicant must define and demonstrate that it has the ability to enforce additional control programs which will reduce, to a specified level, the amount of the pollutant introduced by each such source into the POTW. For example, if an applicant intends to demonstrate that it would meet a State water quality standard for cadmium through source control, it is required to identify all industrial and non-industrial sources of cadmium, to determine what volumes of cadmium they contributed to the POTW, to set specific limitations on the amount of cadmium which can be introduced by each source into the POTW (based on the final effluent limitations needed to comply with the water quality standard), and to develop a program for enforcing those limitations. These requirements are contained in revised sections 125.62 thru 125.64, and are discussed in the section-by-section analysis in Section V of this preamble.

4. *Completion of modifications.* EPA received virtually no comments concerning schedules for completion of improvements under a section 301(h) permit. Congress has directed that the section 301(h) process not delay the attainment of required pollution control objectives. H.R. Rep. 95–830, 95th Cong., 1st Sess. at 74, 79 (1977); S. Rep. 95–370, 95th Cong., 1st Sess. at 1, 50 (1977). Additionally, section 301(h) provides only for the modification of the requirements of section 301(b)(1)(B), and not the requirements of section 301(b)(2)(B). Given these considerations, section 125.59 requires that section 301(h) applicants demonstrate that they can complete such improvements as expeditiously as possible.

To assure that applicants provide sufficient information to allow EPA to determine whether improvements will be completed in a timely manner, § 125.59 has been revised to more clearly address construction schedules and Part G has been added to EPA's application format. This requires that the applicant set forth its proposed facilities planning, design and construction schedule (if any), an analysis of its ability to fund any necessary planning, design and construction according to the proposed schedule, and a history of its compliance or noncompliance with planning, design and/or construction schedules in its existing NPDES permit or an enforcement compliance schedule letter.

B. September 24, 1978 Application Deadline.

EPA received numerous comments on proposed § 233.32(b), which required applicants to submit a complete application for a modified permit (including all required supporting data) no later than September 24, 1978 (43 FR 17498) (Preliminary applications, postmarked no later than September 25, 1978, were accepted as September 24th was a Sunday (see 43 FR 39399)). Most of these comments suggested that the deadline for submission of applications should be relaxed to allow communities additional time to complete the physical, chemical and biological studies and to develop the source control programs required to comply with sections 301(h)(2), (5) and (6) of the Act.

The September 24, 1978 application date is imposed by section 301(j)(1)(A)

of the Act, and EPA is powerless to change this deadline. However, since section 301(h) criteria were not promulgated as of September 24, 1978, it would have been unreasonable to require a complete application by that date. Therefore, both the Notice of Application Filing Deadline (43 FR 39398, September 5, 1978) and these regulations provide that only a preliminary application must have been submitted by September 24, while a complete application must be submitted three months from the date of the publication of this Subpart. This two-phase application process is consistent with the approach used by EPA for other variance and modification provisions with a statutory application deadline (*e.g.*, sections 301 (g) and (c) of the Act, 33 U.S.C. 1311 (g) and (c)).

The three month requirement for submission of a complete section 301(h) application is based on section 304(a)(5)(B), of the Act, which requires EPA to publish regulations implementing section 301(h)(2) no later than June 27, 1978. Since that date is approximately three months before September 24, 1978, EPA has concluded that Congress intended section 301(h) applicants to have at least three months to prepare their applications after EPA published final regulations describing the nature of the data required.

Accordingly, section 301(h) applicants are required to submit, on or before September 13, 1979 a full application which, on its face, demonstrates that the applicant complies with section 301(h) and these regulations. Obviously an application which includes all the information requested by EPA in an appropriate level of detail will be considered adequate for this purpose. Where an application submitted on September 13, 1979 conclusively demonstrates that the applicant qualifies for a section 301(h) permit, EPA will issue a modified permit. On the other hand, if the application demonstrates on its face, that the applicant does not meet the requirements of section 301(h) and this Subpart, its application will be denied. In some cases an application may appear to indicate on its face that the requirements of section 301(h) can be met, but EPA will require some minimal additional information before a final decision can be made (e.g., information on matters peculiar to the applicant's outfall/treatment system configuration, discharge, or receiving waters, which are identified during the review process). In that event, the Agency may request that the necessary information be submitted, as expeditiously as practicable, as a supplement to the application. See generally § 124.55.

This limited opportunity to submit additional information following initial EPA review should not be construed as providing all POTWs submitting incomplete applications with an automatic extension of time in which to submit more data. The process described above is designed to be used only where an applicant submits a complete or substantially complete application, but where some small amount of additional data would be required to assure conclusively that the requirements of the Act and of this Subpart would be met. EPA expects that, as a practical matter, it will be used fairly infrequently.

EPA is aware that the time limitations set forth in these regulations may make it difficult for those applicants who have not previously assembled the required technical data to submit a complete section 301(h) application. However, the legislative history of the Act makes it clear that the relief afforded by section 301(h) was intended for those communities which had accumulated, or could accumulate on a timely basis, the information necessary to make their case for a modification. Additionally, applicants are reminded that section 301(h) was enacted on December 27, 1977, that EPA distributed a pre-proposal preliminary concept paper setting forth draft regulations implementing section 301(h) on March 16, 1978, and that the regulations were formally proposed on April 25, 1978; both the preliminary concept paper and the proposed regulations encouraged applicants to begin assembling the data necessary to support a section 301(h) application immediately, if they had not already done so. The unanticipated extension which resulted from the delay in promulgating this Subpart has also provided applicants with almost one year to gather and develop the information required by the application which has not sustantially changed from what appeared in the proposal.

C. Small Communities, Native Alaskan Villages and U.S. Territorial Possessions and Puerto Rico

1. *Small communities.* In its proposal, EPA expressly requested comment on the general issue of whether small dischargers or dischargers which have no known or suspected sources of toxic pollutants should be treated differently than larger dischargers with significant sources of toxic substances with respect to the extent or nature of the information which they must submit to EPA in applying for a modified permit. A number of commenters expressed the concerns that smaller communities, unlike larger municipalities, would be unable to accumulate the data required by the proposed regulations within the time required by the Act, would be unable to finance the collection of such data, or, in some cases, would be unable to "wade through (EPA's) regulations." These commenters suggested: (1) that EPA develop a separate, shorter application format for small dischargers; (2) that small dischargers be allowed to piggyback" section 301(h) applications submitted by larger communities discharging into similar types of waters, or (3) that EPA categorically relieve small POTWs of some of the information requirements of the proposed regulations. On the other hand, other commenters felt that all applications should be subject to the same requirements and evaluated by the same standards.

Section 301(h) does not authorize EPA to categorically exempt dischargers from any statutory requirement on the basis of size or volume. By omitting such an exemption, Congress recognized that the volume of a discharge in and of itself is not an indicator either of its toxicity or of its actual or potential effect on the marine environment.

However, as noted by several commenters, the inherent characteristics of many small POTWs or POTWs without sources of toxic pollutants will, as a practical matter, reduce the burden that section 301(h) places on them. For example, section 301(h)(5) of the Act and § 125.66 are not applicable to POTWs with no industrial sources of toxic pollutants (generally only small communities). Certain sections of the regulations, such as §§ 125.65(c) "Biological Assessment" and 125.61 "Monitoring Programs", recognize that the nature and volume of the applicant's discharge will affect the extent and type of showing which must be made to demonstrate compliance with this Subpart.

As noted above, applicants will be required to submit by September 13, 1979 an application which demonstrates, on its face, that the applicant's current discharge complies with (or that its improved discharge will comply with) section 301(h) and these regulations. Here, too, the characteristics of small POTWs and POTWs without sources of toxic pollutants may give them an inherent advantage over larger POTWs with major sources of toxic pollutants, since the failure to provide even minor portions of the required data is likely to be far more critical for a large applicant

than a small one with a non-toxic discharge.

Section 301(h), it should be noted, was enacted in response to Congressional testimony from a number of large West Coast POTWs which indicated that they had already accumulated the data necessary to demonstrate that a less than secondary treated discharge would not adversely affect the environment. As a result, the needs of many small communities for extended time and financial assistance to collect the data necessary to submit a complete application for modification have not been incorporated into the statutory scheme. EPA has attempted to accommodate these needs in its regulations insofar as possible within the confines of the statute.

2. *Native Alaskan Villages, U.S. Territorial Possessions and Puerto Rico.* In its proposed regulations, EPA solicited comments on how it should deal with 301(h) applications from coastal native villages in Alaska, and small communities in Puerto Rico and the U.S. territories in the Caribbean and Pacific. Generally, these communities generate very low volumes of wastewater, consisting mainly of domestic waste. Discharges, where they exist, are generally far apart; receiving waters are either very deep or subject to substantial dilution and flushing from tides, currents, or both.

Many of these native villages and territorial communities are not eligible for a modification even under EPA's revised regulations because they did not discharge into marine waters on December 27, 1977. In many cases, they have no existing collection and treatment systems, and wastes are transported from individual homes to beaches or tundra; in other cases, primitive collection systems which deposit sewage on beaches or in streams which flow into the ocean. Other communities, which *do* have ocean outfalls in place, may be limited in terms of available background data and their ability to acquire technical expertise needed to develop a section 301(h) application.

Additionally, as a practical matter, many of these communities operate on near subsistence economics and do not have the economic or technological ability to either build or maintain secondary treatment facilities. As noted, existing sewage treatment facilities are either non-existent or very primitive. In some areas, raw sewage is transported through the streets in open sewers directly to beaches or to the ocean; in others, over-the-water toilets are used to dispose of human wastes. In tropical climates, these open sewers and latrines serve as a breeding ground for disease vectors and intestinal parasites which afflict significant portions of the population, and they contaminate ground and surface waters and near-shore bathing areas. In many cases, the construction of secondary treatment facilities would divert funds away from projects (such as the construction of covered sewers) necessary to provide the basic public health protection which exists in most of the United States.

EPA received numerous comments on how it should handle this difficult issue. Some commenters suggested relaxing the amount and type of data which would be required from such communities in their section 301(h) applications. Other commenters suggested that no NPDES permits of any kind be issued to villages of less than 100 families with subsistence lifestyles. Many small communities simply urged the Agency to recognize their special status and to develop an intelligent solution to their wastewater treatment problems.

In response to these comments, EPA has adopted the following policy with respect to these communities. As an alternative to their submitting completed section 301(h) applications, the Agency will use its discretion in scheduling secondary treatment for Native Alaskan Villages and communities in Puerto Rico and the U.S. territorial possessions in the Caribbean and Pacific where industrial toxic wastes are not a factor, in cases where such course of action is determined to be in the interest of providing basic public health protection, and where any such delays will not result in unreasonable adverse water quality impacts. In such cases, attention will be given to planning wastewater treatment facilities for these communities with the objective of assuring that inadequacies in sewage collection or treatment which result in public health problems are remedied, and to examining alternatives to traditional secondary treatment, including individual systems and BPWTT options (including land treatment). Any of the Native Alaskan Villages and small communities in Puerto Rico and the U.S. territorial possessions in the Caribbean and Pacific that submitted preliminary applications and meet the requirements of § 125.59 may submit completed section 301(h) applications; however, it may be very difficult for these communities to adequately meet all of the applicable section 301(h) criteria for modifications as presented in this regulation.

The policy described above applies only to coastal native villages in the Trust Territory of the Pacific Islands, the Northern Mariana Islands, Guam, American Samoa, the Virgin Islands, Puerto Rico and Native Alaskan Villages. Congress has indicated its concern for the particular problems of the insular territories (particularly in the context of Federal regulatory and funding programs) in the Territories Omnibus Act, 35 U.S. 600, February 6, 1909 and of Alaskan native villages in the Clean Water Act (section 113, 33 U.S.C. 1263). For this reason, and because these communities have unique economic and public health problems, the policy announced in this section will not be extended either to other coastal communities in the United States or to communities which generate large volumes of domestic and industrial wastes.

III. Other Issues

A. Incorporation Into NPDES Regulations

After the section 301(h) regulations were proposed as 40 CFR Part 233, on April 25, 1978, EPA proposed extensive revisions to the NPDES permit program regulations. (43 FR 37078, August 21, 1978). The NPDES proposal established four new Parts (40 CFR Parts 122, 123, 124 and 125). Part 125 established criteria and standards for the NPDES program and reserved Subpart H for section 301(h) criteria. The revised NPDES regulations were published in final form on June 7, 1979 (44 FR 32854) and reserved Part 125, Subpart G for section 301(h) criteria. Part 124 of the final NPDES regulations establish NPDES decisionmaking procedures and contain some sections which were originally proposed as Subpart C to Part 233, i.e., the appeal provisions for section 301(h) determinations.

EPA decided to incorporate section 301(h) permit procedures into Part 124 of the final NPDES regulations for the following reasons: (1) to consolidate all NPDES permit decisionmaking into one Part of 40 CFR; (2) to reduce possible confusion which could result in having two separate regulatory parts which deal with NPDES procedures; and (3) to respond to the concerns of some commenters by indicating, when, where and how section 301(h) permit modifications fit into the overall NPDES permitting process. Thus, by indicating that these regulations would be incorporated into reserved Subpart G of Part 125, the final NPDES regulations set the stage for today's section 301(h) regulations. Since these regulations are

part of the entire NPDES "package" (40 CFR Parts 121–125), other sections in these Parts may be applicable to section 301(h) decisionmaking and permit issuance, *e.g.* §§ 122.3 (definitions not otherwise covered by § 125.5), 122.5 (signatories), 122.14 (conditions applicable to all permits), etc. Today's regulation, therefore, must be read together with the recently published final NPDES regulations. Since section 301(h) is a federally run permit program, however, Part 123, *State Permit Program Requirements* is not applicable. For a further discussion of the final NPDES regulations as they may relate to section 301(h), see the preamble discussion on Parts 122 and 124.

B. Multiple Applications

A number of POTWs which submitted preliminary applications to EPA indicated that they intended to apply for a section 301(h) modification based on several alternatives (*e.g.*, several possible outfall locations or treatment systems), raising the issue of how decisions should be made where an applicant presents several treatment or discharge alternatives, more than one of which may meet the requirements of the Act and this part. A related issue is whether EPA will consider alternatives to the treatment/outfall system proposed in an application if the Agency finds that the proposed system does not meet the requirements of section 301(h) or this part.

EPA will not consider alternatives to the treatment system included in a POTW's application, nor will it allow applicants to submit other options. The Act and its legislative history make it clear that the applicant must have thoroughly planned and studied the alternatives and must demonstrate that it is entitled to a modification. This can only be achieved by a showing in its application that the proposal meets the requirments of the Act and these regulations. The Agency can either make this demonstration for the applicant nor consider multiple proposals or untimely applications. Accordingly each 301(h) applicant must submit a complete application containing its proposal not later than September 13, 1979.

C. Relationship of Section 301(h) and BPWTT.

A number of commenters suggested that a section 301(h) modified discharge should automatically be considered "Best Practicable Wastewater Treatment Technology" (BPWTT) for purposes of section 301(b)(2)(B) of the Act, which requires that POTWs comply with BPWTT by July 1, 1983. The legislative history of section 301(h) and the Act itself, however, make it clear that section 301(h) only authorizes a modification of the requirements of section 301(b)(1)(B) of the Act, and not of the BPWTT requirements of section 301(b)(2)(B). Furthermore, as noted in both the House Conference and Senate Reports on the 1977 Amendments, Congress clearly recognized that BPWTT *may* "require a degree of effluent reduction which is greater than that required under (Section 301(h)) of the Act." H.R. Rep. 95–830, 95th Cong., 1st Sess. 74 (1977); S. Rep. 95–370, 95th Cong., 1st Sess. 45 (1977).

At present, BPWTT is considered equivalent to secondary treatment. The Agency, however, is now considering expanding the definition of BPWTT to include specific effluent limitations for toxic pollutants and also to provide for the recycle and reuse of wastewater as required under section 201(g)(2)(A) of the Act and confined disposal of pollutants.

D. Section 301(i)(1) and Section 301(h) Permit Compliance Schedules

EPA received a number of inquiries during the comment period concerning compliance schedules in section 301(h) permits. Some commenters wanted to know what kinds of compliance schedules would be included in Section 301(h) permits and what action would be taken by EPA in the event of noncompliance. Others sought a clarification of the relationship between section 301(i)(1) municipal time extensions and the modification afforded by section 301(h). Still others raised more general questions concerning the legal basis for including compliance schedules extending beyond July 1, 1977 in section 301(h) permits.

1. *Sections 301(i)(1) and 301(h).* Sections 301(h) and 301(i) are independent provisions. Section 301(i)(1) authorizes EPA (or a State, where it has an approved NPDES permit program) to extend an existing municipal NPDES permit compliance schedule for achiving EPA's secondary treatment requirements. It does not address the issue of setting revised compliance schedules in section 301(h) permits.

Because sections 301(h) and 301(i)(1) are independant provisions, section 301(h) applicants which require a section 301(i)(1) extension in order to comply with the requirements of section 301(b)(1) (B) or (C) will not be deemed to have applied for such an extension merely by having submitted a section 301(h) application. There is no reason for applicants to be confused on this point, since in the interim final regulations implementing section 301(i), EPA expressly advised 301(h) applicants to apply for a section 301(i) extension if they felt they also met the criteria of section 301(h). (40 FR 21286, 21288 (May 16, 1978)).

As a general matter, EPA expects that most section 301(i) extension requests from section 301(h) applicants will be acted upon following EPA decision on the applicant's section 301(h) application, since a POTW which qualifies for a section 301(h) modification will not require a section 301(i) extension as well. Where a section 301(h) request is denied, the applicant may be eligible for a section 301(i)(1) extension, a section 309(a)(5)(A), administrative order, or be subject to possible enforcement action.

2. *Compliance schedules in section 301(h) permits.* EPA will establish revised compliance schedules for construction of improvements and for the implementation of source control programs necessary to meet the requirement of section 301(h). Accordingly, it will not be necessary for a section 301(h) applicant whose request for a modification is based on an outfall and/or treatment system improvement to demonstrate that it would also qualify for a section 301(i) time extension in order to be eligible for a section 301(h) permit. However, as noted above, in determining whether to grant a section 301(h) permit, EPA will consider (as it does under section 301(i)(1)) the applicant's record of compliance with its existing NPDES permit in determining whether it is likely to comply with requirements of section 301(a) on a timely and responsible basis.

One commenter suggested that EPA has no authority to issue a permit allowing compliance with section 301(h) after the July 1, 1977, date for achieving compliance with the secondary treatment requirements of section 301(b)(1)(B). This is an incorrect interpretation of the Act, since section 301(h) authorizes EPA to issue a permit which modifies the requirements of section 301(b)(1)(B) including the July 1, 1977 compliance deadline. Given that section 301(h) was not enacted until December 27, 1977, the commenter's interpretation would prevent EPA from issuing any section 301(h) permits.

E. Enforcement Policy

1. *Enforcement during section 301(h) decisionmaking process.* A number of commenters expressed concern that some section 301(h) applicants may attempt to utilize the section 301(h) application and decisionmaking process as a means of delaying any needed

planning, design or construction during the application decisionmaking period. It should be clear that EPA will not allow the section 301(h) process to be used as a mechanism for delay.

Section 125.59 of these regulations requires each applicant to submit, as part of its final application, a detailed description of the construction, if any, which it proposes to undertake to comply with the requirements of section 301(h), along with a detailed proposed schedule for all necessary planning, design and construction. The applicant must also (1) provide EPA with a copy of its current NPDES compliance schedule for construction of secondary treatment facilities; and (2) identify in detail all planning, design and construction activities which are common both to the applicant's existing plan for construction of secondary treatment facilities and its proposed plan for outfall and/or treatment system construction under section 301(h). EPA will use this information to determine how much planning, construction or design may proceed pending a decision on the section 301(h) modification and to formulate compliance schedules in the modified permit.

Some section 301(h) applicants, even if a 301(h) modification is granted, will need to complete planning, design or construction activities for treatment works which are less than secondary. Where such construction is compatible with full secondary treatment systems, the applicant can continue planning, design and construction without having to make a commitment to secondary treatment. EPA will require these applicants to proceed toward secondary treatment during the section 301(h) application decisionmaking process. Such applicants will be expected to meet all compliance requirements which are not affected by section 301(h) determinations or pending determinations.

Some section 301(h) applications may be based on present discharge volume, location and composition, and, therefore, the applicants cannot go forward with additional planning, design or construction until EPA has issued a decision. In general, EPA does not expect to initiate enforcement proceedings for construction related schedules against a POTW in this category pending Agency action on its final application for a modification. EPA may commence enforcement actions for activities unrelated to construction, such as violation of interim limits, poor operation and maintenance, reporting errors and omissions, and misrepresentation or falsification of data.

As noted earlier, an applicant's failure to continue planning, design or construction during the section 301(h) decisionmaking process will not only subject it to possible enforcement action, but also will draw into question the propriety of granting a section 301(h) modification. Congress' objective that the section 301(h) process not be protracted (see section II, above) cannot be achieved where POTWs obtaining section 301(h) modifications do not timely construct the improvements and implement the monitoring and source control programs on which these modifications are based. Not only does such delay postpone the achievement of the objectives of section 301(h), but it also deprives EPA of the long-term empirical monitoring data for use in decisionmaking on section 301(h) permit extensions or renewals. Accordingly, an applicant's record of planning, design and construction efforts during the section 301(h) decisionmaking period will be taken into account in determining whether a modified permit should be issued.

2. *Enforcement following denial of a section 301(h) modification.* POTWs which are denied section 301(h) modifications will be candidates for enforcement action unless they have obtained and are complying with, a section 301(i)(1) extension, or an administrative order under section 309(a)(5)(A), or comparable State order.

3. *Enforcement following issuance of a section 301(h) modification.* Violations of section 301(h) modifications will be among the highest priorities in EPA's municipal enforcement program. Compliance schedules will be closely monitored by the Agency and NPDES States; a permittee's failure to meet planning, design or construction schedules, or to comply with any monitoring, pretreatment or nonindustrial source control requirements will subject it to possible enforcement action, including revocation of its modified permit.

EPA will place major emphasis on the review of monitoring data collected as part of a modified permit requirement. Where monitoring data indicates adverse environmental impacts or a failure to attain required effluent limitations or water quality standards, the permittee will be required to identify the source of difficulty and correct it as expeditiously as possible. If it cannot do so, its modified permit will be subject to revocation, requiring the POTW to go immediately to secondary treatment or BPWTT.

IV. Technical Support Document

Several commenters suggested that many of the technical and scientific requirements which will be used to evaluate applications needed further justification and explanation. EPA agreed and on March 21, 1979, made available for public comment its Technical Support Document (44 FR 17194). A total of thirty-seven comments were submitted by various individuals and groups before the end of the thirty day comment period. Based on these, EPA has revised portions of the document to more clearly convey the intent of the section 301(h) regulations.

The purposes of the Technical Support Document are: (1) to provide further explanation and guidance on certain requirements of the regulations, and (2) to provide a rationale for those requirements. It is divided into sections that address (1) calculation of the zone of initial dilution, (2) physical oceanographic and water quality assessment procedures, (3) water quality and biological monitoring requirements, and (4) biological assessments. A final section discusses requirements of a monitoring program which must be implemented by applicants receiving modified permits.

The Technical Support Document is not published as part of these final regulations. All applicants, State agencies, and EPA regional offices have received copies of the March 21st version and will be provided with copies of the document as it was revised following the comment period. Other persons may obtain copies from:

301(h) Task Force, Office of Water Program Operations (WH-548), Environmental Protection Agency, 401 M St. SW., Washington, D.C. 20460, 202/426-8973.

V. Section-By-Section Anaylsis

Section 125.56 Scope and purpose (formerly § 233.2). This section has been changed to reflect the fact that this Part no longer contains the procedural regulations which will govern Agency action on applications for modified permits under section 301(h). These procedural regulations, which are based on the "initial licensing" [1] provisions of the Administrative Procedure Act ("APA"), 5 U.S.C. 551 *et seq.*, have been incorporated into the Agency's revised NPDES regulations at 40 CFR Part 124,

[1] The APA defines "licensing", in part, as any "agency process respecting the . . . limitation, amendment, modification, or conditioning of a license." 5 U.S.C. 551(8). A license includes a permit. 5 U.S.C. 551(8). Section 301(h) proceedings are initial licensing because they involve the first NPDES permits to be issued under section 301(h).

Subpart H (44 FR 32854). The decision to incorporate these regulations into the NPDES regulations was based on the conclusion that placing all procedures for decision-making regarding NPDES permits in one Part provides for greater clarity and consistency.

Section 125.56 also points out that permits received under this Subpart must contain special conditions and terms and conditions required under 40 CFR Part 122. These terms and conditions are discussed in this section-by-section analysis under section 125.67.

Section 125.57 Law authorizing issuance of a section 301(h) Modified permit (formerly § 233.3). This section is self-explanatory in that it simply restates the applicable legal authority under which these regulations are promulgated.

Section 125.58 Definitions (formerly § 233.1). Two major changes have been made in this section. First, all definitions which duplicate those contained in EPA's revised NPDES permit regulations (40 CFR 122.3) have been deleted. Second, as a result of public comment on this section and modifications which have been made in other parts of the regulations, a number of the remaining definitions have been clarified and several new definitions have been added.

EPA received numerous comments on its proposed definition of "balanced, indigenous population." Both the proposed and final regulations require applicants to demonstrate the existence of a balanced, indigenous population (BIP) of shellfish, fish and wildlife immediately beyond the boundary of the zone of initial dilution (ZID) of an outfall discharge. This demonstration is to be based on evidence that the composition, structure and function of the marine communities beyond the boundary of the zone of initial dilution and within the area potentially affected by the outfall discharge are comparable to (1) those of healthy marine communities existing in comparable but unpolluted waters, or (2) those of communities reasonably expected to become re-established in the polluted area from unpolluted waters if the source of pollution were removed. The second part of the definition which concerns re-establishment of communities is necessary because of its pertinence to proposed improved discharges and to discharges into waters that are stressed by sources of pollution other than the applicants discharge. In the final regulations, the definition of balanced, indigenous population has been adjusted for clarification, but the content, which is discussed further in § 125.61(a), remains essentially the same.

The new definitions which have been added to this section include "current discharge," "improved discharge," "preliminary application," "final application," "ocean," "primary treatment," and "stressed waters."

The definitions of "current" and "improved discharge" have been added as a result of EPA's revising its proposed construction of the statutory term "existing discharge." The definitions of "preliminary" and "final application" have been added as a result of the Agency's decision that preliminary, rather than final applications must have been filed by September 24, 1978. The term "ocean" has been defined to clarify an issue raised during the comment period, which is discussed below in this section. The definition of "stressed waters" was necessitated by the Agency's re-evaluation of this concept along with the test for a balanced, indigenous population; a discussion of this term is included in the Technical Support Document.

In response to comments from the public and EPA's regional offices, EPA has also provided a definition of the term "publicly owned treatment works." Consistent with the legislative history of the Act and other EPA regulations defining "POTW," it does not encompass Federal facilities. (See, *e.g.*, EPA's General Pretreatment Regulations, 40 CFR 403.3(m), (43 FR 27733, 27747, June 26, 1978); EPA's Wastewater Treatment Pond Regulations, 40 CFR 133.103 (43 FR 54464, October 7, 1977) (Preamble)). Accordingly, such facilities will not be eligible for section 301(h) modifications.

A number of commenters suggested that EPA should delineate the types of "saline estuarine waters" into which a POTW must discharge in order to be eligible for a section 301(h) modification. The legislative history of the Act indicates that strong currents and tidal movement, high flushing efficiency and thorough water circulation which insure adequate dispersion and seaward transport of wastewater are the key phenomena in defining applicable estuarine waters (*1977 Leg. Hist. 259*). Therefore, the definition of saline estuarine waters has been expanded to require a free connection with the ocean, net seaward exchange with ocean waters (*i.e.*, freshwater inflow) and salinities comparable to those of the ocean. This definition reflects the rapid dynamic exchange of wastewater with ocean waters which Congress indicated should be found in estuarine waters in order for an applicant to be considered for a section 301(h) modification. Generally, the only waters which can meet these requirements are located near the mouth of estuaries and have cross-sectional, annual mean salinity greater than or equal to 30% of ocean salinity (approximately 25 parts per thousand).

During the comment period, it came to EPA's attention that a number of open coastal waters inside the baseline of the territorial seas may have the characteristics of well-flushed open ocean waters and may therefore be appropriate receiving waters for a less-than-secondary discharge under section 301(h). Under the statutory definition of "territorial seas" (section 502(8) of the Act), dischargers into these areas would not be eligible for a modification for a "discharge into deep waters of the territorial seas." They also would not be eligible for a modification under the Agency's proposed definition of "saline estuarine waters" because that definition encompassed only "semi-enclosed" coastal waters. Because it may be possible to meet the requirements of section 301(h) in these waters, and because the legislative history of the Act indicates that Congress intended dischargers into these areas to be considered for modified permits, the regulations have been revised to make it clear that such dischargers will be eligible for a modification upon a showing that they can meet the requirements of this subpart.

Rather than revising its definition of "saline estuarine waters" to include open coastal waters inside the baseline, EPA has incorporated them in a new definition, "ocean waters". This term also includes the deep waters of the territorial seas and the waters of the contiguous zone, to emphasize that these waters have hydrological, ecological and geological characteristics much more akin to ocean than estuarine waters (primarily because of the absence of freshwater flow). This definition should not be confused with the definition of "ocean" in section 502(1) of the Act.

In response to public comment that EPA had not identified the "shellfish, fish and wildlife" for which a balanced, indigenous population must be shown to exist under section 301(h)(2), EPA has added a definition of this term in these final regulations.

One commenter suggested that EPA's proposed definition of "toxic pollutant" conflicted with the definition of "toxic pollutant" in section 502(13) of the Act. While section 502(13) provides a generic definition of "toxic pollutant", section

307(a) of the Act clearly states that the specific "list of toxic pollutants or combinations of pollutants subject to this Act shall consist of those toxic pollutants listed in Table 1 of Committee Print Numbered 95–30 of the Committee on Public Works and Transportation of the House of Representatives." That list was reprinted to identify the "toxic pollutants" under § 233.1(w) of the proposed regulations, and is expressly incorporated by reference in the final version of § 125.57 promulgated today.

Because there were a few pesticides identified in proposed § 233.1(w) which were not included in Table 1 of Committee Print Number 95–30, those substances have been defined in these final regulations as "pesticides". See § 125.57(j). Other sections of the regulations have been changed to reflect this distinction.

The same commenter also suggested that the Agency's definition of "pollutant" as BOD, suspended solids and pH, was inconsistent with the definition of the term in section 502(6) of the Act. Since some commenters apparently felt that the use of the general term "pollutant" caused some confusion in the regulations, EPA is using the term "traditional pollutant" to refer to BOD, suspended solids, and pH both in the definition section and in other sections of the regulations. This should not be confused with the definition of "conventional pollutant" as used in section 301(b)(2)(E), 304(b)(4), or 304(a)(4) of the Act.

Several commenters noted that there were some inconsistencies in both the regulations and the preamble concerning which State water quality standards EPA would consider applicable to a particular discharger for purposes of demonstrating compliance with proposed sections 233.12 through 233.15 and section 233.20. The definition of "water quality standards" has been revised to clarify that applicants will be required to show that they presently meet (or will meet on the basis of an improved outfall or treatment system) those State water quality standards in effect as of (*3 months after date of promulgation*). However, if during the section 301(h) decisionmaking period, EPA approves either State water quality standards for additional pollutants or more stringent State water quality standards, an applicant will be required to supplement its original application to show that it meets or will meet such new or revised standards.

Finally, one commenter suggested that the term "zone of initial dilution" was unnecessarily broad and should be revised to parallel "initial dilution" as calculated in the application form. EPA agrees that an applicant's zone of initial dilution could be inconsistent with the initial dilution achieved at any one time. To remedy this problem, the term "zone of initial dilution" has been redefined as "the region surrounding or adjacent to the end of the outfall pipe or diffuser parts as calculated according to instructions in the application format."

Section 125.59. General. This new section has been added to the regulations in order to consolidate in a single place the basic criteria which must be met by a section 301(h) applicant. A few of the criteria contained in this section appeared in the proposed regulations in other sections, or are required by Federal statutes other than the Clean Water Act. Others were suggested by comments or legislative history. Still others have been added as a result of EPA's revision of its proposed definition of "existing discharge."

In addition to meeting these threshold criteria, a section 301(h) applicant will, of course, be required to meet all other applicable requirements of the Act and 40 CFR 125.21. Thus no modification will be issued under this Subpart where, for example, the discharge for which a modification is requested would violate State water quality or treatment standards or other State requirements within the meaning of section 301(b)(1)(C), or where the applicant's discharge or outfall would impair anchorage and navigation under section 402(b)(6).

Paragraph (a). This new paragraph has been added as a result of EPA's revision of its proposed definition of the term "existing discharge". It provides that a section 301(h) permit application may be based on a current or an *improved* discharge into ocean or saline estuarine waters. A POTW applying on the basis of an improved discharge must still meet the threshold criteria, including having a discharge into marine waters as of December 27, 1977.

POTWs applying for section 301(h) permits should carefully consider whether or not to grant revisions to categorical pretreatment standards under section 307(b) of the Act and 40 CFR 403.7 since such revisions may significantly contribute to adverse impacts on the marine environment which would disqualify such POTWs from receiving a section 301(h) permit.

Paragraph (b). These provisions delineate grounds for denial of a modified permit under section 301(h). These grounds are referred to as "threshold criteria" in that an applicant should determine whether it complies with these "criteria" before undertaking the more costly process of compiling the information necessary for a complete application. The paragraph incorporates a number of provisions from the proposed regulations, along with several new provisions which have been added in response to comments on the proposal.

Subparagraph (b)(1). This provision restates the general premise of these regulations, that is, that a modified permit under section 301(h) may not be issued unless the applicant shows in its application that it meets all the requirements of these regulations.

Subparagraph (b)(2). This provision incorporates the requirements of EPA's National Pollutant Discharge Elimination System (NPDES) program found in 40 CFR Part 122.

Subparagraph (b)(3). This provision originally appeared in § 233.11(b)(2) of EPA's proposed section 301(h) regulations and remains essentially unchanged in these final regulations. The basis for this provision has been discussed above.

Subparagraph (b)(4). The requirement that section 301(h) applicants demonstrate that they will provide at least primary treatment of their wastewater is a new provision which, while suggested in the preamble to EPA's proposed regulations (43 FR 17485), was not actually included in the proposed regulations themselves. To make it clear that no modifications will be granted for the discharge of untreated, raw sewage, EPA has added this provision to the final regulations.

This requirement is based on a number of grounds. First, the legislative history provides clear evidence that section 301(h) was intended to allow municipal marine dischargers to provide less-than-secondary treatment, but was not intended to allow discharges with no treatment. Testimony during Congressional hearings on various proposed secondary treatment modification amendments further supports this position, since no POTW or other witness urged that a modification from secondary treatment requirements should be issued for a less-than-primary discharge.

Secondly, EPA believes, that primary treatment which removes up to 40% of suspended solids, plus floatables and oil and grease, is the absolute minimum level of municipal wastewater treatment which will adequately protect water quality.

Finally, the State of California, in response to extensive studies conducted in the waters off the coast of California on the effect of discharging municipal wastewater into marine waters, requires

that municipal ocean dischargers remove 75% of suspended solids, as well as floatables and oil and grease. 1978 Water Quality Control Plan for Ocean Waters of California, Chapters II.B., III.B., and IV (Table A). This would require POTWs to provide *more* than primary treatment. While the Agency has not required, as a minimum, either advanced primary treatment (*i.e.*, primary with chemical or polymer addition) or a combination of secondary and primary treatment, EPA like the State of California, considers that primary treatment alone, with its minimal suspended solids removal—even with a source control program—is environmentally inadequate for most municipal marine dischargers. Thus, a section 301(h) applicant seeking a modification based on only primary treatment will bear a particularly heavy burden in demonstrating to EPA that such treatment is sufficient to protect marine waters.

Subparagraph (b)(5). One commenter on EPA's proposed regulations suggested that the regulations be revised to clarify that a sewage sludge discharge would be eligible for a permit. EPA agrees that some clarification concerning the status of sewage sludge under section 301(h) is desirable; however, contrary to the commenter's suggestion, the appropriate clarification, stated in subparagraph (b)(5) of this section, is that EPA will not issue modified permits for the discharge of sewage sludge.

The commenter's suggestion that section 301(h) permits may be issued for the discharge of sewage sludge apparently stems from the June 1977 holding in *Pacific Legal Foundation* v. *Quarles*, 440 F. Supp. 316 (C.D. Cal. 1977), that because sewage sludge could not meet EPA secondary treatment requirements under section 301(b)(1)(B), it could not be discharged into ocean waters. Apparently, the commenter believes that Congress, in amending the Act in December 1977 to allow POTWs to seek to modify secondary treatment requirements for municipal wastewater, also intended to lift its 1972 prohibition on the discharge of sewage sludge by POTWs, by allowing the discharge of any sewage sludge which would meet the requirements of section 301(h).

The legislative history of the Act emphatically negates such an intent, for the following reasons:

(1) Section 301(h) was enacted to relieve ocean dischargers of the cost of building and maintaining land and energy intensive secondary wastewater treatment facilities where they could demonstrate that a less-than-secondary discharge would have no adverse impact on the marine environment. There is no evidence in the legislative history that the provision was enacted to reduce sludge handling or disposal costs for marine dischargers by permitting them to discharge sewage sludge.

(2) As discussed above, Congress under section 201, has prohibited the discharge of untreated sewage. Since sewage sludge is, basically, the material which is removed from raw sewage during the treatment process, allowing a POTW to discharge both treated effluent and sewage sludge, or sewage sludge alone, would be equivalent to allowing it to discharge untreated sewage.

(3) The National Commission on Water Quality Report to Congress, which was the basis for many of the 1977 Amendments to the Act, including section 301(h), speaks solely of municipal "wastewaters", and not municipal sludges, in recommending a secondary treatment modification for coastal dischargers. Similarly, references in the legislative history of section 301(h) to treatment, primary treatment, and the need for toxic pollutant removal, indicate that, in enacting section 301(h), Congress was concerned solely about municipal wastewater, not municipal sludge.

(4) A December 7, 1977 letter from EPA's Assistant Administrator for Water and Waste Management discussing the secondary treatment modification, reprinted in the Congressional Record of the floor debate on the conference bill on the 1977 Amendments, expressly sets forth EPA's understanding that the modification was applicable only to "sewage effluent", not sludge. This interpretation was neither rebutted nor contradicted during Congressional debate.

(5) During various Congressional hearings on secondary treatment modifications for marine dischargers, no witness testified that the 1972 Act should be amended to permit the discharge of sewage sludge, as opposed to less-than-secondary effluent.

(6) Approximately one month before the enactment of section 301(h), Congress amended the Marine Protection, Research and Sanctuaries Act of 1972, 33 U.S.C. 1301 *et seq.*, to prohibit the ocean dumping of sewage sludge which cannot meet EPA ocean dumping criteria—*i.e.*, sewage sludge which contains toxic pollutants, and, as a practical matter, *all* sewage sludge which is currently being dumped in the ocean—after December 31, 1981. It would be incongruous for Congress to ban dumping of such sewage sludge at dumpsites anywhere from twelve to more than one hundred miles from shore, while, at the same time, to allow it to be discharged through outfalls in nearshore coastal waters.

In light of these considerations, the Agency is unable to attribute to Congress, in enacting section 301(h), an intent to reverse its 1972 prohibition on the discharge of sewage sludge by POTWs.

EPA also notes that the marine environment has been significantly degraded in the two EPA sites currently used for the ocean dumping of sewage sludge. The State of California, which, as noted above, has studied extensively the impact of municipal discharges on coastal waters, not only requires 75% removal of solids from such discharges (which would have the practical effect of prohibiting the discharge of sewage sludge), but also expressly bans sewage sludge discharges into ocean waters. 1979 Water Quality Control Plan for Ocean Waters of California Chapter IV (Table A). For these additional reasons, EPA believes that a blanket prohibition against issuing section 301(h) permits for sewage sludge discharges is appropriate.

Subparagraph (b)(6). This new provision has been added to the regulations to clarify the status of State secondary treatment laws, regulations and ordinances under section 301(h). The Act and its legislative history make it clear that while Congress has authorized EPA to modify Federal secondary treatment requirements under section 301(h) of the Act, it has not authorized EPA to modify State secondary treatment requirements. Because a POTW must meet such requirements under section 301(b)(1)(C) of the Act, EPA will not issue a modified permit under this Subpart where a State has adopted a secondary treatment requirement (or more stringent effluent limitations as well as a treatment standard), unless such requirement is less stringent than existing Federal requirements.

Subparagraph (b)(7). This is, essentially, a new provision which prohibits the issuance of a permit in those instances where the applicant's discharge would violate the requirements of a Federal statute other than the Clean Water Act or an Executive Order. The list of potentially applicable statutes included in these regulations is intended to be illustrative, not exhaustive.

Applicants will be required to demonstrate in their section 301(h) applications that, as a minimum, their discharge will comply with the specific

statutes listed. Applicants in States with approved coastal zone management programs should consult Office of Coastal Zone Management Federal consistency regulations (43 FR 10517, March 13, 1978), for information on the proper form of certification and procedures for submission of the certification to the State or its designated coastal zone management agency.

For a discharge which occurs within a designated marine sanctuary, applicants should consult the regulations governing that sanctuary to determine whether the discharge is likely to be consistent with the procedures for certification. Regulations governing the Monitor and Key Largo Coral Reef Marine Sanctuaries are found in 15 CFR 924 and 929, respectively.

The Application Format, which is discussed in Section VI of this preamble, also requires that applicants provide information pertaining to requirements of the Endangered Species Act of 1973, as amended, 16 USC 1531 *et seq.* This information is necessary to assist EPA in determining whether the discharge of effluent pursuant to a modified permit may affect a threatened or endangered species or modify the critical habitat of such species.

Subparagraph (b)(8). This provision emphasizes the basic requirement that a section 301(h) applicant must have submitted a preliminary application and must submit a final application which demonstrates, on its face, that the applicant is entitled to a section 301(h) modified permit. The preliminary and final application requirements are delineated in detail in paragraphs (c) and (d) of this section.

Subparagraph (b)(9). In response to the question whether dischargers which are currently achieving effluent limitations based on secondary treatment may apply for a section 301(h) permit, this provision makes clear that such dischargers are ineligible for modified permits. Extensive discussion in the legislative history emphasizes that section 301(h) is a narrowly drafted provision which allows certain dischargers who meet the statutory criteria to obtain permits which modify the requirements of secondary treatment. There is no indication that Congress intended to enable dischargers who have attained effluent limitations based on secondary treatment to relax their efforts, in clear contradiction of the goals and policies stated in section 101 of the Act.

Former Section 233.11. Existing discharge into marine waters. This section has been deleted from the final regulation, primarily for organizational reasons. In reviewing comments on its proposed criteria under paragraph (a)(2)(ii) of this section, EPA determined that they were largely duplicative of requirements contained in proposed § 233.14(c) (now § 125.61), and therefore unnecessary. As discussed above, the requirements of proposed paragraph (b) have been modified in response to public comment and shifted to new § 125.59. Finally, the "stressed waters" concept of paragraph (a)(2)(ii) has been incorporated in § 125.61. The reason for this shift and the changes made in this concept in response to public comment are discussed in the section-by-section analysis of § 125.61 below.

Section 125.60. Existence and compliance with applicable water quality standards. (formerly § 233.12) Section 301(h)(1) requires, as a prerequisite to EPA granting any modified permit, that the applicant demonstrate that there is a water quality standard for the pollutant for which the modification is requested. This section is meant to assure that the pollutant for which a modification is granted is covered by a specific State water quality standard which adequately regulates such pollutant.

EPA's April 25, 1978, proposed regulations provided that applicants must demonstrate that their less-than-secondary discharge would comply with a State water quality standard for BOD, suspended solids (or their surrogates) and pH. The Agency also proposed to extend State water quality standards for the territorial seas to the contiguous zone for purposes of determining compliance with section 301(h)(1). The latter proposal was designed to overcome an apparent Congressional oversight; under section 303, State water quality standards may be adopted or promulgated only for interior waters and the territorial seas.

Public comment on this section reflected a general misunderstanding of both the statutory requirement and the Agency's proposed regulation. Several commenters, for example, stated it was inappropriate to evaluate modification requests based on BOD, suspended solids and pH, and that, instead, the proper basis for assessment was the impact of the discharge on marine biota. The statute requires both. Analyses of physical and biological factors in revised § 125.62 will be used as the basis for further evaluation of compliance with water quality standards.

Another commenter suggested that section 301(h) applicants should not be required to meet either State water quality standards for BOD, suspended solids (or their surrogates) and pH or any other State water quality standards. EPA disagrees. Although section 301(h) modifies the requirements of section 301(b)(1)(B) of the Act, it does not authorize any relaxation of section 301(b)(1)(C). Section 301(b)(1)(C) requires compliance with any limitation more stringent than that required by section 301(b)(1) (A) and (B), including limitations based on State water quality standards.

Another commenter suggested that only those State water quality standards which assure compliance with section 301(h)(2) should be considered applicable State water quality standards within the meaning of section 301(h)(1). The statute clearly imposes no such requirement. A more reasonable conclusion is that section 301(h)(2) has been included in this provision to assure that public water supplies, recreational interests and the marine environment would be adequately protected in cases where State water quality standards may not adequately protect (or were not adopted to protect) such water uses. Conversely, if States have adopted water quality standards or other water pollution control requirements which are more stringent than those required under section 301(h)(2), dischargers receiving modified permits are still subject to those standards and requirements.

The same commenter claimed that EPA failed to publish information identifying marine water quality standards, as required under section 304(a)(6). In fact, prior to proposal of the section 301(h) regulations, EPA published a notice of availability of its State-by-State list of marine water quality standards under section 304(a)(6) (43 FR 13914, April 3, 1978).

The same commenter also charged that EPA had exceeded its statutory authority by allowing contiguous zone dischargers to demonstrate compliance with section 301(h)(1) by showing that they could meet a State water quality standard for discharges into the territorial seas. He urged that only section 403(c) ocean discharge guidelines could be used to demonstrate compliance with the requirements of section 301(h)(1) in the contiguous zone, where State water quality standards do not apply.

The term "water quality standard" is a term of art in the Act, referring only to *State* water quality standards adopted or promulgated under section 303. It does not refer to other water quality based pollution control requirements, such as section 302 water quality related

effluent limitations, section 403(c) ocean discharge guidelines, or section 404(b) dredged material disposal guidelines. Furthermore, the legislative history of the Act makes it clear that, Congress, in using this statutory term of art in section 301(h), expressly intended to refer only to State water quality standards. H.R. Rep. 95–830, 95th Cong. 1st Sess. at 74, 96 (1977); S. Rep. 95–370, 95th Cong., 1st Sess. 45, 72 (1977). As noted in the April 25, 1978, regulatory preamble (43 FR 17488), EPA's proposed extension of State water quality standards to the contiguous zone for purposes of section 301(h)(1) was designed to resolve an internal inconsistency in the statute which would otherwise have prevented any contiguous zone discharger from qualifying for a section 301(h) modification. This construction is wholly consistent with the intent and purpose of the Act.

One commenter urged that a new paragraph be added to this section requiring applicants to demonstrate the existence of and compliance with a State water quality standard for coliform bacteria. Since fecal coliform bacteria is not a parameter used to define secondary treatment (41 FR 30785, July 28, 1976), such a requirement would not be within the scope of section 301(h)(1). However, if an applicable State water quality standard for coliform bacteria exists, section 301(h) permittees must meet any such standard; EPA issuance of a modified permit does not change the water quality standards requirements.

Section 125.61. Attainment or maintenance of water quality which assures protection of public water supplies, the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities (formerly §§ 233.13 through 233.15.) This section consolidates in a single section the physical, biological, public water supply, recreational, and stressed waters criteria which were formerly contained in §§ 233.13 through 233.15 and 233.11(a)(iv) of EPA's proposed regulations. This organizational revision is intended to clarify the interrelationships between these requirements and eliminate unnecessary duplication of criteria.

Another organizational change has been made in these sections to alleviate apparent confusion during the comment period concerning the difference between regulatory criteria and application requirements, respectively. To clarify the distinction between these two parts of the regulation, the application requirements have been shifted to the application format.

A. *Physical Assessment.* In its April 25, 1978 regulations, EPA proposed to require applicants for a section 301(h) permit to demonstrate that they met the following physical oceanographic criteria:

(i) Initial dilution is of the order achieved by accepted designs of multiport ocean outfalls at 300 or more feet and is sufficient to meet applicable water quality standards necessary for the protection of marine communities in the environment affected by the discharge under the most demanding critical conditions which are likely to exist during the life of any modified permit issued under this part;

(ii) Dilution water is continuously supplied in an amount equal to the wastewater flow times the dilution water (sic);

(iii) Following initial dilution, the partially diluted wastewater is rapidly and permanently carried away from the outfall, nearshore water use areas, and areas of particular biological sensitivity; and

(iv) Water quality at the edge of the zone of initial dilution will protect fish, shellfish, and wildlife.

Inclusion of these physical criteria was intended to reflect Congress' intent that section 301(h) modifications be granted only for those marine waters which, because of their unique hydrological and geological characteristics, provide a high degree of initial dilution, dispersion and transport of wastewater and other physical oceanographic conditions which are conducive to the attainment of water quality which assures protection of public water supplies, recreational activities, and a balanced, indigenous population of shellfish, fish and wildlife. Thus, while compliance with the physical criteria contained in the proposed regulation would not, in and of itself, guarantee protection of valuable water uses and marine life, it would indicate the presence of a water quality regime which is likely to be compatible with the attainment or maintenance of those water quality objectives. For example, if partially diluted wastewater was not carried away from the outfall site, the shoreline and sensitive biological areas, or if initial dilution was insufficient to reduce pollutant concentrations below water quality standards, indigenous populations could well suffer adverse effects.

In EPA's proposed regulations, compliance with the physical criteria was to be based on an assessment of the physical oceanographic conditions in the vicinity of the applicant's outfall and the physical impact of its discharge. This physical assessment requirement served two other major functions in the proposed regulations. First, it identified the geographical area where water quality parameters and biological impacts should be measured (the edge of the "zone of initial dilution") under proposed § 233.14. Second, it provided an analysis of wastewater dispersion and transport which could be used to determine areas of potential public water supply, recreational, and biological impacts under proposed § 233.13.

The physical criteria and physical assessment contained in the regulations promulgated today are essentially unchanged from those in the proposed regulation. EPA has made certain minor changes in the physical criteria and assessment in response to public comment.

1. *Well-designed outfall.* In the proposed regulation, EPA required applicants to demonstrate that the initial dilution of their discharge was on the order of that achieved by accepted designs of multi-port ocean outfalls at 200 feet or more. The purpose of this provision was not to establish a minimum depth or a minimum dilution requirement. Rather, it was intended to require applicants to demonstrate, like the California communities which testified in support of section 301(h), that they had a well-designed outfall and diffuser system which provided initial dilution, dispersion and transport of wastewater appropriate to their discharge volume and site conditions. Because the proposed language apparently created confusion, it has been revised in these final regulations to better convey EPA's intent.

The requirement that an applicant have a "multi-port diffuser has been deleted because in some situations a single-port diffuser may be appropriate. In most waters, however, multiple port diffusers would be necessary to provide appropriate dilution, dispersion and transport of wastewater.

2. *Initial dilution.* The proposed regulation required that applicants demonstrate that their initial dilution, as calculated in the application format, would be sufficient to meet all applicable State water quality standards under the most demanding critical conditions likely to occur during the life of any modified permit. This provision was meant to require each applicant to demonstrate that, in addition to meeting State water quality standards under conditions dictated by the State, it would also meet applicable standards using a conservative dilution model and under assumed worst case conditions. This demonstration will provide additional assurance that physical

conditions at the outfall site are compatible with the attainment and maintenance of recreational water uses, public water supplies, and a balanced, indigenous population.

a. *Critical conditions.* In its proposed regulations, EPA identified the following three factors of principal importance in calculating initial dilution: ambient current, waste flow rate and ambient density stratification. The proposed regulation required applicants to predict initial dilution using a "worst case" assumption for each of these factors — *i.e.*, zero current, maximum waste flow, and highest stratification.

Several commenters objected to the requirement that worst case or extreme critical conditions be used in making initial dilution calculations. One commenter suggested that normal or average conditions be used, as more representative of the day-to-day initial dilution actually achieved. Still other commenters contended that "critical conditions" for each of the three factors were not adequately defined in the proposed regulation.

EPA does not agree that normal or average conditions should be used to calculate initial dilution. Initial dilution is a process of rapid turbulent mixing between wastewater discharged at depth and ambient seawater, which results from the density differential between fresh and saline waters. Because the initial dilution actually achieved at a discharge site is highly variable (depending on discharge characteristics and environmental conditions), measuring compliance with water quality standards on the basis of average initial dilution would mean that those standards might be exceeded 50% of the time. Furthermore, this formulation would be inconsistent with Congress' intent that water uses and marine life be protected under "assumed worst conditions."

EPA does agree, however, that the proposed regulations did not fully define "critical conditions" in a statistical sense, and accordingly has provided a more precise definition of that term in the regulations promulgated today. The final regulations permit the applicant, in calculating both the dilution factor and the zone of initial dilution, to use the worst ten percentile on a representative cumulative frequency distribution of data describing densities and currents. Applicants should not use this value, however, if they are aware of any scientific evidence which indicates that more conservative values should be used to protect designated water uses or a balanced, indigenous population. Nor should this value be used if the density and current data have not been obtained over a sufficient period of time to be representative of conditions which may occur during the life of the permit.

The use of ten percentile values will still result in a conservative prediction of initial dilution—*i.e.*, a value which is exceeded most of the time. Because the regulations require initial dilution values to be based on several factors, each taken at the worst ten percentile, the probability that the predicted initial dilution will be exceeded is likely to be greater than 90%. For this reason, an initial dilution value computed in the manner required by these regulations will provide EPA with a reasonable indication of whether a water quality regime is likely to be compatible with the protection of marine life, recreational interests and public water supplies even during "worst case" environmental conditions. The latter include periods of high wastewater flow, low background water quality, exceptional biological activity, low flushing and extreme high and low density stratification. As a result of comments received, a number of changes have been made with respect to the critical conditions calculation required by these final regulations, including:

i. *Zero current.* EPA's proposed definition of critical conditions required applicants to calculate initial dilution assuming zero current. Several commenters criticized this requirement as too restrictive; others argued that it ignored site-specific conditions, and was therefore meaningless.

EPA has eliminated the zero current assumption in revising the definition of critical conditions. Since currents do affect the initial dilution achieved by a discharge, the Agency believes it is reasonable to allow a modest amount of current (the lowest ten percentile) in predicting initial dilution.

The effect of incorporating currents at the lowest ten percentile on calculations of initial dilution will generally be fairly small. For a site with persistent, strong current, for example, allowing currents at the worst ten percentile could double the initial dilution values calculated with zero current; in cases where the worst ten percentile is in fact zero, it obviously will have no effect. Most values will lie somewhere between these two extremes. As noted above, when coupled with other environmental conditions at the worst ten percentile, this will still result in a conservative prediction of initial dilution.

ii. *Wastewater flow.* The proposed regulations required applicants to calculate initial dilution based on a range of wastewater flows, including minimum, average and maximum flow. This requirement was included to provide an estimate of the range of initial dilution values which might result from variations in flow rates.

In response to comment, EPA has re-examined this proposed requirement and has decided that since the *maximum* flow rate is the most critical flow condition for calculating initial dilution, initial dilution values based on average or minimum flows are not essential to an Agency determination of whether an applicant meets the physical criteria in this section. Accordingly, the final regulation requires that applicants calculate initial dilution using only the maximum flows representative of the worst two to three hours per day.

iii. *Vertical ambient density stratification.* A number of commenters requested that EPA more clearly define the vertical ambient density stratification conditions which will be considered critical for purposes of calculating initial dilution. In response to these comments, EPA has revised the final regulations to clarify that the most adverse stratification is the vertical density distribution which produces the largest difference in density over the height-of-rise of the wastewater plume.

For periods when the vertical density gradient is non-linear, the worst-case stratification may be difficult to estimate. Therefore, applicants should evaluate a substantial amount of data from both the discharge site and the nearby region before selecting a vertical density profile in predicting initial dilution.

(b) *Model for calculating initial dilution.* In its proposed regulations, EPA recommended that a specific mathematical plume model be used to calculate initial dilution. A number of commenters asked whether EPA would permit the use of other models and, if so, how the modeling results would be evaluated in the physical assessment.

There is no single model or set of models which is universally acknowledged as appropriate for making the computations required by these regulations. In recommending the use of a particular model in its proposed regulation, EPA was not suggesting that the Agency would not consider results obtained from using other methods. Rather EPA's intentions were (1) to provide applicants with the assurance that a particular method for computing initial dilution had Agency approval; (2) to establish a standard reference by which other models could be evaluated; and (3) to simplify and expedite EPA's application review process and

decision-making, since the Agency would not need to evaluate plume models, but only the results of those models.

In response to commenters' inquiries about other approved methods for calculating initial dilution, EPA in the section 301(h) Technical Support Document, has recommended two additional plume models. As noted above, applicants are not required to use those methods; if they use another method, however, they must describe that method in detail and demonstrate that the results are in general agreement with those which would be obtained through use of EPA's recommended methods.

(c) *Minimum initial dilution.* A number of commenters suggested that EPA establish a minimum dilution ratio to be met by all applicants (*e.g.* 50:1 or 100:1) in order to reduce what they characterized as the vagueness of this section.

The legislative history of section 301(h) indicates that Congress intended applicants to demonstrate that they would achieve "rapid dispersion (e.g., 45 seconds) of wastewater and wastewater constituents" (*1977 Leg. Hist. at 259*). In its April 25, 1978 regulations, EPA proposed that applicants fulfill this requirement by a showing that they could meet water quality standards after initial dilution—i.e., that wastewater dilution would be sufficiently rapid during the first minute or so of discharge to protect designated water uses.

Although EPA has taken initial dilution into account in developing its section 301(h) regulations, it has been unable to establish—either on the basis of legislative history or scientific considerations—a minimum dilution ratio which would allow all dischargers to meet State water quality standards or otherwise comply with sections 301(h)(2) and 101(a)(2) of the Act. For these reasons, EPA has not included a minimum dilution requirement in these final regulations.

d. *Zone of initial dilution.* In the proposed regulations, EPA required applicants to calculate, in the physical assessment section of the application format, the size, shape and location of the region encompassing all critical initial dilution configurations. This region, which EPA termed the "zone of initial dilution" (ZID), established a boundary beyond which State water quality standards and a balanced, indigenous population must be maintained. EPA received a number of comments on both the concept and method of calculation of the ZID.

One commenter expressed concerns that the calculation of the ZID does not take into account biological conditions within the ZID. EPA agrees that the methods it has proposed for calculating the ZID are strictly based upon physical characteristics of the discharge plume. Factors which affect the biological integrity of the immediate discharge site are not considered in ZID computation (except where State regulations require it).

In order to clarify the question of biological considerations, EPA has added criteria to the biological assessment section of the application format relating to (1) protection of a balanced, indigenous population and migratory pathways, and (2) the absence of ecologically significant bioaccumulation of toxic pollutants within the ZID of discharges into saline estuarine waters. Additional explanation has been provided in the case of ocean discharges, to point out that ecological alterations which might occur within the ZID of such discharges must not constitute major impacts affecting the balanced, indigenous population, nor may such impacts extend beyond the ZID. Therefore, applicants should be aware that while size and shape are important factors in the physical assessment of the ZID, biological conditions occurring within or beyond the ZID will be decisive in determining whether or not an application is approved.

In response to another commenter who suggested that any proposed ZID should conform to State requirements, the final regulations now require that the proposed ZID be no larger than that allowed by State regulations on mixing zones or initial dilution zones.

A number of commenters also suggested that EPA establish a maximum size for the zone of initial dilution. As noted above, the zone of initial dilution can only be calculated on a case-by-case basis, considering site-specific conditions, if it is to be useful to EPA in evaluating section 301(h) applications.

One commenter suggested that unless EPA established a maximum zone of initial dilution, dischargers, in an attempt to maximize the use of a zone of initial dilution in order to assure compliance with water quality standards, would build enormous diffuser systems which would potentially disrupt large areas of the marine environment. As a practical matter, economics, maintenance problems, and physical stability of the outfall will place practical limits on length of both the pipeline and the diffuser system. The requirements discussed in section 2.a.(ii), above, and required by § 125.61 of the regulations should similarly remove any incentive to create an abnormally large outfall and diffuser system simply to maximize the use of a ZID for purposes of these regulations.

In response to public comment, the Agency has clarified how EPA-recommended methods are to be used in calculating the ZID and has added an alternative, simplified method for computing the size and shape of the zone. This latter method will yield a technically sound estimate of the size of the zone of initial dilution which would otherwise be obtained by making the detailed calculations which are set forth in the application format. This alternative will simplify the application requirements for those POTWs which choose not to make the detailed calculations. However, applicants should note that in some cases (e.g., where there are strong, persistent currents), the simplified method may result in a smaller estimated ZID than that which would be arrived at through the detailed calculations. This simplified method sets the width of the ZID as approximately twice the depth of the water plus the width of the diffuser, and the length of the ZID as twice the depth plus the length of the diffuser.

3. *Wastewater/dilution water exchange.* EPA has made two changes in the proposed requirement that dilution water be "continuously supplied in an amount equal to the wastewater flow times the dilution water." First, the term "dilution water" in the proposed regulation should have read "dilution factor." This has been corrected in the final regulation. (See § 125.61(a)(1)(iii)). Second, because it is virtually impossible to demonstrate, as a statistical matter, that dilution water will be "continuously" supplied in the volumes specified, the final regulation has been revised to require applicants to show that the required wastewater/dilution water exchange will be achieved for a very large percentage of time.

4. *Transport and dispersion.* This section has been revised to clarify that applicants must demonstrate that solids, as well as other wastewater constituents, will be transported away from water use and biologically sensitive areas.

Some commenters questioned the level of detail and purpose of the questions in the physical assessment relating to this requirement. In response, EPA has made minor revisions to

provide more flexibility in data requirements.

5. *Protection of fish, shellfish and wildlife.* Because proposed § 233.14(c)(1)(iv) contained requirements which overlapped with those in other sections of the regulations, this section has been deleted from the final regulations.

6. *Other issues.* a. *Minimum depth limitation.* A number of commenters suggested that EPA establish a minimum depth criterion for ocean dischargers to reflect the fact that section 301(h) limits the availability of modified permits to dischargers into "deep" ocean waters (or other waters with hydrological and geological characteristics which are necessary to "allow compliance with sections 301(h)(2) and 101(a)(2)."

There is no minimum depth limitation, short of a very shallow one, which would conclusively preclude the attainment of these statutory objectives in every case. For example, a POTW with a low volume, essentially domestic flow might be able to meet these objectives in fifty feet of swiftly moving, well flushed ocean waters; for a larger discharger, two hundred feet might be required. As a result, EPA has been unable to establish a scientifically defensible minimum depth limitation for inclusion in the final regulations.

One commenter suggested that the term "deep" should be given a significance apart from designating ocean waters in which the requirements of sections 301(h)(2) and 101(a)(2) could be achieved. This commenter apparently believes that Congress had a specific minimum depth limitation in mind when it enacted section 301(h).

The only depth figure which appears in the legislative history of section 301(h) is "two hundred feet", *(see, e.g.,* 1977 Leg. Hist. at 259 and 322), the approximate depth of the outfalls of the California POTWs which testified in support of a modification of secondary treatment requirements for marine dischargers. However, there is no evidence that Congress intended this figure to establish a minimum depth for ocean discharges. Furthermore, such a limitation would automatically preclude all but approximately half a dozen ocean dischargers from even being considered for a modification.

Moreover, any minimum depth requirement which was not related to the objectives of sections 301(h)(2) and 101(a)(2) would lead to absurd results. For example, it would require EPA to deny a modified permit to POTWs which could demonstrate that their discharges would fully protect designated water user and marine life simply because they were not located in the requisite depth of water. POTWs with outfalls located in waters which were a few feet short of the requirement would be barred at the threshold even though, all other factors being equal, the depth differential would have no environmental significance. Some dischargers would have to relocate their outfalls, at substantial expense, even though the additional depth, *per se,* would not afford any additional environmental benefits. It is unlikely that Congress could have intended such results. Furthermore, there is considerable scientific knowledge to suggest that depths greatly in excess of two hundred feet may be unsatisfactory for purposes of sections 301(h)(2) and 101(a)(2), because they exhibit geophysical features which prevent adequate dispersion and transport of wastewater following initial dilution.

b. *Other requirements.* One commenter suggested that EPA (1) identify in its regulations those specific geological or hydrological conditions known to prevent effective wastewater dilution, transport, and dispersion (e.g., sills, fjords) and (2) prohibit modified discharges into waters with these characteristics. EPA has not adopted this approach because the effect of these various conditions—which are discussed in the Technical Support Document—must be determined on a case-by-case basis. Where such characteristics do prevent circulation and flushing adequate to protect designated water uses and marine life, the discharge will be unable to meet the requirements of this section and no modified permit will be granted.

B. *Public Water Supply Impact Assessment.* EPA's proposed regulations also required applicants to demonstrate that their discharge would not adversely affect public water supplies, based on an assessment of the effect of the discharge on desalinization plants with intakes located within a ten mile radius of the applicant's outfall.

Because of the limited applicability of this requirement, it was the subject of very few comments. One commenter did question EPA's use of a ten mile limit for identifying potential impacts on public water supplies. Although EPA believes that, as a general matter, a discharge will have no impact on public water supplies outside this limit, it is possible that under some hydrological or meteorological circumstances, wastewater components could be identified as far as ten miles from the discharge. Accordingly, in the final regulations published today, EPA is requiring applicants to assess the impact of their discharge on public water supplies based on the analysis of actual or projected wastewater transport and dispersion required by the physical assessment.

Except for this modification, and a few other clarifying changes, this section is essentially unchanged from the way it appeared in the proposed regulations.

C. *Biological Assessment.* Section 233.14(d) of EPA's proposed regulations required applicants to demonstrate the existence of a balanced, indigenous population of shellfish, fish, and wildlife, as defined in proposed § 233.1(h), immediately beyond the boundary of the zone of initial dilution. This demonstration was to be made by means of a biological assessment, consisting of a biological impact questionnaire supported by a thorough summary of biological conditions at the applicant's existing outfall site and appropriate control sites.

The showing that less than secondary treatment will not interfere with the attainment or maintenance of a balanced indigenous population is perhaps the most important and most difficult requirement under section 301(h)(2). EPA received extensive comments on this section, especially its definition of balanced, indigenous population, and the biological assessment requirement. In response to comment, the definition of balanced, indigenous population has been clarified; impact criteria have been established for the area within the ZID; and the questionnaire and biological conditions summary have been expanded and clarified. These changes, as well as EPA's responses to other comments, are discussed below.

1. *Definition of "balanced, indigenous population".* In its April 25, 1978 regulations, EPA proposed that an applicant demonstrate the presence of a balanced, indigenous population based on evidence indicating that the structure, composition and function of marine communities near the applicant's outfall were comparable to (1) those of healthy marine communities existing in nearby unpolluted waters; or (2) those of communities reasonably expected to repopulate the polluted area from unpolluted areas if the source of pollution were removed.

The first part of this definition reflected Congress' expectation that the existence or non-existence of a balanced, indigenous population would be demonstrated based on "comparative ecosystems . . . in nearby waters (and) evidence . . . (that) the ecosystems which exist in the areas of these outfalls

are identical to those which live in unpolluted environments" (1977 Leg. Hist. at 448). The second part of the definition incorporated Congress' intent that:

> . . . the interim water quality standards be that condition of aquatic life which existed in the absence of pollution . . . Restoration of aquatic ecosystems which existed prior to the introduction of pollution from man's activities is an important element of the restoration and maintenance of the biological, physical and chemical integrity of receiving waters. *(Id.)*

Although EPA received numerous comments on its proposed definition, none warranted substantive revision of the proposed regulations. Although the definition of balanced, indigenous population has been reworded for purposes of clarity in these final regulations, the content remains the same.

A number of commenters suggested that the balanced, indigenous population test be based on a comparison between the marine populations which would exist in the vicinity of the applicant's modified discharge and a secondary discharge, respectively. The Act clearly does not require such a comparison and the legislative history indicates that Congress did not intend such a comparison. *See e.g.*, 1977 *Leg. Hist.* at 448, 1052.

Other commenters objected to the requirement that the populations at the outfall site be measured against populations existing in an unpolluted environment. As discussed in section F, below, where applicants discharge into waters where adverse biological impacts are caused by sources of pollution other than the applicant's discharge, EPA believes it is appropriate to compare marine communities at the outfall site with those at a reference site under comparable environmental (and pollution conditions), but absent the applicant's discharge, to determine whether the applicant's discharge in any way contributes to the adverse impact. In those situations where the applicant's discharge is the sole source of the impact, however, the legislative history is clear that the applicant must demonstrate that "the ecosystems which exist in the areas of these outfalls are identical to those which live in unpolluted environments."

One commenter urged EPA to establish a deadline by which repopulation or re-establishment of natural communities would have to occur following the improvement of an applicant's discharge. EPA believes that existing data are inadequate to specify a time frame which would be appropriate for all discharges.

Still another commenter suggested that marine ecosystems at the outfall site be compared not to ecosystems which "might have existed since the beginning of time" but to ecosystems of more recent origin. Although no specific time period was suggested, the commenter apparently wanted EPA to date a balanced, indigenous population from some point in time after commencement of an applicant's discharge. As noted above, this would be contrary to Congress' intent that a balanced, indigenous population date from "prior to the introduction of pollution from man's activities."

2. *Impacts within the zone of initial dilution.* Neither section 301(h)(2) nor its legislative history specifies the location at which an applicant must demonstrate the existence of a balanced, indigenous population of marine life. If EPA had required that the demonstration were required to be made at the point of discharge, then it would be unlikely that any discharger could qualify for a modified permit. Therefore, in its April 25, 1978, regulations, EPA proposed to establish an area immediately surrounding the discharge in which some adverse biological impact would be allowable, but beyond which a balanced, indigenous population must be maintained. Because section 301(h) was enacted on the premise that the thorough flushing and dilution of wastewater provided by certain marine waters would allow assimilation of less-than-secondary discharges without adverse biological impact, the area chosen by EPA was the zone of initial dilution, that area of incomplete mixing betwsen effluent and seawater.

A number of commenters criticized EPA for failing to establish any controls on biological impacts within the zone of initial dilution, no matter how severe. EPA agrees that although a certain impact within the zone of initial dilution in the case of ocean discharges is inevitable, it should not be extreme or extend beyond the ZID. For saline estuarine discharges, balanced, indigenous populations and migratory pathways, must be maintained both within and beyond the zone of initial dilution.

In the final regulations promulgated today, therefore, EPA is requiring all applicants to demonstrate that their discharge does not cause major adverse biological impacts within the ZID, particularly impacts which are likely to affect marine life outside the ZID. Examples of unacceptable impacts would include, but are not limited to, the destruction of distinctive habitats of limited distribution (*e.g.*, coral reefs, nursery and spawning grounds, and shellfish, grass and kelp beds); the presence of disease epicenters; and the occurrence of phytoplankton blooms that result in serious oxygen depletion in the water column, causing the death of fish, shellfish or other marine organisms, or resulting in the accumulation of toxins in commercially harvested fish and shellfish.

EPA does not believe that the restrictions applicable to ocean dischargers will be sufficient to adequately protect estuarine communities. Estuaries are semi-enclosed, highly productive ecosystems subject to finite limitations on wastewater exchange and dilution, which serve as spawning and nursery grounds to numerous species of fish and shellfish. Due to their uniqueness estuaries are considered a resource of relatively greater biological significance than open coastal waters. In fact, commenting on EPA's proposed regulations, the National Oceanic and Atmospheric Administration (NOAA) stated that it knew of no coastal estuarine waters where it could confidently predict that a modification of secondary treatment requirements would not cause serious adverse impact.

For these reasons, EPA is requiring estuarine dischargers to demonstrate not only that there will be no extreme impacts within the zone of initial dilution, but also that both the area within the zone of initial dilution and the estuarine system as a whole will be only minimally impacted by their discharge. Three criteria must be met. First, the health, structure and function of the benthic community within the ZID must not differ substantially from that outside the ZID. Second, the ZID must not interfere with migratory pathways. Finally, toxic pollutants and pesticides must not accumulate in either sediments or biota within the ZID at levels which would cause adverse impacts.

EPA expects that only dischargers of predominately domestic wastes will be able to meet these criteria.

3. *Impacts outside the zone of initial dilution.* In its proposed regulations, EPA required applicants to establish the existence of a balanced, indigenous population at the "edge" of the ZID. Several commenters were apparently confused by this requirement.

In using the term "edge", EPA did not intend to suggest that applicants should restrict their biological assessment to a narrow line separating the interior of the ZID from the exterior. Since marine communities inhabit a much broader

area than the line marking the perimeter of the ZID, such a definition would obviously preclude a thorough examination of all aspects of the ecosystem.

Rather, it was EPA's intent to have applicants assess biological impacts beginning immediately outside the ZID, and extending as far as necessary to establish that a balanced, indigenous population existed everywhere outside the ZID.

As discussed in the section-by-section analysis of the public water supply impact assessment, above, and the recreational assessment, below, a number of commenters correctly noted that, as a result of wastewater dispersion and transport, a marine discharge may have adverse biological impacts far beyond the edge of the ZID. The final regulation published today has been clarified to require applicants to demonstrate that a balanced, indigenous population will be maintained not only immediately beyond the ZID, but also in any other areas outside the ZID affected or potentially affected by the applicant's discharge. Thus, where an applicant's discharge permits the maintenance of a balanced, indigenous population immediately beyond the boundary of the ZID, but adversely impacts an area at some greater distance, the applicant would be denied a modified permit under these final regulations.

One commenter suggested that applicants be required to measure biological impacts not at the edge of the ZID but at a point five hundred meters from the edge. Because no justification was given for using this distance, and because it would have the effect of substantially increasing the area in which adverse impact would be permitted, EPA has rejected this approach.

4. *Predicting biological impacts.* EPA received numerous comments on the issue of whether the impact of proposed outfall improvements on marine communities could be accurately predicted, and, if so, how much and what type of data applicants must submit in order to carry their burden of proof under section 301(h).

Some commenters felt that it was possible to make a reasonable predictive judgment about the biological impact of a future discharge. One stated that near-field and far-field dispersion models would predict initial dilution under any modified discharge condition and that an assessment of probable environmental effects could be based on these modeling data. Another suggested that "reasonable projections of actual impacts (could be extrapolated from the) large body of actual field data on outfalls of various capabilities and geographic areas." Other commenters, however, seriously questioned whether such predictions could be made with the degree of accuracy and certainty required by statute, and noted that, in any event, they would be less reliable than analyses of existing effects.

On the issue of data requirements and burden of proof, some commenters contended that applicants projecting future biological impacts should bear no greater burden of proof than applicants describing existing effects. Others suggested that applicants seeking a modified permit on the basis of proposed outfall improvements should be required only to make a general showing that adverse impact was improbable or unlikely. Still others observed that the applicant's burden of proof in these situations would be extraordinarily difficult.

EPA agrees that while the burden of proof for all dischargers is the same—i.e., all must demonstrate to EPA's satisfaction that they meet the criteria set forth in this section—the uncertainties inherent in predictive analyses will make it more difficult for POTWs seeking a modified permit based on outfall improvements to sustain this burden. As discussed in Section II.A.2., above, EPA believes that it is generally extremely difficult to make accurate predictive analyses of discharge impact.

Applicants seeking a modified permit based on treatment or outfall modifications should, therefore, be prepared to submit substantial additional data to compensate for the lack of direct, empirical evidence of impact (see section E below). As a general matter, this will require more than general extrapolations and comparisons, since the Act clearly requires detailed, site-specific analyses of biological impact.

5. *Bioaccumulation.* EPA received a number of comments urging that, since bioaccumulation might not be detected in field surveys, the Agency's regulations should require applicants to submit evidence that toxic pollutants and pesticides are not bioaccumulating in biota in the vicinity of their discharge. Some commenters urged simply that some type of bioaccumulation data be supplied. Others were more specific, suggesting that applicants be required to analyze representative aquatic organisms at the discharge site for tissue concentrations of toxic pollutants or for the levels of detoxifying enzyme systems.

In response to these comments, EPA has included a question in the marine biological assessment questionnaire requiring the applicant to determine if there is ". . . an abnormal body burden of any toxic material in marine organisms collected within or beyond the zone of initial dilution" (Question 7–8). The data necessary to support the applicant's response to this question will vary with the composition of the applicant's effluent. Where the chemical analysis required by section 125.64 indicates that the applicant's discharge contains no toxic pollutants or pesticides, or where the concentrations and mass emissions of such substances are extremely low, local environmental agencies should be contacted to ascertain whether bioaccumulation studies have been made for that biogeographic area and whether such studies have revealed any accumulation of toxic materials in the tissues of marine organisms. If bioaccumulation studies exist, the applicant should provide copies with its application, and include a comparison of the study populations with those present within and beyond the ZID. If no bioaccumulation studies exist, the applicant should provide a list of all laboratories, departments, and agencies which were contacted.

If the chemical assessment of the applicant's waste stream indicates that toxic materials are present, the applicant will be expected to conduct tissue analyses of marine organisms at the outfall site as part of its monitoring program if a modified permit is granted. The organisms should be examined for toxic pollutants and pesticides demonstrated to be present in the applicant's waste stream.

Given the extensive data already required in the biological assessment, combined with the lack of available standardized procedures for analysis of detoxifying enzyme systems, EPA does not find it necessary to require enzyme data, as suggested by one commenter.

EPA also disagrees with the implicit recommendation by certain commenters that all applicants, regardless of the characteristics of individual waste streams, be required to perform laboratory tissue analyses for all 65 toxic substances. Accordingly, EPA sees very little to be gained in requiring applicants to conduct tissue analyses for pollutants which do not show up in the chemical analysis. However, for applicants receiving modified permits, the biomonitoring program may include a requirement for tissue analysis.

Section 301(h) requires that applicants must establish a system for monitoring

the impact of their discharge on a representative sample of aquatic biota, to the extent practicable. Applicants who claim that in situ bioassays are not feasible must provide an alternate method of meeting this requirement.

6. *Use of bioassays.* In its proposed regulations, EPA required applicants to conduct a toxicity bioassay (96-hour LC_{50}) as part of a general wastewater characterization (43 FR 17506). During the comment period EPA received several inquiries as to how the results of the bioassay would be interpreted since its function in the decisionmaking process was not identified in the proposed regulation. Another commenter stated that "the only feasible way to determine the impact of pollutants on biota at this time is by the bioassay technique using a 96-hour TLM on a representative number of organisms."

In response to these comments, and suggestions that the bioassays be used for anything from an evaluative factor to a pass/fail criterion, EPA has re-examined its proposed bioassay requirements. There are two basic problems associated with running and interpreting bioassays on municipal waste discharged to the ocean, namely, conducting bioassays with fresh water effluents and marine organisms and correlating laboratory bioassay results with field impacts. EPA has developed procedures, using salts to adjust the salinity of the wastewater, which make it possible to run a bioassay which will accurately measure the acute toxicity of the wastewater. Nevertheless, EPA does not have sufficient information at the present time to correlate a particular laboratory bioassay result with the existence or non-existence of a balanced, indigenous population either within or immediately beyond the ZID. For this reason, and because other biological data requirements adequately provide the basis for evaluating ecological effects, the requirement that applicants run a 96-hour LC_{50} has been deleted from the wastewater characterization.

7. *Other issues.* Numerous commenters criticized the data required by EPA for the biological assessment as unnecessarily elaborate. One commenter contended that no biological assessment should be required where the applicant demonstrates compliance with applicable water quality standards. Other commenters characterized the proposed biological requirements as "extend(ing) beyond the realm of the standard outfall monitoring (and as) more relevant to a major research project." These commenters proposed that biological assessment of outfall effects be limited to: (1) acute data (fish kills, algae blooms), (2) chronic data (disease, abnormalities and bioaccumulation of toxics), and (3) an evaluation of "seasonal patterns of distributions and abundance."

Limiting the biological assessment to a few biological parameters would not provide the information necessary to make a section 301(h) determination. The requirement does "extend beyond the realm of standard outfall monitoring" as this is necessary to meet the requirements of section 301(h)(2). Compliance with applicable State water quality standards is essential and required by the statute, but Congress clearly intended applicants to make additional, direct, site-specific demonstrations under section 301(h)(2) of the existence of a balanced, indigenous population of shellfish, fish and wildlife.

D. *Recreational Impact Assessment.* In its proposed regulations implementing section 301(h)(2), EPA required an applicant to demonstrate, based on a detailed analysis of the impact of its discharge on existing and potential recreational activities within a three-mile radius of the outfall, that the discharge would permit the attainment or maintenance of water quality which would allow recreational activities, and comply with State water quality standards designed to protect recreational water uses.

Two changes have been made in this section in response to public comment.

1. *Impact area.* Several commenters questioned EPA's proposed requirement that recreational impacts be analyzed within a three-mile radius of the outfall. One commenter recommended that "this be reduced to that distance required to reduce pollutants to ambient receiving water conditions by mixing and dilution." Another suggested that the three (3) mile radius "is far too short, given the ability of finfish to be contaminated by an outfall and then travel or migrate far more than three miles from the outfall in a matter of hours" and urged that consideration of recreational fisheries with a radius of at least ten (10) miles be required.

Although under most circumstances the Agency would not anticipate adverse recreational impact beyond a three-mile radius, the limitation is somewhat arbitrary since adverse recreational impacts may occur in some circumstances beyond the three-mile boundary. Accordingly, in these final regulations, EPA has eliminated the requirement that applicants evaluate recreational impacts within a uniform geographical area, and instead will require applicants to analyze recreational impacts within the area of potential discharge impact, as identified in the analysis of wastewater dispersion and transport required by the physical assessment. This should provide a much better indicator of the actual areas where an applicant's discharge is likely to have an effect on recreational water uses.

2. *Federal, State and local restrictions on recreational activities.* EPA received conflicting comments on its proposed requirement that an applicant include in its recreational activities analysis a discussion of State, Federal or local restrictions on shellfishing and other recreational activities in the vicinity of its outfall. Some commenters felt that such restrictions (particularly shellfish closures) are routinely imposed on all sewage outfalls, irrespective of the degree of wastewater treatment provided, and should not be deemed a basis for denying a modification.

EPA agrees that it makes little sense to deny a modified permit on the basis of a shellfish closure, swimming ban or other recreational restriction which is imposed on an applicant's outfall simply because it is discharging municipal wastewater. However, there may be some circumstances where the level of treatment does affect the nature of the restriction. For example, a shellfish closure area for a raw discharge may be much larger than that imposed around a secondary discharge. In these cases, EPA believes it is appropriate to conclude that recreational restrictions are attributable to the applicant's level of treatment, that its less-than-secondary discharge has an adverse impact on recreational activities, and therefore that no modified permit should be granted. The proposed regulations have been revised to reflect this concept.

3. *Other issues.* Several commenters suggested that an applicant should not be required to submit a detailed inventory of recreational activities unless its discharge would violate State water quality standards. Since no modification will be issued for a discharge which does (or will) not comply with State water quality standards, the suggested approach makes little sense. Additionally, since the Act requires applicants to demonstrate that they will meet the requirements of section 301(a) *in addition to* water quality standards under section 301(b)(1)(C), Congress apparently meant that mere demonstration of compliance with State water quality standards would not

necessarily be sufficient to show compliance with sections 301(h)(2) and 102(a)(2). Accordingly, in the final regulations EPA has retained the requirement that all dischargers provide an in-depth analysis of the impact of their discharge on recreational activities.

E. *Additional application requirements for improved discharges.* As discussed in some detail in section II.A.2., above, these final regulations have been revised to allow POTWs to apply for a modified permit based on the projected impact of their discharge after completion of well-planned improvements in their outfall/diffuser system, in wastewater treatment, or both.

The regulations assume that proposed improvements are designed to alleviate adverse physical, recreational or biological impacts at the applicant's current site which would preclude granting a modified permit for its current discharge. They require applicants to (1) document those adverse impacts by completing a physical, biological, public water supply and recreational impact assessment for their current discharge; (2) provide final plans for all improvements and computations for any changes in discharge volume, flow rates, initial dilution or other factors which will result from such improvements and are likely to affect the impact of their discharge; and (3) demonstrate in detail how the completion of improvements will eliminate all identified impacts caused by their current discharge and assure compliance with the physical, biological, public water supply and recreational impact criteria contained in this section.

This analysis, however, should be tailored to site-specific conditions. Thus, for example, where natural conditions preclude certain recreational activities (*e.g.*, extremely cold water temperature limiting swimming and diving), the applicant need supply only a brief explanation under this section. On the other hand, where a discharge is located in an area currently used for, or conducive to, recreational activities, a much more extensive demonstration will be required.

One commenter proposed that the demonstration required under this section be based on a comparison of the impact of the applicant's less-than-secondary discharge with a secondary effluent. EPA disagrees. Consistent with the Act, its legislative history, and other sections of these regulations, the regulations promulgated today, like the proposed regulations, require the assessment under section 301(h)(2) to be made on the basis of the actual or projected impact of the applicant's discharge, not in comparision to the impact of a secondary discharge.

Where the improvements proposed by an applicant include outfall relocation, it should also prepare a physical, biological, public water supply and recreational assessment on its relocation site as well as its current site.

F. *Stressed waters.* In § 233.11(a)(iv) of its April 25, 1978 proposal, EPA proposed to prohibit modified discharges into marine waters which were already stressed. The theory was that where waters are already stressed by pollution, the need is for additional control, not less, for therefore, there should be no relaxation of secondary treatment requirements in such waters.

EPA received numerous comments on this section. Although several commenters supported EPA's approach, many criticized it as vague and illegal. Still other commenters charged that it was unfair because it could penalize applicants for pollution from sources over which they had no control.

In response to comment, EPA has fully re-evaluated its proposed regulation and its approach to the problem of stressed waters. The Agency has concluded that since the primary measurable indicator of whether waters are environmentally stressed is their inability to support a balanced, indigenous population, the existence or non-existence of stressed water conditions would be reflected in the biological assessment required by this section.

This approach does not, however, respond to the most difficult issue raised during the comment period—whether a modification should be issued for a discharge into waters which do not support a balanced, indigenous population, consistent with the objectives of section 301(h)(2) and 101(a)(2), as a result of sources of human perturbation other than the applicant's discharge (*e.g.*, other municipal and industrial outfalls and non-point sources of pollution). EPA agrees that since section 301(h) focuses on the effect of the applicant's discharge, as opposed to other human perturbations, a modified permit should not be denied simply because an applicant discharges into polluted waters. However, where the applicant's discharge contributes to, increases, or perpetuates the pollution and associated adverse impacts on recreational activities or marine like, or where it would contribute to such impacts if the levels of pollution from other sources were increased, it "jeopardize(s) the goal of attaining water quality which will provide for the protection (and) propagation of fish, shellfish and wildlife and allow recreation in and on the water". (1977 Leg. Hist. at 1052). Similarly, where the applicant's discharge would retard the recovery of marine life and water quality if the levels of pollution were reduced, it interferes with the "(r)estoration of aquatic ecosystems which existed prior to the introduction of pollution from man's activities. . .an essential aspect of assuring that future generations will have an adequate supply of basic life support resources." (1977 Leg. Hist. at 448). In such circumstances, the Act prohibits the issuance of a modified permit. These restrictions have been incorporated in paragraph (f) of § 125.61 of these regulations.

As a practical matter, it will be extremely difficult for most applicants discharging into stressed waters to demonstrate that their discharge will meet the requirements of section 125.61. As a factual matter, the discharge of additional pollutants into an already polluted marine environment virtually always increases or contributes to adverse impact; it is extremely difficult, as a practical matter, to demonstrate that it does not. Where, for example, an applicant claims that the failure to attain or maintain a balanced, indigenous population is due to pollution from other sources, it must (1) document the differences between the marine communities that currently exist in the vicinity of its outfall and the balanced, indigenous population that would exist in the absence of all sources of pollution; (2) demonstrate that its discharge is not contributing to the present biological degradation associated with stressed waters by comparing the marine populations at the outfall site with those at a similarly stressed control site (absent its discharge); and (3) demonstrate that its discharge will not contribute to further degradation of the biota if the level of pollution from other sources increases, and will not retard the recovery of the biota if the level of pollution from other sources decreases. This latter showing, which requires a predictive analysis of biological responses to future pollution, is so difficult that EPA is unable to provide specific guidance or suggested analytical procedures for making this demonstration.

In summary, while these final regulations do not prohibit the issuance of permits into stressed waters, and the criteria in § 233.11 of the proposed regulations have been deleted, the final regulations do require the applicant to make additional showings and may

require additional monitoring tasks regarding biological conditions if a permit is requested for discharge into stressed waters.

Section 125.62 Establishment of a monitoring system. (formerly § 233.16). EPA has adjusted it final regulations on monitoring to take into account improved discharges, new toxic control program requirements, and the approach for evaluating compliance with the balanced, indigenous population requirements. Plans for a monitoring program, along with a demonstration that it has the economic and technical resources and the personnel to implement the proposed programs immediately upon issuance of a section 301(h) permit, must accompany the application. Each monitoring program will depend on the specific site and discharge in question, and may be required to include: 1) field studies of the structure and function of the macrofaunal benthos and other biological communities that may be affected by the discharge; 2) if toxic pollutants or pesticides are identified in the applicant's discharge, in situ bioassays with caged organisms to establish effects on the survival and well-being of test specimens, and bioaccumulation of toxic substances; 3) studies of discharge effects on nearby fishery resources; 4) studies on biological effects of sediments heavily contaminated with toxic substances including pesticides; 5) water quality monitoring programs to establish compliance with applicable State water quality standards at the boundary of the zone of initial dilution and elsewhere; 6) chemical analyses of an applicant's discharge in order to measure effectiveness of its program in reducing toxic pollutants, including pesticides, in its discharge and to guide biological monitoring efforts.

Monitoring programs will vary in complexity depending on characteristics of the discharge and sensitivity of the receiving waters. For example, an applicant discharging into an estuary will be required to develop a more complex monitoring program, with more frequent sampling, than an applicant with a comparable discharge into the ocean. Though the regulations identify features common to all of the monitoring programs, the specific test procedures, organisms and sampling intervals must be chosen by applicants as appropriate for a particular waste stream and discharge site. EPA will review the monitoring program proposed in the application and determine whether it is adequate to assess discharge effects on the indigenous population. If the proposed program is not adequate, EPA will recommend necessary changes or additional procedures which an applicant shall adopt into its monitoring program.

To evaluate the actual impact of a discharge on an indigenous population, applicants must design field studies of the outfall area. These field studies must: (1) produce data which indicate whether or not the biological communities in the area of the outfall are remaining healthy and balanced, and (2) monitor specifically any community reported to be perturbed at the time of application.

To monitor the health and balance of indigenous populations, field studies must address the same parameters as the biological conditions summary. In this regard, the structure and function of the macrofaunal benthos must be monitored by all applicants. As appropriate, the following communities should also be monitored: demersal and pelagic fishes, macrofaunal benthos, phytoplankton, zooplankton, macroalgae and intertidal assemblages. Characteristics of communities that should be monitored include species composition, abundance, dominance, diversity and spatial stratification, particularly along depth contours. Changes in size frequencies, reproductive condition or incidence of disease in populations also should be reported. Sampling must be sufficiently frequent to detect changes in community composition, structure or function, especially where perturbed situations are known to exist. In the latter case, increased sampling may be in order.

Proposals for monitoring programs should include a rationale for the choice of sampling and analytical methods; the selection of test species used for *in situ* bioassays and bioaccumulation studies; the selection of biological communities to be monitored in the field; the location and frequency of field surveys, bioaccumulation studies, and bioassays; and the methods to be used in monitoring fishery resources near the outfall. The section 301(h) Technical Support Document contains additional guidance for the design of the biomonitoring program.

If data generated by field studies indicate that disruption of the balanced, indigenous population has resulted from discharge of less than secondary treated effluent, the Agency will determine whether an immediate remedy is possible through increased pretreatment, source control or other means. If not, or if there is doubt that increased control short of secondary treatment would alleviate the situation, the Agency must conclude that significant disruption of the population has occurred, and the modification will be revoked. Where the disruption can be relieved through additional controls, the permit holder will be required to design and implement these controls and to notify EPA of a time interval within which the disruption will cease. The permit holder also should increase monitoring activities. If at the end of the time interval the disruption still exists, the section 301(h) modification will be revoked.

The majority of comments received by EPA concerned the implementation date for biological monitoring and the details required for effective biological monitoring of various discharges. Commenters recommended a range of dates for implementation of monitoring programs. One commenter stated that "data from an EPA approved monitoring system must be available from at least five years" prior to the application. Another commenter suggested that monitoring programs be in effect by September 24, 1978. Another stated that a "firm commitment" to establish a monitoring system should be sufficient at time of application.

The commenter recommending five years of monitoring data as a prerequisite to any Agency decision on an application described several functions served by historical data. In the case of currently operating outfalls, such monitoring data would reveal actual impacts of the discharge on the marine environment. For new (and presumably improved) outfalls, past monitoring data would provide information about the water's flow characteristics, temperature and pH ranges and native marine life. EPA agrees that this type of information would be helpful in section 301(h) modification decisions but recognizes that such an extensive data base will not be available in many cases. Some of this information will be contained in the application in the Marine Biological Questionnaire, Biological Conditions Summary, and chemical assessment. This past data should be in a form suitable for scientific comparisons to data from planned studies.

Applicants need not install monitoring programs at the time of application since, for the purposes of section 301(h) monitoring, data are relevant only to those applicants actually receiving a section 301(h) modification. However, monitoring of the effects of modified secondary treatment requirements on the marine ecosystem must begin as soon as practicable after issuance of a section 301(h) modified permit. The mere

commitment to develop a monitoring program is insufficient to fulfill the statutory requirement for the demonstration that a monitoring program is established at the time of application.

EPA expects that the level of detail of the biological monitoring programs will reflect the specific nature of the applicant's discharge and the characteristics of the receiving marine ecosystem. Monitoring will be "continuous" in the sense that sampling will be conducted at regular intervals over the life of the project as dictated by the specific characteristics of the discharge and outfall site.

Several commenters suggested that a standardized monitoring program be conducted by all applicants at predefined intervals. EPA believes that so much variation exists among cases that adequate standardized monitoring requirements cannot be devised. Program design will be unique to each case.

Section 125.63. Effect of discharge on other point and nonpoint sources. (formerly § 233.17). EPA received two comments on this section. One stated that the regulation was vague. The other noted that the requirement that letters be obtained from agencies which have authority to *advise* in the *establishment*, as opposed to *establishing*, wasteload allocations would add additional delay and cost to the application process and would give advisory agencies a veto over State agencies which have authority to establish wasteload allocations. The latter commenter recommended that the OMB A–95 clearinghouse process be utilized to accommodate the input of advisory agencies.

While EPA believes that the regulations are sufficiently precise as written, the following narrative provides additional explanation. Section 301(h)(4) reflects Congress' concern that a relaxation of pollution control requirements for one or more dischargers in the same water body, particularly a partially enclosed water body such as an estuary, could force the remaining dischargers to utilize additional treatment, best management practices, or source controls to insure maintenance of water quality standards, uses, or compliance with other restrictions. Section 301(h)(4) is meant to assure that no modification will be granted which would have the effect of imposing additional pollution control requirements on other point and nonpoint sources discharging into the same water body.

Neither the statute nor this section should be construed as prohibiting EPA from imposing pretreatment or source control requirements on industrial or nonindustrial contributors to a POTW seeking a section 301(h) modification. Such a construction clearly would be inconsistent with sections 301(h)(2), 301(h)(5) and 301(h)(6) of the Act. Nor should section 301(h)(4) be interpreted as preventing EPA or a State from establishing additional or more stringent requirements for municipal or industrial dischargers independent of the section 301(h) process.

EPA's basic objective in requiring agencies which have an advisory role in the establishment of wasteload allocations to affirm that the issuance of a modified permit will meet the requirements of section 301(h)(4) is to assure that the diverse interests represented by such agencies are fully aired before the Agency. Since EPA must make the ultimate determination under section 301(h)(4), an adverse opinion of an advisory agency would not operate as an automatic veto of a favorable determination by a State agency with authority to establish wasteload allocations. It could, however, serve to point out deficiencies in the State agency's determination which might merit further investigation by EPA prior to making its final decision on issuance of a section 301(h) permit. EPA envisions that the agencies involved would include those which participate in a State's water quality management planning process, *e.g.*, a designated State or areawide planning agency under section 208 of the Act.

EPA considers the OMB A–95 clearance process, which does not always adequately surface opposition to a lead agency's determination, to be somewhat unsatisfactory, and therefore elects to retain the provision with minor changes for clarification.

125.64 *Toxic Control Program (formerly §§ 233.14(b), 233.18 and 233.19).* This new section incorporates the requirements for a chemical analysis, an enforceable industrial pretreatment program, and a program of activities for non-industrial source controls previously contained in three separate sections.

Under proposed § 233.14(b), applicants were required to perform a chemical assessment of the POTW effluent. Applicants had to show that the more stringent of the following requirements would be met, either: (1) their existing discharge would not exceed EPA water quality criteria both in the effluent or following initial dilution, depending upon whether the constituent criterion was for a synthetic organic chemical or a naturally occurring heavy metal; or (2) the toxic pollutant concentrations in their existing discharge are not greater than that achieved by secondary treatment (referred to as secondary equivalency).

After reviewing the public comments on the proposed regulation and re-evaluating the technical documentation, EPA determined that changes in the chemical assessment requirements were necessary. The above-mentioned requirement that the applicants meet EPA water quality criteria or secondary equivalency has been eliminated in the final regulation. Emphasis now is placed on implementation of toxics control programs by the applicant aimed at reducing toxic pollutant and pesticide concentrations in the POTW effluent after a section 301(h) modified permit is issued. However, the applicants still must submit the results of a chemical analysis with their application.

The toxic control program requirements are designed to reduce or eliminate the discharge of toxic pollutants into the applicant's wastewater collection system, develop and monitor toxic controls, and also monitor the discharge of toxic pollutants into the marine environment. The required control and monitoring programs in §§ 125.64 and 62, respectively, will be based on chemical analyses which identify toxic pollutants in the applicant's wastewater.

The toxic control program consists of the following general requirements:

1. Chemical analyses of the existing discharge effluent for the toxic pollutants and pesticides.

2. Analysis and identification of the sources of toxic pollutants in the wastewater, both industrial and non-industrial.

3. Development of source control programs to reduce or eliminate the discharge of toxic pollutants and pesticides from the wastewater.

4. Development of a monitoring program to determine the effectiveness of the source control program.

5. Development of a monitoring program to determine the impact of the identified toxic pollutants on the receiving water and marine environment.

The applicants shall submit in their final application a chemical analysis of the existing wastewater discharge (See Part E, section 1 of the Application Format). Analysis of 24-hour composite wastewater samples for wet and dry weather flows must be provided. Some municipalities have performed chemical analyses for toxic pollutants,

particularly heavy metals and pesticides, on existing effluents for some time. As a result, a data base may be available that characterizes some POTW effluents (in terms of types and concentrations of toxic pollutants) better than could be done with two 24-hour composite samples. Thus, applicants may supplement such data for those pollutants requested for the 24-composite sample, but must demonstrate that the alternate samples from which the concentrations are derived are representative of both wet and dry flow conditions.

All toxic pollutants and pesticides which are detected by the chemical analysis, even though the measurable concentrations are below the recognized limits of detection, must be incorporated in the toxic control program. These are referred to as "identified toxic pollutants." All applicants shall identify known and possible sources of the identified toxic pollutants, including industrial and non-industrial sources. At the same time, applicants shall submit programs (including implementation schedules) for the control of toxics from those sources.

The final element of the toxic control program is the applicant's monitoring program. The monitoring program should be able to determine: (1) if additional toxic pollutant coverage is needed; (2) the effectiveness of the source control programs; and (3) the impact of the discharge of toxic pollutants on the receiving waters. The chemical analysis requirements have been incorporated into the monitoring program (§ 125.62).

The toxic control program replaces compliance with EPA water quality criteria as a basis for evaluating applications. It does not prevent EPA from denying a section 301(h) permit if monitoring data shows that, because of the discharge of toxic pollutants, unacceptable bioaccumulation of toxics has occurred in the marine benthos and other organisms outside the zone of initial dilution (see Biological Assessment, § 125.61(c)). Also, it should be noted that revisions to the chemical assessment requirements will not allow an applicant to exceed either water quality standards for toxic pollutants or other substances, or federally promulgated water quality standards.

The Agency's review of applications will consider the quality of the toxics control program submitted by the applicant and its ability to implement it. The decision on whether or not to continue the section 301(h) modified permit will be based on the applicant's performance in operating the source control and monitoring programs, plus the reported results of the monitoring program. A more detailed discussion of comments made and EPA responses to previous individual sections now comprising the toxic control program requirements follows.

(A) *Chemical analysis (formerly § 233.14(b)).* In addition to a biological and physical assessment, the proposed regulations required applicants to perform a chemical assessment for toxic pollutants to show compliance with § 233.14. This assessment was required for a list of 65 toxic substances published by EPA under section 307(a) of the Act (43 FR 4108, January 21, 1978), plus six pesticides in EPA's *Quality Criteria for Water* that are not included in the list of 65 toxic substances. When generic classes of toxics are specified by compound, the list of 65 expands to 129 toxic substances.

For compliance purposes, the list was divided into two categories: (1) naturally occurring substances, such as metals; and (2) persistent organic compounds, such as PCBs. Regarding the first category, the proposed regulations required that no discharge could exceed the EPA-recommended criteria following initial dilution. For persistent organic compounds, EPA-recommended criteria were to be met in the sewage effluent with no allowance for dilution. In both cases, applicants were required to show that the effluent concentrations were equivalent to that achieved by secondary treatment. Under the proposed requirements, applicants would have had to meet the more stringent of the above limitations.

No chemical analysis was required for substances that the applicant could certify would not be in the POTW effluent. This provision was intended to provide relief to dischargers with little or no industrial inputs.

The secondary equivalency requirement was included in the proposed regulations based on Congressional statements that there should be no increase in the discharge of toxic pollutants as a result of the 301(h) modification. By including the secondary equivalency requirement, the Agency required applicants to show that the amount of toxic pollutants discharged would be no greater than that which would occur if secondary treatment was employed. The Agency recognized that this determination would be difficult since little information currently is available on the fate of many toxic pollutants when subjected to various secondary treatment technologies. Because of this, the proposed regulations stated that if the toxic pollutants removal efficiency of secondary treatment could not be determined, only compliance with EPA-recommended criteria would be required. Acknowledging the uncertainty of the proposed secondary equivalency requirements, EPA specifically solicited comments on this issue in the proposed regulations.

During the public comment period, EPA received many comments on the chemical assessment portion of the proposed regulation. Some commenters responded to specific issues raised in the proposed regulations, including: (1) secondary treatment equivalency for toxic pollutants; (2) predictive chemical analysis for proposed facilities; and (3) use of proposed pretreatment and nonindustrial source control programs in predicting the reduction in the toxic pollutants.

Additional comments on this section addressed the following issues: (1) use of an initial dilution concept to distinguish between heavy metals and synthetic organics; (2) the relationship of suspended solids discharge levels to toxic pollutants concentrations; (3) the development of water quality criteria by EPA; (4) the chemical assessment of bottom sediments; (5) analytical methods to measure toxic pollutant concentrations; (6) whether technology-based limitations are replaced by ambient water quality standards in the chemical assessment section; (7) whether dischargers have to meet State water quality standards for toxic pollutants or EPA-recommended water quality criteria; (8) the significance of pollutants not on the section 307(a) list of 65 toxic substances; and (9) whether toxic control programs should be applied to all dischargers, not just those applying for a section 301(h) modified permit.

The specific and general issues raised by commenters will be addressed in three broad categories: (1) secondary equivalency; (2) water quality criteria; and (3) general toxic pollutant issues.

(1) *Secondary equivalency.* As noted above, § 233.14(b) of the proposed regulation required applicants to show that: (1) their existing discharge would not exceed EPA water quality criteria either in the effluent following initial dilution or depending upon the nature of the toxic; or (2) toxic pollutant concentrations in their existing discharge would be equivalent to that attained by secondary treatment, whichever is more stringent.

Some commenters supported EPA's proposed secondary equivalency approach regarding toxic pollutant removal. In fact, they believed that more

stringent toxic pollutants limitations should be imposed in section 301(h) modified permits. However, the majority of comments were opposed to this part of the proposed regulation. They maintained that the legislative history of section 301(h) would not support EPA's position that toxic pollutant concentrations in less-than-secondary treatment facilities could never exceed that achieved by the application of secondary treatment. They believed that in no case would an applicant be able to meet the proposed requirements with anything less than secondary treatment technology.

Two principal arguments were presented against the secondary equivalency requirement as published in the proposed regulation. First, dischargers maintained they would still have to comply with State water quality standards, regardless of the treatment processes employed or whether the applicant received a section 301(h) modified permit. Thus, the secondary equivalency requirement would be unnecessary from the standpoint of environmental impact. Second, preliminary monitoring data submitted by some commenters indicated that toxic pollutant concentrations in chemical primary treatment process effluent were only 10–15 percent greater than in secondary treated effluent. Commenters believed this increase would not result in environmental degradation.

EPA proposed this requirement because it inferred from the legislative history that there should be no increase in the discharge of toxic pollutants as a result of section 301(h) modified permits. However, EPA agrees that requiring secondary equivalency would not have allowed any modification of secondary treatment requirements for many section 301(h) applicants. This clearly was not the outcome envisioned by Congress when they added section 301(h) to the Act. Therefore, EPA has decided not to apply the secondary equivalency requirement in the final regulations. However, under other parts of the final regulations, applicants still will be required to measure toxic pollutant concentrations in the treated sewage effluent and develop a program to prevent any adverse effects of toxic pollutants.

The proposed regulation required chemical analyses for toxic pollutants and pesticides in both settled and unsettled samples of the treated effluent. EPA anticipated that the results of both analyses could be used to estimate secondary equivalency. Some commenters said that, based on the settled sample analysis, secondary equivalency would be difficult to determine and impossible to verify. One commenter presented an alternate method for making the secondary equivalency determination, based on suspended solids analysis. After reviewing the comments, EPA concludes that good estimates of toxic pollutants removal through use of secondary treatment cannot be made at this time. Thus the secondary equivalency requirement is being removed from the final regulation.

In addition to the secondary equivalency requirement, EPA anticipated that settled and unsettled sample analyses could be used to determine solids accumulation on the seabed. However, EPA scientists have advised that, based on the existing technical data, a defensible correlation between settleable solids in POTW effluent and seabed deposition of settleable solids is not possible. As a result, EPA is eliminating the settled sample analysis from the chemical analysis requirements.

(2) *Water Quality Criteria.* (i) *Initial dilution.* The Agency received comments on part of the proposed regulation which required compliance with EPA-recommended criteria for the toxic pollutants and pesticides. The proposed regulations effectively would have made water quality criteria for the so-called synthetic organic pollutants into end-of-pipe effluent limitations. For heavy metals and potentially naturally occurring constituents, "initial dilution" was allowed.

Some commenters opposed the prohibition of "initial dilution" for synthetic organics, claiming that would place an additional and unnecessary safety factor on the water quality criteria. They argued that application factors had already been used to establish the water quality criteria in the first place. Establishing the additional no-dilution policy was tantamount to admitting that, in fact, EPA-recommended criteria for synthetic organics were not stringent enough to protect ambient marine waters.

Other commenters supported the Agency's "no initial dilution" policy. They believed the same policy should be applied to all toxic pollutants including heavy metals, because such substances are persistent, exhibit bioaccumulative properties and are not affected by biogeochemical processes. The application of this policy to a broad class of pollutants such as "synthetic organics" was also questioned. Some commenters questioned whether all the toxic pollutants and pesticides would have an effect on the marine environment.

EPA proposed the "no initial dilution" policy for synthetic organics because the long term impact of these pollutants on the marine environment is known to be independent of dilution associated with solids, oils, or surface slicks, and because they are readily accumulated in lipid fractions of marine organisms. Heavy metals were not grouped together with synthetic organics since heavy metals are found naturally in the marine environment, and many of the known effects are dilution dependent (except possibly for lead, cadmium, and mercury). California has made this distinction in its Ocean Plan since 1972. Further, EPA's proposed use of the numerical criteria for the toxic pollutants and pesticides exceeded the intended regulatory impact of those criteria under section 304(a) of the Act (see a discussion of EPA recommended criteria at 44 FR 15926, March 15, 1979). Because of this, no distinction is made between groups of toxic substances and pesticides which are naturally occurring and those classified as synthetic organic chemicals. Further, applicants will not have to demonstrate that their effluent does not exceed EPA water quality criteria (with or without dilution) for reasons described below.

(ii) *Analytical methods.* The Agency received comments on the analytical methods available to measure toxic pollutants in wastewaters. Commenters referred to the high cost of these procedures and the questionable accuracy of the proposed methods in measuring low toxic pollutant concentrations.

On June 16, 1978, EPA published a notice of availability of procedures to comply with the chemical assessment requirements of the proposed section 301(h) regulations (43 FR 26126). These procedures were contained in an EPA publication entitled *Sampling and Analysis Procedures for Screening of Industrial Effluents for Priority Pollutants* (the screening protocol). Analytical procedures for heavy metals and traditional pollutants are those published in 40 CFR Part 136 (Guidelines Establishing Test Procedures for the Analysis of Pollutants); procedures for measuring synthetic organic chemicals are described in the screening protocol, but have not been promulgated by EPA in 40 CFR Part 136.

These procedures are designed for measuring pollutants concentrations in industrial effluents, not municipal effluents. Recognizing the potential difficulty of using the screening protocol to measure municipal effluents, EPA

asked applicants to provide quality assurance/quality control data along with reported results. While such data improves the statistical confidence of the reported results, it does not reduce the analytical limits of detectability for the toxic pollutants and pesticides below 10 mg/1. Since many existing water quality criteria recommended by EPA are more stringent than 10 mg/1, it would be impossible to ensure compliance with those criteria using the screening protocol.

Since quality assurance/quality control does not improve the analytical limits of detectability and because some EPA criteria are below the analytical limits of detectability, EPA will not require applicants to prove their effluents will not exceed water quality criteria for toxic pollutants and pesticides.

(iii) *Availability of Criteria.* Some commenters asked whether or not EPA would publish water quality criteria for the 65 toxic pollutants by the time section 301(h) regulations were promulgated. EPA originally had planned to publish these criteria by July 1978, but the schedule has been extended. EPA recently published a notice of availability of 27 draft criteria documents (44 FR 15926, March 15, 1979). We do not expect to publish final criteria documents for all 65 toxic substances until the end of this year, at the earliest.

EPA believes that the comments on the availability of published water quality criteria are no longer relevant, since applicants will not be required to compare the results of their toxics control monitoring program with EPA-recommended criteria. For the purposes of section 301(h), when such criteria are available, they will be used by EPA to evaluate the effectiveness of pretreatment control programs set up by the applicants. As noted earlier, EPA-recommended criteria will not be used by themselves to determine whether or not an applicant qualifies for a section 301(h) modified permit.

(3) *General Toxic Pollutant Issues.* (i) Comments were received on alternate methods to be used by applicants to certify that toxic pollutants are not in the POTW effluent. Presumably, small POTWs receiving little or no industrial effluent would be able to affirmatively demonstrate that they had no toxic pollutants in their effluent by characterizing the toxic pollutants (if any) in the industrial wastewater. This would enable the small POTW to avoid the costly chemical analyses required for most POTWs wastewaters. However, current monitoring data shows that we cannot make such assumptions about small POTWs. Only by conducting chemical analyses required in this regulation will it be possible to conclude that toxic pollutants are not present in POTW effluents. Therefore, all applicants for section 301(h) modified permits will have to perform chemical analyses on their wastewaters.

(ii) Comments were received on the relationship of toxic pollutants to disposition of settleable solids in the bottom sediments. Much field data on the effects of ocean outfalls on marine life relate to the accumulation of settleable solids near the ocean outfall. Commenters pointed out that compliance with ambient water quality criteria in the water column does not necessarily bear any relationship to the impact of wastewaters on the benthic sediments and associated marine life. Toxic pollutants which are relatively insoluble are retained in the suspended solids fraction of the wastewater. When all or part of this fraction settles to the bottom sediment, benthic communities and fish that feed on the benthos may bioaccumulate those toxics.

EPA believes that there is sufficient technical data available to justify its concern over benthic loading near sewage outfalls. EPA disagrees with commenters who maintain that there is little accumulation of toxics in the benthic sediments due to rapid dispersion of wastewaters by strong currents and tidal action. EPA agrees that benthic loading of toxic pollutants cannot be predicted based upon ambient water concentrations. Therefore, it has included a requirement for benthic sediment evaluations for toxic pollutants as part of the physical assessment and subsequent monitoring requirements.

(iii) Finally, comments were received on the presumptive applicability of section 304(a) water quality criteria to all territorial seas of the U.S. One commenter said there was no basis for assigning a threshold concentration for certain pollutants, and that no effective techniques exist for predicting the effects of pollutants on marine communities.

EPA's current policy on use of section 304(a) criteria in State water quality standards is discussed in two recent Federal Register notices (43 FR 29588; July 10, 1978 and 44 FR 15926; March 15, 1979). Although site-specific conditions may warrant use of criteria other than those recommended under section 304(a), EPA now believes those criteria are sufficiently stringent to protect marine communities in most biogeographic areas. EPA policy requires that State regulatory agencies must technically justify alternative criteria less stringent than EPA recommended criteria.

(b) *Enforceable pretreatment program (formerly section 233.18).* Since proposal of these regulations, EPA has promulgated General Pretreatment Regulations (43 FR 27736, June 26, 1978). This section has been changed as a result of those new requirements. Two major issues were raised during the comment period concerning EPA's proposed regulations implementing section 301(h)(5) of the Act (requiring a section 301(h) applicant to demonstrate that all applicable pretreatment requirements for sources discharging into its facility will be enforced):

(1) Should POTWs be allowed to grant revisions to their industrial users' National Pretreatment Standards to reflect treatment by the POTWs under § 403.7 of the General Pretreatment Regulations?

Since Congress provided in section 307(b) of the Act that POTWs can grant revisions to National Categorical Pretreatment Standards to reflect POTW removal, EPA cannot eliminate that option. However, POTWs should carefully consider whether to grant such revisions since they may significantly contribute to adverse impacts in the marine environment which would disqualify the POTWs application for a section 301(h) permit based on either the POTWs current discharge or an improved discharge.

(2) The time when section 301(h) applicants should be required to put a pretreatment program into effect—*i.e.*, prior to receipt of a section 301(h) permit, at the time a section 301(h) permit is issued, or within a reasonable time after issuance of a section 301(h) permit. One large POTW suggested that the time period for implementing the pretreatment program should be extended from eighteen to twenty-four months (or such additional period of time as EPA might allow) for all POTWs, because the proposed eighteen-month deadline was arbitrary, unattainable, and would force applicants to implement a less than comprehensive pretreatment program. No other large POTW with industrial contributors, objected to the proposed eighteen month deadline. The Agency does not view the eighteen month deadline as unreasonable, since it generally coincides with the scheduled promulgation of toxic pretreatment standards under the consent decree entered in *Natural Resources Defense Council, Inc., v. Train,* 8 ERC 2120

(D.D.C. 1976), as modified by *National Resources Defense Council* v. *Costle*, 12 ERC 1833 (D.D.C. March 9, 1979). It is imperative that national pretreatment standards for the control of sources discharging into these facilities be implemented as soon as possible after their promulgation because section 301(h) POTWs will not be utilizing secondary treatment to remove toxic pollutants.

Several commenters suggested that EPA postpone its decision on section 301(h) applications until the applicant's pretreatment program is actually implemented or until all national pretreatment standards have been promulgated. Because this course of action could unnecessarily delay decisions on section 301(h) applications, with resultant delays in treatment construction, EPA has determined not to adopt it.

Where an applicant (1) would discharge increased toxic pollutants as a result of less-than-secondary treatment and (2) receives waste from one of the twenty-one industries identified as subject to pretreatment requirements in 40 CFR Part 403, the final regulations require that a pretreatment program designed to control the introduction of toxic pollutants into the municipal system be established by the time of application. Such program is to address existing problems that the POTW has experienced with the introduction of toxic pollutants, including any problems that cause or substantially contribute to violation of any effluent limitations contained in a NPDES permit, interfere with sludge treatment or disposal, or violate any existing water quality standards. The program must contain provisions to sufficiently limit introduction of such pollutants into the municipal system and adequate legal authorities to enforce such limitations. In addition, the program must provide adequate funding levels and qualified personnel to effectively implement the pretreatment program. The regulations do allow additional time (up to the expected date of issuance of a modified permit) to complete this submission where the applicant can show it has made substantial effort towards obtaining the necessary legal authorities, funding, and personnel, but cannot complete these activities prior to submittal of its application due to time constraints imposed by State or local law. Finally, the regulations require that, within eighteen months of issuance of a modified permit, the POTW must have developed and must implement a pretreatment program in full compliance with the General Pretreatment Regulations. Such a program must contain a complete inventory of all industrial sources under the twenty-one categories of industry identified in 40 CFR Part 403, together with an inventory of other industrial sources which contribute non-domestic pollutants which pass through untreated or which interfere with the POTW, including interference with water reuse and recycling, beneficial uses of sludge, and sludge treatment and disposal. The inventory must include qualitative descriptions of the industrial contributor's discharges, together with a quantitative description of those discharges for all pollutants subject to control under an established national categorical pretreatment standard, or State or local pretreatment requirement. The POTW must obtain within eighteen months full legal authorities to enforce all existing, as well as prospective Federal, State or local pretreatment standards or requirements, together with adequate sources of funding and qualified personnel to effectively implement additional national categorical pretreatment standards or State and local requirements as they become effective.

(c) *Nonindustrial source control program (formerly § 233.19).* EPA received only a few comments on its proposed regulations implementing section 301(h)(6) of the Act, which requires section 301(h) applicants to demonstrate that non-industrial sources of toxic pollutants will be controlled to the extent practicable. Some commenters noted that it would not be "practicable" to remove some of the sources of toxic pollutants identified in the regulation due to institutional, economic, or legal constraints. Others suggested that the proposed regulations were not specific enough and did not require an applicant to demonstrate that it would exercise its best efforts to eliminate the introduction of toxic pollutants from non-industrial sources into its treatment facility.

EPA acknowledges that the statute does not require elimination of all non-industrial sources of toxic pollutants. It does, however, require that the applicant take all practicable measures designed "to eliminate" the input of toxic pollutants from non-industrial sources. This implies the need for a maximum source control effort, and the regulations have been revised to reflect this intent.

With respect to each non-industrial source of toxic pollutants identified by the applicant under § 125.64(d), the applicant has the responsibility for showing the economic, institutional or legal limitations of its program to reduce or eliminate that source of toxic pollutants together with an analysis of future activities designed to strengthen its source control program. In determining economic feasibility, the applicant must consider as an offset to the costs of source control any savings in capital or operating and maintenance expenses which may accrue as a result of being issued a section 301(h) modified permit.

EPA anticipates that the toxic pollutant control requirements set forth in these regulations will require many dischargers to develop innovative ways of reducing non-industrial sources of pollutants. It should be noted, however, that even where an applicant has controlled sources of toxic pollutants to the point necessary to comply with §§ 125.60–61, it would still be required to continue to exercise its best efforts to eliminate non-industrial sources of toxic pollutants under section 301(h)(6).

To provide further guidance to section 301(h) applicants in developing non-industrial source control programs, in these final regulations, at § 125.64(c)(4), EPA has expanded its proposed list of specific programs which should be undertaken to comply with section 301(h)(6).

Section 125.65. Increase in effluent volume or amount of pollutants discharged. (formerly § 233.20). Section 301(h)(7) of the Act provides that an applicant for a section 301(h) permit must demonstrate that there will be no new or substantially increased discharges of the pollutant to which the modification applies (*i.e.*, BOD, suspended solids, and pH) above the volume of discharge specified in the modified permit. Because both the volume of effluent discharged and pollutant loadings may adversely impact marine biota, the Agency chose in its proposed regulations to limit both the volume of wastewater discharged and the mass loadings of BOD and suspended solids. Consistent with the Agency's proposed definition of "existing discharge" in § 233.11; this section, as proposed, limited effluent volume to the applicant's existing design capacity and limited increases in volume to the applicant's existing service area. Mass emissions were similarly limited to the applicant's BOD and suspended solids loadings at the time of application. As a result, any increases in flow during the life of a section 301(h) permit would have to be accompanied by a reduction in BOD and suspended solids effluent concentrations so that total mass loadings would remain constant. To assure that

pollutant loadings from combined sewer overflows ("CSO") were adequately controlled, applicants with CSO problems were asked to submit an analysis of the overflow problem(s) and an explanation of the measures being taken to correct them.

Volume limitations. EPA received numerous comments on this section, particularly on its proposed restrictions on increases in flow. Some commenters suggested that limiting increases in discharge volume to the applicant's design capacity within the service area would amount to the establishment of a no-growth policy, and would greatly restrict a POTW's ability to function as a public service agency within the district. Other commenters urged that the term "substantial" in section 301(h)(7) assumed reasonable growth, and that section 301(h) permits should, therefore, allow increases in flow resulting from normal growth, regardless of whether the increased flow originated within the permittee's service area or would exceed design flow capacity at the time of application. Others suggested that EPA allow increases in flow resulting from the construction of facilities in Step 1, 2, or 3 grants which were proposed or approved at the time of application. Still others suggested that increases in flow during the life of the permit be regulated through the monitoring program required under section 301(h)(3). These commenters proposed that increases in flow resulting from normal growth patterns be allowed so long as the monitoring program indicated that they were not having an adverse impact on the marine environment.

EPA believes that under the proposed definition of "existing discharge" the flow restriction of the proposed regulation appropriately limited growth to the existing design capacity. However, in view of the changed final definition of "existing discharge"—which allows for "planned" as well as existing discharges—the proposed flow restrictions could result in a no-growth situation for a number of municipalities that are now at or near design capacity. Section 125.65 of the final regulations has been changed to allow for reasonable growth through the five-year period of a modified permit. Flows will continue to be limited to the applicant's existing design capacity, where such design capacity provides for normal growth during the life of the modified permit. If an applicant's current design capacity does not provide for normal growth, the applicant must develop a projection of the increased flows necessary to accommodate normal growth over the period of the modified permit, utilizing the analyses performed in Step 1 facilities planning or comparable studies.

A number of commenters supported the proposed flow restrictions because they would prevent the possibility of further adverse impact on the marine environment, and also because they seemed to encourage recycle/reuse/reclamation of wastewater and water conservation generally. Several commenters from water-poor areas suggested that rather than restricting discharge volume to existing flows, EPA require, as a condition of any section 301(h) permit issued, that the permittee study the feasibility and cost-effectiveness of water reuse/recycle/reclamation projects and that, upon renewal of any section 301(h) permit, EPA require discharge volumes to be reduced by the amount of wastewater which could be recycled/reused/reclaimed. Commenters from water-rich areas of the country argued that municipalities receiving a section 301(h) permit should not be required to recycle/reuse and reclaim water unless a need exists and unless recycle/reuse and reclamation is cost-effective. Otherwise, they contended, compliance with the requirements of section 301(h) might prove to be more costly than secondary treatment.

EPA agrees with the concerns expressed in these comments and accordingly has changed the proposed § 233.21. The revised provisions of § 125.66 emphasize that POTWs under active Step 1 grants consider reclamation, reuse, and recycling in addition to other flow and waste reduction measures. This is already required in the facilities planning regulations (§ 35.917 of Subpart E of Title 40). Additionally, the Agency has determined that such alternatives for section 301(h) dischargers should be compared with the cost of secondary treatment, not less-than-secondary treatment, in the Step 1 cost-effective analysis. EPA believes this policy is consistent not only with the goals of section 301(h), but also with Congress' intent that section 301(h) be used only as an interim—not a long-term—solution to the wastewater disposal problems of coastal dischargers. Furthermore, because it is expected to have the greatest impact on those communities which have a high demand for reused water (where water sale revenues can offset recycle/reuse systems costs, and thus make recycle/reuse a cost-effective alternative), EPA believes this policy will encourage recycle/reuse/reclamation of water where it is most necessary and economically realistic.

The final regulations have deleted the proposed requirement that flows be limited to existing service areas. This change is a consequence of allowing applications on the basis of planned discharges. However, any plan to regionalize treatment services that proposes to divert flow from a non-marine discharger to a less-than-secondary marine discharger must be cost-effective based upon the cost of full secondary treatment at the less-than-secondary site. Section 125.66, which concerns the use of Title II funds, has been revised to require the applicant for a modified permit to determine those costs.

Mass limitations. EPA received relatively few comments on its proposed restrictions on mass loadings. One commenter suggested that, in addition to imposing mass loading limitations on BOD and suspended solids, EPA also require applicants to meet mass emission limitations for toxic pollutants.

While section 301(h)(7) applies specifically to those pollutants for which a modification may be issued—*i.e.*, BOD, suspended solids and pH—to the extent that increases in mass loadings of suspended solids may result in increased quantities of toxic pollutants being discharged to the marine environment, the limitations on increases in suspended solids established under this section will restrict the amount of toxic pollutants discharged. Additionally, direct limitations on permissible discharges of specific toxic pollutants will be established by EPA under §§ 125.60 through 125.62 of these regulations. This approach is supported by the legislative history and will carry out both the letter and the intent of section 301(h)(7).

Combined sewer overflows. In addition to limiting volume and mass loading increases in treated wastewater, EPA's proposed regulations implementing section 301(h)(7) attempted to establish a mechanism for reducing or eliminating the discharge of combined sewer overflows by recipients of modified permits under section 301(h). Several commenters indicated that these discharges represent a major source of pollution in coastal waters and are a significant problem for some POTWs.

One way of eliminating or reducing the pollution caused by combined sewer overflows is to route part or all of the overflow through the POTW for treatment. Under its proposed regulations implementing section 301(h)(7), this option would not have been available to most POTWs if they

received a section 301(h) modification. However, to assure that the modification afforded by section 301(h) would not have the effect of delaying community efforts to minimize or eliminate combined sewer overflows by other means EPA proposed in § 233.20(b)(2) that applicants with combined sewers submit a schedule of activities designed to minimize existing overflows and to prevent increases in the amount of pollutants discharged.

EPA received two major comments on this section. One commenter stated that the restrictions on discharge volume and mass loadings imposed under § 233.20(b)(1) would prevent many communities from eliminating nearshore combined sewer overflow discharges by routing them through a section 301(h) treatment facility. The other commenter stated that section 301(h) should be used to minimize existing combined sewer overflows and eliminate them completely where possible.

The Agency agrees that in some cases it may be more environmentally sound to discharge combined sewer overflows through a well designed outfall after a minimum of primary treatment than to allow raw wastewater to overflow collection sewers into nearshore coastal waters. However, EPA believes that such discharges should be allowed under section 301(h)(7) only where the POTW has fully examined all other means of control stormwater inflow. Applicants should ensure that the resulting increase in volume and mass loadings would allow continued compliance with the requirements of sections 301(h) (1), (2) and (4) of the Act and §§ 125.60, 125.61, 125.63 and 125.65 of these regulations, as revised. Providing this additional alternative for reducing and eliminating combined sewer overflows should increase the likelihood that such discharge will in fact be materially limited or eliminated.

Under Program Requirements Memorandum No. 75–34, combined sewer overflow projects which have been throughly studied in the Step 1 process may be funded under Title II of the Act only after provision has been made for secondary treatment of dry-weather flows in the area. Since POTWs receiving section 301(h) modifications will not be constructing secondary treatment facilities, at least for the immediate future, this requirement could prevent or significantly delay funding to control combined sewer overflows from these facilities. To remove this economic disincentive to the correction of combined sewer overflow problems for POTWs receiving section 301(h) modified permits, EPA will waive this requirement for such POTWs.

Section 125.66. Utilization of grant funds under Title II of the Act. (formerly § 233.21). Section 301(h)(8) of the Act requires applicants to demonstrate that they will utilize any Title II funds available to them to comply with the requirement of sections 201(b), 201(g)(2)(A), or section 301(h) of the Act. The purpose of this provision is to allow EPA to fund certain planning, design and construction activities which would be required in order to comply with section 301(h).

In its proposed regulations EPA stated that projects needed to meet the requirements of section 301(h) would be grant-eligible only if the applicant satisfactorily demonstrated that alternative waste management techniques had been studied and evaluated and that the works proposed for grant assistance would be cost-effective and would provide for the application of BPWTT (including reclamation and recycling of wastewater and confined disposal of pollutants). Consistent with the legislative history of section 301(h) and EPA construction grant regulations, EPA noted in the preamble that while Title II funds would be available for the development of monitoring, pretreatment and source control programs, as well as other programs and construction necessary to assure compliance with the requirements of section 301(h), they would not be granted for operating and maintenance costs associated with such programs and construction.

Most comments which EPA received on this section supported the Agency's interpretation of the statute. A few commenters suggested, however, that the scope of activities eligible for funding should either be narrowed or broadened.

In response to these comments, § 233.21 of the proposed regulations has been revised to clarify the scope of activities eligible for Title II funding. Section 125.66 of these final regulations states that Title II funds are to be used for construction of treatment works necessary to ensure the applicants proposed discharge will meet the requirements of section 301(h) of the Act. The definition of construction as contained under section 212 of the Act includes preliminary planning, plan and specification as well as physical construction. Section 35.940–1 of Subpart E of this Chapter lists such costs as allowable project costs. Section 35.901 of the construction grant regulations states that the primary purpose of Federal grant assistance is to assist municipalities in meeting enforceable requirements of the Act, particularly applicable NPDES permit requirements. Thus the construction of less-than-secondary treatment works upon which the section 301(h) modification is based is grant-eligible.

Additionally, § 125.66 of these final regulations provides more detailed information concerning the revision of the scope of work of any active Step 1, Step 2 or Step 3 grant. Subsection (b)(1)(E) requires that a section 301(h) permittee have a program to complete facility planning for additions to the less than secondary treatment facility to bring the treatment works to full secondary treatment if needed. Planning for such additions must be in accordance with all applicable requirements of § 35.917 of Subpart E. Based upon the analysis of these alternative methods of upgrading to secondary treatment, the cost-effective combination of the less-than-secondary treatment system and additional facilities is to be established. This is required because the five year modification is considered temporary until the impact of the less than secondary treatment system and toxics control programs are verified by monitoring and biomonitoring programs. Should these monitoring programs indicate that secondary treatment is required, further delay due to planning requirements will be minimized. In addition, the cost of upgrading to secondary treatment must be known in order to determine whether it is cost-effective for non-marine dischargers to regionalize with a marine discharger and to evaluate wastewater reuse, recycling and reclamation as discussed in the preamble discussion on § 125.65.

Subsection (b)(2), which has been added to the final regulations requires that plans and specifications for the less than secondary facilities include provisions to ensure compatibility with additional facilities, should they be required at a later date. It is not intended that detailed plans and specifications be developed for the additional facilities at this time. Similarly, subsection (b)(3) has been added to provide for the compatibility of construction of the less-than-secondary facilities and any additional facilities required for upgrading to full secondary treatment.

No specific mention was made in the final regulations concerning eligibility of monitoring equipment for section 301(h). Eligibility of monitoring and laboratory equipment for pretreatment and NPDES permit purposes is already established

under Subpart E of this Chapter and Program Operations Memorandum 78-4.

One commenter suggested that Title II funds which had previously been allocated to a section 301(h) applicant for another purpose should be returned to the State and reissued under the State's then current priority list. Requiring section 301(h) dischargers to remit Title II funds previously granted to construct secondary treatment would, in EPA's opinion, be contrary to Congress' expectation, expressed in section 301(h)(8), that such funds would be diverted either to the achievement of BPWTT or the requirements of section 301(h).

Another commenter raised the issue of how section 201(g)(5) would fit into the Agency's assessment of the eligibility of particular projects for funding under section 301(h). Section 201(g)(5) which was added to the Act by the 1977 Amendments, requires EPA, in making any Title II grant from funds authorized for any fiscal year beginning after September 30, 1978, to assure that, in addition to the waste management techniques which must be studied under section 201(g)(2)(A), the grant applicant has evaluated innovative and alternative wastewater treatment processes and techniques. The requirements of this section also apply to section 301(h) dischargers. Not only is there nothing in the legislative history of the Act which would suggest that section 301(h) applicants were exempted from this provision, there is no logical reason for such an exemption. To clarify this point, section 125.66 of the final regulations requires section 301(h) applicants to demonstrate that any grants received from FY 1979 (or later) funds will meet the requirements of section 201(g)(5), in addition to those of section 201(g)(2)(A).

A number of commenters urged that Title II funds be made available to communities to assist them in filling out their section 301(h) applications. EPA disagrees. First of all, the Agency has no authority under the Act to provide federal funding for this purpose. Furthermore, there is nothing in either the language or the legislative history of section 301(h)(8) to suggest that Congress intended to allow Title II funds to be granted to section 301(h) applicants to assist them in gathering the technical and scientific data necessary to complete their applications. Section 301(h)(8) authorizes EPA to provide funding to "carry out the requirements of (Section 301(h))", not to determine whether applicants meet those requirements. Moreover, since section 301(h) is premised on the theory that communities have accumulated the data necessary to demonstrate their eligibility for a modification, it seems highly unlikely that Congress would have enacted a provision permitting EPA to grant Title II funds to collect such data.

Furthermore, since the Agency believes that the information required by the regulations and application is necessary to make an informed decision on the statutory criteria established by Congress, it is not possible to reduce the amount of data required.

Small communities with no, or very limited amounts of toxic pollutants in their discharges will in many cases be able to develop a section 301(h) application with less extensive data than will a larger discharger with significant sources of toxic pollutants. Thus, the costs of their applications should, as a practical matter, be lower than those of larger dischargers.

Section 125.67. Special permit conditions. This is a new section which delineates special conditions which will be required in permits issued under section 301(h). These conditions are to insure compliance with various provisions of the subpart and will be included in all section 301(h) permits in addition to all applicable terms and conditions required by 40 CFR 122.14 through 122.23.

VI. Application Format

Numerous comments have been received by EPA regarding the proposed Application for Modification of the Requirements of Secondary Treatment. Several changes have been made to the Application Format in response to these comments and to reflect changes which have been made in the regulations.

Most of the comments address three main areas of concern, namely, (1) time limitations for submittal of applications; (2) burdensome reporting requirements, particularly as they relate to small communities; and (3) use of a single application form for dischargers which vary substantially in size, complexity and nature of waste discharged.

The comments regarding the time limitations for submittal of applications are somewhat mooted by the fact that final regulations were not published as originally scheduled. As a result of this delay, EPA accepted preliminary applications which required that applicants submit a minimum of information.

Most commenters felt that the three month period for preparation of complete applications was too short, and they suggested that EPA either extend the deadline for submission of applications or implement a "two-stage" application review. As explained in section II.B., above, EPA has no authority to extend the statutory deadline for submission of applications. The Agency recognized, however, that since final regulations were not available for guidance, it would be unreasonable to expect applicants to submit complete final applications by that deadline. Therefore, the Agency accepted preliminary applications postmarked no later than September 25th, 1978 giving applicants substantial additional time to gather data for their final applications.

The suggestions that EPA employ a "two-stage" review process had two basic objectives: (1) to provide additional time for completing final applications, and (2) to require that EPA make an initial eligibility determination, based on a minimum amount of information, prior to a POTW incurring the additional cost of completing a final application.

EPA has not adopted the "two-stage" review process. However, by delineating a number of threshold criteria in § 125.59, these regulations should enable a POTW to determine whether it should incur the cost of applying for a section 301(h) modified permit.

The latter two concerns mentioned above, namely, concerns about burdensome reporting requirements and use of a single application form, are discussed together, as they raise similar questions. Several commenters suggested that the reporting requirements would be unduly burdensome for many small communities, particularly villages in Alaska, Puerto Rico and territorial possessions. This issue has been discussed extensively in a previous section of this preamble. (See discussion on small communities in section II, Major Issues).

A number of commenters suggested that a single application form was inappropriate for obtaining necessary and useful data from POTWs which vary substantially in size, complexity and nature of waste discharged. EPA recognizes that these variables exist but at the same time, believes that certain areas must be addressed in all applications in order for the Agency to make determinations based on sufficient information. Furthermore, this review can be completed more expeditiously if the data is presented in a reasonably uniform manner. For these reasons, EPA believes that a standard Application Format should be followed.

A number of other commenters either suggested specific questions which they felt should be included, or they asked specific questions regarding the basis for various technical requirements in the Application Format. EPA has attempted to respond to most of these suggestions in the Technical Support Document which was made available for review and comment prior to publication of these regulations. (See section IV for a discussion of the Technical Support Document).

Section F of the Application Format has been revised to delineate the information which must be provided by applicants. This information pertains to requirements of the Endangered Species Act of 1973, as amended. There is additional discussion of this change in the section-by-section analysis portion of this preamble.

Accordingly, 40 CFR Part 125 is amended by adding §§ 125.56 through 125.67 to this Subpart G which has been previously reserved.

These final section 301(h) regulations will be considered issued for purposes of judicial review at 1:00 p.m. Eastern time on June 22, 1979.

Note.—The Environmental Protection Agency has determined that this regulation, because it implements a statutory provision which eases rather than imposes, pollution control costs, does not constitute a regulation requiring preparation of an Economic Impact Statement under Executive Order 11821, as amended by Executive Order 11949, and under OMB Circular A–107.

Dated: June 4, 1979.

Douglas M. Costle,

Administrator.

Part 125 is amended by the addition of new Subpart G which reads as set forth below:

PART 125—CRITERIA AND STANDARDS FOR THE NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

Subpart G—Criteria For Modifying the Secondary Treatment Requirements Under Section 301(h) of the Clean Water Act

Sec.

125.56 Scope and purpose.
125.57 Law authorizing issuance of a modified permit.
125.58 Definitions.
125.59 General.
125.60 Existence and compliance with applicable water quality standards.
125.61 Attainment or maintenance of water quality which assures protection of public water supplies, the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities.
125.62 Establishment of a monitoring system.
125.63 Effect of discharge on other point and nonpoint sources.
125.64 Toxics control program.
125.65 Increase in effluent volume or amount of pollutants discharged.
125.66 Utilization of grant funds under Title II of the Act.
125.67 Special permit conditions.

Subpart G—Criteria For Modifying the Secondary Treatment Requirements Under Section 301(h) of the Clean Water Act

§ 125.56 Scope and purpose.

This Subpart establishes the criteria and standards to be applied by EPA in acting on section 301(h) requests for modifications to the secondary treatment requirements. It also establishes special permit conditions which must be imposed, in addition to terms and conditions required under Part 122, in any permit incorporating a section 301(h) modification of the secondary treatment requirement ("section 301(h) modified permit").

§ 125.57 Law authorizing issuance of a section 301(h) modified permit.

Section 301(h) of the Clean Water Act provides that:

The Administrator, with the concurrence of the State, may issue a permit under section 402 which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant in an existing discharge from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that—

(1) There is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 304(a)(6) of this Act;

(2) Such modified requirements will not interfere with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities, in and on the water;

(3) The Applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable;

(4) Such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(5) All applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

(6) To the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

(7) There will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(8) Any funds available to the owner of such treatment works under Title II of this Act will be used to achieve the degree of effluent reduction required by section 301 (b) and (g)(2)(A) or to carry out the requirements of this subsection.

For the purposes of this subsection the phrase "the discharge of any pollutant into marine waters" refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section 101(a)(2) of this Act.

§ 125.58 Definitions.

For the purpose of this Subpart:

(a) "Applicant" means an applicant for a modified NPDES permit under section 301(h) of the Act.

(b) "Application format" means EPA's "Application Format for Modification of the Requirements of Secondary Treatment" provided in Part II of this this regulation.

(c) "Balanced, indigenous population" means an ecological community which:

(1) Exhibits characteristics similar to those of nearby, healthy communities existing under comparable but unpolluted environmental conditions; or

(2) May reasonably be expected to become re-established in the polluted water body segment from adjacent waters if sources of pollution were removed.

(d) "Current discharge" means the volume, composition, and location of an applicant's discharge as of any time between December 27, 1977 and [3 months after date of publication] as designated by the applicant.

(e) "Final application" means a submission for a section 301(h) modified permit to EPA not later than [90 days after date of publication]. The final application shall contain:

(1) A completed application which corresponds to EPA's Application Format for Modification of the Requirements of Secondary Treatment;

(2) A signed, completed NPDES application Standard Form A, Parts I, II, and III; and

(3) The following certification: "I certify under penalty of law that I have personally examined and am familiar with the information submitted in the attached document(s), and based on my inquiry of those individuals immediately responsible for obtaining the information, I am convinced that the information is true, accurate and correct. I am aware that there are significant penalties for submitting false information, including the possibility of

fine and imprisonment." (see § 125.59(d)(1)).

(f) "Improved discharge" means the volume, composition and location of an applicant's discharge following:

(1) Construction of planned outfall improvements, including, without limitation, outfall relocation, outfall repair, or diffuser modification; or

(2) Construction of planned treatment system improvements; or

(3) Implementation of a planned program to improve operation and maintenance of an existing treatment system; or

(4) Implementation of a planned program to eliminate or control the introduction of pollutants into the applicant's treatment works.

(g) "Industrial source" means any source of nondomestic pollutants regulated under section 307 (b) or (c) of the Act which discharges into a POTW.

(h) "Modified discharge"means the volume, composition and location of the discharge proposed by the applicant for which a modification under section 301(h) of the Act is requested.

(i) "Nonindustrial source" means any source of pollutants which is not an industrial source.

(j) "Ocean waters" means those coastal waters landward of the baseline of the territorial seas, and the deep waters of the territorial seas, or the waters of the contiguous zone.

(k) "Pesticides" means demeton, guthion, malathion, mirex, methoxychlor and parathion.

(l) "Preliminary application" means a submission to EPA postmarked no later than September 25, 1978, which contained, at a minimum, the name and address of the applicant and a statement that the applicant was seeking a modification of secondary treatment requirements under section 301(h) of the Act.

(m) "Primary treatment" means the first stage in wastewater treatment where substantially all floating or settleable solids, are removed by floatation and/or sedimentation.

(n) "Public water supplies" means water distributed from a public water system.

(o) "Public water system" means a system for the provision to the public of piped water for human consumption, if such system has at least fifteen service connections or regularly serves at least twenty-five (25) individuals. This term includes (1) any collection, treatment, storage and distribution facilities under the control of the operator of the system and used primarily in connection with the system, and (2) any collection or pretreatment storage facilities not under the control of the operator of the system which are used primarily in connection with the system.

(p) "Publicly owned treatment works" ("POTW") means a treatment works, as defined in section 212(2) of the Act, which is owned by a State, municipality or intermunicipal or interstate agency.

(q) "Saline estuarine waters" means those semi-enclosed coastal waters which have a free connection to the territorial sea, undergo net seaward exchange with ocean waters, and have salinities comparable to those of the ocean. Generally, these waters are near the mouth of estuaries and have cross-sectional annual mean salinities greater than twenty-five (25) parts per thousand.

(r) "Secondary treatment" means the term as defined in 40 CFR 133.102.

(s) "Shellfish, fish and wildlife" means any biological population or community that might be adversely affected by the applicant's modified discharge.

(t) "Stressed waters" means those receiving environments in which an applicant can demonstrate, to the satisfaction of the Administrator, that the absence of a balanced, indigenous population is caused solely by human perturbations other than the applicant's discharge.

(u) "Toxic pollutants" means those substances listed in Table 1 of Committee Print No. 95–30 of the Committee on Public Works and Transportation, House of Representatives, and published at 43 FR 4108 (January 31, 1978), as from time to time revised by the Administrator under section 307(a) of the Act.

(v) "Traditional pollutant" means biochemical oxygen demand ("BOD"), suspended solids ("SS") and pH.

(w) "State water quality standards" means applicable State water quality standards which have been:

(1) Approved or left in effect by the Administrator under section 303(a) or 303(c) of the Act; or

(2) Promulgated by the Administrator under section 303(b) or 303(c) of the Act, as of the date of any final application submitted under this Subpart.

(x) "Zone of initial dilution" ("ZID") means the region surrounding or adjacent to the end of the outfall pipe or diffuser ports, as calculated according to instructions in the application format, provided that it may not be larger than allowed by mixing zone restrictions in applicable State water quality standards.

§ 125.59 General.

(a) *Basis for application.* A final application for modified section 301(h) permit under this Subpart shall be based on either:

(1) A current discharge into ocean waters or saline estuarine waters; or

(2) An improved discharge into ocean waters or saline estuarine waters, *Provided,* That:

(i) The applicant demonstrates in its final application that such improvements have been thoroughly planned and studied as an alternative to secondary treatment and that it can expeditiously complete or implement such improvements; and

(ii) The applicant submits, as part of its final application, a proposed schedule for (A) the planning, design and staged construction of secondary treatment, and (B) such other improvements which will provide for the maximum amount of planning, design and construction which can be completed by the applicant pending a final decision on its application; and

(iii) The applicant has exercised its best efforts to comply with such schedule pending a final decision on its application.

(b) *Prohibitions:* No modified section 301(h) permit shall be issued:

(1) Where such issuance would not assure compliance with all applicable requirements of this Subpart;

(2) Where such issuance would not assure compliance with all applicable requirements of Part 122;

(3) Where the applicant's discharge was not actually flowing into ocean waters or saline estuarine waters as of December 27, 1977;

(4) For a discharge receiving less than primary treatment;

(5) For the discharge of sewage sludge;

(6) For any discharge for which there is as of September 13, 1979 an applicable State or local law, regulation or ordinance requiring secondary treatment of municipal wastewater, unless it can be shown that such law, regulation or ordinance is less stringent than secondary treatment, as defined in 40 CFR 133.102.

(7) Where such issuance would conflict with applicable provisions of other Federal laws, and, to the extent that they do not conflict with requirements of law, applicable provisions of Executive Orders. This includes situations where:

(i) The applicant's modified discharge is located in an area covered by an approved State coastal zone management program, and the applicant fails to provide certification under section 307(c) of the Coastal Zone Management Act of 1972, as amended,

16 U.S.C. 1456(c), that its discharge complies with such program;

(ii) The issuance of a section 301(h) modified permit would jeopardize the continued existence of an endangered or threatened species listed under the Endangered Species Act of 1973, as amended, 16 U.S.C. 1531 *et seq.*, or would result in the destruction or modification of the habitat of such species; or,

(iii) The applicant's modified discharge is located in a marine or estuarine sanctuary designated by the Secretary of Commerce under Title III of the Marine Protection, Research and Sanctuaries Act, as amended, 16 U.S.C. 1431 *et seq.*, or the Coastal Zone Management Act, as amended; 16 U.S.C. 1461 *et seq.*, and the Secretary denies certification under either of these Acts;

(8) Where the applicant either did not submit a preliminary application or submits a final application which, on its face, did not demonstrate to the satisfaction of the Administrator that the applicant's modified discharge meets or will meet all the requirements of this Subpart; or,

(9) Where the applicant is currently meeting effluent limitations based on secondary treatment.

(c) *Preliminary application.* Each applicant for a section 301(h) modified permit under this Subpart must have submitted a preliminary application to EPA, postmarked no later than September 25, 1978, which contained, at a minimum, the name and address of the applicant and a statement that the applicant was seeking a modification of secondary treatment requirements under section 301(h) of the Act.

(d) *Final application.* All final section 301(h) applications shall be signed by either a principal executive officer of the POTW or ranking elected official of the municipality. (See also § 122.5(a)(3)).

(1) *Contents.* Each applicant for a modified permit under this Subpart shall submit a final application to EPA which shall contain:

(i) A signed, completed NPDES Application Standard Form A, Parts I, II, and III; and

(ii) A completed application which corresponds to EPA's Application Format for Modification of the Requirements of Secondary Treatment; and

(iii) The following certification:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in the attached document(s), and based on my inquiry of those individuals immediately responsible for obtaining the information, I am convinced that the information is true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

(2) *Deadline and distribution.* The original and two copies of the final application must be submitted to the following no later than September 13, 1979:

(i) 301(h) Review Group, Office of Water Program Operations, 401 M Street, SW., Washington, D.C. 20460 (original);

(ii) The Regional Administrator for the EPA Region in which the applicant is located (one copy); and

(iii) The State or interstate agency (or agencies) authorized to provide certification/concurrence under § 124.21–124.23 (one copy).

(e) *Decisions on section 301(h) modifications.* (1) The decision to grant or deny a section 301(h) modification of the secondary treatment requirement shall be:

(i) Made by the Administrator, or a person designated by the Administrator, pursuant to § 124.55; and

(ii) Based on the applicant's demonstration that it has met all the criteria set forth in §§ 125.59–66.

(2) No section 301(h) modified permit shall be issued by the Administrator, or person designated by the Administrator:

(i) Until the appropriate State certification/concurrence is granted or waived pursuant to § 124.24; or

(ii) If the appropriate State denies certification/concurrence pursuant to §124.24.

(3) Any section 301(h) modified permit shall:

(i) Be issued in accordance with the procedures set forth in Part 124; and

(ii) Contain all applicable terms and conditions set forth in Part 122; and

(iii) Contain the special permit terms set forth in § 125.67.

(4) Appeals of any section 301(h) determination shall be governed by the nonadversary initial licensing procedures set forth in Part 124, Subpart I.

(5) At the expiration of the section 301(h) permit, the POTW should be prepared to support the continuation of the modification based on studies and monitoring performed during the life of the permit.

§ 125.60 Existence of and compliance with applicable water quality standards.

(a) *Criteria.* There must exist a State water quality standard or standards applicable to the pollutant(s) for which a section 301(h) modified permit is requested, including:

(1) State water quality standards for biochemical oxygen demand or dissolved oxygen;

(2) State water quality standards for suspended solids, turbidity, light transmission, light scattering or maintenance of the photic- zone; and

(3) State water quality standards for pH.

(b) *Application requirements.* To enable the Administrator to determine whether the applicant meets the criteria of paragraph (a), the applicant shall demonstrate in Part A Section 9 of its application that:

(1) An applicable State water quality standard(s) exists; and

(2) That the modified discharge will comply with those State water quality standard(s).

§ 125.61 Attainment or maintenance of water quality which assures protection of public water supplies, the protection and propagation of a balanced, indigenous population of shellfish, fish and wildlife, and allows recreational activities.

(a) *Physical characteristics of discharge.*—(1) *Criteria.* (i) The applicant's modified outfall and diffuser must be well designed, using accepted designs of outfall and diffuser systems, to provide appropriate initial dilution, dispersion and transport of wastewater, considering the volume of the discharge and site-specific physical and environmental conditions;

(ii) The initial dilution achieved by the applicant's modified discharge, as calculated in Part B, section 1 of the Application Format, must be sufficient to meet all applicable State water quality standards at and beyond the boundary of the zone of initial dilution during those conditions defined as critical in Part B, Sections 1–4, of the Application Format;

(iii) Dilution water must be supplied to that zone where entrainment takes place in an amount equal to the wastewater flow times the dilution factor as calculated in Part B, Section 1 of the Application Format;

(iv) Following initial dilution, the partially diluted wastewater and particulates must be transported and dispersed so as not to adversely affect water use areas (including recreational and fishing areas) and areas of biological sensitivity.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's modified discharge meets the criteria of paragraph (a)(1), the applicant shall provide the data on the physical characteristics and hydraulics of the outfall and on the physical

oceanographic conditions in the vicinity of the outfall required by Part B, Sections 1–4, of the Application Format.

(b) *Impact of discharge on public water supplies.*—(1) *Criteria.* (i) The applicant's modified discharge must allow for the attainment or maintenance of water quality which assures protection of public water supplies.

(ii) The applicant's modified discharge must not:

(A) Prevent a planned or existing public water supply from being used, or from continuing to be used, as a public water supply; or,

(B) Have the effect of requiring treatment over and above what would be necessary in the absence of such discharge in order to comply with local, State, and EPA drinking water standards.

(iii) The applicant's modified discharge must comply with all applicable State water quality standards or other requirements adopted or promulgated for the purpose of attaining or maintaining water quality which assures protection of public water supplies.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's modified discharge meets the requirements of paragraph (b)(1) of this section, the applicant shall provide the data on the impact of its outfall on existing and potential public water supplies required by the Public Water Supply Impact Assessment, Part B, section 5, of the Application Format.

(c) *Biological impact of discharge.*—(1) *Criteria.* (i) A balanced, indigenous population of shellfish, fish and wildlife must exist:

(A) Immediately beyond the zone of initial dilution of the applicant's modified discharge and;

(B) In all other areas beyond the zone of initial dilution where marine life is actually or potentially affected by the applicant's modified discharge.

(ii) Conditions within the zone of initial dilution must not contribute to extreme adverse biological impacts, including, but not limited to, the destruction of distinctive habitats of limited distribution, the presence of disease epicenters, or the stimulation of phytoplankton blooms which have adverse effects beyond the zone of initial dilution;

(iii) In the case of a modified discharge into saline estuarine waters the following additional restrictions are placed on impacts within the zone of initial dilution:

(A) Benthic populations within the zone of initial dilution must not differ substantially from the balanced, indigenous populations which exist immediately beyond the boundary of the zone of initial dilution;

(B) The discharge must not interfere with estuarine migratory pathways within the zone of initial dilution; and

(C) The discharge must not result in the accumulation of toxic pollutants or pesticides at levels which exert adverse effects on the biota within the zone of initial dilution.

(iv) The applicant's modified discharge must comply with all applicable State water quality standards or other requirements adopted or promulgated for the purpose of attaining or maintaining water quality which provides for the protection and propagation of fish, shellfish and wildlife.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's modified discharge meets the criteria of paragraph (c)(1) of this section, the applicant shall prepare a Biological Conditions Summary in accordance with the Marine Biological Assessment Part B, section 6, of the Application Format and shall answer all questions contained in the Marine Biological Assessment Questionnaire, part B, Section 7 of the Application Format, based on the summary.

(d) *Impact of discharge on recreational activities.*—(1) *Criteria.* (i) The applicant's modified discharge must allow for the attainment or maintenance of water quality which allows for recreational activities beyond the zone of initial dilution, including, without limitation, swimming, diving, boating, fishing and picnicking and sports activities along shorelines and beaches.

(ii) The applicant's modified discharge must comply with all applicable State water quality standards or other requirements adopted or promulgated for the purpose of attaining or maintaining water quality which allows for recreational activites.

(iii) There must be no Federal, State or local restrictions on recreational activities within the vicinity of the applicant's modified outfall unless such restrictions are routinely imposed around sewage outfalls. This exception shall not apply where the restriction would be lifted or modified, in whole or in part, if the applicant were discharging a secondary treatment effluent.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's modified discharge meets the criteria of paragraph (d)(1) of this section, the applicant shall provide the data on the impact of its discharge on recreational uses required by the Recreation Impact Assessment, Part B, section 8 of the Application Format.

(e) *Additional application requirements for application based on improved discharge.* If an applicant is applying for a section 301(h) modified permit on the basis of an improved discharge, it must submit in its final application:

(1) Final plans for such improvements in Part A, Section 10 of the Application Format;

(2) Computer modeling or other detailed analyses projecting changes in flow rates, flow patterns, composition, volume or other parameters or characteristics of the applicant's current discharge which are expected to result from such improvements at several milestone dates (including the statutory July 1, 1983 date) reflecting conditions of severe waste loadings;

(3) The assessments required by paragraphs (a) through (d) of this section based on its current discharge;

(4) Where the improved discharge involves outfall relocation, the assessments required by paragraphs (a) through (d) of this section for the relocation site; and,

(5) A detailed analysis of how the improvements planned by the applicant will, when completed and at the milestone(s) identified in paragraph (e)(2) above, eliminate, reduce or otherwise relieve any adverse impacts identified in paragraph (e)(3) of this section and assure compliance with the criteria contained in paragraphs (a) through (d) of this section.

(f) *Stressed waters.* If an applicant believes that its failure to meet the requirements of paragraphs (a) through (d) of this section is attributable to conditions resulting from human perturbations other than its modified discharge (including, without limitation, other municipal or industrial discharges, nonpoint source runoff and the applicant's previous discharges), the applicant must demonstrate, to the satisfaction of the Administrator, that its modified discharge does not or will not:

(1) Contribute to, increase, or perpetuate such stressed conditions;

(2) Contribute to further degradation of the biota or water quality if the level of human perturbation from other sources increases; and

(3) Retard the recovery of the biota or water quality if the level of human perturbation from other sources decreases.

§ 125.61 Establishment of a monitoring system.

(a) *General requirements applicable to all proposed monitoring programs.* (1) The applicant must have a biological monitoring program, a program for monitoring compliance with State water quality standards, and a toxics control monitoring program which meet the requirements of paragraphs (a) through (c) of this section;

(2) Each program must include a detailed description of sampling techniques, times, and locations (including appropriate control sites), analytical techniques, quality control and verification procedures to be used; and,

(3) The applicant must also demonstrate that it has the economic, personnel, technical and other resources to implement the proposed programs immediately upon issuance of a section 301(h) modified permit and to carry out the proposed programs for the life of the modified permit.

(4) Each proposed monitoring program submitted by the applicant under this section shall be subject to revision as determined by the Administrator prior to issuing any modified permit and during the term of any modified permit issued.

(b) *Biological monitoring program.*— (1) *Criteria.* (i) The biological monitoring program shall provide data adequate to evaluate the impact of the applicant's discharge on marine biota, taking into account critical environmental periods (e.g., runoff, spawning periods for fish and shellfish, and unusual oceanographic and meteorological events) and variability of the discharge anticipated during the life of the permit. It shall be keyed to the nature and volume of the applicant's discharge, the nature of the receiving water, and the nature of the marine life affected or likely to be affected as identified in the Biological Conditions Summary prepared under § 125.61(c)(2).

(ii) For applicants seeking a section 301(h) modified permit based on:

(A) A current discharge, the biological monitoring program shall be designed to demonstrate that the discharge currently complies and will continue to comply throughout the term of the modified permit with the requirements of § 125.61(c)(1).

(B) An improved discharge other than outfall relocation, the biological monitoring program shall be designed to collect baseline data on the current impact of the discharge, to monitor the impact of the discharge as improvements are completed, and, upon completion of all improvements, to demonstrate that the discharge complies with the requirements of § 125.61(c)(1).

(C) An improved discharge involving outfall relocation, the biological monitoring shall be conducted at both the current discharge site, until such discharge ceases, and the relocation site. The biological monitoring program at the current discharge site must be designed to measure the impact of the discharge as the toxics control program is implemented and any upgrading of treatment is completed. The biological monitoring program at the relocation site shall be designed to collect baseline data for a minimum of one year, to monitor the impact of the discharge as improvements other than outfall relocation are completed, and, upon completion of all improvements, demonstrate that the discharge complies with the requirements of § 125.61(c)(1).

(iii) The biological monitoring program shall include quarterly seasonal surveys of the structure and function of the macrofaunal benthos and those other biological communities most likely to be affected by the discharge.

(iv) Where the chemical analysis conducted under § 125.64(a)(1) of this Subpart or any subsequent chemical analysis of the applicant's discharge required to be conducted under paragraph (d) of this section identifies any toxic pollutants or pesticides in the applicant's discharge, the biological program shall include:

(A) *In situ* bioassays within and immediately beyond the zone of initial dilution and at appropriate reference sites. The bioassays must be conducted with appropriate sensitive marine organisms, and shall be designed to:

(*1*) Determine the accumulation of each identified toxic pollutant and pesticide in the organisms;

(*2*) Examine other adverse effects of the discharge on the organisms, including, death, growth abnormalities, and physiological stress.

(B) Sampling of sediments within and immediately beyond the boundary of the zone of initial dilution and other areas of solids accumulation (as identified in the physical assessment prepared under § 125.61(a)(1)), and at appropriate reference sites, for accumulation of each identified toxic pollutant and pesticide. If sampling indicates the existence of elevated or increasing levels of such pollutants or pesticides, the biological monitoring program must include a specific program for measuring the impact of such substances on, at a minimum, the macrofaunal benthos.

(v) Where the applicant's discharge may affect commercial or recreational fisheries, the biomonitoring program shall include periodic assessments of the condition and productivity of fisheries likely to be affected by the discharge.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's biomonitoring program meets the criteria of (b)(1), the applicant shall submit a proposed Biological Monitoring Program in Part C, Section 1 of its final application.

(c) *Water quality monitoring program.*(1) *Criteria.* (1) The water quality monitoring program shall provide data adequate to evaluate the applicant's compliance with applicable State water quality standards, taking into account critical environmental periods (e.g., runoff, spawning periods for fish and shellfish, and unusual oceanographic and meteorological events) and variability of the discharge anticipated during the term of the modified permit;

(ii) The water quality monitoring program shall be designed to measure the applicant's compliance with applicable State water quality standards:

(A) As required by State law;

(B) At the boundary of the zone of initial dilution; and

(C) At locations beyond the zone of initial dilution where impacts on marine life, recreational interests or public water supplies may occur.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's water quality monitoring program meets the criteria of (c)(1) of this section, the applicant shall submit a proposed Water Quality Monitoring Program in Part C, Section 2 of its final application.

(d) *Toxics control minitoring program* (1) *Criteria.* (i) The toxics control monitoring program shall provide data on the chemical composition of the applicant's discharge, which can be used to:

(A) Measure the effectiveness of the applicant's toxic control program in reducing toxic pollutants and pesticides in its discharge;

(B) Assist in implementing the toxics control program; and,

(C) Guide biological monitoring efforts under paragraph (b)(1)(iv) of this section.

(ii) The toxics control monitoring program shall provide for a chemical analysis of representative wet weather and dry weather discharges for toxic pollutants and pesticides.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's toxic control monitoring program meets the criteria of

(d)(1) of this section, the applicant shall submit a proposed Toxics Control Monitoring program in Part C, section 3 of its final application.

§ 125.63 Effect of discharge on other point and non-point sources.

(a) *Criterion.* No modified discharge may result in any additional requirements on any other point or nonpoint source.

(b) *Application requirements.* To enable the Administrator to determine whether an applicant's modified discharge meets the criterion of paragraph (a) of this section, the applicant shall submit in Part D of its final application, letters from each agency having authority to establish or to advise in the establishment of waste loadings or wasteload allocations for the waters into which the applicant proposes to discharge. These letters shall indicate whether the applicant's proposed discharge will result in any additional treatment, pollution control, or other requirement on any other point or nonpoint source (including combined sewers). The letter(s) shall include the basis for the agency's conclusion.

§ 125.64 Toxics control program.

(a) *Chemical analysis.*—(1) *Criteria.* The applicant shall submit at the time of application, a chemical analysis of its current discharge for all toxic pollutants and pesticides as defined in § 125.58(k) and (u). Analysis shall be performed on two 24 hour composite samples (one dry weather and one wet weather). Applicants may supplement or substitute additional chemical analysis data if documentation is provided to show that the composition of the wastewater samples typifies that which occurs during dry and wet weather conditions.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant meets the criteria of paragraph (a)(1) the applicant shall provide the information required by Part E, Section 1 of the Application Format.

(b) *Identification of Sources of Toxic Pollutants* (1) *Criteria.* The applicant shall submit at the time of application, an analysis of the sources of toxic pollutants identified in section 125.64(a)(1). The applicant shall categorize the sources of the toxic pollutants according to industrial and non-industrial types.

The applicant shall include in § 125.64(c) and (d) programs to reduce or remove the identified toxic pollutants from the applicant's discharge.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant meets the criteria of paragraph (b)(1) the applicant shall provide the information required by Part E, Section 1 of the Application Format.

(c) *Industrial pretreatment requirements.*—(1) *Criteria.* (i) An applicant which has known or suspected industrial sources of toxic pollutants shall have a pretreatment program capable of enforcing all applicable promulgated pretreatment standards which meets the requirements of 40 CFR 403.8(f) no later than the time the applicant's permit is modified, and which will be implemented no later than eighteen (18) months after issuance of the modified permit;

(ii) This requirement shall not apply to any applicant which has no known or suspected industrial sources of toxic pollutants and so certifies to the Administrator;

(iii) The proposed industrial pretreatment program submitted by the applicant under this section shall be subject to revision as determined by the Administrator prior to issuing any section 301(h) modified permit and during the term of any section 301(h) modified permit issued;

(iv) Implementation of all existing pretreatment requirements and authorities must be maintained through the period of development of any additional pretreatment requirements that may be necessary to comply with the requirements of this subpart.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant not exempted by paragraph (c)(1)(ii) of this section meets the criteria of paragraph (c)(1), the applicant shall provide in Part E, Section 2 of its final application, a proposed pretreatment program which includes the following:

(i) The evidence required by 40 CFR 403.9(a)(1)–(4);

(ii) An inventory of sources which are subject or may be subject to the pretreatment program. Such sources shall include, but not be limited to, sources in the industrial categories identified in Appendix A, Part 122 of the National Pollutant Discharge Elimination System regulations. The inventory shall include a description of the methodology used to develop the inventory and the process to be used to ensure the inventory is kept accurate and current. At a minimum, the inventory shall include a qualitative description of the type of pollutants contributed by each identified source. In addition, for sources subject to promulgated national categorical pretreatment standards, State or local pretreatment requirements, the inventory shall include a summary of industrial compliance with the quantitative and qualitative information required by 40 CFR Part 403.12(b);

(iii) A schedule of compliance which demonstrates that the program will be implemented as soon as possible but in no event later than eighteen (18) months after issuance of a section 301(h) modified permit. The compliance schedule shall include, at a minimum, the following milestones and shall specify their initiation and completion dates:

(A) Completion of the wastewater characterization of industrial sources inventoried in the final application as required by 40 CFR 403.8(f)(2)(i–iii);

(B) Development of effluent limitations for prohibited pollutants (as defined by 40 CFR 403.5) contributed to the POTW by industrial sources;

(C) Notification of industrial sources of applicable pretreatment standards and sludge management requirements, as required by 40 CFR 403.8 (f)(2)(iii);

(D) Design of a compliance monitoring program, as defined by 40 CFR 403.8(f)(1)(v);

(E) Establishment of financial programs and revenue sources to ensure adequate funding to carry out the pretreatment program;

(F) Acquisition of all qualified personnel necessary to carry out the pretreatment program; and

(G) Submission of a request for pretreatment program approval without conditions (and removal credit approval if desired and eligible) as required by 40 CFR 403.9.

(iv) Provisions, if necessary, for requesting conditional acceptance of the pretreatment program pending the acquisition of funding and/or personnel for limited aspects which do not require immediate implementation, *Provided* the applicant:

(A) Has the authority, procedures, funding and personnel to fulfill its current enforcement responsibilities for all applicable promulgated pretreatment standards;

(B) Meets the requirements of 40 CFR 403.9(b)(1)–(3);

(C) Submits a schedule of compliance and evidence demonstrating it will have sufficient resources and qualified personnel to carry out the authorities and procedures in 40 CFR 403.8(f) as soon as possible but not later than eighteen (18) months after issuance of a section 301(h) modified permit;

(D) Submits a description of its record to date in enforcing existing applicable national, State and local pretreatment standards; and

(E) Has an approvable schedule of compliance for implementing its pretreatment program.

(d) *Nonindustrial source control program.*—(1) *Criteria.* (i) The applicant shall have at the time of application, a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into its treatment works to the extent practicable, which will be implemented no later than eighteen months after issuance of a section 301(h) modified permit.

(ii) Each proposed nonindustrial source control program submitted by the applicant under this section shall be subject to revision as determined by the Administrator prior to issuing any section 301(h) modified permit and during the life of any such permit issued.

(2) *Application requirements.* To enable the Administrator to determine whether an applicant's nonindustrial source control program meets the criteria of paragraph (d)(1) of this section, the applicant shall provide in Part E, section 3 of its final application a proposed nonindustrial source control program which includes the following:

(i) A schedule of activities for identifying nonindustrial sources of toxic pollutants, including:

(A) All nonindustrial sources, or categories of sources, which are introducing toxic pollutants into the applicant's treatment works; and,

(B) The specific toxic pollutants and volumes thereof generated by such sources or categories of sources.

(ii) A schedule of activities to determine practicability of controls, to include:

(A) An analysis of the control technologies available to the applicant, including treatment as well as control, at the sale, use, handling and disposal stage;

(B) An assessment of the effectiveness of such control technologies in eliminating or limiting the introduction of toxic pollutants from such source into the applicant's treatment facility; and

(C) An analysis of the legal, technological, socio-economic, and institutional impact of utilizing such control technologies.

(iii) A schedule for the development and implementation of control programs, to the extent practicable, for each nonindustrial source or category of sources identified under paragraphs (b)(1) and (d)(2)(i) of this section. Each such program shall include:

(A) A description of the program;

(B) A method for enforcing the program;

(C) A monitoring program which will measure compliance with and the effectiveness of the program; and

(D) A schedule for implementation.

(iv) A schedule for the development and implementation, to the extent practicable, of specific control programs, in addition to the programs for any other non-industrial source or sources identified under paragraph (b)(1) of this section. These programs shall include;

(A) A program for the development of best management practices to control urban stormwater runoff into combined sewers, including street cleaning, catch basin cleaning, trash pickup in both commercial and residential areas, and runoff controls at construction sites;

(B) A program to eliminate the discharge of waste oil from gas stations, service stations and garages into the applicant's treatment works, including programs to collect such waste oil for recycling or solid waste disposal;

(C) A program to control the introduction of herbicides, fungicides, insecticides and rodenticides into the applicant's treatment facility from residential, commercial and public works activities;

(D) A program for controlling sale, use, and/or disposal of certain household products containing toxic pollutants which, because of disposal practices, are likely to enter the applicant's treatment works (e.g., household paints, cleaning compounds); and

(E) A program to modify building and/or plumbing codes for new construction to limit the introduction of heavy metals from plumbing equipment into the applicant's treatment works.

(v) The schedules of activities shall include an assessment of the applicant's ability to provide the financial, staffing and other resources or arrangements which may be necessary to carry out the schedule of activities listed in paragraph (d)(2)(i) through (iv).

§ 125.65 Increase in effluent volume or amount of pollutants discharge.

(a) *Criteria.* No modified discharge may result in any new or substantially increased discharges of the pollutant to which the modification applies above the discaharge specified in the section 301(h) modified permit. The applicant shall provide data indicating that:

(1) There shall be no increase in effluent volume beyond the amount in the applicant's projected five year discharge;

(2) There shall be no increase in the mass loadings of any pollutant(s) for which a modification is requested over and above the amount in the applicant's projected five year discharge; and

(3) Where pollutant discharges are attributable in part to combined sewer overflows, the applicant shall minimize existing overflows and prevent increases in the amount of pollutants discharged.

(b) *Application requirements.* To enable the Administrator to determine whether the applicant meets the requirements of paragraph (a), the applicant shall demonstrate in Part F of its final application, compliance with paragraphs (a) (1) and (2) of this section, ans submit a schedule of activities designed to comply with paragraph (a)(3) of this section.

§ 125.66 Utilization of grant funds available under Title II of the Act.

(a) *Criteria.* (1) Any funds available to the applicant under Title II of the Act shall be used for:

(i) The construction of municipal treatment works necessary to ensure that the applicant's modified discharge will meet the requirements of this subpart; and

(ii) The application of best practicable wastewater treatment technology.

(2) The applicant shall prepare a revised scope of work and estimate of revised costs under any active Step 1, 2, or 3 Construction Grant awarded under 40 CFR Part 35, subpart E.

(3) The revised scope of work of any active grant awarded from funds authorized for any fiscal year beginning after September 30, 1978, shall be subject to the requirement to evaluate innovative and alternative technologies in accordance with 40 CFR Part 35, Subpart E.

(4) Any such revised scope of work and costs shall be subject to review and revision by the Administrator; such review shall not constitute approval, obligation, or award of a grant under 40 CFR Part 35.

(b) *Application requirements.* To enable the Administrator to determine whether an applicant can meet the requirements of paragraph (a) of this section the applicant shall submit as Part G of its final application a funding program which shall contain a proposed modified scope of work and estimate of revised costs for any active Step 1, 2, or 3 Construction Grants awarded under Part 35, Subpart E of this Chapter, which provides for the following:

(1) *Step 1 Grants.* (i) Application of the best practicable wastewater treatment technology (BPWIT);

(ii) Reclamation, recycle, and reuse of water and confined disposal of pollutants;

(iii) Development of a pretreatment program in accordance with the requirements of this part and 40 CFR 403 (see also 40 CFR 35.907);

(iv) An evaluation of flow and waste reduction methods including development of a non-industrial source program as required by § 125.64(d)(3) to reduce or eliminate the discharge of toxic substances to the municipal treatment works; and

(v) An analysis which establishes the cost effective combination of the proposed less-than-secondary treatment system and additional facilities required to provide for full secondary treatment (such additional facilities must be planned in accordance with the requirements of § 35.917 of 40 CFR Part 35, Subpart E).

(2) *Step 2 Grants.* Development of plans and specification for the proposed less-than-secondary treatment facilities including provision for future addition of facilities to provide for secondary treatment and BPWTT.

(3) *Step 3 Grants.* Construction of the proposed less-than-secondary facilities including provisions to ensure compatibility with future additions of facilities to provide for secondary treatment and BPWTT.

§ 125.67 Special conditions for section 301(h) modified permits.

Each section 301(h) modified permit issued shall contain, in addition to all applicable terms and conditions required by 40 CFR §§ 122.14 through 122.23, the following:

(a) Effluent limitations which will assure compliance with the requirements of this Subpart;

(b) A schedule or schedules of compliance for:

(1) Pretreatment program development required by § 125.64(c);

(2) Nonindustrial toxics control program required by § 125.64(d);

(3) Any construction required by § 125.66; and

(4) Control of combined sewer overflows required by § 125.65.

(c) Monitoring requirements that include:

(1) Biomonitoring program requirements of § 125.62(b);

(2) Water quality program requirements of § 125.62(c); and

(3) Toxic control monitoring program requirements of § 125.62(d).

(d) Reporting requirements that include:

(1) An annual report to the Enforcement Division Director on the results of the monitoring program required by paragraph (c);

(2) An annual report summarizing industrial compliance with the reporting requirements of 40 CFR 403.12(b). The report shall summarize for each industrial subcategory covered by national pretreatment standards:

(i) The number of sources reporting versus the number of sources inventoried in that subcategory;

(ii) The number of sources not in compliance with the pretreatment standard;

(iii) The number of sources with compliance schedules; and

(iv) What actions are being undertaken to develop compliance schedules for sources currently lacking but requiring a schedule.

(3) A report within 180 days of the final compliance date of a national pretreatment standard, summarizing the number of noncomplying sources in that industrial subcategory and what actions are being taken to bring non-complying sources into compliance (see industry reports required by 40 CFR 403.12(d)).

(4) An annual report on the public notification of noncomplying industries required by 40 CFR 403.8(f)(2)(vii).

[OMB No. 158—579003; Expires December 31, 1979]

Application Format for Modification of the Requirements of Secondary Treatment

Introduction

This application format consists of the following seven (7) parts, (A through G), sections and appendices which must be provided by the applicant to constitute a final application:

Part A. General

Section 1. Description of Treatment System.
Section 2. Effluent Limitations.
Section 3. Existing Discharge.
Section 4. State Secondary Treatment Requirements.
Section 5. State Coastal Zone Management Program.
Section 6. Marine and Estuarine Sanctuaries.
Section 7. Endangered or Threatened Species.
Section 8. Other Applicable Federal Requirements.
Section 9. Existence and Compliance with State Water Quality Standards.
Section 10. Improved Discharge Construction.

Part B. Technical Evaluation Information

Section 1. Physical Assessment.
Subsection A—Initial Dilution.
Appendix I. Description of Methods used to compute initial dilution assuming EPA methods were not used.
Appendix II. Oceanographic Data.
Subsection B—Ocean Discharge.
Appendix III. Data on Ocean Discharge.
Subsection C—Saline Estuarine Discharge.
Appendix IV. Data on Estuarine Discharge.
Section 2. Compliance with BOD or DO.
Appendix V. DO demand resulting from disturbance of bottom.
Appendix VI. Description of more critical DO situation.
Section 3. Compliance with pH.
Appendix VII. Other considerations relative to pH.
Section 4. Compliance with Suspended Solids.
Appendix VIII. Compliance with State water quality standards.
Appendix IX. Description of experimental procedure used to compute amount and areal extent of SS accumulation on seabed.
Section 5. Public Water Supply Impact Assessment.
Appendix X. Assessment of Modified Discharge on Public Water Supplies.
Section 6. Marine Biological Assessment.
Appendix XI. Biological Conditions Summary.
Section 7. Biological Assessment Questionnaire.
Section 8. Recreational Impact Assessment.
Appendix XII. Assessment of Modified Discharge on Recreational Activities.

Part C. Description of Monitoring System

Section 1. Biological Monitoring Program.
Appendix XIII. Proposed Biological Monitoring Program.
Section 2. Water Quality Monitoring Program.
Appendix XIV. Proposed Water Quality Monitoring Program.
Section 3. Toxics Control Monitoring Program.
Appendix XV. Proposed Toxics Control Monitoring Program.

Part D. Letter(s) From State Concerning Impact of Modified Discharge on Other Point and Non-Point Sources

Appendix XVI. Letters from State Agencies Concerning Impact on Other Point and Non-Point Sources.

Part E. Toxic Control Program.

Section 1. Chemical Analysis.
Appendix XVII. Chemical Analysis of Toxic Pollutants and Pesticides and Source Identification Analysis.
Section 2. Pretreatment Program.
Appendix XVIII. Proposed Pretreatment Program.
Section 3. Non-Industrial Source Control Program.
Appendix XIX. Proposed Non-Industrial Source Control Program.

Part F. Effluent Volume and Mass Emissions

Appendix XX. Data on Effluent Volume and Mass Emissions.
Appendix XXI. Schedule of Activities to Control Combined Sewer Overflows.

Part G. Use of Title II Funds

Appendix XXII. Funding Program for Available Title II Funds.

Each part should be completed by the applicant to the best of its ability. When completed, this application must demonstrate, on its face, that the applicant's

modified discharge will meet the requirements of 40 CFR Part 125 and section 301(h) of the Act.

Part A—General

Section 1. Description of Treatment System

Please provide a detailed description of the treatment system and outfall configuration which you propose to utilize to satisfy the requirements of section 301(h) and 40 CFR Part 125.

If you are applying for a modification on the basis of an improved discharge within the meaning of 40 CFR 125.58, please also provide a detailed description of your current treatment system and outfall configuration.

Section 2. Effluent Limitations

Please identify the final effluent limitations for biochemical oxygen demand, suspended solids and pH on which your application for a modification is based:

Biochemical oxygen demand ———mg/l

Suspended solids ———mg/l

pH ———

Section 3. Existing Discharge

Did the publicly owned treatment works for which you are requesting a modification discharge into marine waters on or prior to December 27, 1977?

Yes ——— No ———

If "yes", please provide the start-up date of the facility's discharge, the discharge volume, and the exact location of the discharge.

If "no", please provide an explanation.

Section 4. State Secondary Treatment Requirements

Does your State or locality have a law, regulation or ordinance requiring secondary treatment of municipal wastewater?

Yes ——— No ———

If "yes", please attach a copy of such law, regulation or ordinance.

Section 5. State Coastal Zone Management Program

Is your modified discharge located in an area which is included in a State coastal zone management program(s) which has been approved under the Coastal Zone Management Act of 1972, as amended?

Yes ——— No ———

If "yes", attach a certification that your modified discharge will comply with such program(s).

Section 6. Marine and Estuarine Sanctuaries

Is your modified discharge located in a marine or estuarine sanctuary designated under Title III of the Marine, Protection, Research & Sanctuaries Act of 1972, as amended or under the Coastal Zone Management Act of 1972?

Yes ——— No ———

If "yes", please attach a certification from the Secretary of Commerce that the discharge is consistent with Title III and can be carried out within any applicable regulations promulgated thereunder.

Section 7. Endangered or Threatened Species

Please attach sufficient information to demonstrate that your modified discharge will not jeopardize the continued existence of an endangered or threatened species (as determined by the Secretary of the Interior under the Endangered Species Act of 1973, as amended), and will not result in the destruction or modification of the habitat of such species.

To assist EPA in determining whether the discharge of effluent pursuant to a permit issued under section 301(h) may affect a threatened or endangered species or modify the critical habitat of such species, an application must contain the following information:

(1) the names of any threatened or endangered species listed in 44 FR 3636 *et seq.* (January 17, 1979 or subsequently listed species) that inhabit, or obtain nutrients from, waters that will be affected by the proposed discharge;

(2) an indication whether the discharge will affect an area designated as Critical Habitat in 50 CFR Sections 17.95, 19.96 or Part 226;

(3) the applicant's evaluation of whether the proposed discharge may affect threatened or endangered species or modify a Critical Habitat (if a proposed discharge may affect waters inhabited by a threatened or endangered species, or used by such species to obtain nutrients, or if a proposed discharge may affect a Critical Habitat, the applicant's evaluation should contain a detailed analysis of the direct and indirect impacts of such discharge on threatened or endangered species).

Section 8. Other Applicable Federal Requirements

Are you aware of any Federal law, other than the Clean Water Act or the three statutes identified in Sections 5, 6 and 7, or an Executive Order, which is applicable to your discharge?

Yes——— No———

If "yes", please provide sufficient information to demonstrate that your modified discharge will comply with such law(s) or order(s).

Section 9. Existence and Compliance With State Water Quality Standards

Does a State water quality standard or standards, as defined in section 125.58(w) exist, as required by § 125.60(a) that is applicable to the pollutant or pollutants for which a modified permit is requested?

Yes——— No———

If "yes", please attach a certification from your State water pollution control agency and a demonstration that the water quality of your modified discharge meets or will meet the appropriate State water quality standard or standards. Include information on the State's mixing zone policy, criteria applied, and dilution or decay studies that were undertaken to demonstrate that the appropriate mixing and effluent concentration limitations were met.

Section 10. Improved Discharge Construction

Are you applying for a section 301(h) modification based on an improved discharge within the meaning of 40 CFR 125.58?

If "yes", please provide the following information:

A. Evidence that such improvements have been throughly planned and studied as an alternative to secondary treatment.

B. Evidence that you have the financial and technical resources necessary to complete or implement such improvements expeditiously.

C. A history of your previous efforts to comply with construction schedules in your existing NPDES permit (or an enforcement compliance schedule letter). If you have not met all required dates, please provide an explanation.

D. A proposed schedule for the staged planning, design and construction of (A) secondary treatment and (B) the improvements which you propose to make to meet the requirements of this part, which will maximize the amount of planning, design and construction which you can complete pending a final Agency decision on your application.

Part B—Technical Evaluation Information

Table of Contents

Section 1. Physical Assessment.
Subsection A—Initial Dilution.
Subsection B—Ocean Discharge.
Subsection C—Saline Estuarine Discharge.
Section 2. Compliance with BOD or DO.
Section 3. Compliance with pH.

Section 4. Compliance with Suspended Solids.
Section 5. Public Water Supply Impact Assessment.
Section 6. Marine Biological Assessment.
Section 7. Biological Assessment Questionnaire.
Section 8. Recreational Impact Assessment.

General Instructions. In addition to providing the information required in this format, the applicant must include supplemental information as requested in various Sections of Part A.

Section 1. Physical Assessment

Subsection A. Initial Dilution

1–1. List the characteristics of the outfall diffuser system:

————angle of port orientation(s) from the horizontal, in degrees.

————port diameter(s) in meters to three significant figures, and the contraction coefficient of the orifice(s), if known.

————vertical distance between water surface and outfall port(s) centerline, in meters.

————density of effluent in grams per cubic centimeters at some reference temperature (degrees centigrade).

————number of ports.

————port spacing, meters; also explain in Appendix I the spatial arrangement of ports with respect to each other, and the seabed.

————design flow rate for each port if multiple ports are employed (m^3/sec).

1–2. Determine the flow rates representing the highest two to three hours during an average day of the seasonal critical periods identified in 1–3:

a. Maximum flow = ————m^3/sec.

b. Expected maximum flow at the end of the permit term = ————m^3/sec.

1–3. Provide ambient density gradient lines for the region of the outfall diffuser. Sufficient vertical data points must be given to allow an accurate representation by linear segments of the major features of the ambient density structure. Ambient stratification adversely effects initial dilution. The greatest density gradient over the height-of-rise of the plume will result in the lowest dilution period. Data can be evaluated by (1) comparing predictions for various density profiles or (2) predicting the density gradient over the height-of-rise of the plume and then using the greatest value (as explained in the Technical Support Document). Worst case conditions or those at the worst 10 percentile if sufficient data exists should be used. Since initial dilution predictions may be sensitive to the value of the density gradient, data accuracy should be consistent with generally accepted oceanographic practices. Density should be reported to five (5) significant figures. A set of data should be provided for each of the following critical environmental situations:

a. Periods of maximum hydraulic loading from the wastewater treatment facility.

b. Periods of low background water quality due to natural conditions including low DO, excessively high and low turbidity.

c. Periods of exceptional biological activity (*e.g.*, spawning, migration of anadromous or catadramous organisms, etc.)

d. Periods of low net circulation, low effective net flushing, or low intertidal mixing

e. Periods of minimum and maximum stratification.

1–4. Compute initial dilution for the flow rates identified in Section 1–2 and each of the critical environmental conditions given in Section 1–3. Currents equal to the lowest ten percentile of those measurements made near the discharge site during these periods may be used in computations.

Dilution is defined as the total volume of a parcel divided by the volume of waste it contains. Initial dilution is the flux-average dilution attained by the plume during its convective ascent through ambient water. Initial dilution may be calculated by the applicant. However, EPA will make calculations based on its own methods.[1] These methods are available upon request. If other methods are used, they, should be described in Appendix I and be in reasonable agreement with EPA calculations.

For the purposes of demonstrating impact on water quality, concentrations of waste constituents expected after initial dilution are:

$C_f = C_a + (C_e - C_a) / Sa$

Where:

C_f = final concentrations, C_e = effluent concentrations, C_a = ambient concentration, and Sa = predicted initial dilution.

1–5. If EPA methods of initial dilution prediction are used, check here.————

1–6. Of the initial dilutions listed in 1–4, which is most critical with respect to ambient DO requirements (See 2–7)? Explain in Appendix I.

1–7. Which is most critical for pH (See 3.3)? Explain in Appendix I.

1–8. Which is most critical for SS (See 4.5)? Explain in Appendix I.

[1] Teeter, A. M. and D. J. Baumgartner. Predictions of Initial Mixing for Municipal Ocean Discharges. EPA, Corvallis Environmental Research Laboratory Publication 043. Corvallis, Oregon, August 1978.

1–9. Provide in Appendix II an explanation of how the currents and ambient vertical density stratification in the vicinity of the outfall (using data provided in Appendices III and/or IV) may influence plume shape, trajectory, and seawater entrainment in the plume (or plumes if multiple diffusers are used). Methods cited above for initial dilution may be used. The applicant must demonstrate that coastal circulation processes supply dilution water in the amount of Sa x Q, where Q is the volumetric flux of treated wastewater, using oceanographic data discussed in Appendix II, III, or IV.

1–10. Estimate the boundary of the zone of initial dilution. This zone should bound those dilutions calculated for the flows and conditions described in Section 1–4. Use predicted plume trajectories or vertical height of rise for the critical conditions, whichever is greater, as the radial extent of the zone. Measure this distance horizontally from the discharge point(s) to the boundary of the zone. The maximum vertical height of rise will equal the water depth in most cases and is an acceptable value. The zone will then be a circle with a radius equal to the water depth in the case of a single port, or a rectangle whose width is equal to twice the depth of the water plus the width of the diffuser, and whose length is equal to twice the depth of the water plus the length of the diffuser. For purposes of compliance monitoring, a regularly shaped boundary (describing a cylinder, cube, etc.) extending vertically from the seabed to the sea surface would be acceptable. List the geometric description of the zone configurations indicating the margin for navigational error as a ± distance.

1–11. List the coordinates of the zone by latitude and longitude.

Subsection B. Ocean Discharge

1–12. If your discharge is into the ocean, provide in Appendix III an oceanographic report including:

a. Profiles with depth, representative of seasonal conditions, shall be provided for temperature, salinity, density and currents. These variables shall be given for the water column inshore of the diffuser (or pipeline end, in the case of no diffuser), over the diffuser (or end), but away from direct effluent effects, offshore of the end, and upstream and downstream of the center of the discharge. Conclusions should be drawn from direct and inferred current measurements as to the fate of material in the far field and as to plume dynamics. Oceanographic atlases or compendia of data may be used, or data

may be extrapolated from them if it is shown that they are representative of the outfall area.

b. Depending on applicable water quality standards and monitoring requirements, the following measurements shall be made simultaneously at the same stations as 1–12a, above, and additionally to monitor outfall effluents: BOD, DO, pH, suspended particulates, and light transmittance. As noted elsewhere, DO is a surrogate for BOD, and light transmittance and turbidity are surrogates for suspended solids and may be substituted where appropriate.

c. An assessment of the environmental effects of direct freshwater runoff from coastal areas is required. Runoff from estuaries may contain substances that affect measurements in the zone occupied by the outfall, hence the outfall may contribute less to the pollution load than would be the case if extraneous sources were not considered. The applicant should document the estuary mass emission rate if this situation occurs.

Subsection C. Saline Estuarine Discharge

1–13. If your discharge is to saline estuarine waters, provide in Appendix IV an oceanographic report describing the following characteristics:

a. Seasonal classification of the estuary in the vicinity of the discharge must be documented, preferably by the scheme devised by Hansen and Rattray.[3] If the Hansen-Rattray method is used, velocity and salinity data shall be presented so as to estimate pollutant flux past the outfall. Residence times of material in the vicinity of the outfall and in the estuary itself should be provided. If the Hansen-Rattray scheme is not used, *e.g.*, if the estuary is classified as "well-mixed," "partially-mixed," etc., data shall be presented to support the classification. The same calculations discussed above will be presented.

If deep estuaries, *e.g.*, fiords, are being considered, calculation of residence times throughout the water column will be given. Methods of deriving these estimates and their effect on relative pollutant distibution must be made with reference to the seasonal variation of plume configuration, *i.e.*, plume equilibrium position.

b. In conjunction with 1–13a, the freshwater budget is required to provide estimates of the non-tidal freshwater velocity, at the point of evaluation. Other uses of the freshwater budget are for calculations of flushing rates which require knowledge of tidal prisms and as input to numerical models which are discussed below. Generally, streams are gauged sufficiently above tidal effect so that the freshwater inflow can be estimated. Other estimates of runoff contributions below the gauging station are required.

If gauged stream data are not available for runoff estimates the method of estimating flow must be accompanied by a discussion of assumptions, estimates of errors and potential effect of errors.

c. Historical records of wind, tide height and tidal currents should be synthesized and a correlation made with the dispersion of surface and subsurface materials, and recirculation of material. Particular attention should be given to prevailing wind speed and direction, especially the onshore-alongshore-offshore component (as it affects the shoreward movement of surface materials), and the incidence of such events. Where possible, corrections to time of occurrence, elevations, speeds and directions should be cited with reference to NOAA current and tide table stations.

d. The effects of geographical and geomorphological features on spatial and temporal variations shall be evaluated with narrows and shoaling effects in mind.

e. Spatial and temporal scale-dependent phenomena within the outfall tidal excursion zone are to be evaluated.

f. If numerical models are used to support the modification request, complete documentation and seasonal verification at the point(s) in question must be supplied, as must methods employed to evaluate turbulent, advective, and other terms.

g. If hydraulic models are used to support the modification request, time-lapse photographs covering combinations of seasonal runoff and tidal conditions at the point(s) in question should be supplied if available. Documentations of methods employed to simulate wind, density, and velocity profiles will be required.

h. Background data on suspended solids contributions and estimates of deposition and resuspension to the estuary solids balance must be supplied.

Section 2. Compliance With BOD or DO

2–1. If the BOD of your effluent exceeds the BOD criteria described in 40 CFR 133.102(a), complete this section.

2–2. Provide applicable State water quality standards levels in receiving water. You may apply for a BOD modification if a value is entered in 2–2a or 2–2b below.

a. DO criteria ———

b. BOD criteria ———

Complete the appropriate subsection to show compliance with the criteria listed in 2–2a or 2–2b or both if applicable.

Dissolved Oxygen

2–3. Effluent sample point location ———. DO (mg/l) at sample point ———.

The location of effluent concentration measurement should be clearly indicated (*i.e.*, final clarifier overflow, final pump station). If disinfection is employed periodically, samples must be obtained for every comparable situation.

2–4. Travel time from sample point to diffuser ports:

a. Minimum flow ——— m^3/sec, time to flow ——— minutes.

b. Average flow ——— m^3/sec, time to flow ——— minutes.

c. Maximum flow ——— m^3/sec, time to flow ——— minutes.

d. Expected maximum flow at the end of the permit term ——— m^3/sec, time to flow ——— minutes.

Because anaerobic conditions in ocean outfalls may increase demand and adversely alter other chemical parameters, it is necessary to compute travel times at these flows. Applicants should enter the values for the flows indicated and compute the time to flow between the sample point and the diffuser ports.

2–5. Immediate dissolved oxygen demand (15 minutes) of the effluent after anaerobic incubation for times 2–4a through 2–4d, respectively.

a. ———.

b. ———.

c. ———.

d. ———.

The immediate dissolved oxygen demand (IDOD; APHA Standard Methods, 14th ed., except as modified to use representative seawater instead of distilled water for dilution) must be measured after anaerobic incubation at representative temperatures for the time periods computed in 2–4. This value is considered to be a conservative estimate of the oxygen demand exerted by the waste stream in the buoyant plume formed in the sea upon discharge from an ocean outfall. Show the data from which the IDOD's were calculated.

2–6. List background DO concentrations at appropriate depths and indicate possible influence by the ocean outfall for the critical environmental situations listed in question 1–3.

[3] Hansen, D. V. and M. Rattray, Jr. New dimensions in estuary classification. Limn. Ocean. 11:319–326. 1966.

2–7. Compute the influence on ambient DO using the largest IDOD presented in 2–5, the DO concentration presented in 2–6, and the corresponding Sa from question 1–4. Respond to question 1–6. Compute the following equation (all values in mg/l):

$DO_f = DO_a + (DO_s - IDOD - DO_a)/Sa$

where:

DO_f = final dissolved oxygen,
DO_a = background dissolved oxygen,
DO_s = dissolved oxygen of samples at final sampling point in the plant,
IDOD = immediate dissolved oxygen demand, per modified standard methods,
Sa = predicted average initial dilution.

2–8. Do the results of 2–7 meet the criteria for DO presented in 2–2? If not explain.

BOD

2–9. Determine the effluent BOD taken at times corresponding to flows presented in 2–4a, b, c, and d.

a. ————.
b. ————.
c. ————.
d. ————.

2–10. Compute the final BOD following initial dilution using the appropriate flows in 2–4.

a. ————.
b. ————.
c. ————.
d. ————.

2–11. Do the results of 2–10 meet the criteria for BOD presented in 2–2b? If not explain.

2–12. Provide in Appendix V, an analysis showing that BOD exerted *after* initial dilution will not result in subsequent depletion of DO below applicable standards for DO. Describe the oxygen demand resulting from periodic disturbance of accumulated sediments, and from steady demand of undisturbed sediments, in relation to 2–13.

2–13. The demand of oxygen in the bottom 2 meters of seawater for the critical 3 month period refers to the following data:

a. Ambient DO concentration ———— mg/l.
b. DO criteria ————.
c. What months of the year are represented? ————.

2–14. How often are the 2–2a criteria exceeded? ————.

2–15. Do you believe questions 2–2 through 2–13 adequately represent the most critical evaluation of possible adverse effects that may be associated with the BOD exerted by your discharge? If not, please describe in Appendix VI a more critical situation and demonstrate that your discharge will comply with applicable State water quality standards and not cause environmental damage.

Section 3. Compliance with pH

3–1. Does your effluent pH ever exceed nine or fall below six? If so, explain why and complete this section.

3–2. List the applicable State standard for pH in the vicinity of the discharge.

3–3. List pH's resulting from mixtures of receiving seawater and effluent according to the lowest initial dilution calculated in 1–4. Respond to question 1–7. Describe the method used in determining pH.

Values must be a time series, as deemed appropriate, based on the above experimental observations. The pH may change as a result of effluent dilution with seawater. Therefore, the applicant should provide results of pH measurement in tabular form (graphs of continuous measurement may be attached). Measurements should be made immediately after mixing and at three more times following mixing as determined by observing the rate of reaction of the waste and seawater.

3–4. Is the pH standard met? How often is the pH standard exceeded? Explain.

3–5. If you have evaluated other considerations regarding pH, please provide a detailed analysis in Appendix VII.

Section 4. Compliance With Suspended Solids

4–1. If the suspended solids of your effluent exceeds the suspended solids criteria described in 40 CFR 133.102(b) complete this section.

4–2. Have you received, or are you in the process of receiving an adjusted suspended solids effluent requirement from EPA by virtue of operating an approved wastewater treatment pond? (See 40 CFR 133.103).

YES ————, please explain.
NO ————, proceed to next question.

4–3. List the State water quality standard related to suspended solids applicable to the marine waters at the discharge point. Standards for suspended solids, water clarity, turbidity, light transmittance, depth of photic zone, or settleable solids are acceptable.

4–4. Determine the suspended solids content for the following flow conditions:

a. Minimum flow ———— m^3/sec, SS ———— mg/l.
b. Average flow ———— m^3/sec, SS ———— mg/l.
c. Maximum flow ———— m^3/sec, SS ———— mg/l.

4–5. Using the initial dilutions computed in 1–4, the ambient SS concentrations for the critical periods identified in 1–3, and corresponding SS in 4–4, compute the final suspended solids concentrations following initial mixing. Respond to question 1–8.

4–6. Do the final suspended solids concentrations meet the State water quality standard for suspended solids?
YES ———— NO ————
State does not have water quality standard for SS ————.

4–7. If the State does not have a water quality standard for SS, provide as Appendix VIII a detailed discussion of how your outfall discharge meets State water quality standards for water clarity, turbidity, light transmittance, depth of photic zone, or settleable solids. The information should relate to the critical condition explained in 1–8 and include the results of laboratory testing and field studies.

4–8 Describe in Appendix IX the experimental procedure used to compute the amount and areal extent of seabed accumulation of SS discharge under this modification.

If applicable water quality standards limit settleable solids, the applicant must experimentally determine the amount of settleable solids after appropriate initial mixing and a period of a quiescent settling. The mass of settleable material may be reported per unit volume of discharge or per unit volume of receiving water, whichever relates most directly to the applicable standard.

Water quality standards may limit the actual areal deposition [3] rate of settleable solids as a way to protect benthic communities from significantly altered sedimentary materials. An assessment of the accumulation of settleable solids must be provided in any event, in order to estimate the impact of deposited materials on oxygen levels.

The applicant must also provide an assessment of the long term fate of the sedimentary material within and outside the zone of initial dilution. It is important to assure that periodic sediment resuspension or continual drift of sediment loads will not result in deleterious accumulations in bays, estuaries, beaches, and oceanic topographic depressions. Data from seabed drifter studies, if available should be reported.

4–9. Does the discharge meet the settleable solids standards in all critical cases as identified in 1–3? Data must be

[3] As distinguished from a limit on the concentration of settleable solids in the water column.

provided to substantiate this assessment.

——— Yes,

——— No applicable standard; however the seabed accumulation is computed for use in evaluating oxygen demand at the seabed interface.

Section 5. Public Water Supply Impact Assessment

General Instructions. The applicant must prepare an assessment of the impact of its current discharge on existing and potential sources of public water supplies (Appendix X). As noted in § 125.61(e), applicants requesting a modified permit based on an improved discharge involving outfall relocation must submit a similar assessment for the relocation site.

The public water supply impact assessment must include, at a minimum:

5–1. Identification of the exact location of each planned or existing seawater intake which is being or will be used by a desalinization plant producing water for public water supplies and is likely to be affected by the applicant's modified discharge, based on the analysis of the transport and dispersion of the applicant's wastewater required by the Physical Assessment, Sections 1–4 of this part.

5–2. If any desalinization plant is identified under paragraph 5–1, a detailed assessment of:

(a) The impact of the applicant's modified discharge on water quality in the vicinity of the intake, considering the effect of tides, winds, currents and other meteorological or hydrological phenomena which affect the transport and dispersion of the applicant's modified discharge; and

(b) If the applicant's modified discharge has any impact on the water quality in the vicinity of the intake, the effect of that impact on the quality of the public water supply ultimately produced, including an analysis of whether it will continue to comply with local, State and EPA drinking water standards, and whether such compliance will require additional treatment.

5–3. An analysis of whether the applicant's modified discharge will comply with all applicable State water quality standards or other requirements adopted or promulgated for the purpose of attaining or maintaining water quality which assures protection of public water supplies.

Section 6. Marine Biological Assessment

General Instructions: To enable the Administrator to determine whether an applicant's modified discharge meets the criteria of § 125.61(b)(1), the applicant shall answer the Biological Assessment Questionnaire contained in Section 7 of this part of the application form, and shall prepare a Biological Conditions Summary (Appendix XI) that supports the response to the questionnaire. The organization of the Biological Conditions Summary should follow the format of the questionnaire. A section should be prepared for each question and it should include a synthesis of all data relevant to the issue.

The Biological Conditions Summary must examine ecological conditions at a minimum of three sites: within the zone of initial dilution, immediately beyond the boundary of the zone of initial dilution, and at a reference site that is comparable to the discharge site in all physical and chemical parameters except for the presence of ecologically significant human disturbances.

The basic requirements of § 125.61(b)(1) are the absence of extreme biological impacts within the zone of initial dilution, and the presence of a balanced, indigenous population immediately beyond the boundary of the zone. A balanced, indigenous population must also exist at any point beyond the boundary of the zone where impacts from the applicant's modified discharge might reasonably be expected to occur. A balanced, indigenous population will be considered present beyond the boundary of the zone if the applicant can demonstrate that biological conditions there fall within the natural range of variability observed at the reference site.

Section 125.61(b)(1) contains additional biological criteria for modified discharges into saline estuarine waters, for modified discharges into stressed waters, and for improved discharges. Applicants who propose a modified discharge into saline estuarine waters must demonstrate in their response to question 7–2 that their modified discharge will not cause substantial difference in benthic populations within and beyond the zone of initial dilution, will not interfere with migratory pathways within the zone, and will not result in the bioaccumulation of pollutants at levels which exert adverse effects on the biota within the zone.

Applicants who propose a discharge into stressed waters must demonstrate in their response to question 7–12 that their modified discharge will not increase or perpetuate adverse ecological alterations resulting from other sources of pollution.

Applicants who propose an improved discharge must demonstrate in their response to question 7–13 that the improvement will eliminate any adverse biological impacts attributable to their current discharge.

The other portions of the Biological Assessment Questionnaire address major ecological impacts of obvious concern. These include the occurrence of mass mortalities, disease epicenters, and phytoplankton blooms near the applicant's outfall; adverse effects on fisheries and distinctive habitats of limited distribution such as coral reefs and kelp beds; and the bioaccumulation of toxic materials. The questions also address more fundamental ecological characteristics that are likely to indicate a disruption of the natural structure and function of a balanced, indigenous population. These include species composition; patterns of diversity, abundance, and productivity; trophic structure; and the presence of pollution indicators, opportunistic, or nuisance species. Alterations in such ecological parameters may occur in benthic, phytoplankton, zooplankton, demersal, and intertidal assemblages. Sampling guidelines for each of these biological assemblages are cited in the 301(h) Technical Support Document.

The extent of documentation in the Biological Conditions Summary necessary to support the response to the Biological Assessment Questionnaire is dependent on the quality and quantity of the applicant's discharge and the sensitivity of the receiving environment. Because these factors vary greatly among potential 301(h) applicants, EPA has generally avoided specific, universal requirements for biological analyses. Applicants are given the flexibility to provide only those analyses that are warranted in individual cases.

Section 7. Biological Assessment Questionnaire

Is there reason to believe that the applicant's discharge may have caused or will cause:

7–1 Interference with the protection and propagation of a balanced, indigenous population of marine life characteristic of the biogeographic zone in which the outfall is located? YES ——— NO ———

7–2 Biological communities within the zone of initial dilution to be different from those that would naturally occur in the absence of the outfall? YES ——— NO ———

7–3 Differences in the structure and function of biological communities (e.g., vertical and horizontal stratification, species composition, abundance,

diversity, productivity, trophic structure, etc.) beyond the zone of initial dilution from those characteristics of the biogeographic zone in which the outfall is located? YES ——— NO ———

7–4 Increases in the abundance of any marine plant or animal organism (especially nuisance or toxic species, or phytoplankton whose blooms cause adverse ecological effects) within or beyond the zone of initial dilution not characteristic of the biogeographic zone in which the outfall discharge is located? YES ——— NO ———

7–5 Domination of marine communities within or beyond the zone of initial dilution by pollution resistant species (e.g., slime forming algae or bacteria, fouling, boring, nuisance or opportunistic species of finfish, invertebrates, etc.)? YES ——— NO ———

7–6 A deleterious effect on distinctive habitats of limited distribution such as kelp beds and coral reefs either within or beyond the zone of initial dilution? YES ——— NO ———

7–7 Within or beyond the zone of initial dilution, an increased incidence of disease in marine organisms? YES ——— NO ———

7–8 An abnormal body burden of any toxic material in marine organisms collected within or beyond the zone of initial dilution? YES ——— NO ———

7–9 Adverse effects on commercial or recreational fisheries within or beyond the zone of initial dilution? YES ——— NO ———

7–10 Mass mortality of fishes or invertebrates due to a typical growth of marine algae, anoxia or other conditions within or beyond the zone of initial dilution? YES ——— NO ———

7–11 Adverse ecological impacts either within or beyond the zone of initial dilution other than those addressed in the preceding questions? If so, please explain. YES ——— NO ———

The following question must be answered only by applicants who propose a discharge into stressed waters.

7–12 Is there reason to believe that the applicant's discharge has enhanced or will perpetuate adverse ecological alterations resulting from other sources of pollution? If so, please explain. YES ——— NO ———

The following question must be answered only by applicants who propose to improve their discharge in order to qualify for a 301(h) modification.

7–13 Will the proposed improvement eliminate adverse ecological impacts attributable to the applicant's existing discharge? If so, please explain. YES ——— NO ———

Section 6. Recreational Impact Assessment

General Instructions: The applicant must prepare an assessment of the impact of its modified discharge on existing and potential recreational activities (Appendix XII). The term recreational activities includes, but is not limited to, swimming, diving, wading, boating, fishing, and picnicking and sports activities along shorelines and beaches. As noted in § 125.61(e), applicants requesting a modified permit based on an improved discharge involving outfall relocation must submit a similar assessment for the relocation site.

The recreational impact assessment must include, as a minimum:

8–1. Identification of: (1) all existing or potential recreational activities affected and likely to be affected by the applicant's modified discharge, based on the analysis of the transport and dispersion of the applicant's wastewater required by the Physical Assessment, Section 1–4 of this part; (2) all existing and potential recreational activities at a reference site(s) of comparable, but unpolluted, environmental conditions; and (3) where the applicant claims that its inability to meet the requirements of § 125.61(d) is due to pollution from sources other than its discharge, all existing and potential recreational activities at a reference site(s) of comparable environmental conditions (including comparable pollution absent the applicant's discharge).

8–2. Within the area of impact, as identified by the applicant's analysis of the transport and dispersion of its discharge contained in the Physical Assessment, a detailed analysis of the following:

(a) The impact of the applicant's discharge on existing or potential recreational fishing, including both finfishing and shellfishing;

(b) State, Federal, or local restrictions on the harvesting or human consumption of shellfish or finfish;

(c) State, Federal or local limitations on the concentrations of toxic pollutants, pesticides or other substances in edible fish and shellfish harvested from within the area of impact;

(d) The impact of the applicant's discharge on recreational boating, swimming, wading, and picnicking and sports activities along shorelines and beaches; and

(e) State, Federal or local restrictions on water contact sports or other activities or on the recreational uses of shorelines and beaches.

8–3. An analysis of whether the applicant's discharge will comply with all applicable water quality standards or other requirements adopted or promulgated for the purpose of attaining or maintaining water quality which assures protection of recreational activities.

Part C—Description of Monitoring System

Table of Contents

Section 1. Biological Monitoring Program.
Section 2. Water Quality Monitoring Program.
Section 3. Toxics Control Monitoring Program.

General Instructions: The applicant must prepare as Part C of the application a description of the proposed monitoring system to meet the criteria of section 125.62 that would be implemented upon receipt of a section 301(h) modified NPDES permit. As noted in section 125.62(b)(ii) applicants requesting a modified permit based on an improved discharge involving outfall relocation must submit a monitoring plan for both the existing discharge site and the relocation site as well as control site(s).

The proposed monitoring plan must include proposed programs for monitoring to demonstrate compliance with the toxics control program established to meet the requirements of § 125.64, for monitoring biological impacts of the applicant's discharge(s) on marine biota to demonstrate compliance with § 125.61, and monitoring of compliance with State water quality standards as required by §125.60. Each proposed program must include a detailed description or references of sampling techniques, frequency and locations of sampling, analytical techniques and quality control methods. In addition, applicants must demonstrate that adequate economic, personnel, technical, and other resources are available to implement the proposed programs upon issuance of a modified permit and to carry out the proposed programs for the life of the modified permit.

Section 1. Biological Monitoring Program

The applicant must submit as Appendix XIII a proposed biological monitoring program designed to provide data adequate to evaluate the impact of

the applicant's discharge on marine biota. The biological monitoring program should allow for the development and understanding of variations in the marine biota over time and the causes of these variations, whether they are due to natural forces, the discharge itself, or other sources of pollutants. Therefore, the biological monitoring program should be designed so that observed changes in the marine biota can be correlated with the possible influencing factors of the applicant's discharge, including but not limited to variations in the wastewater flow and characteristics, and both normal and unusual meteorological and oceanographic conditions. The biological monitoring program should be keyed to the marine life affected or likely to be affected, as indicated in the biological conditions summary prepared under § 125.61(c)(2), and should emphasize those parameters most likely to impact the marine biota in the vicinity of the applicant's outfall.

The requirements of § 125.62(b) should lead to the development of a biological monitoring program which consists of:

1. Field surveys of biological communities and populations that permit comparisons with baseline conditions described in the Biological Conditions Summary;

2. An assessment of the condition and productivity of both commerical and recreational fisheries potentially affected by the applicant's discharge; and

3. *In situ* bioassays and fields surveys to determine bioaccumulation and survival of indicator organisms at various depths within and beyond the zone of initial dilution and at appropriate reference points. The proposed program should include detailed descriptions or references of sampling techniques, frequency and location of sampling and analytical methods, and rationales for the selection of indicator organisms and biological communities used for bioaccumulation studies and various field studies.

Section 2. Water Quality Monitoring Program

The applicant must submit as Appendix XIV a proposed water quality monitoring program designed to provide data adequate to evaluate the applicant's compliance with applicable State water quality standards. The water quality monitoring program should allow for the development and understanding of variations in water quality over time and the causes of these variations, whether they are due to natural forces, the discharge itself, or other sources of pollutants. Therefore, the water quality monitoring program should be designed so that observed water quality can be correlated with the possible influencing factors of the applicant's discharge, including but not limited to variations in the wastewater flow and characteristics, and both normal and unusual meteorological and oceanographic conditions. Emphasis should be placed on critical environmental periods such as spawning periods for fish and shellfish. The proposed program should include detailed descriptions or references of sampling techniques, frequency and location sampling, and analytical and quality control methods.

Section 3. Toxics Control Monitoring Program

The applicant must submit as Appendix XV a proposed toxics control monitoring program designed to demonstrate the effectiveness of the applicant's toxic control program in reducing those toxic pollutants and pesticides identified in the required analysis of its current discharge under § 125.64(a) for the toxic pollutants and pesticides identified in § 125.58 (k) and (s). Accordingly, the toxics control monitoring program should provide data on the chemical composition of the applicant's discharge which can be used to:

1. Measure the effectiveness of the applicant's pretreatment and non-industrial source control programs and procedures;

2. Assist in implementing the overall toxics control program efforts; and

3. Guide the biological monitoring program efforts.

The proposed program should include detailed descriptions of or references to sampling techniques, frequency and location of sampling, and analytical and quality control methods. The toxics control monitoring program should provide an understanding of variations over time of both the flow rate and toxic pollutant content of the applicant's discharge; accordingly, the program should be designed to provide data on both wet weather and dry weather flows.

Part D—Letter(s) From State Concerning Impact of Modified Discharge on Other Point and Non-Point Sources

General Instructions: The applicant must submit, as Appendix XVI of the application, letters from appropriate State agencies stating whether the applicant's modified discharge will result in any additional treatment, pollution control, or other requirement on any other point or non-point source. The letter(s) should include a detailed analysis of the facts and other considerations supporting the agency's conclusion, including a thorough analysis of existing and future waste loads and waste load allocations for the waters into which the applicant has discharged and will be discharging, and the effect of granting the proposed section 301(h) modification to other POTWs and other point and non-point source discharges into these waters.

Since waste load allocations are determined by the State, letter(s) should be secured from all State agencies which have any role in setting waste loadings or waste load allocations. These agencies include the State water pollution control agency, area-wide planning or management agency, coastal zone commission, and possibly other State-level agencies.

Part E—Toxic Control Program

Table of Contents

Section 1. Chemical Analysis.
Section 2. Pretreatment Program.
Section 3. Non-Industrial Source Control Program.

General Instructions: All applicants must submit as Appendix XVII an analysis of the wastewater or effluent from their current discharge, an analysis of known or suspected sources of toxics and pesticides in the wastestream, and proposed industrial pretreatment and non-industrial source control programs designed to address the control of the toxics identified by the chemical analysis. Applicants who can certify that there are no known or suspected industrial sources of the identified toxic pollutants currently or planned that would discharge into the POTW for which a modification is being requested are not required to develop a proposed industrial pretreatment program.

Section 1. Chemical Analysis

All applicants shall submit an analysis of the waste water or effluent from their current discharge for the toxic pollutants and pesticides listed in Table 1 below, and present the results of the analyses in Appendix XVII. All analyses shall be done on a 24-hour composite sample with incremental samples collected hourly. Both dry weather and wet weather flows of the effluent shall be sampled and analyzed. The dry weather flow sample shall be collected no less than 5 days following a rainfall of measureable intensity.

The pesticides and toxic pollutants shall be analyzed using the precedures presented in the document titled "Sampling and Analysis Procedures for

Screening of Industrial Effluents for Priority Pollutants" (April, 1977 or later revisions). This document is available at no charge to the applicant. Applicants should notify the person listed under "For Further Information Contact" at the front of the regulation for a copy of the document.

This document references the analytical procedures for measuring pesticides, heavy metals, cyanides and phenols listed in 40 CFR Part 136. Applicants must report data for all detectable pesticides and toxic pollutants, not just those reported to be greater than 10ug/1, as requested on page thirty of the "Sampling and Analysis" document. Applicants should provide quality control data collected during the analysis of the wastewater samples.

Applicants may substitute or provide additional data on the concentration of priority pollutants concentrations in their discharge for those found in the two composite samples. Information must be provided to demonstrate that the concentrations are those typical of wet and dry weather flows. Where these data are not available, applicants shall provide data on the two samples listed above.

In addition to complying with the requirements of § 125.64(b), the applicant must submit as a part of Appendix XVII an analysis of known or suspected sources of the toxics and pesticides identified through the chemical analysis of the waste stream. These sources should be categorized according to their specific industrial and non-industrial origin, where possible.

For the purposes of these regulations, toxic pollutants and pesticides include: (1) those substances identified in Table 1 of Committee Print 95–30 of the House of Representatives Committee on Public Works and Transportation; and (2) those pesticides identified in *Quality Criteria for Water, 1976* but not included in Committee Print 95–30. Following is the list of toxic pollutants and pesticides which applicants must include in their toxic control program.

Table 1

Pesticides:
- Mirex
- Guthion
- Methoxychlor
- Parathion
- Demeton
- Malathion

Toxic Pollutants:
- Acenaphthene
- Acrolein
- Acrylonitrile
- Aldrin/Dieldrin
- Antimony and compounds
- Arsenic and compounds
- Asbestos
- Benzene
- Benzidine
- Beryllium and compounds
- Cadmium and compounds
- Carbon tetrachloride
- Chlordane (technical mixture and metabolites)
- Chlorinated benzenes (other than dichlorobenzenes)
- Chlorinated ethanes (including 1, 2-dichloroethane, 1,1,1-trichloroethane, and hexachloroethane)
- Chloroalkyl ethers (chloromethyl, chloroethyl, and mixed ethers)
- Chlorinated naphthalene
- Chlorinated phenols (other than those listed elsewhere; includes trichlorophenols and chlorinated cresols)
- Chloroform
- 2-chlorophenol
- Chromium and compounds
- Copper and compounds
- Cyanides
- DDT and metabolites
- Dichlorobenzenes (1,2,- 1,3-, and 1,4-dichlorobenzenes)
- Dichlorobenzidine
- Dichloroethylenes (1,1- and 1,2-dichloroethylene)
- 2,4-dichlorophenol
- Dichloropropane and dichloropropene
- 2,4-dimethylphenol
- Dinitrotoluene
- Diphenylhydrazine
- Endosulfan and metabolites
- Endrin and metabolites
- Ethylbenzene
- Fluoranthene
- Haloethers (other than those listed elsewhere; includes chlorophenylphenyl ethers, bromophenylphenyl ether, bis (dichloroisopropyl) ether, bis-(chloroethoxy) methane and polychlorinated diphenyl ethers)
- Halomethanes (other than those listed elsewhere; includes methlene chloride, methylchloride, methylbromide, bromoform, dichlorobromomethane, trichlorofluoromethane, dichlorodifluoromethane)
- Heptachlor and metabolites
- Hexachlorobutadiene
- Hexachlorocyclohexane (all isomers)
- Hexachlorocyclopentadiene
- Isophorone
- Lead and compounds
- Mercury and compounds
- Naphthalene
- Nickel and compounds
- Nitrobenzene
- Nitrophenols (including 2,4,-dinitrophenol, dinitrocresol)
- Nitrosamines
- Pentachlorophenol
- Phenol
- Phthalate esters
- Polychlorinated biphenyls (PCBs)
- Polynuclear aromatic hydrocarbons (including benzanthracenes, benzopyrenes, benzofluoranthene, chrysenes, dibenzanthracenes, and indenopyrenes)
- Selenium and compounds
- Silver and compounds
- 2,3,7,8-Tetrachlorodibenzo-p-dioxin (TCDD)
- Tetrachloroethylene
- Thallium and compounds
- Toluene
- Toxaphene
- Trichloroethylene
- Vinyl chloride
- Zinc and compounds

Section 2. Industrial Pretreatment Program

All applicants shall submit, as Appendix XVIII, a proposed pretreatment program which complies with the requirements of § 125.64(c) (1) and (2) and which is designed to address the control of toxic pollutants identified by the chemical analyses of its current discharge, as required under § 125.64(a), and reported in Appendix XVII, Section 1 of this part of the application format. In lieu of such pretreatment program, applicants may certify, as provided under § 125.64(c)(1)(ii), that no known or suspected industrial sources of toxic pollutants currently exist or are planned for construction that would discharge into the POTW for which a modification is being requested. Applicants developing proposed pretreatment programs should assure that all of the criteria and application requirements listed under § 125.64 are thoroughly addressed and that the proposed program can be implemented after issuance of a modified permit.

Section 3. Non-Industrial Source Control Program

All applicants shall submit as Appendix XIX a proposed non-industrial source control program which complies with the requirements of § 125.64(d) (1) and (2) and is designed to address the control of toxics identified by the chemical analyses of its current discharge as required under § 125.64(a) and reported in Appendix XI, Section 1 of this part of the application format. Applicants should note that they are *not* exempt from this requirement by the exemption from developing a proposed pretreatment program under § 125.64(c)(1)(ii).

Part F—Effluent Volume and Mass Emissions

General Instructions: Under § 125.65, the applicant must submit, as Appendix XX, evidence that there shall be no increase in effluent volume or mass loadings of any pollutant(s) for which a modification is requested over and above that amount identified in the applicant's projected five year discharge. Also, where combined sewer overflows contribute in part to pollutant

discharges, the applicant must submit as a part of Appendix XXI a schedule of activities designed to minimize existing overflows and prevent increases in the amount of pollutants from this source.

Part G—Use of Title II Funds

General Instructions: The applicant must submit as Appendix XXII a funding program containing a proposed modified scope of work and estimates of revised costs for any funds available to the applicant under Title II of the Clean Water Act in a manner which complies with the requirements of § 125.66 (a) and (b). This submittal should cover any active Step 1, 2, or 3 construction grants awarded under 40 CFR Part 35 Subpart E which may be affected by an approval of the applicants request for a 301(h) modified permit.

Management of Off-Road Vehicle Use on Public Lands

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

43 CFR Part 8340

[Circular No. 2445]

Off-Road Vehicles, Use of Public Lands

AGENCY: Bureau of Land Management, Interior.

ACTION: Final rule.

SUMMARY: This final rulemaking provides for the management of off-road vehicle use on public lands. The rules have been developed because off-road vehicles, in some areas, have caused excessive damage to natural resources and conflicted with other more passive uses. Implementation of these rules will provide for continued off-road vehicle use under conditions that will protect natural resources, be less disruptive to the activities of other uses, and promote safety.

DATE: Effective July 16, 1979.

ADDRESS: Director (370), Bureau of Land Management, 1800 C Street, N.W., Washington, D.C. 20240.

FOR FURTHER INFORMATION CONTACT: Mr. Larry R. Young (202) 343–9353.

SUPPLEMENTARY INFORMATION: The principal author of this final rulemaking is Larry R. Young of the Bureau of Land Management (BLM), Washington Office, Division of Recreation, assisted by the staff of the Division of Legislation and Regulatory Management.

Final rulemaking covering off-road vehicle (ORV) use on public lands was first published in the Federal Register on April 15, 1974. On May 2, 1975 a court order declared that these regulations violated Executive Order 11644 and the National Environmental Policy Act of 1969. After the regulations were rectified to correct their shortcomings, a proposed rule was issued on July 28, 1976. Following this, on May 25, 1977, Executive Order 11644 was amended by Executive Order 11989. This amendment required further changes in the rulemaking. The amended proposed rule appeared in the Federal Register of July 7, 1978 with a comment period of 90 days. A final Environmental Statement pertaining to these and other Departmental off-road vehicle regulations was made available to the public by the Department of the Interior on April 21, 1978.

Although the format of these final regulations is the same as that of the proposed regulations, the numbering has been changed. This was done to conform to the recodified recreation regulations as published in the Federal Register of September 12, 1978 starting on page 40734.

Approximately 400 letters were received from individuals and groups. Many contained detailed analyses, comments and suggestions. These letters have been reviewed and analyzed. The following summarizes the comments and suggestions received and the actions taken on them.

Purpose

It was suggested that lands be designated for use of "one or more types of" off-road vehicles because one type might be acceptable while another might not, e.g., a motorbike vs. a snowmobile. Sections 8341.2(a) and 8342.1 provide adequate means for coping with such a situation.

Definitions

There were numerous suggestions to clarify terms. It was felt to be preferable to leave most of these terms to dictionary definitions and interpretation in the light of the specific circumstances to which they apply. However, one new term—"spark arrester" has been added to the definitions in the final regulations.

It was suggested that the exclusions in the definition of "Off-Road Vehicle" be eliminated. This cannot be done because it contradicts Executive Orders 11644 and 11989. To eliminate redundancy, however, the 3rd exclusion in this definition has been modified by the deletion of "except use authorized under § 8294.1 of this part". Another suggestion was that there be a 6th exclusion for vehicles being used for lawful mining activities.

Lawful mining activities, including the use of off-roads vehicles may be conducted in closed or limited areas where use is expressly authorized by the authorized officer or otherwise officially approved. This specific matter will be dealt with in greater detail in regulations relating to mining which are under consideration.

Authorized activities that require the use of off-road vehicles in closed or limited areas are covered by specific authorization in a contract, permit, lease, license or temporary permit. The kinds of activities covered by the exclusions in the definition of the term "off-road vehicle" are a grazing permittee using a pickup truck to haul supplies to livestock in the area or a right-of-way holder using a vehicle to inspect or make repairs to a right-of-way. Emergency or normal administrative activities requiring the use of off-road vehicles are also covered by the exclusion.

In the second sentence of the definition of "Limited areas and trails", the words "dates and" have been inserted between the words "allowed" and "times" as a result of one comment. This will help clarify the period of use.

Concern was expressed that farmers, ranchers and miners could be prevented from conducting their businesses as a result of the closure provisions of these regulations. Circumstances of this nature can be worked out with the authorized officer through the exclusion provided in § 8340.0–5(a)(3).

Penalties

The heading of § 8340.0–7 has been changed from "Enforcement" to "Penalties" to reflect more accurately the subject of the section.

There were many comments predicting that staffing will be inadequate to enforce the regulations which carry penalties for noncompliance. These comments also suggested that the regulations should require sufficient personnel for enforcement. Regulations establish programs, but do not determine personnel requirements or ceilings. It is expected that the programs established by these regulations will be adequately funded through the normal process of budgeting.

It was suggested that these regulations provide for interim penalties such as the impoundment of vehicles until offenders are brought to trial. The authority to establish penalties stems from the Federal Land Policy and Management Act of 1976. That Act does not provide for forfeiture, impoundment or pretrial penalties.

After reviewing the comments on this penalty section, it was agreed that the section did not clearly state that punishment is imposed only after conviction. In order to clarify this point, the first sentence of § 8340.0–7 was amended by inserting the word "conviction" between the words "arrest" and "and".

Regulations Governing Use

Numerous comments wanted the regulations to control hunting, firearms and registration as they relate to off-road vehicles. These are activities in which the States have traditionally established standards of control, and there is no intent to interfere in this function. Standards of control in these regulations have been limited to situations where the States either have no controls, or their controls may be

considered insufficient for off-road vehicle activities on public lands.

There was an intense interest shown in § 8341.1(f) which establishes the requirements for operating an off-road vehicle on public lands. Many people suggested that there be no licensing required at all. Others wanted a learner's permit to be the minimum requirement for operating an off-road vehicle. Still others wanted the exception, which begins with the third word of the paragraph, to be deleted. The requirements contained in the paragraph are believed to be the best way to protect the public safety as required by Executive Order 11644 while at the same time allowing supervised youngsters to participate in off-road vehicle activities.

There were a number of suggestions to delete § 8341.1(g)(1) which states that no person shall operate an off-road vehicle on public lands in a reckless, careless, or negligent manner. In addition, many wanted the terms "reckless", "careless", and "negligent" defined. This section is necessary to fulfill the Bureau of Land Management's obligation to protect public safety. These words carry their ordinary legal meaning as interpreted by the courts.

Some people suggested that § 8341.1(g)(2), which covers speed limits, be deleted. Others suggested that the regulations specify where speed limits will apply. Speed limits are necessary to preserve public safety. However, where they will be established is determined on the basis of specific on-the-ground needs.

It was suggested that § 8341.1(g)(4), which deals with damage to natural and cultural resources and other uses, be deleted because it gives the "bureaucrat" too much latitude. This section is essential if the land manager is to effectively carry out his responsibility to minimize damage on the public lands.

Concern was also expressed about the phrase "or likely to cause" in § 8341.1(g)(4). There are many situations in which damage can be predicted on the basis of past experience. It would be poor management to wait for damage to occur before taking corrective action.

A new paragraph has been inserted as § 8341.1(h). It covers the subject of yielding right-of-way. The former § 8341.1(h) has been renumbered § 8341.1(i).

Special Rules

In line with one suggestion, § 8341.2(a) has been changed to reflect that its provisions are applicable in the given situations notwithstanding the consultation provisions of § 8342.2(a).

There were some comments expressing concern about the words "causing or will cause adverse effects", in the first sentence of § 8341.2(a), and how they would be interpreted. The wording is essentially identical to the words and intent of Executive Order 11989, and cannot be changed. The interpretation of these words, as applied to specific field conditions, will be based on past experience.

In keeping with a number of suggestions to expand the list of items in the first sentence of § 8341.2(a), there has been added "threatened or endangered species, wilderness suitability, other authorized uses, or other resources". There were also people who felt the list was too broad. However, the section fulfills the intent of Executive Order 11989.

There were expressions of concern because there was no provision for public participation in § 8341.2(a). This paragraph provides the authorized officer with a tool to take timely emergency action. Adding a provision for public discussion would defeat this purpose. Public participation is provided in other actions by § 8342.2.

It was suggested that in addition to closing an area to use there be other options such as "restrict", "reroute", "limit", or "rehabilitate". These alternatives have not been included because Executive Order 11989 provides only for closure.

Section 8291.2(b) of the proposed regulations has been deleted because it was felt that this paragraph provides the authorized officer with authority that properly belongs to the Office of the Secretary.

It was suggested that there be provision for public participation under § 8341.2(b) which authorizes State Directors to close some public lands to off-road vehicle use. Lands which are closed by State Directors will be either designated or redesignated as regards off-road vehicle use under procedures contained in Subpart 8342. That section requires public participation.

Designation Criteria

There were many suggestions to establish criteria that would confine off-road vehicles to designated roads and trails. Executive Order 11644 provides for the designation of "areas and trails" rather than the more restrictive "roads and trails".

It was suggested that areas and trails should also be located to minimize damage to air quality. This idea has been incorporated into § 8342.1(a).

There were some suggestions that off-road vehicles be prohibited from the habitats identified in § 8342.1(b). Executive Order 11644 does not direct agencies to prohibit off-road vehicles in these habitats—only to minimize significant disruption of wildlife habitats.

It was suggested that § 8342.1(c) either be deleted or rewritten because it suggests that off-road vehicle activities rank last in priority—even to recreational uses that do not exist yet. The wording used in this section is identical to that used in section 2(a)(3) of Executive Order 11644.

There was some concern shown about allowing off-road vehicles in natural areas as provided in § 8342.1(d). Again, the wording of this section is essentially that of Executive Order 11644.

There was concern expressed about the interaction of the wilderness review and designations for off-road vehicle use. During the period of wilderness review, which is to be completed by October 21, 1991, and until Congress has determined otherwise, roadless areas of 5,000 acres or more and roadless islands "* * *" having wilderness characteristics " * * *" are to be managed "* * * in a manner so as not to impair the suitability of such areas for preservation as wilderness * * *". This matter will be addressed in the interim management policy for wilderness study areas currently under development. The regulations do, however, list wilderness suitability as a resource to be considered in determining whether an area should be closed or limited.

Designation Procedures

Action necessary to make designations is beginning immediately. Depending upon the availability of funds and manpower, all areas will be designated by 1987. The status of the public lands prior to designation is simply undesignated.

There was a large number of suggestions recommending that only those areas be marked where off-road vehicle use is permitted. Others suggested that only closed and limited areas and trails be marked. These specific suggestions have not been adopted. Instead, the rulemaking provides flexibility to the authorized officer to mark designations on the ground in the manner which will best inform the public. This reflects the intent of Executive Order 11644, and will permit marking some areas as open, some as limited and others as closed.

There were suggestions that maps of designated areas be made available to the public. This suggestion has been

incorporated into the last sentence of § 8342.2(b).

Monitoring Use

It was suggested that under § 8342.3(a), the effects to be monitored should be spelled out in the regulations. Executive Order 11644 does not direct doing this. In addition, a comprehensive list of possible effects on the various ecosystems could be almost limitless. However, off-road vehicle use will be monitored.

Temporary Action

Section 8292.3(b) of the proposed regulations has been excluded from these regulations since full authority to temporarily close lands from any use, including off-road vehicles, when necessary to protect the public or to assure proper resource protection, is contained in 43 CFR Part 8364. An example of the use of this authority is the temporary closure during a period of high fire danger or unsafe conditions of an area designated open to off-road vehicles. This authority is in addition to that contained in § 8341.2 which allows closure of lands designated open or limited due to the considerable adverse effects of off-road vehicles on the environment.

Vehicle Operations—Standards

One suggestion was that the Bureau of Land Management should confine itself to the management of public lands and not to the management of off-road vehicle equipment. Executive Order 11644 directs that operating conditions be prescribed for off-road vehicles on public lands.

Permits

There were several suggestions that the time requirement for filing applications be shortened to less than 120 days, and that the 50-vehicle requirement for permits be reduced. These requirements are actually a part of Subpart 8372 of this title and not Subpart 8340 which is under consideration here. An opportunity for making such a change will come when Subpart 8372 is considered for revision. However, the 120 days is needed to allow the authorized officer to complete all needed administrative work, including an environmental statement, if one is needed, before issuing a permit. This administrative activity is necessary to protect the public lands and the public that uses those lands. Editorial changes and corrections have been made as necessary.

Miscellaneous

Note.—The Department of the Interior has determined that this document is a significant rule, but does not require a regulatory analysis under Executive Order 12044 and 43 CFR Part 14.

Under the authority of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 et seq.), the Taylor Grazing Act (43 U.S.C. 315a), the Wild and Scenic Rivers Act (16 U.S.C. 1281c), the Endangered Species Act (16 U.S.C. 1531 et seq.), the Act of September 18, 1960, as amended (16 U.S.C. 670 et seq.), the Land and Water Conservation Fund Act (16 U.S.C. 4601–6a), the National Trails System Act (16 U.S.C. 1241 et seq.), and Executive Order 12044 (37 FR 2877, 3 CFR 2877), as amended by Executive Order 11989 (42 FR 26959) Part 8340, Group 8300, Subchapter H, Chapter II, Title 43 of the Code of Federal Regulations is revised as set forth below.

Guy R. Martin,

Assistant Secretary of the Interior.

June 4, 1979.

PART 8340—OFF-ROAD VEHICLES

Subpart 8340—General

Sec.

8340.0–1 Purpose.
8340.0–2 Objectives.
8340.0–3 Authority.
8340.0–5 Definitions.
8340.0–7 Penalties.
8340.0–8 Applicability.

Subpart 8341—Conditions of Use of Public Lands

8341.1 Regulations governing use.
8341.2 Special rules.

Subpart 8342—Areas and Trails Designation

8342.1 Designation criteria.
8342.2 Designation procedures.
8342.3 Designation changes.

Subpart 8343—Vehicle Operation

8343.1 Standards.

Subpart 8344—Permits

8344.1 Permit requirements.

Authority: 43 U.S.C. 1201, 43 U.S.C. 315a, 16 U.S.C. 1531 et seq., 16 U.S.C. 1281c, 16 U.S.C. 670 et seq., 16 U.S.C. 460 1–6a, 16 U.S.C. 1241 et seq., and 43 U.S.C. 1701 et seq.

Subpart 8340—General

§ 8340.0–1 Purpose.

The purpose of this part is to establish criteria for designating public lands as open, limited or closed to the use of off-road vehicles and for establishing controls governing the use and operation of off-road vehicles in such areas.

§ 8340.0–2 Objectives.

The objectives of these regulations are to protect the resources of the public lands, to promote the safety of all users of those lands, and to minimize conflicts among the various uses of those lands.

§ 8340.0–3 Authority.

The provisions of this part are issued under the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1701 et seq.); the Taylor Grazing Act (43 U.S.C. 315a); the Endangered Species Act (16 U.S.C. 1531 et seq.); the Wild and Scenic Rivers Act (16 U.S.C. 1281c); the act of September 15, 1960, as amended (16 U.S.C. 670 et seq.); the Land and Water Conservation Fund Act (16 U.S.C. 460 1–6a); the National Trails System Act (16 U.S.C. 1241 et seq.) and E.O. 11644 (Use of Off-Road Vehicles on the Public Lands), 37 FR 2877, 3 CFR 74, 332, as amended by E.O. 11989 42 FR 26959 (May 25, 1977).

§ 8340.0–5 Definitions.

As used in this part:

(a) "Off-Road Vehicle" means any motorized vehicle capable of, or designed for, travel on or immediately over land, water, or other natural terrain, excluding: (1) any nonamphibious registered motorboat; (2) any military, fire, emergency, or law enforcement vehicle while being used for emergency purposes; (3) any vehicle whose use is expressly authorized by the authorized officer, or otherwise officially approved; (4) Vehicles in official use; and (5) any combat or combat support vehicle when used in times of national defense emergencies.

(b) "Public Lands" means any lands the surface of which is administered by the Bureau of Land Management.

(c) "Bureau" means the Bureau of Land Management.

(d) "Official Use" means use by an employee, agent, or designated representative of the Federal Government or one of its contractors, in the course of his employment, agency, or representation.

(e) "Planning System" means the approach provided in Bureau regulations, directives and manuals to formulate multiple use plans for the public lands. This approach provides for public participation within the system.

(f) "Open areas and trails" are designated areas and trails where off-road vehicles may be operated subject to the operating regulations and vehicle

standards set forth at Subparts 8341 and 8343 of this part.

(g) "Limited areas and trails" are designated areas and trails where the use of off-road vehicles is subject to restrictions deemed appropriate by the authorized officer. Restrictions may limit the number or types of vehicles allowed, dates and times of use, and similar matters. Limited areas and trails may be designated for special or intensive use, including, but not limited to, organized events, and may be subject to but not limited to, rules set forth at Subpart 8341.2.

(h) "Closed areas and trails" are designated areas and trails where the use of off-road vehicles is permanently or temporarily prohibited.

(i) "Spark Arrester" is any device which traps or destroys 80 percent or more of the exhaust particles to which it is subjected.

§ 8340.0-7 Penalties.

Any person who violates or fails to comply with the regulations of Subparts 8341 and 8343 is subject to arrest, conviction, and punishment pursuant to appropriate laws and regulations. Such punishment may be a fine of not more than $1,000 or imprisonment for not longer than 12 months, or both.

§ 8340.0-8 Applicability.

The regulations in this part apply to all public lands, roads, and trails under administration of the Bureau.

Subpart 8341—Conditions of Use

§ 8341.1 Regulations governing use.

(a) The operation of off-road vehicles is permitted on those areas and trails designated as open to off-road vehicle use.

(b) Any person operating an off-road vehicle on those areas and trails designated as limited shall conform to all terms and conditions of the applicable designation orders.

(c) The operation of off-road vehicles is prohibited on those areas and trails closed to off-road vehicle use.

(d) It is prohibited to operate an off-road vehicle in violation of State laws and regulations relating to use, standards, registration, operation, and inspection of off-road vehicles. To the extent that State laws and regulations do not exist or are less stringent than the regulations in this part, the regulations in this part are minimum standards and are controlling.

(e) No person may operate an off-road vehicle on public lands without a valid State operator's license or learner's permit. Exceptions are: (1) A person under the direct supervision of an individual 18 years of age or older who has a valid operator's license and who is responsible for the acts of the person supervised. (2) A person certified by State government as competent to drive off-road vehicles after successfully completing a State approved operator's training program. (3) Operation of an off-road vehicle in areas of Alaska designated by the Bureau's State Director for Alaska.

(f) Any person supervising a nonlicensed driver shall be responsible for the operation of the vehicle and shall be responsible for the actions of the driver.

(g) No person shall operate an off-road vehicle on public lands:

(1) In a reckless, careless, or negligent manner;

(2) In excess of established speed limits;

(3) While under the influence of alcohol, narcotics, or dangerous drugs;

(4) In a manner causing, or likely to cause significant, undue damage to or disturbance of the soil, wildlife, wildlife habitat, improvements, cultural, or vegetative resources or other authorized uses of the public lands; and

(5) During night hours, from a half-hour after sunset to a half-hour before sunrise, without lighted headlights and taillights.

(h) Drivers of off-road vehicles shall yield the right-of-way to pedestrians, saddle horses, pack trains, and animal-drawn vehicles.

(i) Any person who operates an off-road vehicle on public lands must comply with the regulations in this part, and in § 8341.2 as applicable, while operating such vehicle on public lands.

§ 8341.2 Special rules.

(a) Notwithstanding the consultation provisions in § 8342.2(a), where the authorized officer determines that off-road vehicles are causing or will cause considerable adverse effects upon soil, vegetation, wildlife, wildlife habitat, cultural resources, historical resources, threatened or endangered species, wilderness suitability, other authorized uses, or other resources, the authorized officer shall immediately close the areas or trails affected to the type(s) of vehicle causing the adverse effect until the adverse effects are eliminated and measures implemented to prevent recurrence. Such closures will not prevent designation in accordance with procedures in part 8342 of this subpart, but these lands shall not be opened to the type(s) of off-road vehicle to which it was closed unless the authorized officer determines that the adverse effects have been eliminated and measures implemented to prevent recurrence.

(b) Each State director is authorized to close portions of the public lands to use by off-road vehicles, except those areas or trails which are suitable and specifically designated as open to such use pursuant to Subpart 8342 of this part.

Subpart 8342—Designation of Areas and Trails

§ 8342.1 Criteria.

The authorized officer shall designate all public lands as either open, limited, or closed to off-road vehicles. All designations shall be based on the protection of the resources of the public lands, the promotion of the safety of all the users of the public lands, and the minimization of conflicts among various uses of the public lands; and in accordance with the following criteria:

(a) Areas and trails shall be located to minimize damage to soil, watershed, vegetation, air, or other resources of the public lands, and to prevent impairment of wilderness suitability.

(b) Areas and trails shall be located to minimize harassment of wildlife or significant disruption of wildlife habitats. Special attention will be given to protect endangered or threatened species and their habitats.

(c) Areas and trails shall be located to minimize conflicts between off-road vehicle use and other existing or proposed recreational uses of the same or neighboring public lands, and to ensure the compatibility of such uses with existing conditions in populated areas, taking into account noise and other factors.

(d) Areas and trails shall not be located in officially designated wilderness areas or primitive areas. Areas and trails shall be located in natural areas only if the authorized officer determines that off-road vehicle use in such locations will not adversely affect their natural, esthetic, scenic, or other values for which such areas are established.

§ 8342.2 Designation procedures.

(a) *Public participation.* The authorized officer shall, to the extent practical, designate and redesignate areas and trails in conjunction with the Bureau planning system for the formulation of multiple-use management plans. Plans shall consider current and potential impacts of specific vehicle types on all resources and users in the region of the area under consideration. Prior to making designations or redesignations, the authorized officer

shall consult with interested user groups, Federal, State, county, and local agencies, local landowners, and other parties in a manner that provides an opportunity for the public to express itself and have those views taken into account.

(b) *Identification of designated areas and trails.* The authorized officer shall, after designation, take action by marking and other appropriate measures to identify designated areas and trails so that the public will be aware of locations and limitations applicable thereto. Public notice of designations or redesignations shall be given at the time of designation or redesignation through publication in the **Federal Register** and local news media. Copies of such notices shall be available to the public in local Bureau offices. The authorized officer will make available to the public appropriate informational material, including maps.

§ 8342.3 Designation changes.

Monitoring use. The authorized officer shall monitor effects of the use of off-road vehicles. On the basis of information so obtained, and whenever the authorized officer deems it necessary to carry out the objectives of this part, designations may be amended, revised, revoked, or other actions taken pursuant to the regulations in this part.

Subpart 8343—Vehicle Operations

§ 8343.1 Standards.

(a) No off-road vehicle may be operated on public lands unless equipped with brakes in good working condition.

(b) No off-road vehicle equipped with a muffler cutout, bypass, or similar device, or producing excessive noise exceeding Environmental Protection Agency standards, when established, may be operated on public lands.

(c) By posting appropriate signs or by marking a map which shall be available for public inspection at local Bureau offices, the authorized officer may indicate those public lands upon which no off-road vehicle may be operated unless equipped with a properly installed spark arrester. The spark arrester must meet either the U.S. Department of Agriculture—Forest Service Standard 5100–1a, or the 80-percent efficiency level standard when determined by the appropriate Society of Automotive Engineers (SAE) Recommended Practices J335 or J350. These standards include, among others, the requirements that: (1) the spark arrester shall have an efficiency to retain or destroy at least 80 percent of carbon particles for all flow rates, and (2) the spark arrester has been warranted by its manufacturer as meeting this efficiency requirement for at least 1,000 hours subject to normal use, with maintenance and mounting in accordance with the manufacturer's recommendation. A spark arrester is not required when an off-road vehicle is being operated in an area which has 3 or more inches of snow on the ground.

(d) Vehicles operating during night hours, from a half-hour after sunset to a half-hour before sunrise, shall comply with the following: (1) Headlights shall be of sufficient power to illuminate an object at 300 feet at night under normal, clear atmospheric conditions. Two- or three-wheeled vehicles or single-tracked vehicles will have a minimum of one headlight. Vehicles having four or more wheels or more than a single track will have a minimum of two headlights, except double tracked snowmachines with a maximum capacity of two people may have only one headlight. (2) Red taillights, capable of being seen at a distance of 500 feet from the rear at night under normal, clear atmospheric conditions, are required on vehicles in the same numbers as headlights.

Subpart 8344—Permits

§ 8344.1 Permit requirements.

Permits are required for certain types of ORV use and shall be issued in accordance with the special recreation permit procedures under part 8372 of this chapter.

Environmental Protection Agency

Standards of Performance for New Stationary Sources, Glass Manufacturing Plants

ENVIRONMENTAL PROTECTION AGENCY

[40 CFR Part 60]

[FRL 1203-7]

Standards of Performance for New Stationary Sources; Glass Manufacturing Plants

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule and notice of public hearing.

SUMMARY: The proposed standards would limit emissions of particulate matter from new, modified, and reconstructed glass manufacturing plants. The standards implement the Clean Air Act and are based on the Administrator's determination that glass manufacturing plants contribute significantly to air pollution. The intended effect is to require new, modified, and reconstructed glass manufacturing plants to use the best demonstrated system of continuous emission reduction, considering costs, nonair quality health and environmental impact, and energy impacts.

A public hearing will be held to provide interested persons an opportunity for oral presentation of data, views, or arguments concerning the proposed standards.

DATES: *Comments.* Comments must be received on or before August 14, 1979.

Public Hearing. The public hearing will be held on July 9, 1979 beginning at 9:30 a.m. and ending at 4:30 p.m.

Request to Speak at Hearing. Persons wishing to present oral testimony at the hearing should contact EPA by June 29, 1979.

ADDRESSES: *Comments.* Comments should be submitted to Central Docket Section (A-130), United States Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460, Attention: Docket No. OAQPS 79-2.

Public Hearing. The public will be held at Office of Administration Auditorium, Research Triangle Park, North Carolina 27771. Persons wishing to present oral testimony should notify Mary Jane Clark, Emission Standards and Engineering Division (MD-13), Environmental Protection Agency, Rsearch Triangle Park, North Carolina 27711, telephone (919) 541-5271.

Standards Support Document. The support document for the proposes standards may be obained from the U.S. EPA Library (MD-35), Research Triangle Park, North Carolina 27711, telephone number (919) 541-2777. Please refer to "Glass Manufacturing Plants, Background Information: Proposed Standards of Performance," EPA-450/3-79-005a.

Docket. A docket, number OAQPS 79-2, containing information used by EPA in development of the proposed standard, is available for public inspection between 8:00 a.m. and 4:00 p.m. Monday through Friday, at EPA's Central Docket Section (A-130), Room 2903 B, Waterside Mall, 401 M Street, S.W., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Mr. Don R. Goodwin, Director, Emission Standards and Engineering Division (MD-13), Environmental Protection Agency, Research Triangle Park, North Carolina 27711, telephone number (919) 541-5271.

SUPPLEMENTARY INFORMATION:

Proposed Standards

The standards would apply to glass melting furnaces with glass manufacturing plants with two exceptions: day pot furnaces (which melt two tons or less of glass per day) and all-electric melting furnaces. No existing plants would be covered unless they were to undergo modification or reconstruction. Change of fuel from gas to fuel oil would be exempt from consideration as a modification and rebricking of furnaces would be exempt from consideration as reconstruction.

Specifically, the proposed standards would limit exhaust emissions from gas-fired glass melting furnaces to 0.15 grams of particulate matter per kilogram of glass produced for flat glass production; 0.1 g/kg (0.2 lb/ton) for container glass production; 0.2 g/kg (0.4 lb/ton) for wool fiberglass production; 0.1 g/kg (0.2 lb/ton) for pressed and blown glass production of soda-lime formulation; and 0.25 g/kg (0.5 lb/ton) for pressed and blown glass production of borosilicate, opal, and other formulations. A 15 percent allowance above the emission limits for gas-fired furnaces is proposed for fuel oil-fired glass melting furnaces and an additional proportionate allowance is proposed for furnaces simultaneously firing gas and fuel oil.

Summary of Environmental and Economic Impacts

Environmental Impacts

The proposed standards would reduce projected 1983 emissions from new uncontrolled glass melting furnaces from about 5,200 megagrams (Mg)/year (5,732 ton/year) to about 400 Mg/year (441 ton/year). This is a reduction of about 92 percent of uncontrolled emissions. Meeting a typical State Implementation Plan (SIP), however, would reduce emissions from new uncontrolled furnaces by about 3,700 Mg/year (4,079 ton/year), or by about 70 percent. The proposed standard would exceed the reduction achieved under a typical SIP by about 1,100 Mg/year (1,213 ton-year). This reduction in emissions would result in a reduction of ambient air concentrations of particulate matter in the vicinity of new glass manufacturing plants.

The proposed standards are based on the use of electrostatic precipitators (ESP's) and fabric filters, which are dry control techniques; therefore, no water discharge would be generated and there would be no adverse water pollution impact.

The solid waste impact of the proposed standards would be minimal. Less than 2 Mg (2.2 ton) of particulate would be collected for every 1,000 Mg (1,102 ton) of glass produced. These dusts can generally be recycled, or they can be landfilled if recycling proves to be unattractive. The current solid waste disposal practice among most controlled plants surveyed is landfilling. Since landfill operations are subject to State regulation, this disposal method would not be expected to have an adverse environmental impact. The additional solid material collected under the proposed standard would not differ chemically from the material collected under a typical SIP regulation; therefore, adverse impact from landfilling should be minimal. Also, recycling of the solids has no adverse environmental impact.

For typical plants in the glass manufacturing industry, the increased energy consumption that would result from the proposed standards ranges from about 0.1 to 2 percent of the energy consumed to produce glass. The energy required in excess of that required by a typical SIP regulation to control all new glass melting furnaces constructed by 1983 to the level of the proposed standards would be about 2,500 kilowatt-hours per day in the fifth year and is considered negligible. Thus, the proposed standards would have a minimal impact on national energy consumption.

Economic Impacts

The economic impact of the proposed standards is reasonable. Compliance with the standards would result in annualized costs in the glass manufacturing industry of about $8.5 million by 1983. For typical plants constructed between 1978-1983 capital costs associated with the proposed

standards would range from about $235,000 for a small furnace in the pressed and blown glass sector which melts formulations other than soda-lime to about $770,000 for a large pressed and blown glass furnace which melts soda-lime formulations. Annualized costs associated with the proposed standards would range from about $70,000/year to about $235,000/year for the furnaces mentioned above. Cumulative capital costs of complying with the proposed standards for the glass manufacturing industry as a whole would amount to about $28 million between 1978–1983. The percent price increase necessary to offset costs of compliance with the proposed standards would range from about 0.3 percent in the wool fiberglass sector to about 1.8 percent in the container glass sector. Industry-wide, the price increase would amount to about 0.7 percent.

The economic impact of the proposed standards may vary depending on the size of the glass melting furnace being considered. EPA is requesting comments specifically on the economic impact of the proposed standards with regard to a possible lower cut-off size for glass melting furnaces.

Rationale

Selection of Source and Pollutants

The proposed Priority List, 40 CFR 60.16, identifies various sources of emissions on a nationwide basis in terms of the quantities of emissions from source categories, the mobility and competitive nature of each source category, and the extent to which each pollutant endangers health or welfare. The sources on this proposed list are ranked in decreasing order. Glass manufacturing ranks 38th on the proposed list, and is therefore of considerable importance nationwide.

The production of glass is projected to increase at compounded annual growth rates of up to 7 percent through the year 1983. In 1975, over 17 million megagrams (18.8 million ton) of glass were produced; by 1983 this production rate is expected to increase by nearly 2.9 million Mg/year (3.2 million ton/year). Geographically, the glass manufacturing industry is relatively concentrated with plants currently located in 17 states. Total particulate emissions in the United States in 1975 were estimated to be about 12.4 million Mg/year (13.7 million ton/year); by the year 1983 new glass manufacturing plants would cause annual nationwide particulate matter emissions to increase by about 1,500 Mg/year (1,620 ton/year) with emissions controlled to the level of a typical SIP regulation.

On March 18, 1977, the Governor of New Jersey petitioned EPA to establish standards of performance for glass manufacturing plants. The petition was primarily motivated by the Governor's concern that the glass manufacturing industry might locate plants in other States rather than comply with New Jersey's air pollution regulations limiting emissions of particulate matter. The glass manufacturing industry is not geographically tied to either markets or resources. Only a few States have specialized air pollution standards for glass manufacturing plants in their SIP's, and these standards vary in the level of control required. Therefore, new glass manufacturing operations could be located in States which do not have stringent SIP regulations.

Glass manufacturing plants are significant contributors to nationwide emissions of particulate matter, especially when viewed as contributors to emissions in the limited number of States in which they are located. They rank high with regard to potential reduction of emissions. Since they are free to relocate in terms of both markets and required resources, the possibility exists that operations could be moved or relocated to avoid stringent SIP regulations, thereby generating economic dislocations. For these reasons, emissions of particulate matter from new glass manufacturing plants have been selected for control by NSPS.

Glass manufacturing plants also emit other criteria pollutants: sulfur oxides (SO_x), nitrogen oxides (NO_x), carbon monoxide, and hydrocarbons. Carbon monoxide and hydrocarbon emissions from efficiently operated glass manufacturing plants, however, are negligible.

Nationwide, the largest aggregate emissions from glass manufacturing plants are NO_x. The techniques generally applicable to control NO_x produced by combustion are staged combustion, off-stoichiometric combustion, or reduced-temperature combustion. To date none of these techniques has been applied to the control of NO_x emissions from glass melting furnaces. Accordingly, there is no way of determining how effective they might be in such applications. Consequently, NO_x was not selected for control by standards of performance.

SO_x emissions result from combustion of sulfur-containing fuels and from chemical reactions of raw materials. In general there are two alternatives for control of SO_x emissions: (1) scrubbing of exhaust gases containing SO_x, and (2) reducing the sulfur content of fuel and raw materials. SO_x emissions from glass melting furnaces are in most cases already less than the emission limits of applicable SIP's for fuel burning sources. Flue-gas scrubbing for control of SO_x emissions from glass melting furnaces is not considered economically reasonable.

There are difficulties as well with the use of low-sulfur fuels or reduction of sulfur content of raw materials. Using low-sulfur fuel would not adequately address the problem of SO_x control for two reasons. Natural gas is the preferred fuel for glass melting furnaces. The only alternative fuel currently in use or projected for future use by the glass manufacturing industry is distillate fuel oil, which normally contains more sulfur than natural gas. The elimination of sulfur-containing fuel oil is not considered reasonable. Alternatively, standards of performance based solely on combustion of low-sulfur fuels could distort existing fuel distribution patterns, since low-sulfur fuels could be diverted to new facilities to meet NSPS in areas that have no difficulty attaining or maintaining the National Ambient Air Quality Standards (NAAQS) for SO_x. This would reduce the supply of low-sulfur fuels for existing facilities in areas that have great difficulty attaining or maintaining the NAAQS for SO_x. Consequently, standards of performance for SO_x emissions based on use of low-sulfur fuels do not seem reasonable.

Use of reduced-sulfur raw materials has not been demonstrated as a means of reducing SO_x emissions from glass melting furnaces. There is a wide variety of formulations, most of which are considered by the industry to be trade secrets. The present state of glass making is such that formula alterations of the type envisioned here would lead to glass of unpredictable quality. For these reasons, standards of performance for SO_x emissions from glass melting furnaces based on reduced-sulfur raw materials, or any other approach, do not seem reasonable and have not been proposed.

Selection of Affected Facility

Ninety-eight percent of the particulate matter emitted from glass manufacturing plants is emitted in gaseous exhaust streams from glass melting furnaces. Only two percent of the particulate matter emitted from glass manufacturing plants is emitted from raw material handling and glass forming and finishing. Therefore, the glass melting furnace has been selected as the affected facility.

The proposed standards would apply to all glass melting furnaces within glass manufacturing plants with two exceptions: day pot furnaces and all-electric melters. A day pot furnace is a glass melting furnace which is capable of producing no more than two tons of glass per day. These small glass melting furnaces constitute an extremely small percentage of total glass production and their control is not considered economically reasonable. Therefore, the regulation exempts day pot furnaces from the proposed standards.

Well operated and maintained all-electric furnaces have particulate emissions only slightly higher than fossil-fuel fired furnaces controlled to meet the proposed standards. Most of these furnaces are open to the atmosphere and do not have stacks. Thus, control and measurement of emissions from all-electric furnaces does not appear to be economically reasonable. Therefore, all-electric melting furnaces are not regulated by the proposed standards.

Selection of Format

Two alternative formats were considered for the proposed standards: mass standards, which limit emissions per unit of feed to the glass furnace or per unit of glass produced by the glass furnace; and concentration standards, which limit emissions per unit volume of exhaust gases discharged to the atmosphere.

Enforcement of concentration standards requires a minimum of data and information, decreasing the costs of enforcement and reducing chances of error. Furthermore, vendors of emission control equipment usually guarantee equipment performance in terms of the pollutant concentration in the discharge gas stream.

There is a potential for circumventing concentration standards by diluting the exhaust gases discharged to the atmosphere with excess air, thus lowering the concentration of pollutants emitted but not the total mass emitted. This problem can be overcome, however, by correcting the concentration measured in the gas stream to a reference condition such as a specified oxygen percentage in the gas stream.

Concentration standards would penalize energy-efficient furnaces, since a decrease in the amount of fuel required to melt glass decreases the volume of gases released but not the quantity of particulate matter emitted. As a result, the concentration of particulate matter in the exhaust gas stream would be increased even though the total mass emitted remained the same. Even if a concentration standard were corrected to a specified oxygen content in the gas stream, this penalizing effect of the concentration would not be overcome.

Primary disadvantages of mass standards, as compared to concentration standards, are that their enforcement is more costly and that the more numerous calculations required increase the opportunities for error. Determining mass emissions requires the development of a material balance on process data concerning the operation of the plant, whether it be input flow rates or production flow rates. Development of this balance depends on the availability and reliability of production figures supplied by the plant. Gathering of these data increases the testing or monitoring necessary, the time involved, and, consequently, the costs. Manipulation of these data increases the number of calculations necessary; e.g., the conversion of volumetric flow rates to mass flow rates, thus compounding error inherent in the data and increasing the chance for error.

Although concentration standards involve lower resource requirements than mass standards, mass standards are more suitable for regulation of particulate emissions from glass melting furnaces because of their flexibility to accommodate process improvements and their direct relationship to quantity of particulate emitted to the atmosphere. These advantages outweigh the drawbacks associated with creating and manipulated a data base. Consequently, mass standards are selected as the format for expressing standards of performance for glass melting furnaces.

The proposed standards express allowable particulate emissions in grams of particulates per kilogram of glass pulled. While emissions data referring to raw material input as well as data referring to glass pulled were used in the development of the standards, an examination of the several sectors of the glass manufacturing industry indicated that an emission rate based on quantity of glass pulled would be more representative of industry practice. Further, emissions are more dependent on pull rate than on rate of raw material input. Accordingly, the mass of glass pulled is used as the denominator in the proposed standards. Raw material input data could be employed to estimate glass pulled from a furnace if a quantitative relationship between raw material input and glass pulled were developed following good engineering methods.

Selection of the Best System of Emission Reduction and Emission Limits

Introduction

Particulate emissions from glass melting furnaces can be reduced significantly by the use of the following emission control techniques: electrostatic precipitators, fabric filters, and venturi scrubbers. Since these emission control techniques do not achieve the same level of control for glass melting furnace emissions within all sectors of the glass manufacturing industry, they are discussed separately for each sector.

Process modifications such as batch formulation alteration and electric boosting also may be capable of reducing particulate emissions from glass melting furnaces. The test data available for furnaces where process modifications are used as emissions reduction techniques indicate that emission reduction by process modification is indefinite with respect to the effectiveness of the techniques. Accordingly, the selection of the best system of emission reduction is based on the use of add-on emission reduction techniques of known effectiveness. However, there is nothing in this proposal nor is it the intent of this proposal to preclude the use of process modifications to comply with the proposed standards.

The glass manufacturing industry is divided into four principal sectors designated by Standard Industrial Classifications (SIC's). The container glass sector (SIC 3221) manufactures containers for commercial packing and bottling and for home canning by pressing (stamping) and/or blowing (air-forming) molten glass usually of soda-lime recipe. The pressed and blown glass, not elsewhere classified, sector (SIC 3229) includes such diverse products as: table, kitchen, art and novelty glassware; lighting and electronic glassware; scientific, technical, and other glassware; and textile glass fibers. Based on the differing rates of particulate matter emissions, it is necessary to subdivide the pressed and blown glass sector into plants producing glass from soda-lime formulations and plants producing glass from other formulation (primarily borosilicate, opal and lead). Glass manufacturing plants in the wool fiberglass sector are classified under mineral wool (SIC 3296); fiberglass insulation is a major product. The flat glass sector (SIC 3211) uses continuous glass forming processes, and materials almost exclusively of soda lime

formulation, to manufacture sheet, plate, float, rolled, and wire glass.

Each of the glass manufacturing sectors is unique both from a technical and an economic standpoint. Thus, uncontrolled particulate emission rate, furnace size, and the applicability of emission control techniques vary from one sector to another. Since the products manufactured by the different sectors of the glass manufacturing industry serve different markets, each sector is working in a different economic environment. For these reasons it was apparent that no single model furnace could adequately characterize the glass manufacturing industry. Accordingly, several model furnaces were specified in terms of the following parameters: production rate, stack height, stack diameter, exhaust gas exit velocity, exhaust gas flow rate, and exhaust gas temperature. The evaluation of these parameters may be found in the Background Information document. The model furnace production rate specified for the container glass sector was 225 Mg/day (250 ton/day). For pressed and blown glass furnaces melting soda-lime and other formulations two model furnace production rates were specified: 45 Mg/day (50 ton/day) and 90 Mg/day (100 ton/day). Model furnace production rates for the wool fiberglass and flat glass sector were 180 Mg/day (200 ton/day) and 635 Mg/day (700 ton/day), respectively.

Review of the performance of the emission control techniques led to the identification of two regulatory options for each sector. These options specify numerical emission limits for glass melting furnaces in each sector of the glass manufacturing industry. The environmental impacts, energy impacts, and cost and economic impacts of each regulatory option were compared with those associated with a typical SIP regulation and those associated with no control.

Container Glass

Uncontrolled particulate emissions from container glass furnaces are generally about 1.25 g/kg (2.5 lb/ton) of glass pulled. Emission tests (using EPA Method 5) on three container glass furnaces equipped with ESP's indicate an average particulate emission of 0.06 g/kg (0.12 lb/ton) of glass pulled.

Emission test data for container glass furnaces equipped with fabric filters are not available. However, emission test results for a pressed and blown glass furnace melting a soda-lime formulation essentially identical to that used for container glass indicate that emissions can be reduced to 0.12 g/kg (0.24 lb/ton) of glass pulled with a fabric filter. This fabric filter installation was tested with the Los Angeles Air Pollution Control District particulate matter test method (LAAPCD Method), which considers the combined weight of the particulate matter collected in water-filled impingers and of that collected on a filter. EPA Method 5 also uses impingers and a filter, but considers only the weight of the particulate matter collected on the filter. The LAAPCD Method collects a larger amount of particulate matter than does EPA Method 5, and, consequently, greater mass emissions would be reported for comparable tests. An emission level of 0.1 g/kg (0.2 lb/ton) as determined by EPA Method 5, could be achieved by a container glass furnace equipped with a properly designed and operated fabric filter.

EPA Method 5 tests of four furnaces equipped with venturi scrubbers indicated an average particulate emission of 0.21 g/kg (0.42 lb/ton) of glass pulled.

Based on the data cited above, an emission level of 0.1 g/kg (0.2 lb/ton) of glass pulled from container glass furnaces can be achieved with ESP's or fabric filters. An emission level of 0.2 g/kg (0.4 lb/ton) of glass pulled can reasonably be achieved with a venturi scrubber when operated at a pressure drop somewhat higher than the average of those scrubbers tested. ESP's and fabric filters could also be designed to achieve an emission level of 0.2 g/kg (0.4 lb/ton) of glass pulled.

On the basis of these conclusions, two regulatory options for reducing particulate emissions from container glass furnaces were formulated. Option I would set an emission limit of 0.1 g/kg (0.2 lb/ton), requiring a particulate emission reduction of somewhat over 90 percent as compared with an uncontrolled furnace. Option II would set an emission limit of 0.2 g/kg (0.4 lb/ton), requiring a particulate emission reduction of about 85 percent.

By 1983 approximately 1900 gigagrams (Gg)/year (2.1 million ton/year) of additional production is anticipated in the container glass sector. About 25 new container glass furnaces of about 225 Mg/day (250 ton/day) production capacity (the size of the model furnace) would be built in order to provide this additional production. If uncontrolled, these new container glass furnaces would add about 2,400 Mg/year (2,646 ton/year) to national particulate emissions by 1983. Compliance with a typical SIP regulation would reduce this impact to about 1,000 Mg/year (1,102 ton/year). Under Option I, emissions would be reduced to about 12 percent of those emitted under a typical SIP regulation. Under Option II, emissions would be reduced to about 30 percent of those emitted under a typical SIP regulation.

Ambient dispersion modeling indicates that under worst case conditions the annual maximum ground-level particulate concentration near an uncontrolled container glass furnace producing 225 Mg/day of glass would be less than 1 $\mu g/m^3$. The annual maximum ground-level concentration resulting from compliance with a typical SIP regulation, Option I, or Option II would also be less than 1 $\mu g/m^3$. The calculated maximum 24-hour ground-level particulate concentration near an uncontrolled container glass furnace producing 225 Mg/day of glass would be approximately 10 $\mu g/m^3$. The corresponding concentration for complying with a typical SIP regulation would be 5 $\mu g/m^3$. Under Option I, with an ESP or a fabric filter being employed for control, the maximum 24-hour ground-level concentration would be reduced to 1 $\mu g/m^3$. Under Option II, with the same techniques being employed, the concentration would be reduced to 2 $\mu g/m^3$. Use of a venturi scrubber to meet the Option II emissions limit would only reduce the concentration to 0 $\mu g/m^3$ due to the decreased stack height of a scrubber-controlled plant and the resulting increased building wake effects.

With one exception, standards of performance for container glass furnaces would have no water pollution impact. The exception would be the use of a venturi scrubber to comply with a standard based on Option II. Such a system, applied to a furnace producing 225 Mg/day of glass, would discharge about 0.5 m^3/hr of waste water containing about 5 percent solids. The waste water would probably be discharged directly to an available waste water treatment system. To date, however, only a few container glass furnaces have been controlled with venturi scrubbers; dry collection techniques have been preferred. Consequently, few container glass manufacturers would be expected to install venturi scrubbers on their furnaces to comply with a standard based on Option II. The overall water pollution impact would then be negligible.

The potential solid waste impacts of the regulatory options would result from collected particulate matter. Solid waste from container glass furnaces, other than collected particulate matter, is minimal since cullet is normally

recycled back into the glass melting process. Under a typical SIP regulation, about 1,400 Mg/year (1,543 ton/year) of particulate matter would be collected from the 25 new 225 Mg/day container glass furnaces projected to come on-stream during the 1978–1983 period. Compliance with standards based on Option I and Option II would add about 800 Mg/year (882 ton/year) and about 600 Mg/year (661 ton/year), respectively, to the solid waste collected under a typical SIP regulation. Option I would increase the mass of solids for disposal by about 60 percent over that resulting from compliance with a typical SIP regulation, and Option II would increase it by about 45 percent. The additional solid material collected under Option I or Option II would not differ chemically from the material collected under a typical SIP regulation. Collected solids either are recycled back into the glass melting process or are disposed of in a landfill. Recycling of the solids has no adverse environmental impact, and, since landfill operations are subject to State regulation, this disposal method also would not be expected to have an adverse environmental impact.

The potential energy impacts of the regulatory options would be due to the energy used to drive the fans in emission control systems and the energy used to charge the electrodes in ESP's. Since ESP's have been the predominant control system used in the industry, the energy requirements estimated for a typical SIP regulation, Option I, and Option II were based on the use of ESP's. The energy required to control particulate emissions from the 25 new container glass furnaces would be about 40 million kWh (22 thousand barrels of oil/year) for a typical SIP regulation for the new furnaces equipped with ESP's. This required energy would be about 0.2 percent of the total energy use in the container glass sector. There would be no energy impact associated with either Option I or Option II because the energy required to operate an ESP for Option I or Option II is essentially the same as the energy required to operate an ESP for a typical SIP regulation.

Incremental installed cost (cost in excess of a typical SIP regulation cost) in January 1978 dollars associated with Option I for controlling particulate emissions from a 225 Mg/day container glass furnace would be about $700 thousand for an ESP and about $1.2 million for a fabric filter. Incremental installed cost associated with Option II would be about $450 thousand for an ESP, and about $1 million for a fabric filter. The incremental installed cost of control equipment associated with Option I level of control would be about 1.6 times the incremental installed cost associated with Option II if ESP's were selected. If fabric filters were selected, the incremental installed cost associated with the Option I level of control would be about 1.2 times the incremental installed cost associated with Option II.

Incremental annualized costs associated with Option I for a 225 Mg/day furnace would be about $200 thousand/year and about $350 thousand/year for an ESP and a fabric filter, respectively. Incremental annualized costs associated with Option II would be about $130 thousand/year for an ESP, and about $300 thousand/year for a fabric filter. The incremental annualized cost associated with Option I would be about 1.5 times the incremental annualized cost associated with Option II if ESP's were used. If fabric filters were used the incremental annualized cost associated with Option I would be about 1.2 times the incremental annualized cost associated with Option II.

Based on the use of control equipment with the highest annualized cost (worst case conditions), a price increase of about 1.8 percent would be necessary to offset the cost of installing control equipment on a 225 Mg/day container glass furnace to meet the emissions limit of Option I. A price increase of about 1.5 percent would be necessary to comply with the emission limit of Option II.

Incremental cumulative capital costs for the 25 new 225 Mg/day container glass furnaces during the 1978–1983 period associated with Option I would be about $17 million if ESP's were used. Use of ESP's to comply with a standard based on Option II would require incremental cumulative capital costs of about $11 million for the same period. Fifth-year annualized costs for controlling container glass melting furnaces to comply with Option I would be about $5 million/year. To comply with Option II, fifth-year annualized costs would be about $3 million/year.

A summary of incremental impacts (in excess of impacts of a typical SIP regulation) associated with Option I and Option II is shown in Table 1. Air impacts, expressed in Mg/year of particulate matter emissions reduced, would approximate the quantity of particulate matter collected and disposed of as solid waste.

Table 1.—*Summary of Incremental Impacts Associated With Regulatory Options*

	Impacts			
	Air [1]	Water	Energy [2]	Economic [3]
Regulatory option:				
I	800	None	Negligible	~1.8
II	600	Negligible	Negligible	~1.5

[1] Mg/Yr. reduced.
[2] Barrels of oil/day.
[3] Percent price increase.

Consideration of the beneficial impact on national particulate emissions, the degree of water pollution impact, the small potential for adverse solid waste impact, the lack of energy impact, the reasonableness of cost impact, and the general availability of demonstrated emission control technology leads to the selection of Option I as the basis for standards for glass melting furnaces in the container glass sector.

Pressed and Blown Glass—Soda-Lime Formulation

Because the glass production rates, the furnace configurations, and the glass formulations melted in furnaces in this sector are very similar to those in container glass sector, the quantity and chemical composition of particulate emissions approximate those of container glass furnaces. On the basis of this similarity of process and emissions, the emission reduction techniques which have been shown to be effective for container glass furnaces would also be effective in reducing particulate emissions from furnaces in this sector.

Uncontrolled particulate emissions from pressed and blown glass furnaces melting soda-lime formulations are generally about 1.25 g/kg (2.5 lb/ton) of glass pulled from the furnace. Test data for a pressed and blown glass furnace melting a soda-lime formulation and equipped with a fabric filter indicate particulate emissions of 0.12 g/kg (0.24 lb/ton) of glass pulled using the

LAAPCD Method. No emissions data for pressed and blown glass furnaces equipped with ESP's are available. However, emission tests using EPA Method 5 on three container-glass furnaces equipped with ESP's indicate an average particulate emission rate of 0.06 g/kg (0.12 lb/ton) of glass pulled. Because of the similarities between this sector and the container glass sector, both ESP's and fabric filters would be expected to be capable of reducing emissions to about 0.1 g/kg (0.2 lb/ton) of glass pulled.

Based on the similarity of pressed and blown glass production methods in this sector to those of the container glass sector, as well as on test data available on container glass furnace emissions, two regulatory options were formulated. The regulatory options are identical to those formulated for container glass furnaces. Option I would set an emission limit of 0.1 g/kg (0.2 lb/ton) of glass pulled, which would require a particulate emission reduction of about 90 percent. Option II would set an emission limit of 0.2 g/kg (0.4 lb/ton) of glass pulled, which would require about 85 percent particulate emission reduction.

By 1983 approximately 310 Mg/year (342 ton/year) of additional production is anticipated in this glass manufacturing sector. About four new 45 Mg/day (50 ton/day) (small) and six new 90 Mg/day (100 ton/day) (large) furnaces would be built in order to provide this production. Emissions from the large furnaces would have to be reduced in order to comply with a typical SIP regulation, while small furnaces would meet a typical SIP regulation without reducing emissions. If uncontrolled, the four new small furnaces would add about 60 Mg/year (66 ton/year) to national particulate emissions by 1983, while the six new large furnaces would add about 230 Mg/year (254 ton/year). Compliance with a typical SIP regulation would reduce the impact of the new large furnaces to about 70 Mg/year (77 ton/year). Under Option I, these furnace emissions would be reduced to about 26 percent of those emitted under a typical SIP regulation. Under Option II, large furnace emissions would be reduced to about 53 percent of those emitted under a typical SIP regulation.

The small furnaces would be in compliance with a typical SIP regulation without control. Under Option I, emissions would be reduced to about 8 percent of uncontrolled emissions. Under Option II, emissions would be reduced to about 16 percent of uncontrolled emissions.

The effect of a typical SIP regulation for both 20 Mg/day (100 ton/day) and 45 Mg/day (50 ton/day) furnaces would be a reduction of about 48 percent of uncontrolled emissions. Under Option I, emissions would be reduced to about 16 percent of those emitted under a typical SIP regulation. Under Option II, emissions would be reduced to about 33 percent of those emitted under a typical SIP regulation.

Ambient dispersion modeling indicates that under worst case conditions the annual maximum ground-level particulate concentration near an uncontrolled pressed and blown glass furnace producing 45 Mg/day of glass would be less than 1 $\mu g/m^3$, as would the concentrations resulting from compliance with Option I or Option II. Corresponding annual maximum ground-level concentrations near an uncontrolled pressed and blown glass furnace producing 90 Mg/day of glass would also be less than 1 $\mu g/m^3$. Emissions from uncontrolled furnaces of either size in this sector would result in calculated maximum 24-hour ground-level concentrations of 3 $\mu g/m^3$. Under Option I this concentration would be reduced to below 1 $\mu g/m^3$. Under Option II it would be reduced to about 1 $\mu g/m^3$.

Since fabric filters and electrostatic precipitators are likely to be the control systems installed on furnaces in this sector to comply with standards, there would be no water pollution impact associated with standards based on either Option I or Option II.

Under a typical SIP regulation, no particulate matter would be collected from the four new 45 Mg/day pressed and blown glass furnaces projected to come on-stream during the 1978–1983 period. The six new 90 Mg/day furnaces would collect about 160 Mg/year (176 ton/year) under a typical SIP regulation. For the six 90 Mg/day furnaces the amounts collected in addition to those collected through compliance with a typical SIP regulation would be about 50 Mg/year (55 ton/year) for Option I and about 33 Mg/year (36 ton/year) for Option II. Compliance with standards based on Option I and Option II would result in the collection of about 72 Mg/year (79 ton/year) and about 68 Mg/year (75 ton/year), respectively, of solid waste from the four 45 Mg/day furnaces. Option I would increase the mass of solids for disposal by 100 percent and by about 21 percent over that required by a typical SIP regulation for 45 Mg/day and 90 Mg/day furnaces, respectively. Option II would increase the mass of solids for disposal by 100 percent and 21 percent over that required by a typical SIP regulation for 45 Mg/day and 90 Mg/day furnaces, respectively. The total masses of solids for disposal collected from all new furnaces would be about 122 Mg/year (135 ton/year) and 101 Mg/year (111 ton/year) for Option I and Option II, respectively.

The additional solid material collected under Option I and Option II would not differ chemically from the material collected under a typical SIP regulation. Collected solids either are recycled back into the glass melting process or are disposed of in a landfill. Recycling of the solids has no adverse environmental impact, and, since landfill operations are subject to State regulation, this disposal method also would not be expected to have an adverse environmental impact.

Since the four new 45 Mg/day furnaces would be in compliance with a typical SIP regulation without add-on controls, there would be no associated energy requirement. The estimated energy required to control particulates emissions from the four new 45 Mg/day furnaces projected to come on-stream in the 1978–1983 period to the levels required by both Option I and Option II would be about 1.5 million kWh (900 barrels of oil/year). The energy required to control particulate emissions from the six new 90 Mg/day furnaces would be 4.4 million kWh (2,800 barrels of oil/year) for a typical SIP regulation, Option I, or Option II if ESP's were installed.

The energy required to comply with the emission limits of the regulatory options would be about 0.5 percent of the total energy use in this glass manufacturing sector. The energy impacts of both Option I and Option II are negligible (~3 barrels of oil/day) for the new 45 Mg/day furnaces. There would be no energy impact associated with either Option I or Option II for the new 90 Mg/day furnaces beyond the impact associated with the requirements to meet a typical SIP regulation.

Incremental installed costs in January 1978 dollars associated with Option I for controlling particular emissions from a 45 Mg/day pressed and blown glass furnace melting soda-lime formulations would be about $749 thousand for an ESP and about $719 thousand for a fabric filter. Incremental installed costs associated with Option II would be about $645 thousand for an ESP, and about $675 thousand for a fabric filter. The incremental installed costs of control equipment associated with the Option I level of control would be about 1.1 times the incremental installed costs associated with Option II if ESP's were selected. If fabric filters were selected the incremental installed costs associated with the Option I level of

control would be about 1.1 times the incremental installed costs associated with Option II.

Incremental annualized costs for a 45 Mg/day furnace associated with Option I would be about $230 thousand/year for both ESP's and fabric filters. Incremental annualized costs associated with Option II would be about $205 thousand/year for an ESP, and about $215 thousand/year for a fabric filter. The incremental annualized costs associated with Option I would be about 1.1 times the incremental annualized costs associated with Option II if ESP's were used. If fabric filters were used, the incremental annualized costs associated with Option I would be about 1.1 times the incremental annualized costs associated with Option II.

Based on the use of control equipment with the highest annualized costs (worse case conditions), a price increase of about 0.6 percent would be necessary to offset the costs of installing control equipment on a 45-Mg/day pressed and blown glass furnace melting soda-lime formulations to meet the emission limits of Option I. A price increase of about 0.5 percent would be necessary to comply with the emission limits of Option II.

Incremental cumulative capital costs for the 1978–1983 period associated with Option I for the four new 45 Mg/day furnaces would be about $2.8 million if a fabric filter were used. Use of an ESP to comply with Option II would require incremental cumulative capital costs of about $2.6 million for the same period. Fifth-year annualized costs for controlling the furnace to comply with Option I would be about $910 thousand. To comply with Option II, fifth-year annualized costs would be about $815 thousand.

Incremental installed costs in January 1978 dollars associated with Option I for controlling particulate emissions from a 90 Mg/day pressed and blown glass furnace melting soda-lime formulations would be about $615 thousand for an ESP and about $770 thousand for a fabric filter. Incremental installed costs associated with Option II would be about $450 thousand for an ESP, and about $680 thousand for a fabric filter. The incremental installed costs of control equipment associated with the Option I level of control would be about 1.4 times the incremental installed costs associated with Option II, if ESP's were selected. If fabric filters were selected the incremental installed costs associated with the Option I level of control would be about 1.1 times the incremental installed costs associated with Option II.

Incremental annualized costs for a 90 Mg/day furnace associated with Option I would be about $175 thousand/year and about $235 thousand/ year for an ESP and a fabric filter, respectively. Incremental annualized costs associated with Option II would be about $130 thousand/year for an ESP, and about $205 thousand/year for a fabric filter. The incremental annualized costs associated with Option I would be about 1.3 times the incremental annualized costs associated with Option II if ESP's were used. If fabric filters were used the incremental annualized costs associated with Option I would be about 1.1 times the incremental annualized costs associated with Option II.

Based on the use of control equipment with the highest annualized cost, a price increase of about 0.8 percent would be necessary to offset the costs of installing control equipment on the large pressed and blown glass furnace melting soda-lime formulations to meet the emission limits of Option I. A price increase of about 0.5 percent would be necessary to comply with the emission limits of Option II.

Incremental cumulative capital costs for the 1978–1983 period associated with Option I for the six new 90 Mg/day furnaces would be about $3.7 million if ESP's were used. Use of ESP's to comply with Option II would require incremental cumulative capital costs of about $2.7 million for the same period. Fifth-year annualized costs for controlling these glass melting furnaces to comply with Option I would be about $1.1 million. To comply with Option II, fifth-year annualized costs would be about $790 thousand.

A summary of incremental impacts (in excess of impacts of the typical SIP regulation) associated with Option I and Option II is shown in Table II for both small and large furnaces. Air impacts, expressed in Mg/year of particulate matter emissions reduced, would approximate the quantity of particulate matter collected and disposed of as solid waste.

Table II.—*Summary of Incremental Impacts Associated With Regulatory Options*

	Impacts			
	Air [1]	Water	Energy [2]	Economic [3]
I	122	None	~3.0	~0.6
II	101	None	~3.0	~0.5

[1] Mg/Yr. reduced.
[2] Barrels of oil/day.
[3] Percent price increase.

Consideration of the beneficial impact on national particulate emissions, the lack of water pollution impact, the small potential for adverse solid waste impact, the reasonableness of energy and costs impacts, and the general availability of demonstrated emission control technology leads to the selection of Option I as the basis for standards for pressed and blown glass furnaces melting soda-lime formulations.

Pressed and Blown Glass—Other Than Soda-Lime Formulations

Uncontrolled particulate emissions from furnaces in this sector are about 5 g/kg (10 lb/ton) of glass pulled. Emission tests using EPA Method 5 on four furnaces melting borosilicate formulations and equipped with ESP's yielded a representative emission rate of about 0.50 g/kg (1.0 lb/ton) of glass pulled. A single emission test using EPA Method 5 on an ESP-controlled furnace melting fluoride/opal formulations yielded an emission rate of 0.17 g/kg (0.34 lb/ton) of glass pulled. EPA Method 5 tests of six ESP-controlled furnaces melting lead glass yielded a representative emission rate of 0.12 g/kg (0.24 lb/ton) of glass pulled. A single EPA method 5 emission test of an ESP-controlled furnace melting potash-soda-lead glass yielded an emission rate of 0.03 g/kg (0.06 lb/ton) of glass pulled. An EPA method 5 emission test on a furnace equipped with a fabric filter and melting soda-lead-borosilicate glass produced an emission rate of 0.17 g/kg (0.34 lb/ton) of glass pulled.

Upon consideration of the data cited above, an emission limit of 0.25 g/kg (0.5 lb/ton) of glass pulled was identified as a reasonable limit for control for pressed and blown glass furnaces melting other than soda-lime formulations. This limit was selected for Option I; it provides for about 95 percent particulate removal. Option II would set an emission limit of 0.5 g/kg (1.0 lb/ton) of glass pulled, which provides for a particulate removal of about 90 percent. Fabric filters and ESP's could be designed to achieve the levels of emission reduction required by either regulatory option.

By 1983 approximately 70 Gg/year (77,200 ton/year) of additional production is anticipated in this sector. One 45 Mg/day (50 ton/day) (small) furnace and two 90 Mg/day (100 ton/day) (large) furnaces would be built in order to provide this production. If uncontrolled, emissions from the one new small pressed and blown glass furnace melting formulations other than soda-lime would add about 90 Mg/year (100 ton/year) to national particulate

emissions by 1983, while the emissions from the two new large furnaces would add about 260 Mg/year (287 ton/year) during the same period.

Compliance with a typical SIP regulation would reduce the impact from the small furnace to about 27 Mg/year (30 ton/year). Control to the Option I emissions limit would reduce the emissions to about 17 percent of those emitted under a typical SIP regulation. With Option II emissions would be reduced to about 33 percent of those emitted under a typical SIP regulation.

Compliance with a typical SIP regulation would reduce the impact of the large furnances to about 47 Mg/year (52 ton/year). Under Option I, these emissions would be reduced to about 28 percent of those emitted under a typical SIP regulation. Under Option II, the large furnace emissions would be reduced to about 56 percent of those emitted under a typical SIP regulation.

The effect of a typical SIP regulation for both large and small furnaces would be a reduction of about 79 percent. Under Option I, emissions would be reduced to about 25 percent of those emitted under a typical SIP regulation. Under Option II, emissions would be reduced to about 50 percent of those emitted under a typical SIP regulation.

Ambient dispersion modeling indicates that under worst case conditions the annual maximum ground-level particulate concentration near an uncontrolled 45 Mg/day pressed and blown glass furnace melting formulations other than soda-lime would be less than 1 $\mu g/m^3$, as would be the concentrations resulting from compliance with a typical SIP regulation, Option I, or Option II. Corresponding annual maximum ground-level concentrations near a 90 Mg/day furnace also would be less than 1 $\mu g/m^3$

The calculated maximum 24-hour ground-level concentration near an uncontrolled 45 Mg/day furnace in this sector would be 11 $\mu g/m^3$. This concentration would be reduced to 3 $\mu g/m^3$ with a typical SIP regulation. With Options I and II, the concentrations would be reduced to 1 $\mu g/m^3$ or less. The calculated maximum 24-hour ground-level concentration near an uncontrolled 90 Mg/day furnance would be 14 $\mu g/m^3$. This concentration would be reduced to 3 $\mu g/m^3$ with a typical SIP regulation and to below 1 $\mu g/m^3$ with Option I; with Option II it would reach 2 $\mu g/m^3$.

Since fabric filters and ESP's are likely to be the control systems installed on furnaces in this sector to comply with standards, there would be no water pollution impact associated with standards based on either Option I or Option II.

Under a typical SIP regulation, about 64 Mg/year (71 ton/year) of particulate matter would be collected from the one new 45 Mg/day furnace projected to come on-stream in the 1978–1983 period. Compliance with standards based on Option I and Option II would add about 23 Mg/year (25 ton/year) and 18 Mg/year (20 ton/year), respectively, to the solid waste collected under a typical SIP regulation. Option I would increase the mass of solids by about 36 percent over that resulting from compliance with a typical SIP regulation, and Option II would increase it by about 28 percent.

Under a typical SIP regulation, about 210 Mg/year (232 ton/year) of particulate matter would be collected from the two new 90 Mg/day furnaces projected to come on-stream in the 1978–1983 period. Compliance with standards based on Option I and Option II would add about 34 Mg/year (38 ton/year) and 21 Mg/year (23 ton/year), respectively, to the solid waste collected under a typical SIP regulation. Option I would increase the mass of solids by about 16 percent over that resulting from compliance with a typical SIP regulation, and Option II would increase it by about 10 percent. The total mass of solids for disposal collected from all three new furnaces in this sector, associated with Option I and Option II, would be about 57 Mg/year (63 ton/year) and about 39 Mg/year (43 ton/year), respectively.

The additional solid material collected under Option I or Option II would not differ chemically from the material collected under the typical SIP regulation. Collected solids either are recycled back into the glass melting process or are disposed of in a landfill. Recycling of the solids has no adverse environmental impact, and, since landfill operations are subject to State regulation, this disposal method also is not expected to have an adverse environmental impact.

Since ESP's have been the predominant control system used in the industry and are anticipated as the predominant system to be used for new plants coming on-stream between 1978–1983 regardless of which regulatory option is selected, energy requirements estimated for the typical SIP regulation, Option I, and Option II are based on the use of ESP's.

The energy required to control particulate emissions from the new 45 Mg/day pressed and blown glass furnace melting formulations other than soda-lime to the level required by the typical SIP regulation would be about 2.7 million kWh (1,500 barrels of oil/year). The energy required to comply with the Option I and Option II emissions limits would be essentially the same as that required for meeting a typical SIP regulation.

Control to the level required by a typical SIP regulation of the two new 90 Mg/day pressed and blown glass furnaces melting formulations other than soda-lime and projected to come on-stream during the 1978–1983 period would require about 6.6 million kWh (3,700 barrels of oil/year) if an ESP were used. The energy requirements to achieve the Option I and Option II emission limits would be essentially the same as the requirements for meeting a typical SIP regulation.

The energy required to comply with the emission limits of the regulatory options would be about 0.1 percent of total energy use for all new furnaces in this glass manufacturing sector. Considering the small amounts of additional oil and electricity required and the slight increase in total energy use in this sector, the energy impacts of either Option I or Option II would be negligible.

Incremental installed costs in January 1978 dollars associated with Option I for controlling particulate emissions from a 45 Mg/day pressed and blown glass furnace melting formulations other than soda-lime would be about $760 thousand for an ESP and about $235 thousand for a fabric filter. Incremental installed costs associated with Option II would be about $320 thousand for an ESP, and about $180 thousand for a fabric filter. The incremental installed costs of control equipment associated with the Option I level of control would be about 2.4 times the incremental installed costs associated with Option II if ESP's were selected. If fabric filters were selected the incremental installed costs associated with the Option I level of control would be about 1.2 times the incremental installed costs associated with Option II level of control.

Incremental annualized costs for a 45 Mg/day furnace associated with Option I would be about $230 thousand/year and about $70 thousand/year for an ESP and a fabric filter, respectively. Incremental annualized costs associated with Option II would be about $85 thousand/year for an ESP, and about $60 thousand/year for a fabric filter. The incremental annualized costs associated with Option I would be about 2.4 times the incremental annualized costs associated with Option II if ESP's were used. If fabric filters were used the incremental annualized costs associated

with Option I would be about 1.2 times the incremental annualized costs associated with Option II.

Based on the use of control equipment with the highest annualized costs (worse case conditions), a price increase of about 0.4 percent would be necessary to offset the costs of installing control equipment on a 45 Mg/day pressed and blown glass furnace melting other than soda-lime formulations to meet the emission limits of Option I. A price increase of about 0.3 percent would be necessary to comply with the emission limits of Option II.

Incremental cumulative capital costs for the 1978–1983 period associated with Option I for the 45 Mg/day furnace would be about $235 thousand if an ESP were used. Use of an ESP to comply with Option II would require incremental cumulative capital costs of about $190 thousand for the same period. Fifth-year annualized costs for controlling this furnace in this sector to comply with Option I would be about $70 thousand. To comply with Option II, fifth-year annualized costs would be about $60 thousand.

Incremental installed costs in January 1978 dollars associated with Option I for controlling particulate emissions from a 90 Mg/day pressed and blown glass furnace melting other than soda-lime formulations would be about $800 thousand for an ESP and about $280 thousand for a fabric filter. Incremental installed costs associated with Option II would be about $140 thousand for an ESP, and about $180 thousand for a fabric filter. The incremental installed costs of control equipment associated with the Option I level of control would be about 5.7 times the incremental installed costs associated with Option II if ESP's were selected. If fabric filters were selected the incremental installed costs associated with the Option I level of control would be about 1.4 times the incremental installed costs associated with Option II.

Incremental annualized costs for a 90 Mg/day furnace associated with Option I would be about $245 thousand per year and about $85 thousand per year for an ESP and a fabric filter, respectively. Incremental annualized costs associated with Option II would be about $45 thousand per year for an ESP, and about $55 thousand per year for a fabric filter. The incremental annualized costs associated with Option I would be about 5.4 times the incremental annualized costs associated with Option II if ESP's were used. If fabric filters were used the incremental annualized costs associated with Option I would be about 1.5 times the incremental annualized costs associated with Option II.

Based on the use of control equipment with the highest annualized costs, a price increase of about 0.8 percent would be necessary to offset the costs of installing control equipment on the 90 Mg/day pressed and blown glass furnace melting formulations other than soda-lime to meet the emission limits of Option I. A price increase of about 0.5 percent would be necessary to comply with the emission limits of Option II.

Incremental cumulative capital costs for the 1978–1983 period associated with Option I for the two new 90 Mg/day furnaces would be about $500 thousand if fabric filters were used. Use of ESP's to comply with Option II would require incremental cumulative capital costs of about $300 thousand for the same period. Fifth-year annualized costs for controlling these glass melting furnaces to comply with Option I would be about $160 thousand. To comply with Option II, fifth-year annualized costs would be about $85 thousand.

A summary of incremental impacts (in excess of impacts of the typical SIP regulation) associated with Option I and Option II is shown in Table III for both small and large furnaces. Air impacts, expressed in Mg/year of particulate matter emissions reduced, would approximate the quantity of particulate matter collected and disposed of as solid waste.

Table III.—*Summary of Incremental Impacts Associated With Regulatory Options*

	Impacts			
	Air[1]	Water	Energy[2]	Economic[3]
Regulatory option:				
I	67 None	Negligible		~0.7
II	89 None	Negligible		~0.4

[1] Mg/Yr. reduced.
[2] Barrels of oil/day.
[3] Percent price increase.

Consideration of the beneficial impact on national particulate emissions, lack of water pollution impact, the small potential for adverse solid waste impact, the lack of energy impact, the reasonableness of cost impacts, and the general availability of demonstrated emission control technology leads to the selection of Option I as the basis for standards for pressed and blown glass furnaces melting formulations other than soda-lime.

Wool Fiberglass

Uncontrolled particulate emissions from wool fiberglass furnaces are generally about 5 g/kg (10 lb/ton) of glass pulled. The average emission from three furnaces in the wool fiberglass sector equipped with ESP's was 0.18 g/kg (0.36 lb/ton) of glass pulled. EPA Method 5 tests of three furnaces equipped with fabric filters indicated emissions of 0.2 g/kg (0.4 lb/ton), 0.26 g/kg (0.52 lb/ton), and 0.55 g/kg (1.1 lb/ton) of glass pulled. The test data cited indicate that an emission limit of 0.2 g/kg (0.4 lb/ton) of glass pulled could be met through the use of an ESP and that a limit of 0.4 g/kg (0.8 lb/ton) of glass pulled could be met through the use of either an ESP or a fabric filter.

On the basis of these conclusions, two regulatory options for reducing particulate emissions from wool fiberglass furnaces were formulated. Option I would set an emission limit of 0.2 g/kg (0.4 lb/ton) of glass pulled, which would provide for about 95 percent particulate removal. Option II would set an emission limit of 0.4 g/kg (0.8 lb/ton) of glass pulled, which would provide for about 90 percent removal of particulates.

By 1983 approximately 360 Gg/year (397,000 ton/year) of additional production is anticipated in the wool fiberglass sector. About six new wool fiberglass furnaces of about 180 Mg/day (200 ton/day production capacity (the size of the model furnace) would be built in order to provide this additional production. If uncontrolled, these new wool fiberglass furnaces would add about 1,800 Mg/year (1,984 ton/year) to national particulate emissions by 1983. Compliance with a typical SIP regulation would reduce this impact to about 210 Mg/year (232 ton/year). Under Option I, emissions would be reduced to about 33 percent of those emitted under a typical SIP regulation. Under Option II, emissions would be reduced to about 66 percent of those emitted under a typical SIP regulation.

Ambient dispersion modeling indicates that under worst case conditions the annual maximum ground-level particulate concentration near an uncontrolled wool fiberglass furnace producing 180 Mg/day of glass would be about 2 $\mu g/m^3$. The annual maximum ground-level concentrations resulting from compliance with a typical SIP regulation, Option I, or Option II would be less than 1 $\mu g/m^3$. The calculated maximum 24-hour ground-level particulate concentration near an uncontrolled wool fiberglass furnace producing 180 Mg/day of glass would be about 29 $\mu g/m^3$. The corresponding concentration for complying with a typical SIP regulation would be about 3 $\mu g/m^3$. Under Option I, with an ESP employed for control, the maximum 24-

hour ground-level concentration would be reduced to 2 $\mu g/m^3$. Under Option II it would be reduced to 3 and 4 $\mu g/m^3$ with the fabric filter and ESP, respectively.

Since fabric filters and ESP's are likely to be the control systems installed on wool fiberglass furnaces to comply with standards, there would be no water pollution impact associated with standards based on either Option I or Option II.

Under a typical SIP regulation, about 1600 Mg/year (1,764 ton/year) of particulate matter would be collected from the six new 180 Mg/day wool fiberglass furnaces projected to come on-stream during the 1978–1983 period. Compliance with standards based on Option I and Option II would add about 140 Mg/year (154 ton/year) and about 70 Mg/year (77 ton/year), respectively, to the solid waste collected under a typical SIP regulation. Option I would increase the mass of solids for disposal by about 9 percent over that resulting from compliance with a typical SIP regulation, and Option II would increase it by about 4 percent. The additional solid material collected under Option I or Option II would not differ chemically from the material collected under a typical SIP regulation. Collected solids either are recycled back into the glass melting process or are disposed of in a landfill. Recycling of the solids has no adverse environmental impact, and, since landfill operations are subject to State regulation, this disposal method also is not expected to have an adverse environmental impact.

The estimated energy required to control particulate emissions from the six new wool fiberglass furnaces expected to come on-stream in the 1978–83 period to comply with a typical SIP regulation would be about 6.8 million kWh (3,850 barrels of oil/year) if electrostatic precipitators were used. Complying with the emission limits of Option I and Option II with electrostatic precipitators would require about 6.9 million kWh (3,900 barrels of oil/year). The energy required would be about 0.3 percent of the total energy use in the wool fiberglass sector. The energy impacts of either Option I or Option II would be negligible—only about 50 barrels of oil/year.

Incremental installed costs in January 1978 dollars associated with Option I for controlling particulate emissions from a 180 Mg/day wool fiberglass furnace would be about $500 thousand for an ESP and about $70 thousand for a fabric filter. Incremental installed costs associated with Option II would be about $110 thousand and about $30 thousand for an ESP and a fabric filter, respectively. The incremental installed costs of control equipment associated with the Option I level of control would be nearly 5 times the incremental installed costs associated with Option II if ESP's were selected. If fabric filters were selected, the incremental installed costs associated with the Option I level of control would be aobut twice the incremental installed costs associated with Option II.

Incremental annualized costs associated with Option I for a 180 Mg/day wool fiberglass furnace would be about $155 thousand/year and about $20 thousand/year for an ESP and a fabric filter, respectively. Incremental annualized costs associated with Option II would be about $35 thousand/year for an ESP and about $10 thousand/year for a fabric filter. The incremental annualized costs associated with Option I would be about five times the incremental annualized costs associated with Option II if ESP's were used. If fabric filters were used, the incremental annualized costs associated with Option I would be about two times the incremental annualized costs associated with Option II.

Based on the use of control equipment with the highest annualized costs (worst case conditions), a price increase of about 0.3 percent would be necessary to offset the costs of installing control equipment on a 180 Mg/day wool fiberglass furnace to meet the emission limits of Option I. A price increase of about 0.1 percent would be necessary to complying with the emission limits of Option II.

Incremental cumulative capital costs for the six new 180 Mg/day wool fiberglass furnaces during the 1978–1983 period associated with Option I would be about $3 million if ESP's were used. Use of fabric filters to comply with Option II would require incremental cumulative capital costs of about $185 thousand for the same period. Fifth-year annualized costs for controlling wool fiberglass furnaces complying with Option I would be about $930 thousand. To comply with Option II, fifth-year annualized costs would be about $60 thousand.

A summary of incremental impacts associated with Option I and Option II is shown in Table IV. Air impacts, expressed in Mg/year of particulate matter emissions reduced, would approximate the quantity of particulate matter collected and disposed of as solid waste.

Table IV.—*Summary of Incremental Impacts Associated With Regulatory Options*

Regulatory option:	Impacts			
	Air [1]	Water	Energy [2]	Economic [3]
I	140 Mg/Yr.	Negligible		0.3
II	70 Mg/Yr.	Negligible		0.1

[1] Mg/Yr. reduced.
[2] Barrels of oil/day.
[3] Percent price increase.

Consideration of the beneficial impact on national particulate emissions, the lack of water pollution impact, the small potential for adverse solid waste impact, the reasonableness of energy and cost impacts, and the general availability of demonstrated emission control technology leads to the selection of Option I as the basis for standards for glass melting furnaces in the wool fiberglass sector.

Flat Glass

Uncontrolled particulate emissions from flat glass furnaces are about 1.5 g/kg (3.0 lb/ton) of glass pulled. There are no emissions test data for flat glass furnaces equipped with control devices available for evaluation. However, the soda-lime formulations melted in these furnaces are quite similar to those melted in container glass furnaces, as are the chemical composition and physical characteristics of the particulate emissions. The primary difference between container glass and flat glass furnaces is that the uncontrolled emission rates of flat glass furnaces are greater. Given the similarity of processes, glass formulations, and emissions it is expected that the percentage reduction in particulate emissions achieved by control of container glass furnaces also could be achieved with flat glass furnaces. This conclusion is supported by the performance guarantee underwritten by an ESP manufacturer for a flat glass facility which indicates at least 90 percent control efficiency. Thus, uncontrolled emissions from flat glass furnaces can be reduced with an ESP by at least 90 percent or to about 0.15 g/kg (0.3 lb/ton) of glass pulled.

The similarity of container glass and flat glass furnace formulations and emissions and the vendor guarantee noted above provide the basis for Option I. Option I would set an emission limit of 0.15 g/kg (0.3 lb/ton) of glass pulled, which would provide about 90 percent control. The Option II emission limit for furnaces in the other glass manufacturing sectors has been found to be twice the Option I limit. For

consistency, therefore, Option II would set an emission limit of 0.3 g/kg (0.6 lb/ton) of glass pulled, which would provide about 80 percent control.

By 1983 approximately 240 Gg/year (264,555 ton/year) of additional production is expected in the flat glass sector. One new flat glass furnace of about 635 Mg/day (700 ton/day) capacity (the size of the model furnace) would be built in order to provide this additional production.

If uncontrolled, this new flat glass furnace would add about 360 Mg/year (397 ton/year) to national particulate emissions by 1983. Compliance with a typical SIP regulation would reduce this impact to about 90 Mg/year (100 ton/year). Under Option I, emissions would be reduced to about 40 percent of those emitted under a typical SIP regulation. Under Option II, emissions would be reduced to about 80 percent of those emitted under a typical SIP regulation.

Ambient dispersion modeling indicates that under worst case conditions the annual maximum ground-level particulate concentration near an uncontrolled flat glass furnace producing 635 Mg/day of glass would be about 1 $\mu g/m^3$. The annual maximum ground-level concentrations resulting from compliance with a typical SIP regulation, Option I, or Option II, would be less than 1 $\mu g/m^3$. The calculated maximum 24-hour ground-level particulate concentration near an uncontrolled flat glass furnace producing 635 Mg/day of glass would be about 21 $\mu g/m^3$. The corresponding concentration for complying with a typical SIP regulation would be about 5 $\mu g/m^3$. Under Option I, this concentration would be reduced to about 2 $\mu g/m^3$. Under Option II it would be reduced to about 5 $\mu g/m^3$.

Since the ESP is likely to be the emission control system installed on flat glass furnaces to comply with standards, there would be no water pollution impact associated with standards based on either Option I or Option II.

Under a typical SIP regulation, about 270 Mg/year (298 ton/year) of particulate matter would be collected from the one new 635 Mg/day flat glass furnace projected to come on-stream in the 1978–1983 period. Compliance with standards based on Option I and II would add about 50 Mg/year (55 ton/year) and about 20 Mg/year (22 ton/year), respectively, to the solid waste collected under a typical SIP regulation. Option I would increase the mass of solids for disposal by about 20 percent over that resulting from compliance with a typical SIP regulation, and Option II would increase it by about 7 percent. The additional solid material collected under Option I or Option II would not differ chemically from the material collected under a typical SIP regulation. Collected solids either are recycled back into the glass melting process or are disposed of in a landfill. Recyling of the solids has no adverse environmental impact, and, since landfill operations are subject to State regulations, this disposal method also is not expected to have an adverse environmental impact.

Since the energy requirements for an electrostatic precipitator do not vary significantly over the range of emission reductions considered here, the estimate of energy required to control particulate emissions from the one new flat glass furnace would be about the same for compliance with a typical SIP regulation, Option I, or Option II—about 7.6 million kWh (4,300 barrels of oil/year). The energy required to comply with the emission limits of the regulatory options would be about 0.2 percent of the total energy use in the flat glass sector. There would be no incremental energy impact associated with either Option I or Option II as compared with a typical SIP regulation.

The incremental installed cost in January 1978 dollars associated with Option I for controlling particulate emissions from a 635 Mg/day flat glass furnace would be about $605 thousand. Incremental installed cost associated with Option II would be about $140 thousand. The incremental installed cost of control equipment associated with the Option I level of control would be somewhat more than four times the incremental installed cost associated with the Option II level of control.

Incremental annualized cost associated with Option I for a 635 Mg/day flat glass furnace would be about $190 thousand/year; the corresponding incremental annualized cost for Option II would be about $45 thousand/year. The incremental annualized cost associated with Option I would be more than four times the incremental annualized cost associated with Option II.

A price increase of about 0.4 percent would be necessary to offset the cost of installing an ESP on a 635 Mg/day flat glass furnace to meet the emission limit of Option I. A price increase of about 0.1 percent would be necessary to comply with the emission limit of Option II.

Incremental cumulative capital cost for the one new 635 Mg/day flat glass furnace during the 1978–1983 period associated with Option I would be about $605 thousand. Compliance with Option II would require an incremental cumulative capital cost of about $145 thousand for the same period. Fifth-year annualized costs for controlling the one new flat glass furnace to comply with Option I would be about $190 thousand. To meet the Option II emissions limit, fifth-year annualized costs would be about $45 thousand.

A summary of incremental impacts associated with Option I and Option II is shown in Table V. Air impacts, expressed in Mg/year of particulate matter emissions reduced, would approximate the quantity of particulate matter collected and disposed of as solid waste.

Table V.—Summary of Incremental Impacts Associated With Regulatory Options

	Impacts			
	Air[1]	Water	Energy[2]	Economic[3]
Regulatory option:				
I	320	None	Negligible	0.4
II	260	None	Negligible	0.1

[1] Mg/Yr. reduced.
[2] Barrels of oil/day.
[3] Percent price increase.

Consideration of the beneficial impact on national particulate emissions, the lack of water pollution impact, the small potential for adverse solid waste impact, the lack of energy impact, the reasonableness of cost impacts, and the general availability of demonstrated emission control technology leads to the selection of the Option I as the basis for standards for glass melting furnaces in the flat glass sector.

Summary

If uncontrolled, total particulate emissions from the 45 new glass melting furnaces projected to come on-stream between 1978 and 1983 would be about 5,200 Mg/year (5,732 ton/year). Compared to a typical SIP regulation, Option I would reduce particulate emissions by an additional 1,100 Mg/year (1,213 ton/year).

Ambient dispersion modeling indicates that the annual maximum ground-level particulate concentrations near uncontrolled glass melting furnaces would be 2 $\mu g/m^3$ or less. Both a typical SIP regulation and the Option I emission limits would reduce the annual maximum ground-level particulate concentrations to under 1 $\mu g/m$. The 24-maximum ground-level particulate concentrations near uncontrolled glass melting furnaces would be less than 30 $\mu g/m^3$, with a median concentration of about 11 $\mu g/m^3$. Under a typical SIP regulation these concentrations would be reduced to 5 $\mu g/m^3$ or less. Control to the Option I emission limits would

reduce the 24-hour maximum ground-level concentrations near glass melting furnaces to about 2 $\mu g/m^3$ or less.

The glass manufacturing process has minimal water pollution potential. Complying with a standard based on Option I would have a negligible water pollution impact, because control systems installed to meet Option I would not discharge waste water streams.

The amounts of solid waste generated in the control of particulates from glass melting furnaces would approximate the amount of particulate removed from exhaust gases. Compliance with a typical SIP regulation would produce 3,700 Mg (4,080 tons) of solid waste per year. Meeting the Option I emission limits would generate an additional 1,100 Mg/year (1,210 ton/year). Either recycling or landfilling would present minimal adverse environmental impact. Totally recycling the collected solids would have no adverse impact. Landfilling operations must meet State regulations, and therefore this disposal method would have limited potential for adverse environmental impact.

Implementing Option I would require about 1.6 million kWh of electricity to power the emission control equipment installed above the requirements for implementing a typical SIP regulation. To meet this power requirement electric utilities would require about 950 barrels of oil/year, or about 3 barrels/day. The energy that would be required to operate emission reduction sytems to meet a standard based on the Option I limits would be 2 percent or less of the total energy used in glass production.

Incremental cumulative capital costs to the glass manufacturing industry for controlling emissions from new glass melting furnaces projected to come on-stream during the 1978–1983 period to comply with a standard based on the Option I emission limits would be about $27.9 million. The fifth-year annualized costs to the glass manufacturing industry associated with compliance with the Option I emission limits would be about $8.4 million. An industry-wide price increase of about 0.7 percent would be necessary to offset the costs of installing control equipment to meet the emission limits of Option I.

Modification, Reconstruction, and Other Considerations

An exemption from provisions of the modification section (40 CFR § 60.14) is proposed for those plants which convert to fuel-oil firing, even though particulate emissions would more than likely be increased. The primary objective of the proposed standards is to control emissions of particulates from glass melting furnaces. The data and information supporting the standards consider essentially only those emissions arising from the basic melting process, not those arising from fuel combustion. It is not the prime purpose of these standards, therefore, to control emissions from fuel combustion per se. Consequently, since emissions from fuel combustion are small in comparison with those from the basic melting process, and a conversion of glass melting furnaces to firing oil rather than natural gas will aid in efforts to conserve natural gas resources, the standards proposed herein include a provision exempting fuel switching in glass melting furnaces from consideration as a modification. The proposed increment in emissions allowed fuel oil-fired glass melting furnaces is 15 percent, a small allowance; however, without this exemption there would be a large economic impact on the industry.

An exemption from reconstruction provisions (40 CFR § 60.15) is proposed for the cold refining (rebricking) of the melter of an existing furnace. Under 40 CFR § 60.15 the Administrator must be notified of intent to conduct such a procedure 60 days in advance of commencement, and will determine whether or not the rebricking constitutes a reconstruction. This rebricking procedure has been a routine operation in the glass manufacturing industry and would not generally be considered an opportunity to evade the provisions of the standard by unduly extending the useful life of an existing glass melting furnace. Therefore, the exemption of rebricking from reconstruction provision has been proposed.

Glass melting furnaces fired with number 2 fuel oil would be expected to exhibit a 10 percent increase in particulate emissions over those produced in gas-fired furnaces since particulates are formed by the combustion of oil. Similarly, furnaces fired with numer 4, 5, or 6 fuel oil would show a 15 percent increase in particulate emissions over those produced in gas-fired furnaces. This effect of fuel oil on furnace emissions being recognized, it is proposed that the emission limits for furnaces fired with fuel oil be the limits for gas-fired furnaces multiplied by 1.15. It is additionally proposed that simultaneously liquid and gas-fired furnaces have emission limits based on an equation, taking into consideraton the relative properties of the fuels being fired.

Selection of Performance Test Methods

The use of EPA Reference Method 5—"Determination of Particulate Emissions from Stationary Sources" (Appendix A, 40 CFR § 60, Federal Register, December 23, 1971) is required to determine compliance with the mass standards for particular matter emissions. Emission test data used in the development of the proposed standard were obtained either by the LAAPCD sampling method or by EPA Method 5. However, results of performance tests using Method 5 conducted by EPA on existing glass melting furnaces comprise a major portion of the data base used in the development of the proposed standard. EPA Reference Method 5 has been shown to provide a respresentative measurement of particulate matter emissions. Therefore, it has been included for determining compliance with the proposed standards.

Calculations applicable under Method 5 necessitate the use of data obtained from three other EPA test methods conducted previous to the performance of Method 5. Method 1—"Sample and Velocity Traverse for Stationary Sources" must be conducted in order to obtain representative measurements of pollutant emissions. The average gas velocity in the exhaust stack is measured by conducting Method 2—"Determination of Stack Gas Velocity and Volumetric Flow Rate (Type S Pitot Tube)." The analysis of gas composition is measured by conducting Method 3—"Gas Analysis for Carbon Dioxide, Oxygen, Excess Air and Dry Molecular Weight." These three tests provide data necessary in Method 5 for converting volumetric flow rate to mass flow rate. In addition, Method 4—"Determination of Moisture Conent in Stack Gases" is suggested as an accurate mode of predetermination of moisture content.

Since the proposed standards are expressed as mass of emissions per unit mass of glass pulled, it will be neccessary to quantify glass pulled in addition to measuring particulate emissions. Glass production in Mg shall be determined by direct measurement or computed from materials balance data using good engineering practices. The materials balance computation may constst of a process relationship between feed material input rate and the glass pull rate. In all materials balance computations, glass pulled from the furnace shall include product, cullet, and any waste glass. The hourly glass pull rate for a furnace shall be determined by averaging the glass pull rate over the time of the performance test.

Selection of Monitoring Requirements

To provide a convenient means for enforcement personnel to ensure that installed emission control systems comply with standards of performance through proper operation and maintenance, monitoring requirements are generally included in standards of performance. For glass melting furnaces the most straightforward means of ensuring proper operation and maintenance is to monitor emissions released to the atmosphere. EPA has established opacity monitoring performance specifications in Appendix B of 40 CFR § 60 for industrial sources with well-developed velocity and temperature profiles.

The best indirect method of monitoring proper operation and maintenance of compliance control equipment is the determination of exhaust gas opacity limits. Determining an acceptable exhaust gas opacity limit is not presently possible because the relationship between particulate emissions and corresponding opacity levels was not evaluated for glass melting furnaces. The data base for the particulate standards does not include information on opacity. Also, currently there are no continuous particulate monitors operating on glass melting furnaces; consquently, the data base necessary for developing an opacity-emission rate relationship is not available. Resolution of the sampling problems, development of performance standards for continuous particulate monitors, and obtaining a data base for developing an opacity-emission rate relationship would entail a major development program. For these reasons, continuous monitoring of particulate emissions from glass melting furnaces would not be required by the proposed standards.

Public Hearing

A public hearing will be held to discuss these proposed standards in accordance with Section 307(d)(5) of the Clean Air Act. Persons wishing to make oral presentations should contact EPA at the address given in the ADDRESSES section of this preamble. Oral presentations will be limited to 15 minutes each. Any member of the public may file a written statement with EPA before, during, or within 30 days after the hearing. Written statements should be addressed to the Docket address given in the ADDRESSES section of this preamble.

A verbatim transcript of the hearing and written statements will be available for public inspection and copying during normal working hours at EPA's Central Docket Section in Washington, D.C. (See ADDRESSES section of this preamble).

Miscellaneous

The docket is an organized and complete file of all the information considered by EPA in the development of this rulemaking. The principal purposes of the docket are: (1) to allow interested persons to identify and locate documents so that they can intelligently and effectively participate in the rulemaking process, and (2) to serve as the record for judicial review. The docket requirement is discussed in Section 307(d) of the Clean Air Act.

As prescribed by Section 111 of the Act, this proposal of standards has been preceded by the Administrator's determination that emissions from glass manufacturing plants contribute to the endangerment of public health or welfare, and by publication of this determination in this issue of the **Federal Register**. In accordance with Section 117 of the Act, publication of these proposed standards was preceded by consultation with appropriate advisory committees, independent experts, and Federal departments and agencies. The Administrator will welcome comments on all aspects of the proposed regulation, including the designation of glass manufacturing plants as a significant contributor to air pollution which causes or contributes to the endangerment of public health or welfare, economic and technological issues, and on the proposed test method.

It should be noted that standards of performance for new sources established under Section 111 of the Clean Air Act reflect:

"Application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated." [Section 111(a)(1)]

Although there may be emission control technology available that is capable of reducing emissions below those levels required to comply with the standards of performance, this technology might not be selected as the basis of standards of performance because of costs associated with its use. Accordingly, these standards of performance should not be viewed as the ultimate in achievable emissions control. In fact, the Act requires (or has the potential for requiring) the imposition of a more stringent emission standard in several situations. For example, applicable costs do not necessarily play as prominent a role in determining the "lowest achievable emission rate" for new or modified sources locating in nonattainment areas; i.e., those areas where statutorily-mandated health and welfare standards are being violated. In this respect, Section 173 of the Act requires that new or modified sources constructed in an area which is in violation of the NAAQS must reduce emissions to the level which reflects the "lowest achievable emission rate" (LAER), as defined in Section 171(3), for such category of source. The statute defines LAER as that rate of emissions which reflects:

"(A) the most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable; or (B) the most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent."

In no event can the emission rate exceed any applicable new source perfomance standard [Section 171(3)].

A similar situation may arise under the prevention of significant deterioration of air quality provisions of the Act (Part C). These provisions require that certain sources (referred to in Section 169(1)) employ "best available control technology" (as defined in Section 169(3)) for all pollutants regulated under the Act. Best available control technology (BACT) must be determined on a case-by-case basis, taking energy, environmental, and economic impacts and other costs into account. In no event may the application of BACT result in emissions of any pollutants which will exceed the emissions allowed by an applicable standard established pursuant to Section 111 (or 112) of the Act.

In all events, State Implementation Plans approved or promulgated under Section 110 of the Act must provide for the attainment and maintenance of national ambient air quality standards (NAAQS) designed to protect public health and welfare. For this purpose, SIP's must in some cases require greater emission reductions than those required by standards of performance for new sources.

Finally, States are free under Section 116 of the Act to establish even more stringent limits than those established under Section 111 of those necessary to attain or maintain the NAAQS under Section 110. Accordingly, new sources may in some cases be subject to limitations more stringent than EPA's standards of performance under Section

111, and prospective owners and operators of new sources should be aware of this possibility in planning for such facilities.

EPA will review this regulation four years from the date of promulgation. This review will include an assessment of such factors as the need for integration with other programs, the existence of alternative methods, enforceability, and improvements in emission control technology.

An economic impact assignment has been prepared as required under Section 317 of the Act and is included in the Background Information Document.

Dated: May 22, 1979.

Douglas M. Costle,

Administrator.

It is proposed to amend Part 60 of Chapter I, Title 40 of the Code of Federal Regulations as follows:

Subpart CC—Standards of Performance for Glass Manufacturing Plants

Sec.

60.290 Applicability and designation of affected facility.
60.291 Definitions.
60.292 Standards for particulate matter.
60.293 Test methods and procedures.

Authority: Sections 111 and 301(a) of the Clean Air Act, as amended [42 U.S.C. 7411, 7601(a)], and additional authority as noted below.

§ 60.290 Applicability and designation of affected facility.

The affected facility to which the provisions of this subpart apply is each glass melting furnace within a glass manufacturing plant.

§ 60.291 Definitions.

As used in this subpart, all terms not defined herein shall have the meaning given them in the Act and in Subpart A.

(a) "Glass manufacturing plant" means any plant which produces glass or glass products.

(b) "Glass melting furnace" means a unit comprising a refractory vessel in which raw materials are charged, melted at high temperature, refined, and conditioned to produce molten glass. The unit includes foundations, superstructure and retaining walls, raw material charger systems, heat exchangers, melter cooling system, exhaust system, refractory brick work, fuel supply and electrical boosting equipment, integral control systems and instrumentation, and appendages for conditioning and distributing molten glass to forming apparatuses.

(c) "Day pot" means any glass melting furnace designed to produce less than 1800 kilograms of glass per day.

(d) "All-electric melter" means a glass melting furnace in which all the heat required for melting is provided by electric current from electrodes submerged in the molten glass, although some fossil fuel may be charged to the furnace as raw material.

(e) "Glass" means flat glass; container glass; pressed and blown glass; and wool fiberglass.

(f) "Flat glass" means glass made of soda-lime recipe and produced into continuous flat sheets and other products listed in Standard Industrial Classification 3211 (SIC 3211).

(g) "Container glass" means glass made of soda-lime recipe, clear or colored, which is pressed and/or blown into bottles, jars, ampoules, and other products listed in SIC 3211.

(h) "Pressed and blown glass" means glass which is pressed and/or blown, including textile fiberglass, noncontinuous process flat glass, noncontainer glass, and other products listed in SIC 3229. It is separated into:

(1) Glass of soda-lime recipe; and

(2) Glass of borosilicate, opal, lead and other recipes.

(i) "Wool fiberglass" means fibrous glass of random texture, including fiberglass insulation, and other products listed in SIC 3296.

(j) "Recipe" means formulation of raw materials.

(k) "Glass production" means the weight of glass pulled from a glass melting furnace.

(l) "Rebricking" means cold replacement of damaged or worn refractory parts of the glass melting furnace. Rebricking includes replacement of the refractories comprising the bottom, sidewalls, or roof of the melting vefssel; replacement of refractory work in the heat exchanger; replacement of refractory portions of the glass conditioning and distribution system.

(m) "Soda-lime recipe" means raw material formulation of the following approximate proportions: 72 percent silica; 15 percent soda; 10 percent lime and magnesia; 2 percent alumina; and 1 percent miscellaneous materials.

§ 60.292 Standards for particulate matter.

(a) On or after the date on which the performance test required to be conducted by § 60.8 is completed, no owner or operator of a glass melting furnace subject to the provisions of this subpart shall cause to be discharged into the atmosphere, except as provided in paragraph (d) of this section:

(1) From any glass melting furnace, fired with a gaseous fuel, particulate matter at emission rates exceeding those specified in Table CC-1.

(2) From any glass melting furnace, fired with a liquid fuel, particulate matter at emission rates exceeding 1.15 times those specified in Table CC-1.

(3) From any glass melting furnace, simultaneously fired with gaseous and liquid fuel, particulate matter at emission rates exceeding those specified by the following equation;

$STD = X[1.15(Y) + (Z)]$

where:

STD = Particulate matter emission limit
X = Emission rate specified in Table CC-1
Y = Decimal percent of liquid fuel heating value to total (gaseous and liquid) fuel heating value

kilojoules

kilojoules
Z = (1 − Y)

(b) Conversion of a glass melting furnace to use of liquid fuel shall not be considered a modification for purposes of 40 CFR 60.14.

(c) Rebricking and the cost of rebricking shall not be considered reconstruction for the purposes of 40 CFR 60.15.

(d) This subpart shall not apply to day pots and all-electric melters.

Table CC-1—*Emission Rates*

Glass category	g of particulate/kg of glass produced
(1) Flat Glass	0.15
(2) Container Glass	.10
(3) Pressed and Blown Glass:	
(a) Other than soda-lime recipes (i.e., borosilicate, opal, lead, and other recipes, including textile fiberglass)	.25
(b) Soda-lime recipes	.10
(4) Wool Fiberglass	.20

§ 60.293 Test methods and procedures.

(a) Reference methods in Appendix A of this part, except as provided under § 60.8(b), shall be used to determine compliance with § 60.292 as follows:

(1) Method 5 shall be used to determine the concentration of particulate matter and the associated moisture content.

(2) Method 1 shall be used for sample and velocity traverses, and

(3) Method 2 shall be used to determine velocity and volumetric flow rate.

(4) Method 3 shall be used for gas analysis.

(b) For Method 5, the sample probe and filter holder shall be heated to 121°C (250°F). The sampling time for each run

shall be at least 60 minutes and the volume shall be at least 4.25 dscm.

(c) The particulate emission rate, E, shall be computed as follows:

$E = V \times C$

where:

(1) E is the particulate emission rate (g/hr),

(2) V is the average volumetric flow rate (dscm/hr) as found from Method 2; and

(3) C is the average concentration (g/dscm) of particulate matter as found from Method 5.

(d) the rate of glass production, P (kg/hr) shall be determined by dividing the weight of glass pulled in kilograms (kg) from the affected facility during the performance test by the number of hours (hr) taken to perform the performance test. The glass pulled in kilograms shall be determined by direct measurement or computed from materials balance by good engineering practice.

(e) The furnace emission rate shall be computed as follows:

$R = E/P$

where:

(1) R is the furnace emission rate (g/kg);

(2) E is the particulate emission rate (g/hr) from (c) above; and

(3) P is the rate of glass production (kg/hr) from (d) above.

[Sec. 114 of Clean Air Act as amended (42 U.S.C. 7414).]

Part VII

Department of Agriculture

Animal and Plant Health Inspection Service

Foreign Quarantine Notices; Public Hearing and Notice of Proposed Rulemaking

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[7 CFR Part 319]

Foreign Quarantine Notices; Public Hearing and Notice of Proposed Rulemaking

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule and public hearing.

SUMMARY: This document proposes to revise "Subpart—Nursery Stock, Plants, and Seeds" (7 CFR 319.37 through 319.37–28a) relating to prohibitions and restrictions on the importation of certain classes of nursery stock, and certain other classes of plants, roots, bulbs, seeds, and other plant products. This appears to be necessary to update regulations and to prevent the introduction into the United States of certain injurious plant diseases, insect pests, and other plant pests. This document also gives notice of a public hearing to consider this proposal.

DATES: Written comments must be received on or before September 13, 1979.

Public hearing: August 21 and 22, 1979.

ADDRESSES: Written comments should be submitted to the Hearing Officer, Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Room 635, Federal Building, Hyattsville, MD 20782.

Public hearing location: Holiday Inn Hotel, Baltimore Washington International Airport, Templehoff Room, 6500 Elkridge Landing Road, Baltimore, MD 21240.

FOR FURTHER INFORMATION CONTACT: H. V. Autry, 301–436–8247.

SUPPLEMENTARY INFORMATION:

Written Comments and Public Hearing

Interested persons are invited to submit written comments concerning the proposal.

Comments should bear a reference to the date and page numbers of this issue of the Federal Register. All written comments made pursuant to this notice will be made available for public inspection in Room 635, Federal Building, Hyattsville, MD 20782, during regular hours of business.

The public hearing to consider the proposal will be held before a representative of the Animal and Plant Health Inspection Service on August 21 and 22, 1979, at 10 a.m., at the Holiday Inn Hotel, Baltimore Washington International Airport, Templehoff Room, 6500 Elkridge Landing Road, Baltimore, MD 21240. At the hearing, a representative of the Animal and Plant Health Inspection Service will present a statement explaining the purpose and basis of this proposal. Any interested person may appear and be heard either in person, by attorney, or other representative. Also, any interested person, his attorney, or other representative will be afforded an opportunity to ask relevant questions concerning the proposal.

Background

The Plant Quarantine Act and the Federal Plant Pest Act contain authority to prohibit or restrict the importation into the United States of any classes of nursery stock, and other classes of plants, roots, bulbs, seeds, or other plant products in order to prevent the introduction into the United States of certain diseases, insects, and other plant pests. Regulations promulgated in connection with this authority are contained in 7 CFR Parts 319, 321, 330, 351, and 352. This document relates only to a revision of the current subpart of Part 319 captioned "Subpart—Nursery Stock, Plants, and Seeds" (7 CFR 319.37 through 319.37–28a) which concerns the importation or offer for importation into the United States of any such classes of nursery stock, plants, roots, bulbs, seeds, or other plant products except for articles that are subject to Part 321, i.e., potatoes, or to other subparts of Part 319, e.g., fruits and vegetables, cut flowers, sugarcane, and rice.

In particular, sections 7 and 9 of the Plant Quarantine Act (7 U.S.C. 160, 162) contain authority to prohibit the importation of articles into the United States in order to prevent the entry of tree, plant, or fruit diseases, or injurious insects, new to or not widely prevalent or distributed within and throughout the United States, and sections 1, 5, and 9 of the Plant Quarantine Act (7 U.S.C. 154, 159, 162) contain authority to restrict the importation of articles into the United States in order to prevent the entry of injurious plant diseases or insect pests. However, this authority in the Plant Quarantine Act is not broad enough to cover certain other plant pests, such as nematodes and mites. One of the purposes of the Federal Plant Pest Act was to add authority to prohibit or restrict the importation of articles because of such other plant pests, and section 106 of the Federal Plant Pest Act (7 U.S.C. 150ee) is cited as authority for this purpose.

This document proposes numerous changes from the current "Subpart—Nursery Stock, Plants, and Seeds" including new concepts, much rewording in order to relate more clearly to the language of the Plant Quarantine Act and the Federal Plant Pest Act, and a general reorganization of material in order to provide a more logical arrangement.

The proposed regulations would divide the articles subject to the revised subpart into "prohibited articles" and "restricted articles." A "prohibited article" would be prohibited from being imported or offered for entry into the United States unless imported by the U.S. Department of Agriculture under specified conditions referred to below. The list of prohibited articles would represent those articles for which there does not appear to be a feasible method for inspection, treatment, or other procedures for preventing the possible introduction into the United States of any accompanying tree, plant, or fruit disease, of any injurious insects, or of any other plant pest, new to or not theretofore widely prevalent or distributed within and throughout the United States. A "restricted article" would be any article subject to the revised subpart other than a "prohibited article" and would be eligible for importation into the United States only in accordance with the restrictions contained in the revised subpart. It appears that all articles proposed to be defined as "restricted articles" from any foreign country or locality must necessarily be subject to restrictions for importation into the United States because any such articles could be the means of introducing injurious plant diseases and injurious insect pests. Further, such articles could be the means of introducing other plant pests.

Both the current subpart 319 captioned "Nursery Stock, Plants, and Seeds" and these proposed regulations relate only to articles "for or capable of propagation." Other subparts of 319 and 321 contain requirements with respect to the importation of other articles "for or capable of propagation," e.g., potatoes, sugarcane, rice, wheat, and corn, and Part 319 also contains requirements with respect to the importation of articles not "for or capable of propagation," e.g., cut flowers and fruits and vegetables.

The proposed regulations would prohibit or restrict the importation of articles "from" specified countries and localities. The term "from" as used in this context is defined to provide that an article is deemed to be "from" any country or locality in which it was grown since articles could become

affected with diseases or pests occurring in countries or localities in which grown. However, special provisions concerning the importation of certain articles "from" Canada are explained below in the discussion relating to the proposed section 319.37–14.

The term "spp." (species) as used in the current regulations and in the proposed regulations is intended to refer to "all species, clones, cultivars, strains, varieties, and hybrids" of the genus when listed with the genus name, e.g., *Actinidia* spp. Accordingly, a definition of species would be added to reflect this intent. This appears to be necessary because the risk of introducing diseases or pests would be similar for all of the species, clones, cultivars, strains, varieties, and hybrids of a genus.

One or more common names of articles are given in parentheses after most scientific names for the purpose of helping to identify the articles represented by such scientific names; however, (unless otherwise specified) a scientific name is intended to include all articles within the genus or species represented by the scientific name, regardless of whether the common name or names are as comprehensive in scope as the scientific name. It would be impossible to list common names for all of the articles included by the scientific names because some scientific names are given for which there are no known common names, and some scientific names are given for which there are clones, cultivars, strains, hybrids, or varieties without common names.

The term "disease" as used in the proposed regulations is used interchangeably to mean a "disease" or a "disease agent which incites a disease." In order to be precise, the term "disease" would therefore be defined to reflect this intent.

The current regulations prohibit or restrict the importation of articles into the continental United States, Guam, Hawaii, Puerto Rico, and the Virgin Islands of the United States, because the provisions of the Plant Quarantine Act and the Federal Plant Pest Act have been made applicable by law to Guam, Puerto Rico, and the Virgin Islands of the United States, in addition to the States and the District of Columbia. However, pursuant to Public Law 94–241 (90 Stat. 263 *et seq.*) and Presidential Proclamation 4534, the provision of these Acts are also made applicable to the Northern Mariana Islands. It appears that the proposed regulations should be made applicable to the Northern Mariana Islands for the same reasons they would be applicable to the States, the District of Columbia, Guam, Puerto Rico, and the Virgin Islands of the United States. Accordingly, under the provisions of this proposal the definition of United States would be amended to include the Northern Mariana Islands and consequently the regulations would also apply to the Northern Mariana Islands.

Proposed § 319.37(c) provides that an article refused importation for noncompliance with the requirements of the proposed subpart shall be promptly removed from the United States or abandoned by the importer for destruction, and that pending removal or abandonment, the article shall be subject to the immediate application of such safeguards against escape of injurious plant diseases, injurious insect pests, and other plant pests as the inspector determines necessary to prevent the introduction into the United States of such diseases or pests. Proposed § 319.37(c) also provides for seizure, destruction, or other disposal of any such article not promptly safeguarded, removed, or abandoned. These provisions are necessary to implement the provisions of section 10 of the Plant Quarantine Act (7 U.S.C. 164a) and sections 105 and 107 of the Federal Plant Pest Act (7 U.S.C. 150dd, 150ff) which authorize emergency measures against prohibited and restricted articles which are not in compliance with the provisions of this subpart.

Proposed § 319.37–2 contains a list of articles from designated countries and localities which would be classified as prohibited articles and would be prohibited from being imported or offered for entry into the United States, except as otherwise provided in proposed § 319.37–2(c).

Each article listed in the following chart from the designated countries and localities is proposed to be added to the current list of prohibited articles because there does not appear to be any feasible method for inspection, treatment, or other procedures for preventing the possible introduction into the United States of accompanying tree, plant, or fruit diseases, or injurious insects, or other plant pests (listed in the chart), new to or not theretofore widely prevalent or distributed within and throughout the United States, and thereby preventing consequent injurious effects of such diseases, insects, or other plant pests, i.e., destruction or substantial reduction of the yield or marketability of the kind of listed article or products thereof.

Article (except seeds unless specifically mentioned) proposed to be added to the list of prohibited articles	Foreign country(ies) or locality(ies)	Tree, plant, or fruit disease, or injurious insect, or other plant pest determined as existing in the places named and capable of being transported with the article
Actinidia spp. (chinese gooseberry, kiwi)	Japan and Taiwan	*Puccinistrum actinidiae* Hiratsuuka (Rust).
Adonidia spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Allagoptera arenaria	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Areca spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Arenga spp. (sugarpalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Arikuryroba spp. (arikury palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Borassus spp. (palmyra palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Caryota spp. (fishtail palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Chaenomeles spp. (flowering quince) not meeting the conditions for importation in proposed § 319.37–5(b).	All	*Monilinia fructigena* (Aderh. & Ruhl.) Honey (Brown rot of fruit).
Chrysalidocarpus spp. (butterfly palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Chrysanthemum spp. (chrysanthemum)	Europe, Argentina, Brazil, Hong Kong, Japan, Korea, Malaysia, New Zealand, People's Republic of China, and Republic of South Africa.	*Puccinia horiana* P. Henn. (White rust of chrysanthemum).
Cocos nucifera (coconut) (including seeds)	All except from Jamaica if meeting the conditions for importation in proposed § 319.37–5(f) (currently listed as prohibited only if destined to Hawaii).	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Cocos spp. (other than *Cocos nucifera*)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.

Article (except seeds unless specifically mentioned) proposed to be added to the list of prohibited articles	Foreign country(ies) or locality(ies)	Tree, plant, or fruit disease, or injurious insect, or other plant pest determined as existing in the places named and capable of being transported with the article
Corypha spp.	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Cycas spp. (quince) not meeting the conditions for importation in proposed § 319.37-5(b).	All	A diversity of diseases including but not limited to items 1, 18, 19, 20, and 21 listed in proposed § 319.37-5(b)(2).
Datura spp.	Colombia	Datura Colombian virus.
Dictyosperma spp. (*Princess palm*)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Elaeis spp. (oil palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Erianthus spp (plumegrass)	All	*Puccinia melanocephala* H. Syd. & P. Syd. (Sugarcane rust).
Fragaria spp. (strawberry)	Australia, Austria, Czechoslovakia, France, Great Britain, Italy, Japan, Lebanon, The Netherlands, New Zealand, Northern Ireland, Republic of Ireland, Switzerland, and Union of Soviet Socialist Republics.	*Phytophthora fragariae* Hickman (Red stele disease).
Gaussia spp. (Sumapalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Gladiolus spp. (gladiolus)	Italy, Malta, and Portugal	*Uromyces transversalis* (Theum.) Wint. (Rust).
Hibiscus spp. (hibiscus, rosemallow)	Nigeria	Okra mosaic virus.
	Africa (currently listed as prohibited only from Sudan and Nigeria).	Cotton leaf curl virus.
Howeia belmoreana (Sentry palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Hydrangea spp. (hydrangea)	Japan	*Ascidium hydrangeae-paniculatae* Diesel.
Ipomoea spp. (sweetpotato)	All except Canada	A diversity of diseases including but not limited to the sweetpotato witches broom (little leaf); sweetpotato viruses of eastern Africa.
Juniperus spp. (juniper)	Austria	*Stigmina deflectans* (Karst) Ellis (Needlecast disease).
	Europe (currently listed as prohibited from Finland and Romania because of *Exosporium deflectans* (Karst).	*Phacidiopycnis pseudotsugae* (M. Wils) Hahn (Douglas fir canker).
Latania spp.	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Livistona spp. (fan palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Manihot spp. (cassava)	All except Canada	A diversity of diseases, insects, and other pests including but not limited to: *Monoychellus tanajoa* Bondar (Cassava mite); *Phenacoccus manihoti* Matile-Ferrero (Cassava mealybug); *Xanthomonas manihotis* (Arthaud-Berthet) Starr (Bacterial blight); Cassava brown streak virus; Cassava latent virus; Cassava African mosaic virus; Cassava common mosaic virus.
Mascarena spp.	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Morus spp. (mulberry)	India, and Union of Soviet Socialist Republics	A diversity of diseases including but not limited to: Mulberry dwarf; Mulberry curly little leaf agent; Mulberry mosaic agent.
Oryza spp. (rice) (Seeds are prohibited from importation into the U.S. See 7 CFR 319.55).	All	A diversity of diseases including but not limited to: Rice dwarf virus; Rice stripe virus; Rice yellow dwarf agent; Rice black-streaked dwarf virus; Rice tungro virus; Rice transitory yellowing virus; Rice orange leaf agent; Rice grassy stunt agent; Rice ragged stunt virus; Rice yellow mottle virus; *Melanomma glumarum* Mly. *Oospora oryzetorum* Sacc.; *Rhynchosporium oryzae* Hashioka & Yokogi; *Xanthomonas oryzae* (Uyeda & Ishiyama) Dowson.
Philadelphus spp. (mock orange)	Europe	Elm mottle virus.
Phoenix spp. (date)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Pritchardia spp.	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Ribes nigrum (black currant)	Australia, Province of British Columbia in Canada, New Zealand, and Europe (currently listed as prohibited from British Isles and Sweden).	Black currant reversion agent.
Salix spp. (willow)	Federal Republic of Germany (West), and German Democratic Republic (East).	*Erwinia salicis* (Day) Chester (Watermark disease).
Solanum spp. (potato) (including seeds)	All	Andean potato latent virus; Andean potato mottle virus; Potato mop top virus; Dulcamara mottle virus; Tomato blackring virus; Tobacco rattle virus; Potato virus Y (Tobacco veinal necrosis strain); Potato purple top wilt agent; Potato marginal flavescence agent; Potato purple top roll agent; Potato witches broom agent; Stolbur agent; Parastolbur agent; Potato leaflet stunt agent; Potato spindle tuber viroid.
Syringa spp. (lilac)	Europe	Elm mottle virus.
Trachycarpus spp. (windmillpalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Ulmus spp. (elm) (including seeds)	Europe (currently listed as prohibited from Europe, Dominion of Canada and other foreign areas north of the United States, including Newfoundland, Labrador, St. Pierre, Miquelon, and islands adjacent thereto if destined to California, Nevada, or Oregon).	Elm mottle virus.
Veitchia spp.	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Vitis spp. (grape)	All except Canada (currently listed as prohibited from Europe because of *Marmor viticola* Holmes).	A diversity of disease agents, including but not limited to: Arabis mosaic virus; Flavescence-doree agent; Raspberry ringspot virus; Hungarian chrome mosaic virus; Strawberry latent ringspot virus; *Xanthomonas ampelina* Panagopoulos (Bacterial blight); Grapevine fanleaf virus and its strains; Grapevine leaf roll virus and its strains; Tomato black ring virus; Artichoke Italian latent virus; Grapevine vein necrosis virus.
Zizania spp. (wild rice)	All	A diversity of diseases including but not limited to: Rice dwarf virus; Rice stripe virus; Rice yellow dwarf agent; Rice black-streaked dwarf virus; Rice tungro virus; Rice transitory yellowing virus; Rice orange leaf agent; Rice grassy stunt agent; Rice ragged stunt virus; Rice yellow mottle virus; *Melanomma glumarum* Mly. *Oospora oryzetorum* Sacc.; *Rhynchosporium oryzae* Hashioka & Yokogi; *Xanthomonas oryzae* (Uyeda & Ishiyama) Dowson.

Each article listed in the following chart from the designated countries and localities is proposed to be deleted from the list of prohibited articles for the reasons specified in the chart:

Articles (excludes seeds unless specifically mentioned)	Foreign country(ies) or locality(ies) from which prohibited	Tree, plant, or fruit disease, or injurious insect, or other plant pest	Reason for deletion from prohibited list
Alnus spp. (alder)	China and Brazil	*Mycosphaerella alnicola* (Myoke) Ou (leaf spot).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Castanea (cactus) cuttings (without roots or branches) of 1.22 meters or less in length.	All except Canada	A diversity of plant diseases	Stem cuttings not exceeding such size apparently can be readily inspected.
Castanea spp. (chestnut) destined to California, Idaho, Oregon, or Washington.	All	*Endothia parasitica* (Murr.) P. J. Anders. and H. W. Anders. (Chestnut blight disease).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Castanopsis spp. (chinquapin) destined to California, Idaho, Oregon, or Washington.	All	*Endothia parasitica* (Murr.) P. J. Anders. and H. W. Anders. (Chestnut blight disease).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Corylus spp. (filbert, hazel, hazel nut, cobnut) destined to California, Oregon, or Washington.	Provinces east of Manitoba in Canada	*Cryptosporella anomala* (Pk.) Sacc. (Filbert blight).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Cocos nucifera (coconut) (including seeds) destined to Hawaii and meeting the conditions for importation in proposed § 319.57-5(f).	Jamaica	Cadang-cadang disease	Disease apparently does not exist in Jamaica.
Daphne spp	New Zealand	Daphne mosaic virus	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Datura spp	England	Datura virus 1 Smith and d'Oliveira (Datura-viroids virus).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Dianthus spp. (carnation, Sweet William)	England	*Verticillium chrysosporium* W.	*Dianthus* spp. would not ordinarily be within the class of restricted articles because it appears there would not be significant risk of introducing *Verticillium chrysosporium* W. If imported under conditions in proposed § 319.37-5(d) or § 319.37-7.
Fruit and Nut Stocks except vegetatively produced understocks.	All except Canada	A diversity of plant pests	It appears that there would be no significant risk of introducing plant pests if imported in accordance with general conditions for restricted articles and in accordance with postentry quarantine conditions in § 319.37-7.
Hydrangea spp. (hydrangea)	Germany	Hydrangea-ringspot virus	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Ilex spp. (holly)	England and France	Ilex-variegation virus	Disease does not appear to be in existence.
Nicotiana spp. (tobacco)	Australia and Great Britain	*Marmor tabaci* Holmes (Tobacco-necrosis virus).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Nut and fruit stocks	(See Fruit and Nut Stocks)		
Pelargonium spp. (geranium) (except stem cuttings).	All except Canada	*Marmor tabaci* Holmes (Tobacco-necrosis virus).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Pinus spp. (pine) Destined to California, Idaho, Montana, Oregon, Utah, or Washington.	Canada	*Rhyacionia buoliana* (Schiff). (European pine shoot moth).	Insect appears to be widely prevalent or distributed within and throughout the U.S.
Pinus spp. (pine) (5-leaved) destined to Massachusetts, Michigan, New York, West Virginia, or Wisconsin.	Canada	White pine blister rust	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Planera (water elm, planer) destined to California, Nevada, or Oregon.	Europe and the Dominion of Canada and other foreign areas north of the United States including Newfoundland, Labrador, St. Pierre, Miquelon and islands adjacent thereto.	*Ceratocystis ulmi* (Buisman) C. Moreau (Dutch elm disease).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Primula spp. (primrose)	Australia and Great Britain	*Marmor tabaci* Holmes (Tobacco-necrosis virus).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Ribes spp. (currant, gooseberry) destined to Massachusetts, New York, West Virginia, or Wisconsin.	All	(White pine blister rust)	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Seeds of all kinds in pulp	Canada	Fruit flies	It appears that fruit flies do not occur in Canada.
Sorbus spp. (mountain ash)	Southeastern Asia	*Taphrina piri* Kusano (leaf distortion fungus).	Disease does not appear to occur in Southeastern Asia.
Stem cuttings (without leaves, roots, sprouts, or branches) of 4 inches or less in diameter and six feet or less in length.	All except Canada	A diversity of plant diseases	Stem cuttings not exceeding such size apparently can be readily inspected.
Ulmus spp. (elm) destined to California, Nevada, or Oregon.	Europe and the Dominion of Canada, and other foreign areas north of the United States, including Newfoundland, Labrador, St. Pierre, Miquelon and islands adjacent thereto.	*Ceratocystis ulmi* (Buisman) C. Moreau (Dutch elm disease).	Disease appears to be widely prevalent or distributed within and throughout the U.S.
Wisteria (wisteria)	Australia	Mosaic disease	Disease does not appear to exist.
Zelkova destined to California, Nevada, or Oregon.	Europe, and the Dominion of Canada, and other foreign areas north of the United States including Newfoundland, Labrador, St. Pierre, Miquelon, and islands adjacent thereto.	*Ceratocystis ulmi* (Buisman) Moreau (Dutch elm disease).	C. Disease appears to be widely prevalent or distributed within and throughout the U.S.

Some additional tree, plant, or fruit diseases have been discovered with respect to articles that are currently prohibited from being imported or offered for entry into the United States because of other diseases, insects, or pests. These additional diseases would destroy or substantially reduce the yield or marketability of the kind of listed articles or products thereof, and therefore, would by themselves require an article to be prohibited from being imported or offered for entry into the United States. Accordingly, it is proposed to continue to prohibit the importation of these articles and also to add such additional diseases to the prohibited list as specified in the following chart:

Prohibited article (excludes seeds unless specifically mentioned)	Foreign country(ies) or locality(ies) from which prohibited	Discovered tree, plant, or fruit disease or injurious insect, or other plant pest determined as existing in the places named and capable of being transported with the prohibited article
Cocos nucifera (coconut) (including seeds) destined to Hawaii.	All except from Jamaica if meeting the conditions for importation in § 319.37-5(f).	Lethal yellowing disease.
Conifers	All except Canada	A diversity of tree, plant, and fruit diseases including but not limited to: *Guignardia laricina* (Saweda) Yamamoto & K. Ito (shoot blight of larch); *Chrysomyxa deformans* (Diet.) Jacz. (Spruce needle rust); *Coleosporium flexilum* (Alb. & Schw.) Wint. (Scotch pine blister rust); *Chrysomyxa abietis* (Wallr.) Ung. (Rust); *Phaeidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker); *Stigmina deflectans* (Karst.) Ellis (Needlecast disease); *Chrysomyxa ledi* (Alb. & Schw.) d By var. *Rhododendri* (DC) Savile. (Rhododendron-spruce needle rust).
Datura spp	Colombia	Datura Colombian virus.
	India	Datura distortion or enation mosaic virus.
Gossypium spp. (cotton)	All	Cotton virescence agent; small leaf virus.
Hydrangea spp. (hydrangea)	Japan	Aecidium hydrangeae-paniculatae Diet.
Juniperus spp. (juniper)	Europe	*Phaeidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker).
Malus spp. (apple) Not meeting the conditions for importation in proposed § 319.37-5(b).	All	Apple green crinkle virus; Apple chat fruit virus.
Morus spp. (mulberry)	China, Japan, India, and Union of Soviet Socialist Republics.	Mulberry dwarf; Mulberry curly little leaf.
Prunus spp. (almond, apricot, cherry, nectarine, peach, plum, prune) not meeting the conditions for importation in proposed § 319.37-5(b).	All	Cherry leaf roll virus; Cherry rusty mottle (European) agent; Apricot chlorotic leaf roll; Plum bark split virus; Arabis mosaic virus and its strains; Raspberry ringspot virus and its strains; Tomato blackring virus and its strains.
Pyrus spp. (pear) not meeting the conditions for importation in proposed § 319.37-5(b).	All	Pear blister canker virus; Pear bud and drop virus.
Ulmus spp. (elm) (including seeds)	Europe	Elm mottle virus.
Vitis spp. (grape)	All except Canada	A diversity of plant disease agents including, but not limited to: Arabis mosaic virus; Flavescence-dorée agent; Raspberry ringspot virus; Hungarian chrome mosaic virus; Strawberry latent ringspot virus; *Xanthomonas ampelina* Panagopoulos (Bacterial blight); Grapevine fanleaf virus and its strains; Grapevine leaf roll virus and its strains; Tomato black ring virus; Artichoke Italian latent virus; Grapevine vein necrosis virus.

Some tree, plant, or fruit diseases are proposed to be deleted from the prohibited list with respect to some articles from certain countries and localities that would remain on the prohibited list because of other listed diseases, insects, or plant pests. In this connection, it is proposed to delete for each of the articles listed in the following chart from the designated countries and localities, the following diseases for the reasons specified in the chart:

Prohibited articles (excludes seeds unless specifically mentioned)	Foreign country(ies) or locality(ies) from which prohibited	Tree, plant, or fruit diseases, or injurious insect or other plant pest	Reason for deletion from prohibited list
Datura spp		Datura-mosaic virus	Disease apparently does not exist.
	India and England	Datura virus 1 Smith and d'Oliveira (Datura-virosis virus).	Disease appears to be widely prevalent or distributed within and throughout the United States.
		Marmor tabaci var. *deformans* Holmes (Enation-mosaic strain of tobacco-mosaic virus).	Disease appears to be widely prevalent or distributed within and throughout the United States.
Hydrangea spp	Germany	Hydrangea-virescence virus	Disease appears to be widely prevalent or distributed within and throughout the United States.
Malus spp. (apple, crabapple)	All sources in all countries, except nurseries designated in accordance with current § 319.37-2a as producing material grown from parent plants that have been tested by the plant protection service of the country of origin and found apparently free of all disease of plant quarantine significance, including those diseases caused by viruses.	"Rosette" (Virus)	Disease apparently does not exist.
Prunus spp. (almond, apricot, cherry, nectarine, peach, plum, prune).	All sources in all countries, except nurseries designated in accordance with current § 319.37-2a as producing material grown from parent plants that have been tested by the plant protection service of the country of origin and found apparently free of all disease of plant quarantine significance, including those diseases caused by viruses.	Rigi cherry disease virus	Disease apparently does not exist.

The current regulations specify that all forest trees (not including seeds) are prohibited from being imported into the United States except from Canada. It appears that because of the diseases referred to in proposed § 319.37–2, listed with respect to conifers, there is a valid reason for prohibiting the importation of all conifer trees from all countries and localities except Canada. Further, it appears that there is a valid reason for prohibiting the importation of all of the non-conifer trees listed in proposed § 319.37–2 from the specified foreign countries and localities because of the diseases listed with respect to these trees. However, the prohibition for importation of "all" forest trees in the current regulations appears to be overly broad in that there does not appear to be adequate reason for prohibiting the importation of all those non-conifer trees not listed in proposed § 319.37–2.

Further, proposed § 319.37–2(b)(1) and (7) would specify classes of articles which would be on the prohibited list because of specified criteria relating to age. The current regulations prohibit the importation of such articles exceeding the "normal size" of such articles of certain ages. These criteria in the current regulations would be amended to impose restrictions based solely on specified ages because the risk of introduction of diseases or pests relates substantially to age.

Proposed § 319.37–2(b)(4) and (5) would impose limitations with respect to the maximum length and diameter of certain stem cuttings and certain cacti cuttings for importation into the United States. It appears that such articles within these limitations can be readily inspected and treated if necessary. Larger articles of these types would be difficult to inspect and treat because of size and density of growth, and therefore, would be classified as prohibited articles.

The current regulations in § 319.37–18(b) in essence permit herbaceous perennials to be imported in the form of root crown or clumps not more than 1 year old. This requirement was imposed because such articles are difficult to inspect if larger than the usual size of such articles 1 year old. Proposed § 319.37–2(b)(3) would be clarified to specify that such herbaceous perennials would be on the prohibited list if exceeding 102 millimeters (approximately 4 inches) in diameter. It appears that such plants exceeding this diameter would be more likely to harbor plant pests, and would be difficult to inspect and treat because of the density of small roots and stems found in such articles.

Further, proposed § 319.37–2(c) would permit prohibited articles to be imported into the United States if imported by the U.S. Department of Agriculture for experimental or scientific purposes, and imported under conditions specified on the permit and found by the Deputy Administrator to be adequate to prevent the introduction into the United States of any tree, plant, or fruit diseases, of any injurious insects, or of any other plant pests, i.e., conditions of treatment, processing, growing, shipment, or disposal.

The Plant Quarantine Act specifically authorizes such articles to be imported for experimental or scientific purposes by the U.S. Department of Agriculture pursuant to prescribed regulations. This is also consistent with the provisions of the Federal Plant Pest Act. In addition, the conditions for importation would be required to be specified on the permit in order to help assure that they would be understood and followed.

Proposed § 319.37–3 contains requirements with respect to permits for importation of restricted articles. Pursuant to the Plant Quarantine Act, restricted articles may not be imported except under permit.

The following articles other than articles for food, analytical, medicinal or manufacturing purposes, would be required to be imported pursuant to a written permit:

(1) Articles subject to treatment and other requirements of § 319.37–6;

(2) Articles subject to postentry quarantine;

(3) Bulbs of *Allium sativum* (garlic);

(4) Articles of *Cocos nucifera* (coconut); and articles (except seeds) of *Chrysanthemum* spp. (chrysanthemum) and *Dianthus* spp. (carnation, sweet William), from any country or locality except Canada;

(5) Lots of 13 or more articles (other than seeds, bulbs, and sterile cultures of orchid plants) from any country or locality except Canada;

(6) Seeds of trees or shrubs from any country or locality except Canada;

(7) Articles (except seeds) of *Fragaria* spp. (strawberry), *Malus* spp. (apple, crabapple), *Pyrus* spp. (pear), *Prunus* spp. (almond, apricot, cherry, nectarine, peach, plum, and prune), *Cydonia* spp. (quince), *Chaenomeles* spp. (flowering quince), and *Rubus* spp. (blackberry, boysenberry, cloudberry, dewberry, loganberry, raspberry), from Canada;

(8) Woody plants, shrubs, and trees (except seeds) grown out-of-doors in Prince Edward Island, Nova Scotia, the counties of Albert and Westmoreland in New Brunswick, the city of Richmond on Lulu Island in British Columbia, or Vancouver Island in British Columbia;

(9) Articles (except seeds) of *Castanea* spp. (chestnut) or *Castanopsis* spp. (chinquapin) destined to California or Oregon;

(10) Articles (except seeds) of *Pinus* spp. (pine) (5-leaved) destined to Wisconsin;

(11) Articles of *Ribes* spp. (currant, gooseberry) (including seeds) destined to Massachusetts, New York, West Virginia, or Wisconsin;

(12) Articles (except seeds) of *Planera* spp. (water elm, planer) or *Zelkova* spp. from Europe, Canada, St. Pierre, or Miquelon and destined to California, Nevada, or Oregon;

(13) Seeds of *Prunus* spp. (almond, apricot, cherry, nectarine, peach, plum, and prune) from Canada and destined to Colorado, Michigan, New York, Washington, or West Virginia;

(14) Articles (except seeds) of *Vitis* spp. (grape) from Canada and destined to California, New York, Ohio, Oregon, or Washington;

(15) Articles (except seeds) of *Corylus* spp. (filbert, hazel, hazelnut, cobnut) from provinces east of Manitoba in Canada and destined to Oregon or Washington;

(16) Articles (except seeds) of *Pinus* spp. (pine) from Canada and destined to California, Idaho, Montana, Oregon, or Utah; and

(17) Articles (except seeds) of *Ulmus* spp. (elm) from Canada and destined to California, Nevada, or Oregon.

All other articles would be permitted to be imported under an oral permit.

Articles included in categories 1, 2, 3, 4, 5, 6, and 8, in accordance with proposed § 319.37–14, would be permitted to be imported only at ports of entry with special inspection and treatment facilities because these articles present a substantial risk of carrying injurious plant diseases, injurious insect pests, or other plant pests at the time of importation.

It appears that a written permit for these articles would be helpful in order to assure that the importer understands that such articles would be permitted to be imported only at a port of entry with such special inspection and treatment facilities. Consequently, this would also help eliminate an unnecessary risk of introducing such diseases or pests into the United States because of the presence of such articles at a port of entry without such facilities.

Also, articles included in categories 4 and 7, except *Fragaria* spp., would be required to be accompanied at the time of importation by special certification representing special inspection activities

provided by the country of origin. It appears that a written permit for such articles would be helpful in order to help assure that these complex requirements would be understood and met.

Further, it appears that requiring articles included in categories 1 through 8 to be imported pursuant to written permits could help assure that such articles would not have to be unnecessarily destroyed or reshipped. In addition, since it is proposed that a written permit issued by the Plant Protection and Quarantine Programs would indicate the conditions on the permit under which an article would be eligible to be imported, there would be a record that could be checked in order to assure that the requirements of this subpart are understood and followed by the importer and employees of the Plant Protection and Quarantine Programs.

Articles included in categories 9 through 17 are subject to State quarantine requirements. The affected States have requested notification from the Plant Protection and Quarantine Programs of requests to import such articles destined to such States in order to assist with the enforcement of their requirements. It appears that the written permit procedures provide the most feasible means of gathering the necessary information for such States.

It is further proposed that prior to the issuance of a written permit an application must be made to the Plant Protection and Quarantine Programs and shall include the following information which appears to be necessary in order for the Plant Protection and Quarantine Programs to make a determination as to whether an article would be eligible for a written permit under this subpart, to respond to the applicant, and to make any necessary preparation for inspection or treatment:

(1) Name, address, and telephone number of importer;

(2) Approximate quantity and kinds (botanical designations) of articles intended to be imported;

(3) Country(ies) or locality(ies) where grown;

(4) Intended United States port of entry;

(5) Means of transportation, e.g., mail, airmail, express, air express, freight, airfreight, or baggage; and

(6) Expected date of arrival.

The proposed regulations provide that an application for a written permit should be submitted to the Plant Protection and Quarantine Programs at least 30 days prior to the arrival of the article at the port of entry. This would benefit the importer in that the Plant Protection and Quarantine Programs would have sufficient time to make sure the importer is aware of the requirements of this subpart and to help prevent the arrival at a port of entry of articles which are not eligible to be offered for importation at such a port of entry.

Under the proposed regulations, articles subject to the proposed subpart and not required to be imported under a written permit, would be eligible to be imported under an oral permit issued at a port of entry at the time of importation. These articles would be subject to inspection at the port of entry, and there does not appear to be a need for a written permit for these articles. In essence, requiring a written permit for these articles would appear to result in the generation of numerous additional papers and paperwork for Plant Protection and Quarantine Programs and the importer without any consequent protection with respect to preventing the introduction into the United States of injurious plant diseases, insect pests, or other plant pests.

The proposed regulations also state that restricted articles may not be imported, even if a permit has been issued unless an inspector at the port of entry determines upon inspection that no emergency measures pursuant to section 105 of the Federal Plant Pest Act (7 U.S.C. 150dd) are necessary with respect to such article. In this connection section 105 of the Federal Plant Pest Act provides, in relevant part, that:

"(a) Except as provided in paragraph (c), the Secretary may, whenever he deems it necessary as an emergency measure in order to prevent the dissemination of any plant pest new to or not theretofore known to be widely prevalent or distributed within and throughout the United States, seize, quarantine, treat, apply other remedial measures to, destroy, or otherwise dispose of, in such manner as he deems appropriate, any product or article of any character whatsoever, or means of conveyance, which is moving into or through the United States . . . and which he has reason to believe is infested or infected by or contains any such plant pest . . . Provided, That this paragraph shall not authorize such action with respect to any product, article, means of conveyance, or plant pest subject, at the time of the proposed action, to disposal under the Plant Quarantine Act."

"(b) Except as provided in paragraph (c), the Secretary may order the owner of any product, article, means of conveyance, or plant pest subject to disposal under paragraph (a), or his agent, to treat, apply other remedial measures to, destroy, or make other disposal of such product, article, means of conveyance, or plant pest, without cost to the Federal Government and in such manner as the Secretary deems appropriate. . . ."

"(c) No product, article, means of conveyance, or plant pest shall be destroyed, exported, or returned to shipping point of origin, or ordered to be destroyed, exported, or so returned under this section, unless in the opinion of the Secretary there is no less drastic action which would be adequate to prevent the dissemination of plant pests new to or not theretofore known to be widely prevalent or distributed within and throughout the United States. . . ."

The proposed regulations also state restricted articles may not be imported even if a permit has been issued unless all applicable requirements of the proposed subpart are met. In this connection it should also be noted that section 10 of the Plant Quarantine Act (7 U.S.C. 164a) and section 105 and 107 of the Federal Plant Pest Act (7 U.S.C. 150dd, 150ff) also authorize emergency measures against prohibited and restricted articles which are not in compliance with the regulations issued pursuant to such Acts.

In addition, the proposed regulations contain provisions for the withdrawal of permits by the Deputy Administrator if he determines that the holder of the permit has not complied with any conditions for the use of the permit. Due process requirements concerning such withdrawals are set forth in the proposed regulations.

Proposed § 319.37–4 contains requirements with respect to inspection and phytosanitary certificates of inspection.

The Plant Quarantine Act provides that at the time of importation all restricted articles from a country maintaining an official system of inspection for such articles must be accompanied by a phytosanitary certificate of inspection from an official of the country from which the importation is made, certifying that the article has been thoroughly inspected and is believed to be free from injurious plant diseases and insect pests. Most of the countries of the world have such a system of inspection, and therefore, most restricted articles would be required to be accompanied by such a certificate at the time of importation.

The Plant Quarantine Act, however, also provides that restricted articles imported from countries where no

official system of inspection is maintained may be imported under conditions and regulations as the Secretary may prescribe. Accordingly, in order to assure that all restricted articles would be inspected, proposed § 319.37–4 would require all restricted articles from countries where not official system of inspection if maintained to be inspected by and inspector of the Plant Protection and Quarantine Programs at the time of importation. Also, any restricted article accompanied by a phytosanitary certificate of inspection would be subject to inspection by Plant Protection and Quarantine Programs inspectors as necessary to assure that such restricted articles are free from injurious plant diseases, injurious insect pests, and other plant pests.

The proposed regulations also would require that a phytosanitary certificate of inspection be issued not more than 15 days prior to shipment of the restricted article from the country in which grown, in order for the certificate to be valid. This would help assure that restricted articles would be promptly shipped after inspection in the country in which grown, and consequently reduce the risk of such articles becoming infected or infested with injurious plant diseases, injurious insect pests, or other plant pests after inspection.

It should also be noted that the use of phytosanitary certificates of inspection was encouraged at the International Plant Protection Convention of 1951 in Rome of which the United States is a party. The proposed requirements relating to phytosanitary certificates of inspection, in addition to being in conformity with the provisions of the Plant Quarantine Act and the Federal Plant Pest Act, are in conformity with the International Plant Protection Convention.

Proposed § 319.37–5 contains special inspection and certification requirements to be performed by the plant protection service of the country in which the article was grown in order to prevent the introduction into the United States of the diseases and pests specified in proposed § 319.37–5 which could destroy or substantially reduce the yield or marketability of the kind of articles specified in proposed § 319.37–5, or products thereof.

Such inspection and certification would be performed by the foreign plant protection service because such pests and diseases which could accompany the specified articles would not be detectable at the port of entry, and there do not appear to be any other feasible methods of treatment or other procedures (except postentry conditions for *Dianthus* spp. (carnation, sweet William), and *Rubus* spp. (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry)) for preventing the introduction into the United States of such diseases or pests.

The current regulations require all restricted articles (except seeds of herbaceous plants and except articles solely for food, analytical, medicinal, or manufacturing purposes) to be accompanied by a certificate of inspection from the plant protection service of the country of origin certifying that the restricted plant material covered by the certificate was grown on land on which no golden nematode is known to occur. Further, with respect to articles from a country where there golden nematode is known to occur the certificate must also state the date of the most recent inspection of the land for golden nematode.

The proposed regulations have changed the name of golden nematode to potato cyst nematodes (*Globodera rostrochiensis* (Woll.) Mulvey and Stone and *G. pallida* (Stone) Mulvey and Stone) because this is now the commonly accepted name for what was formerly known as golden nematode. The proposed regulations would require certain restricted articles as a condition of entry to be accompanied by a phytosanitary certificate of inspection certifying that such articles were grown on land which has been sampled and microscopically inspected by the plant protection service of the country in which grown and found free from such pests.

It appears that the only feasible means of detecting and preventing the introduction of potato cyst nematodes in addition to requiring the removal of growing media (see discussion below in connection with proposed § 319.37–8) is to require the plant protection service of the country in which grown to inspect the land on which the article is grown. It would not be feasible to permit such articles to be grown under postentry quarantine in lieu of such requirements because the nematodes could not be detected until well established on the land in which grown and it is extremely difficult to eradicate the pests once they have been introduced into the soil.

Also, the inspection and certification requirements are proposed to apply only restricted articles imported from the foreign countries or localities listed in proposed section 319.37–5 because these are the only foreign countries and localities where potato cyst nematodes are known to occur.

Further, it is proposed that seeds; unrooted cuttings; and articles solely for food, analytical, medicinal, or manufacturing purposes be expected from these requirements. It appears that there is no significant risk of introduction potato cyst nematodes with seeds or unrooted cuttings because potato cyst nematodes are soil inhabiting, and seeds and unrooted cuttings are produced without direct contact with the soil. Also, articles solely for food, analytical, medicinal or manufacturing purposes would not appear to present a risk of introduction of potato cyst nematodes because they would not appear likely to come in contact with the soil after importation.

Also, it is proposed that the foreign land on which such articles are grown must have been sampled and microscopically tested for such nematodes within 12 months preceding issuance of the accompanying phytosanitary certificate of inspection and found free from such nematodes. This would appear to assure ongoing detection programs for such nematodes and provide a reasonable assurance of detecting the presence of any potato cyst nemadotes which might otherwise accompany restricted articles imported into the United States.

It is proposed a condition of importation that any article (except seeds) of *Chaenomeles* spp. (flowering quince), *Cydonia* spp. (quince), *Malus* spp. (apple, crabapple), *Prunus* spp. (almond, apricot, cherry, nectarine, peach, plum, and prune), and *Pyrus* spp. (pear), (1) be accompanied by a phyosanitary certificate of inspection declaring that such article was grown in a nursery in Belgium, Canada, France, Federal Republic of Germany (West), The Netherlands, or Great Britain and found by the plant protection service of the country in which grown to be free of diseases specified inproposed § 319.37–5 based on the testing of parent stock by visual examination and indexing and declaring that such article was grown in a nursery free of any specified disease, and (2) be grown under postentry quarantine conditions specified in proposed § 319.37–7, unless grown in Canada.

It is also proposed as a condition of importation that any article (except seeds) of *Dianthus* spp. (carnation, sweet William) from Great Britain, and *Rubus* spp. (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry) from Ontario, Canada, be required to be grown under postentry quarantine conditions specified in proposed § 319.37–7 unless accompanied by a phytosanitary certificate of inspection containing an accurate additional declaration that such article

was found by the plant protection service of the country in which grown to be free of diseases specified in proposed § 319.37–5, based on visual examinaton and indexing of the parent stock, and, in the case of an article of *Dianthus* spp., that it was grown in a greenhouse nursery free of such specified plant diseases.

Further, it is proposed as a condition of importation that any article (except seeds) of *Chrysanthemum* spp. (chrysanthemum) from Great Britain be accompanied by a phytosanitary certicate of inspection containing an accurate additional declaration that such article was found by the plant protection service of Great Britain to be free of the disease specified in proposed § 319.37–5 based on visual examination of the parent stock, and that it was grown in a greenhouse nursery free of such disease.

The diseases specified in proposed § 319.37–5 accompanying such articles usually would not be detectable at a port of entry. These articles are imported without leaves (except for plants of *Chrysanthemum* spp. and *Dianthus* spp.), without fruit, and without flowers; and the diseases, in most cases, are not detectable without an examination of the leaves, fruit or flowers. Further, such articles are shipped in a dormant condition rather than in a condition of active growth, and in many cases the disease would not be detectable in any part of the article (even with the leaves, fruit, and flowers) unless the article were in a period of active growth.

Indexing of the parent stock of any of these articles would indicate the presence of such diseases in the parent stock and the offspring, because the offspring originate from parts of the parent stock which would be infected with such disease if the parent stock were infected. Indexing is accomplished by conducting serological testing, or transmitting the juices from plants of the parent stock to other plants known to be susceptible to a disease, by grafting or otherwise. Indexing of a parent stock would not be required with respect to *Chrysanthemum* spp. because the associated disease would be readily detectable by visual examination if present in the parent stock. With respect to the other articles, the diseases in most cases would not be detectable without indexing. Also, it would not be practical to index the articles for importation because of the large number of articles being imported.

The disease specified in proposed § 319.37–5 in connection with these articles are known to occur in the countries from which these provisions would apply except that the diseases specified for *Chaenomeles* spp., *Cydonia* spp., *Malus* spp., *Prunus* spp., and *Pyrus* spp., are not known to occur in Canada, and that the disease specified for *Rubus* spp. is not known to occur in Ontario, Canada.

Articles of *Chaenomeles* spp., *Cydonia* spp., *Malus* spp., *Prunus* spp., and *Pyrus* spp. are grown out-of-doors because of their size and because they must be grown under natural climatic conditions in order to achieve normal development or to produce typical fruit. Since the articles are grown out-of-doors in countries and localities where such diseases are known to occur, there is a risk that such articles would be infected with such diseases after separation from the parent stock. In order to minimize the risk of becoming infected with such diseases, articles of *Chaenmeles* spp., *Cydonia* spp., *Malus* spp., *Prunus* spp., and *Pyrus* spp. as a condition of importation would be required to be grown in nurseries free of the specified diseases. This would also help assure that such articles would be grown within designated boundaries, and would be subject to ongoing programs of indexing. But because there would still be a slight risk of such articles becoming infected with such diseases after indexing and because such diseases would be detectable after a period of time, these articles also would be required to be grown under postentry quarantine conditions specified in proposed § 319.37–7.

Articles (except seeds) of *Chrysanthemum* spp. and *Dianthus* spp. would be required to be grown in greenhouse nurseries free of the specified diseases for these articles in order to provide protection against the natural spread of the specified diseases. *Rubus* spp. would not be required to be grown in a greenhouse nursery for such certification because the specified disease of concern with respect to *Rubus* spp., i.e., rubus stunt virus, is not known to occur in Ontario, Canada. However, since this disease occurs in other parts of Canada it appears that the findings and certification of the plant protection service of Canada are necessary as a precautionary measure in that the disease could spread to Ontario, Canada.

The regulations currently require as a condition of importation that trees, shrubs, and plants of *Malus* spp., *Pyrus* spp., and *Prunus* spp. originate from specified foreign nurseries which have been certified by the plant protection service of the country of origin as producing material of such genera from parent plants that have been tested by such plant protection service and found free from diseases caused by viruses. The current regulations contain a list of such nurseries located in Belgium, Great Britain, Canada, Germany, and The Netherlands. The protection afforded against the introduction into the United States of such diseases is provided by the visual examination and indexing of parent stock and certification thereof by the plant protection service of the country of origin, and there does not appear to be a need for certifying nurseries. The certification provisions would be performed only by the listed countries because these are the only countries that provide such service.

The current regulations prohibit the entry of *Cocos nucifera* from all foreign countries into the State of Hawaii because of Cadang-cadang disease. It is proposed to permit an article of *Cocos nucifera* (coconut) to be imported into the United States, including Hawaii, if found and certified by the plant protection service of Jamaica (Coconut Industry Board) to be of Malayan dwarf variety based on visual examination of parent stock. Cadang-cadang disease apparently does not occur in Jamaica and the Malayan dwarf variety appears to be the only variety which is resistant to lethal yellowing disease (other varieties are listed as prohibited articles). Lethal yellowing disease could destroy or substantially reduce the yield or marketability of coconut or other palms if introduced into areas of the United States where it does not occur. The variety of *Cocos nucifera* cannot be determined upon inspection at the time of entry. A determination as to variety can be made based on visual examination of parent stock because of the physical characteristics of the parent stock.

Also, *Cocos nucifera* (coconut) would only be permitted to be imported if found by the plant protection service of the government of Jamaica (Coconut Industry Board) to be a Malayan dwarf variety because this is the only country or locality known to provide such certification.

Proposed § 319.37–6 would require specified restricted articles from specified countries or localities to be treated at the time of importation, or in some cases to be either defoliated before arrival at the port of entry or treated at the time of importation. These articles pose significant risks of introducing diseases or pests specified in proposed § 319.37–6 which could substantially reduce the yield or marketability of such kinds of articles or products thereof. Also, these diseases or

pests are difficult to detect upon inspection or have been consistently found upon inspection to be accompanying such articles. Further, it appears that the introduction into the United States of such diseases or pests can be feasibly prevented by the specified treatment or defoliation.

The current regulations require seeds of alfalfa (*Medicago sativa)* from Europe to be treated with 8 ounces of Arasan 50 (50 percent Thiram) per 100 pounds of seeds to prevent the spread of infection with *Verticillium albo-atrum* (a wilt disease). It is proposed that seeds of alfalfa and related plants (i.e., *Medicago falcata, M. gaetula, M. glutinosa, M. media, M. sativa)* from Europe be required to be treated with Arasan 50 (50 percent Thiram) at a rate of 8 ounces (approximately 226.8 grams) per 100 pounds (approximately 45.36 kilograms) of seeds, (same as is currently required for *M. sativa*), or with a slurry of Arasan 50 Red at a rate of 8 ounces per pint of water per 100 pounds of seeds. These treatments are equivalent in strength.

Such treatment for seeds of *Medicago sativa* appears to be necessary and adequate to prevent the spread of infection with *Verticillium albo-atrum.* Such treatment is also proposed to be required for seeds of certain plants related to *Medicago sativa* (i.e., *M. falcata, M. gaetula, M. glutinosa, M. media*) because it appears that these articles are also frequently infected with *Verticillium albo-atrum.*

The current regulations also require plants of specific genera from any country or locality other than Canada, Europe, Asia Minor, and the countries of Africa bordering on the Mediterranean Sea, to be imported through the ports of entry at New York or Seattle or to be defoliated before arrival at any other port of entry.

These requirements were imposed in order to prevent the introduction into the United States of the citrus blackfly (*Aleurocanthus woglumi* Ashby). This pest is found on the leaves of host plants and defoliation of such plants appears to be adequate to prevent such pests from accompanying host plants. Also, the current regulations permit host plants to be imported through the ports of New York or Seattle without defoliation because the citrus blackfly will not survive in northern climates typical of New York and Seattle. However, it is proposed to discontinue permitting such host plants to be imported at these ports without defoliation or other treatment (referred to below) because these infested host plants can be readily move to southern areas of the United States where citrus blackfly can survive.

It is also proposed that such host plants be permitted to be imported without defoliation if treated at the port of entry with methyl bromide in accordance with the Plant Protection and Quarantine Treatment Manual (which has been incorporated by reference) because this appears to be adequate to prevent the introduction of citrus blackfly.

Also, it is proposed to make changes with respect to the scientific names for *Achras, Calocarpum,* and *Lucuma,* which are currently listed as hosts of citrus blackfly. The name *Achras* would be changed to *Manilkara,* and the names *Calocarpum* and *Lucuma* would collectively be changed to one name, *Pouteria.* These changes are proposed in order to conform to nomenclature currently accepted by the scientific community.

The current regulations further specify that any listed articles are subject to special requirements because of the citrus blackfly if from any foreign country or locality (other than Canada, Europe and Asia Minor, and countries in Africa bordering the Mediterranean Sea). Citrus blackfly is known to occur in countries and localities other than those specifically excepted from such requirements. In this connection, the list of areas excepted from such requirements would be clarified to more clearly describe the countries and localities in which citrus blackfly is not know to occur; i.e., Canada, Europe, and any other country or locality bordering on the Mediterranean Sea.

The proposed regulations would also require the following list of restricted seeds from the listed countries and localities to be treated at the time of importation because of the diseases or pests referred to in the proposed § 319.37–6.

Seeds	Country(ies) or locality(ies) from
Hibiscus spp. (hibiscus, rosemallow).	All.
Lathyrus spp. (sweet pea, peavine).	All except North America and Central America.
Lens spp. (lentil)	All except North America and Central America.
Vicia spp. (fava bean, vetch)	All except North America and Central America.
Glycine spp. (soybean)	Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia; Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela; Vietnam, and the West Indies.
Dolichos spp. (lablab)	Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia, Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela, Vietnam, and the West Indies.
Pachyrhizus spp. (yam bean root, jicama).	Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia, Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela, Vietnam, and the West Indies.
Phaseolus spp. (bean)	Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia, Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela, Vietnam, and the West Indies.
Pueraria spp. (Chinese yam)	Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia, Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela, Vietnam, and the West Indies.
Vigna spp. (cowpea, adjang, asparagus bean, black-eyed pea, moth bean, mung bean).	Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia, Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela, Vietnam, and the West Indies.

The treatment proposed to be required for each of these types of seeds is specified in proposed § 319.37–6 except for seeds of *Hibiscus* spp., (hibiscus, rosemallow), *Lathyrus* spp., (sweet pea, peavine), *Lens* spp., (lentil) and *Vicia* spp., (fava bean, vetch) which would be required to be treated with methyl bromide in accordance with the applicable provisions of the Plant Protection and Quarantine Treatment Manual which have been incorporated by reference. These treatments appear to be adequate to prevent the introduction into the United States of the diseases or pests referred to in proposed § 319.37–6.

Proposed § 319.37–7 designates articles from specified countries and localities which would be required to be grown under postentry quarantine as a condition of importation. Except as

otherwise provided in proposed § 319.37–5 with respect to *Dianthus* spp. (carnation, sweet William), and *Rubus* spp., (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry), this appears to be necessary because there do not appear to be other feasible methods of inspection, treatment, or other procedures that could be performed at the port of entry or otherwise and be sufficient for the purpose of preventing the introduction of injurious plant diseases that could destroy or substantially reduce the yield or marketability of the kinds of listed article or the products thereof. A period of observation under postentry quarantine would be necessary in order to detect such diseases which could possibly accompany such articles.

Many of those articles which are listed in proposed § 319.37–7 would be required to be grown under postentry quarantine as a condition of importation if from certain countries or localities but would be listed in proposed § 319.37–2 as prohibited articles if from other countries or localities. Such articles listed in the prohibited list are from countries or localities where the diseases associated with such articles and listed in proposed § 319.37–2 are known to occur. Other than as explained above in the discussion concerning proposed § 319.37–5, such articles that would be subject to postentry quarantine requirements are from countries or localities where such diseases are not known to occur. However, because of the international movement of such articles and the natural spread of such diseases, the diseases could be carried to countries or localities where the diseases are not known to occur without being detected. Accordingly, it appears to be necessary to require such articles to be grown under postentry quarantine as a condition of importation as a precautionary measure in order to prevent the introduction of such diseases. For these reasons each article listed in the following chart from the listed countries and localities is proposed to be added to the current list of articles required to be grown under postentry quarantine as a condition of importation:

Article	Country(ies) or locality(ies)
Acacia spp. (acacia)	All except Canada, Australia, and Oceania.
Anemone spp. (anemone, windflower)	All except Canada, Federal Republic of Germany (West), and German Democratic Republic (East).
Datura spp.	Great Britain.
Fragaria spp. (strawberry)	All except Australia, Austria, Canada, Czechoslovakia, France, Great Britain, Italy, Japan, Lebanon, The Netherlands, New Zealand, Northern Ireland, Republic of Ireland, Switzerland, and Union of Soviet Socialist Republics.
Gladiolus spp.	All except Canada, Africa, Italy, Malta, and Portugal.
Hydrangea spp. (hydrangea)	Federal Republic of Germany (West) and German Democratic Republic (East).
Philadelphus spp. (mock-orange).	All except Canada and Europe.
Sorbus spp. (mountain ash)	Southeastern Asia.
Syringa spp. (lilac)	All except Canada and Europe.

Also, for reason, for reasons explained above in the discussion concerning proposed § 319.37–5, it is proposed that articles of *Chaenomeles* spp., *Cydonia* spp., *Malus* Prunus spp., and *Pyrus* spp., grown in Belgium, France, Federal Republic of Germany (West), The Netherlands, or Great Britain and otherwise meeting the conditions of proposed § 319.37–5 be required to be grown under postentry quarantine as a condition of importation.

In addition, for reasons explained above in the discussion concerning proposed § 319.37–5, it is proposed that plants of *Dianthus* spp. from Great Britain, and *Rubus* spp. from Ontario, Canada, be required to be grown under postentry quarantine as a condition of importation because of the diseases specified in proposed § 319.37–5 unless accompanied by an accurate additional declarations on the phytosanitary certificate of inspection as provided for in proposed § 319.37–5.

Seedling understocks of fruit and nut articles listed in proposed § 319.37–7(b) from all countries and localities except Canada are proposed to be added to the list of articles required to be grown under postentry quarantine as a condition of importation. It appears that the types of diseases associated with such articles would not be detectable at a port of entry but would be detectable under the postentry conditions specified in § 319.37–7(c) and that under such conditions these diseases would be prevented from being disseminated into the United States.

"Fruit and nut plants, buds, cuttings, scions, and vegetatively-produced understocks" together with "fruit and nut stocks" comprise "fruit and nut articles." The regulations currently list "fruit and nut plants, buds, cuttings, scions, and vegetatively-produced understocks" on the postentry list. Also, as noted above, it is proposed to add "fruit and nut stocks" to the postentry list. Accordingly, these items are proposed to be collectively listed as "fruit and nut articles." Also, this term would be clarified by listing such articles which are intended to be within this class.

Articles required to be grown under postentry quarantine, as a condition of importation, would be required to be grown under the supervision and control of a person who has signed a postentry quarantine agreement to comply with the following conditions:

(1) to grow such article or increase therefrom only on specified premises;

(2) to permit an inspector to have access to the specified premises for inspection of such article at all reasonable hours;

(3) to keep the article and any increase therefrom identified with a label showing the name of the article, port accession number, number of written permit, and date of importation;

(4) to keep the article separated from any domestic plant or plant product of the same genus by no less than 3 meters (approximately 10 feet); and from other imported plant or plant products by the same distance;

(5) to allow or apply remedial measures (including destruction) determined by an inspector to be necessary to prevent the spread of an injurious plant disease, injurious insect pest, or other plant pest; and

(6) to notify Plant Protection and Quarantine Programs when any abnormality of the article is noticed or if the article dies.

It appears that these conditions are necessary and adequate for the Plant Protection and Quarantine Programs to keep track of such articles and to take any necessary action to prevent the possible dissemination of injurious plant diseases.

It is further proposed to require articles to be grown under postentry quarantine, as a condition of importation, to be grown under such conditions for 2 years, except for *Chrysanthemum* spp. (chrysanthemum) (6 months) and *Dianthus* spp. (carnation, sweet William) (1 year). Based on experience it appears that the diseases associated with such articles would express their symptoms within these time limits.

It is also proposed to require a completed postentry quarantine agreement to accompany the application for a written permit for articles required to be grown under postentry quarantine conditions since both of these documents would be necessary for a determination as to whether a permit for importation should be issued for such articles.

Further, articles from certain countries and localities are proposed to be deleted from the list of articles required to be grown under postentry quarantine as a condition of importation.

Articles of *Juniperus* spp., (juniper) and *Ulmus* spp., (elm) from Canada would be deleted from the postentry list because diseases associated with such articles (such diseases are specified in the proposed prohibited list) are not known to occur in Canada and because Canada prohibits the importation of such articles from all countries and localities where such diseases are known to occur.

The articles in the following chart from the listed countries and localities are proposed to be deleted from the postentry quarantine list because such articles are proposed to be added to the prohibited list in proposed § 319.37–2:

Article	Country(ies) or locality(ies)
Actinidia spp. (Chinese gooseberry, kiwi).	Japan and Taiwan.
Cedrus spp. (cedar)	All other than Canada and Europe.
Chrysanthemum spp. (chrysanthemum).	Europe, Argentina, Brazil, Hong Kong, Japan, Korea, Malaysia, New Zealand, Peoples Republic of China and Republic of South Africa.
Datura spp.	Colombia.
Hibiscus spp. (hibiscus, rosemallow).	Africa (except Sudan and Nigeria).
Hydrangea spp. (hydrangea)	Japan.
Juniperus spp. (juniper)	All except Finland and Rumania.
Larix spp. (larch)	All other than Canada and Europe.
Morus spp. (mulberry)	India and Union of Soviet Socialist Republics.
Picea spp. (spruce)	All other than Canada, Japan, Siberia, and Europe.
Pinus spp. (pine) (2- or 3-leaved).	All other than Canada, Japan, and Europe.
Pseudotsuga spp. (Douglas fir).	All other than Canada and Europe.
Ribes nigrum (black currant)	Europe (except British Isles and Sweden) and Australia.
Salix spp. (willow)	Federal Republic of Germany (West) and German Democratic Republic (East).
Vitis spp. (grape)	All other than Canada and Europe.

The articles in the following chart from the listed countries and localities are proposed to be delisted from the postentry list because the plant disease or diseases which caused the article to be listed on the postentry list appear to be widely prevalent within and throughout the United States:

Article	Country(ies) or locality(ies) from	Plant disease which caused article to be listed
Alsophila spp. (fern).	All foreign countries except China and Brazil.	*Mycosphaerella* (Myriosa) *Cu alsophilae* (Leaf spot).
Daphne spp.	All foreign countries except Canada and New Zealand.	Daphne-mosaic virus.
Nicotiana spp. (tobacco).	All foreign countries except Australia, Great Britain, and Canada.	*Marmor tethale* Holmes (Tobacco necrosis virus).

The articles in the following chart from the listed countries and localities are proposed to be deleted from the postentry list for the reasons specified in the chart:

Article	Country(ies) or locality(ies)	Reason
Actinidia spp. (Chinese gooseberry, kiwi).	Australia and New Zealand.	On list because of *Puccinastrum actinidiae* Hiratsuka (Rust) which apparently does not exist in Australia and New Zealand, based on official reports from the governments of Australia and New Zealand.
Anthurium spp.	All	On list because of Anthurium mosaic virus which apparently no longer exist.
Boltonia spp.	Canada	On list because of Boltonia streak virus which apparently no longer exist.
Chrysanthemum spp. (chrysanthemum).	Great Britain if in compliance with conditions for importation in proposed § 319.37–5(c).	On list because of *Puccinia horiana* P. Henn. which apparently would not be present if conditions in proposed § 319.37–5(c) would be met.
Ilex spp. (holly).	All except Canada, England, and France.	On list because of Ilex-variegation virus which apparently does not exist.
Rubus spp. (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry).	Ontario, Canada, if in compliance with conditions for importation in proposed § 319.37–5(e).	On list because of Rubus stunt virus which apparently would not be present if conditions in proposed § 319.37–5(e) would be met.
Waldsteinia spp. (waldsteinia).	All except Canada and Australia.	On list because of mosaic disease which apparently does not exist.

Proposed § 319.37–3 would provide requirements with respect to the importation of restricted articles in growing media. In general, if restricted articles were to be imported in their growing media, there would be a substantial risk of introducing any of a large number of injurious plant diseases, injurious insect pests, and other plant pests, which could not be detected by inspection and could not be eliminated without destruction of the restricted article. Accordingly, it is proposed to prohibit the importation or offer for entry into the United States of restricted articles unless free of soil, sand, earth or other growing media, except as explained below.

In addition, the terms "soil" and "earth" would be defined in the definition section of the proposed regulations in order to assure that these terms would be interpreted to include all of the "soil" and "earth" that presents such a risk of introducing such diseases and pests.

The current regulations specify that restricted articles may be imported in any gowing media (sand, soil, or earth) only if imported from Canada. It is proposed to permit restricted articles to be imported from Canada in growing media except from Newfoundland or from the Land District of South Saanich on Vancouver Island in British Columbia. Restricted articles in growing media from these specified places in Canada would not be permitted to be imported because it appears that there is a substantial danger that such restricted articles, if in such growing media, would introduce a potato cyst nematode, *Globodera rostochiensis* (Woll.) Mulvey and Stone, which is not discernible by inspection at the port of entry and cannot be eliminated without destruction of the restricted article.

It is also proposed to permit any restricted article growing solely in agar to be imported in such agar medium because it appears that the presence of diseases or pests which could be detected if the restricted article were imported with bare roots, would not be less detectable if in agar because agar is transparent or translucent.

It is further proposed to permit a restricted article which is a herbaceous plant or shrub to be imported in peat, sphagnum moss, or vermiculite growing media or in synthetic growing media or synethetic horticultural foams, i.e., plastic particles, glass wool, organic and inorganic fibers, polyurethane, polystyrene, polyethylene, phenol formaldehyde, ureaformaldehyde, of in accordance with the detailed criteria in proposed § 319.37–6(d). These criteria appear to be necessary in order to allow the importation of restricted articles in the above growing media or horticultural foams and still prevent the introduction into the United States of any of a wide variety of injurious plant diseases, injurious insect pests, or other plant pests, generally associated with articles in growing media. These criteria would assure that the restricted articles and their growing media would be free of injurious plant diseases, insect pests, or other plant pests because of being grown, stored, and shipped in isolation from such diseases or pests. Since there would be a great risk of introduction of such diseases or pests if any of the criteria were not strictly adhered to,

proposed § 319.37–8(d) would not only require the country of origin to certify compliance with these criteria, but as an added measure of safety, would require a Plant Protection and Quarantine Programs inspector to determine that such articles were produced in accordance with the specified procedures, and to endorse the phytosanitary certificate relating to such articles.

Proposed § 319.37–9 would specify what packing materials could be used for importation of restricted articles into the United States. Generally, packing materials can be the means of introducing into the United States any of a large number of injurious insect pests or other plant pests. Most such pests would not be detectable by inspection and could not feasibly be eliminated from the packing material. In addition, many such pests in the packing material could be transmitted to an accompanied restricted article. Also, many packing materials would because of their nature render articles difficult or impossible to inspect. Based on experience with respect to the examination of packing materials, it appears that those materials listed in proposed § 319.37–9 would present no significant risk of causing the introduction of injurious insect pests or other pests, provided that such materials are free from sand, soil, or earth, are not intermixed, and have not been used previously as packing material or otherwise. This proposed list of materials is the same as the current list except for three additions, two deletions, and three modifications. Ground rubber, paper, and quarry gravel would be added to the list because they apparently would present no significant risk of introducing such pests. Charcoal would be deleted from the list because it appears that it is difficult to detect the presence of many injurious plant diseases, insect pests, and other plant pests on or with articles packed in such material because charcoal often discolors such articles and there is often little contrast between charcoal and such diseases and pests.

Subsoil from Japan (other than that referred to below with respect to the Ryukyu Islands in Japan) would be deleted from the list. Under the current regulations subsoil from Japan has been permitted to be used as a packing material for lily bulbs only if, among other things, it was treated with DDT. However, under the laws administered by the Environmental Protection Agency, the use of DDT may not continue to be required, and there does not appear to be another insecticide adequate to destroy *Phyllobrotica* spp. and other insect pests, which have been found in such subsoil.

Also, under the current regulations, subsoil from the Ryukyu Islands in Japan may be used as packing material for lily bulbs only if certified by the plant protection service of Japan to have been dug from at least 2 feet below the soil surface, handled under special conditions, and treated with an insecticide. Under the laws of the Environmental Protection Agency there are no insecticides which may be feasibly used in connection with such subsoil. However, it appears, based on experience, that even without the use of an insecticide there is no significant risk of introducing undetectable diseases or pests in connection with the importation of lily bulbs in such subsoil, if such subsoil would come from at least 2 feet below the soil surface, and be sifted, dried, and stored in isolation from contamination with pests and diseases. Accordingly, such subsoil would be permitted to be used as packing material for lily bulbs if found and certified by the plant protection service of Japan to meet such conditions.

Other articles would not be permitted to be packed in such subsoil because there has not been sufficient testing to establish that this could be done without a substantial risk of introducing diseases or pests.

In addition, the current regulations specify that shavings are permitted to be used as packing material. This was inteded to refer to wood shavings and cork shavings and the list would be clarified to reflect this intent.

Further, the current regulations permit coral sand from Bermuda to be used as a packing material if accompanied by a valid certificate from the plant protection service of Bermuda certifying the sand to be free from surface soil. This was intended to prohibit the use of any soil in the packing material because soil can be accompanied by any of a host of injurious plant diseases, injurious insect pests, and other plant pests which would not be detectable at the port of entry. Accordingly, the proposed regulations are clarified to provide that the coral sand for packing material must be free from soil.

Proposed § 319.37–10 would require certain marking and identification information to be plainly and correctly borne at the time of importation on the outer container of a restricted article or directly on such article if not in a container. In order to comply with specified requirements of the Plant Quarantine Act, any restricted article for importation, including any article for importation by mail, would be required to bear at the time of importation the general nature and quantity of the contents; the country and locality where grown; the name and address of the shipper, owner, or person shipping or forwarding the article; and the name and address of the consignee (in the case of mail the consignee would be the Plant Protection and Quarantine Programs). Such restricted articles would also be required to bear the number of the written permit authorizing the importation, if one was issued. This would enable the inspector to check whether a valid permit was actually issued for the article in question. Further, a restricted article for importation other than by mail would be required to bear an identifying shipper's mark and number. This would enable an inspector to locate the restricted article at the port of entry by comparing the shipper's mark and number on available entry documents (e.g., manifest, waybill) with such information on the restricted article or container thereof.

The proposal would also require any restricted article for importation by mail to be mailed to the Plant Protection and Quarantine Programs at a port of entry designated in the list of ports of entry in proposed § 319.37–14. This appears to be necessary in order to prevent direct mailing to the intended recipient, and for the requirements of the proposed subpart to be met, e.g., inspection, treatment. The proposal would further require a package containing a restricted article for importation by mail to contain within each package a sheet of paper bearing the name, address, and telephone number of the intended recipient. This would permit the Plant Protection and quarantine Programs to be able to forward the package to the intended recipient. Also, inclusion of the telephone number of the intended recipient for mailed articles would permit Plant Protection and Quarantine Programs to contact the intended recipient for the purpose of obtaining any necessary clarifications for determining eligibility for importation of such articles. With respect to importation of articles other than by mail, this requirement is not necessary because the representative or agent of the intended recipient would be available at the port of entry to provide any necessary clarifications.

It is also proposed that shipments containing restricted articles be required to be accompanied by an invoice or packing list indicating the contents of the shipments. This appears necessary because such information on the outside of a package or on a restricted article could be rendered illegible, destroyed,

or lost because of handling during shipment. This requirement would not be an additional burden on importers since invoices and packing lists are required by the shipping industry and by the U.S. Customs Service.

Proposed § 319.37–11 would require the importer upon arrival at a port of entry of any shipment of any restricted article to promptly notify the Plant Protection and Quarantine Programs of such shipment's arrival by such means as a manifest, customs entry document, commercial invoice, waybill, a broker's document, or a notice form provided for that purpose. The current regulations require that the importer submit a completed Form PPQ–368 and an invoice or packing list at the time of arrival. The purpose of the current regulations and the proposed regulations in this regard is to assure that the Plant Protection and Quarantine Programs is advised that any restricted article has arrived at a port of entry. It appears that this can be accomplished by any document which would specify what is contained in a shipment, such as those documents specified in the proposed rule.

Proposed § 319.37–12 would prohibit a restricted article from being imported or offered for entry into the United States if packed in the same container as an article prohibited importation into the United States by Part 319 or 321. This appears necessary in order to prevent prohibited articles from transmitting to restricted articles tree, plant, or fruit diseases, injurious insect pests, or other plant pests which could not be detected by inspection and could not be eliminated without destruction of the restricted article.

Proposed § 319.37–13 relates to costs and charges in connection with the services of an inspector and costs and charges relating to inspection facilities and equpment used in connection with treatment of articles. This reflects the policy of the Plant Protection and Quarantine Programs with respect to costs and charges relating to the importation of articles subject to this subpart.

Proposed § 319.37–13 also contains provisions relating to where treatments shall be performed. Government operated special inspection facilities are located in close proximity to unloading areas for imported articles and, consequently, the use of government-operated facilities would be required in most cases for treatment of articles in order to prevent unnecessary movement. Treatment would be permitted to be performed at a nongovernmental facility only in cases of unavailability of government facilities and only if, in the judgment of an inspector, such articles can be transported to such nongovernmental facility without the risk of introduction into the United States of injurious plant diseases, injurious insect pests, or other plant pests. Also, it is proposed that treatment performed under this subpart would be required to be performed by or under the direction of an inspector in order to assure that any applicable treatment requirements would be met.

Proposed § 319.37–14 would require any restricted article required to be imported under a written permit pursuant to subsection (1) through (6) or (8) of proposed section 319.37–3, to be imported only at a port of entry designated by an asterisk in paragraph (b) of proposed § 319.37–14, and would permit any other restricted articles to be imported at any port of entry listed in paragraph (b) of proposed § 319.37–14. The ports of entry listed in paragraph (b) are those ports of entry where inspectors are stationed and authorized to take action in connection with the importation or offer for importation of articles which would be subject to the proposed subpart.

Those articles which would be required to be imported only at a port of entry designated by an asterisk appear to present a substantial risk of carrying injurious plant diseases, insect pests, or other plant pests at the time of importation. Accordingly, they would be required to be imported only at a port of entry designated by an asterisk because these ports of entry are the only ports of entry with special inspection and treatment facilities adequate for taking necessary action with respect to such articles in order to prevent the introduction of accompanying injurious plant diseases, injurious insect pests, or other plant pests.

In the current regulations, certain articles for importation from Canada are exempted from certain prohibitions or restrictions which would apply if such articles were imported from certain other foreign countries and localities. It appears that the importation from Canada of most articles subject to the proposed subpart poses little or no risk of introduction of injurious plant diseases, injurious insect pests or other plant pests that are not already widely prevalent or distributed within and throughout the United States. This is because such diseases and pests do not occur in Canada because of climatic conditions adverse to many such diseases and pests, and because of an effective Canadian inspection program for articles imported into Canada. For these reasons, the proposed regulations also contain numerous exemptions from prohibitions or restrictions with regard to articles for importation from Canada.

As noted above, in connection with the discussion concerning proposed § 319.37–4, restricted articles accompanied by a phytosanitary certificate of inspection are merely "subject" to inspection at ports of entry "as necessary" to assure the absence of injurious plant diseases, injurious insect pests, and other plant pests. Because of various risks of introducing such diseases or pests restricted articles are given various degrees of inspection at ports of entry. However, articles for importation from Canada and not requiring a written permit pursuant to paragraphs (a)(1), (2), (3), (4), (5), (6), or (8) of proposed § 319.37–3, are given the least amount of inspection which is commensurate with the risk of introducing diseases or pests. Accordingly, such articles from Canada are the only articles proposed to be allowed to be imported at the port of entry on the United States-Canadian border, which provide this minimal inspection.

It appears that the risk of introduction of diseases or pests would be the same for an article grown in a foreign country or locality other than Canada if it meets each of the following conditions:

1. It is imported into the United States directly from Canada after having been grown for at least 1 year in Canada,

2. It has never been grown in a country from which it would be a prohibited article, or grown in a country other than Canada from which it would be subject to conditions of § 319.37–5 or § 319.37–6,

3. It was not grown in a country or locality from which it would be subject to conditions of § 319.37–7 unless it was grown in Canada under postentry growing conditions equivalent to those specified in § 319.37–7, and

4. It was not imported into Canada in growing media.

Articles specified in items 2 through 4 appear to present a substantial risk of introducing diseases or pests and are either prohibited articles or would be required to be imported at a port of entry with special inspection and treatment facilities. Also, these articles would be required to be grown for at least 1 year in Canada in order to be considered as being solely from Canada. The added growing time would provide an opportunity for any accompanying diseases or pests to become readily detectable at the time of inspection relating to the issuance of the phytosanitary certificate of inspection. This would be an added precautionary

measure in order to allow the articles to be imported under conditions of minimal inspection at ports of entry on the United States-Canada border.

The proposed regulations would also make numerous other miscellaneous changes from the current regulations.

The proposed regulations would reflect certain changes which have occurred with respect to names or boundaries of countries. "Ceylon" is changed to "Sri Lanka," "Germany" is changed to "Federal Republic of Germany (West)" or "German Democratic Republic (East)," as appropriate, "North Ireland" is changed to "Northern Ireland," and "Trinidad" is changed to "Trinidad and Tobago."

The term "England" as used in the current regulations is proposed to be changed to "Great Britain," which includes England, Scotland, and Wales. This is because the term "England" as used in the current regulations was intended to include England, Scotland, and Wales, and because it appears that the reasons for imposing requirements with respect to England are also valid reasons for imposing requirements with respect to Scotland and Wales.

The term "Europe" is defined in the current regulations as "the continent of Europe, the British Isles, and the other islands on the European continental shelf." The term "other islands on the continental shelf" is proposed to be changed to "Iceland, the Azores, and the islands in the Mediterranean Sea", to clarify the intent in the current regulations. Also, the reasons for imposing requirements appear to be valid reasons for imposing requirements with respect to all of these places.

The term "Oceania," although used in the current regulations, is not defined. This term is commonly understood to include the islands of Micronesia, Melanesia, and Polynesia in the central and southern Pacific Ocean. However, this term is also sometimes construed to include Australia and New Zealand which are not part of these islands. In order to avoid confusion, the term "Oceania" is defined in the proposed regulations and does not include Australia or New Zealand. Further, Hawaii, which is part of Polynesia, is specifically excepted from the definition of "Oceania" since the term "Oceania" as used in the proposed subpart, relates only to foreign countries and localities.

Some articles which are proposed to be deleted from the prohibited list are prohibited from entering certain States because of State laws. Also, some articles which are proposed to be deleted from the postentry list are required to be grown under postentry quarantine as a condition of entry into such States. Since this information would be helpful to potential importers of these articles, it is proposed to include such information in notes at the end of the respective list of prohibited articles and postentry articles.

Some of the scientific names in the current regulations with respect to certain diseases, insects, or other pests, are proposed to be changed in order to conform to nomenclature currently accepted by the scientific community. Accordingly, the following chart explains the proposed changes and lists the article associated with the diseases or pests.

Article	Name in current regulations	Name in proposed regulations
Abies spp. (fir)	*Phomopsis pseudotsugae* Wilson (Douglas fir canker).	*Phacidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker).
Althaea spp. (althaea, hollyhock)	*Fuga gossypi* Holmes (Cotton leaf-curl virus)	Cotton leaf-curl virus.
Anemone spp. (anemone, windflower)	*Galla anemones* Holmes (Anemone-alloiophylly virus)	Anemone-alloiophylly virus.
Cedrus spp. (cedar)	*Phomopsis pseudotsugae* Wilson (Douglas fir canker).	*Phacidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker).
Datura spp	*Marmor labaci* var. *deformans* Holmes (Enation-mosaic strain of mosaic virus).	Datura distortion or enation mosaic virus.
Dianthus spp. (carnation, sweet William)	*Verticillium chlamydosporium* Wr	*Phialophora chlamydospora* (Wr.) U. Beyma (*Verticillium chlamydosporium* Wr.)
Euonymus spp. (euonymus)	*Marmor euonymi* Holmes (Euonymus mosaic virus)	Euonymus mosaic virus.
Hibiscus spp. (hibiscus, rosemallow)	Yellow-mosaic virus of okra	Okra yellow mosaic virus.
Hibiscus spp. (hibiscus, rosemallow)	Mosaic-disease virus of okra	Okra mosaic virus.
Hibiscus spp. (hibiscus, rosemallow)	*Fuga gossypi* Holmes (Cotton leaf-curl virus)	Cotton leaf-curl virus.
Juniperus spp. (juniper)	*Exosporium deflectans* Karst	*Stigmina deflectans* (Karst.) Ellis (Needlecast disease).
Larix spp. (larch)	*Phomopsis pseudotsugae* Wilson (Douglas fir canker).	*Phacidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker).
Lens spp. (lentil) seeds	A rust fungus (a form of *Uromyces fabae* (Pers.) d By).	*Uromyces viciae-fabae* (Pers.) Schroet. (rust).
Ligustrum spp. (privet)	*Marmor ligustri* Holmes (Ligustrum-mosaic virus)	Ligustrum mosaic virus.
Malus spp. (apple, crabapple)	*Physalospora piricola* Nose (Leaf, branch and fruit fungus).	*Guignardia piricola* (Nose) Yamomoto (Leaf, branch and fruit disease).
Malus spp. (apple, crabapple)	"Proliferation" (virus)	Apple proliferation agent.
Mangifera spp. (mango) seed	*Sternochetus mangiferae* F	*Cryptorhynchus mangiferae* F. (mango weevil).
Morus spp. (mulberry)	Mulberry mosaic virus	Mulberry mosaic agent.
Picea spp. (spruce)	*Chrysomyxa rhododendri* (DC) D By. (Rust causing a serious needel disease).	*Chrysomyxa ledi* (Alb. & Schw.) d By var. *rhododendri* (DC) Savile. (Rhododendron-spruce needle rust).
Picea spp. (spruce)	*Phomopsis pseudotsugae* Wilson (Douglas fir canker).	*Phacidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker).
Populus spp. (aspen, cottonwood, poplar)	*Pseudomonas rimaefaciens* Koning (Canker)	*Aplanobacter populi* Ride (Canker).
Prunus spp. (almond, apricot, cherry, peach, plum and prune	Pox-disease virus of sweet cherry	Plum pox (=Sharka).
Pseudotsuga spp. (Douglas fir)	*Phomopsis pseudotsugae* Wilson (Douglas fir canker).	*Phacidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker).
Pyrus spp. (pear)	*Physalospora piricola* Nose (Leaf, branch and fruit disease).	*Guignardia piricola* (Nose) Yamomoto (Leaf, branch and fruit disease).
Pyrus spp. (pear)	"Proliferation" (Virus)	Apple proliferation agent.
Ribes nigrum spp. (black currant)	*Acrogenus ribis* Burt. (Black current reversion disease virus).	Black currant reversion virus.
Rosa spp. (rose)	*Marmor flaccumfaciens* Holmes (Rose wilt virus)	Rose wilt virus.
Salix spp. (willow)	*Bacterium salicis* Day (Watermark disease)	*Erwinia salicis* (Day) Chester (Watermark disease).
Sorbus spp. (mountain ash)	Pyrus disease virus No. 1	Mountain ash variegation virus.
Vitis spp. (grape)	*Marmor vitícola* Holmes (Vine Mosaic virus)	Grapevine fanleaf virus and its strains.
Articles designated in § 319.37-5(a)	Golden nematode *Heterodera rostochiensis* Wr	*Globodera rostochiensis* (Woll.) Mulvey and Stone and *G. pallida* (Stone) Mulvey and Stone.

Accordingly, it is proposed to revise "Subpart—Nursery Stock, Plants, and Seeds" in 7 CFR Part 319 § 319.37—§ 319.37–28a) to read as follows:

PART 319—FOREIGN QUARANTINE NOTICES

Subpart—Nursery Stock, Plants, Roots, Bulbs, Seeds and Other Plant Products

Sec.

§ 319.37 Prohibitions and restrictions on importation; disposal of articles refused importation
§ 319.37–1 Definitions
§ 319.37–2 Prohibited Articles
§ 319.37–3 Permits
§ 319.37–4 Inspection and phytosanitary certificates of inspection
§ 319.37–5 Special foreign inspection and certification requirements
§ 319.37–6 Specific treatment and other requirements
§ 319.37–7 Postentry quarantine
§ 319.37–8 Growing media
§ 319.37–9 Approved packing material
§ 319.37–10 Marking and identity
§ 319.37–11 Arrival notification
§ 319.37–12 Prohibited articles accompanying restricted articles
§ 319.37–13 Treatment and costs and charges for inspection and treatment
§ 319.37–14 Ports of entry

Subpart—Nursery Stock, Plants, Roots, Bulbs, Seeds, and Other Plant Products [1]

§ 319.37 Prohibitions and restrictions on importation; disposal of articles refused importation.

(a) Pursuant to section 7 of the Plant Quarantine Act (7 U.S.C. 160) and section 106 of the Federal Plant Pest Act (7 U.S.C. 150ee) the Secretary of Agriculture has determined that, in order to prevent the introduction into the United States from any foreign country or locality of certain tree, plant, and fruit diseases, or injurious insects, new to or not widely prevalent or distributed within and throughout the United States it is necessary to prohibit the importation into the United States of certain articles from foreign countries and localities. Accordingly; no person shall import or offer for entry into the United States any article designated in § 319.37–2(a) or (b) of this subpart from the designated foreign countries and localities, except as otherwise provided in § 319.37–2(c) of this subpart.

(b) Pursuant to sections 1 and 5 of the Plant Quarantine Act (7 U.S.C. 154, 159) and section 106 of the Federal Plant Pest Act (7 U.S.C. 150ee) the Secretary of Agriculture has determined that, in order to prevent the entry into the United States of certain injurious plant diseases, injurious insect pests, and other plant pests it is necessary to restrict the importation into the United States of certain articles from foreign countries and localities. Accordingly, no person shall import or offer for importation into the United States, or grow in the United States, any restricted article from any foreign country or locality unless in conformity with all of the applicable restrictions in this subpart.

(c) Any article refused importation for noncompliance with the requirements of this subpart shall be properly removed from the United States or abandoned by the importer for destruction, and pending such action shall be subject to the immediate application of such safeguards against escape of injurious plant diseases, injurious insect pests and other plant pests as the inspector determines necessary to prevent the introduction into the United States of such diseases or pests. If such article is not promptly safeguarded by the importer, removed from the United States, or abandoned for destruction, it may be seized, destroyed, or otherwise disposed of in accordance with section 10 of the Plant Quarantine Act (7 U.S.C. 164a) and sections 105 and 107 of the Federal Plant Pest Act (7 U.S.C. 150dd, 150ff).

§ 319.37–1 Definitions.

Terms used in the singular form in this subpart shall be construed as the plural, and vice versa, as the case may demand. The following terms, when used in this subpart, shall be construed, respectively, to mean:

Deputy Administrator. the Deputy administrator of the Plant Protection and Quarantine Programs, animal and Plant Health Inspection Service, U.S. Department of Agriculture, or any other officer or employee of said Service to whom authority to act in his/her stead has been or may hereafter be delegated.

Disease. The term in addition to its common meaning, includes a disease, disease agent which incites a disease.

Earth. The softer matter composing part of the surface of the globe, in distinction from the firm rock, and including the soil and subsoil, as well as finely divided rock and other soil formation materials down to the rock layer.

Europe. The continent of Europe, the British Isles, Iceland, the Azores, and the islands in the Mediterranean Sea.

From. An article is considered to be "from" any country or locality in which it was grown. *Provided,* that an article imported into Canada from another country or locality shall be considered as being solely from Canada if it meets the following conditions:

(a) It is imported into the United States directly from Canada after having been grown for at least 1 year in Canada,

(b) It has never been grown in a country from which it would be a prohibited article or grown in a country other than Canada from which it would be subject to conditons of § 319.37–5 or 319.37–6,

(c) It was not grown in a country or locality from which it would be subject to conditions of § 319.37–7 unless it was grown in Canada under postentry growing conditions equivalent to those specified in § 319.37–7 [2], and

(d) It was not imported into Canada in growing media.

Indexing. (a) Serological testing, or (b) transmitting the juices from an article suspected of being infected with a particular disease to another article known to be susceptible to such disease, by grafting or otherwise, in order to determine the presence or absence of the disease in the article suspected of being infected with such disease.

Inspector. Any employee of the Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, or other person, authorized by the Deputy Administrator to enforce the provisions of the regulations in this subpart.

Nursery Stock. All field-grown florist's stock, trees, shrubs, vines, cuttings, grafts, scions, buds, fruit pits, and other seeds of fruit and ornamental trees or shrubs, and other plants and plant products for propagation, except field, vegetable, and flower seeds, bedding plants, and other herbaceous plants, bulbs, and roots.

Oceania. The islands of Micronesia, Melanesia, and Polynesia (except Hawaii) in the central and southern Pacific Ocean.

Person. An individual, corporation, company, society, or association.

Phytosanitary certificate of inspection. A document relating to a restricted article, which is issued by a

[1] One or more common names of articles are given in parentheses after most scientific names (when common names are known) for the purpose of helping to identify the articles represented by such scientific names; however, unless otherwise specified, a reference to a scientific name includes all articles within the class represented by the scientific name regardless of whether the common name or names are as comprehensive in scope as the scientific name.

[2] Currently only *Chaenomoles* spp. (flowering quince), *Cydonia* spp. (quince), *Malus* spp. (apple, crabapple); *Prunus* spp. (almond, apricot, cherry, nectarines, peach, plum, prune) and *Pyrus* spp. (pear) are required to be grown in Canada under such equivalent conditions after importaton.

plant protection official of the country in which the restricted article was grown, which is issued not more than 15 days prior to shipment of the restricted article from the country in which grown, which is addressed to the plant protection service of the United States (Plant Protection and Quarantine Programs), which contains a description of the restricted article intended to be imported into the United States, which certifies that the article has been thoroughly inspected, is believed to be free from injurious plant diseases, injurious insect pests, and other plant pests, and is otherwise believed to be eligible for importation pursuant to the current phytosanitary laws and regulations of the United States, and which contains any specific additional declarations required under this subpart.

Plant Pest. The egg, pupal, and larval stages as well as any other living stage of: Any insects, mites, nematodes, slugs, snails, protozoa, or other invertebrate animals, bacteria, fungi, other parasitic plants or reproductive parts thereof, viruses, or any organisms similar to or allied with any of the foregoing, or any infectious substances, which can directly or indirectly injure or cause disease or damage in any plants or parts thereof, or any processed, manufactured, or other products of plants.

Plant Protection and Quarantine Programs. The organizational unit within the Animal and Plant Health Inspection Service, U.S. Department of Agriculture delegated responsibility for enforcing provisions of the Plant Quarantine Act and the Federal Plant Pest Act, and regulations promulgated thereunder.

Prohibited article. Any class of nursery stock or other class of plant, root, bulb, seed, or other plant product designated in § 319.37–2(a) or (b).

Restricted article. Any class of nursery stock or other class of plant, root, bulb, seed or other plant product, for or capable of propagation, excluding any articles subject to any restricted entry orders in Part 321 (i.e. potatoes) or to any foreign quarantine notice in other subparts of Part 319, e.g., fruits and vegetables, cut flowers, sugarcane, rice, and excluding any prohibited articles listed in § 319.37–2(a) or (b).

Secretary. The Secretary of Agriculture, or any other officer or employee of the Department of Agriculture to whom authority to act in his/her stead has been or may hereafter be delegated.

Soil. The loose surface material of the earth in which plants, trees, and shrubs grow, in most cases consisting of disintegrated rock with an admixture of organic material and soluble salts.

Spp. (species). All species, clones, cultivars, strains, varieties, and hybrids, of a genus.

United States. The States, District of Columbia, Guam, Northern Mariana Islands, Puerto Rico, and the Virgin Islands of the United States.

§ 319.37–2 Prohibited articles.

(a) The following listed articles from the designated countries and localities are prohibited articles and are prohibited from being imported or offered for entry into the United States except as provided in § 319.37–2(c) of this subpart.

Prohibited article (except seeds unless specifically mentioned)	Foreign country(ies) or locality(ies) from which prohibited	Tree, plant, or fruit disease, or injurious insect, or other plant pest determined as existing in the places named and capable of being transported with the prohibited article
Acacia spp. (acacia)	Australia and Oceania	*Uromycladium tepperianum* (Sacc.) McAlp. (Rust).
Acer spp. (maple)	Japan	*Xanthomonas acernea* (Ogawa) Burk. (leaf diseases).
	Bulgaria, Great Britain, France, Federal Republic of Germany (West), German Democratic Republic (East), and Japan.	Maple-variegation virus.
Actinidia spp. (Chinese gooseberry, kiwi)	Japan and Taiwan	*Pucciniastrum actinidiae* Hiratsuka (Rust).
Adonidia spp	All	A diversity of diseases including, but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Aesculus spp (horsechestnut)	Czechoslovakia, Great Britain, Federal Republic of Germany (West), and German Democratic Republic (East).	Horsechestnut-variegation virus.
Allagoptera arenaria	All	A diversity of diseases including, but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Althaea spp. (althaea, hollyhock)	India	Hollyhock yellow-vein mosaic virus.
	Africa	Cotton leaf-curl virus
Anemone spp. (anemone, windflower)	Federal Republic of Germany (West) and German Democratic Republic (East).	Anemone alloiophylly virus.
Areca spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Arenga spp. (sugar palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Arikuryroba spp. (arikury palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Articles listed in § 319.37–2(b)	All except Canada	A diversity of diseases, insects, and other pests, including but not limited to: *Cactoblastis cactorum* (Berg); *Meteranium* spp.; *Opogona sacchari* (Bojer); *Chrysomyxa himalensis* Barclay (Spruce needle rust); *Ascotium mori* Barclay (Mulberry rust); *Pseudomonas fuscicola* Westhard. & Buis. (Bacterial stain); *Pucciniastrum areolatum* (Fr.) Oth. (Cherry-spruce rust).
Berberis spp. (barberry) (plants of all species and horticultural varieties not designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter).	All	*Puccinia graminis* Pers. (Black stem rust).
Berberis spp. (barberry) destined to an eradication State listed in § 301.38–2a of this chapter (plants of all species and horticultural varieties designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter.	All	*Puccinia graminis* Pers. (Black stem rust).
Berberis spp. (barberry) seed	All	*Puccinia graminis* Pers. (Black stem rust).
Borassus spp. (palmyra palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Caryota spp. (fishtail palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Chaenomeles spp. (flowering quince) not meeting the conditions for importation in § 319.37–5(b).	All	A diversity of plant diseases including but not limited to items 1, 21, and 28 listed in § 319.37–5(b)(2).
Chrysalidocarpus spp. (butterfly palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Chrysanthemum spp. (chrysanthemum) not meeting the conditions for importation in § 319.37—5(c).	Europe, Argentina, Brazil, Hong Kong, Japan, Korea, Malaysia, New Zealand, People's Republic of China, and Republic of South Africa.	*Puccinia horiana* P. Henn. (White rust of chrysanthemum).

Prohibited article (except seeds unless specifically mentioned)	Foreign country(ies) or locality(ies) from which prohibited	Tree, plant, or fruit disease, or injurious insect, or other plant pest determined as existing in the places named and capable of being transported with the prohibited article
Cocos nucifera (coconut) (including seeds) (Coconut seed without husks or without milk may be imported into the United States in accordance with § 319.56 of this Part).	All except from Jamaica if meeting the conditions for importation in § 319.37–5(f).	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Cocos spp. (other than *Cocos nucifera*)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Conifers	All except Canada	A diversity of diseases including but not limited to: *Bulgaria larchi* (Sawada) Yamamoto & K. Ito (Shoot blight of larch); *Chrysomyxa determans* (Dietl.) Jacz. (Spruce needle rust); *Cronartium flaccidum* (Alb. & Schw.) (Scotch pine blister rust); *Chrysomyxa abietis* (Wallr.) Ung. (Rust); *Phacidiopycnis pseudotsugae* (M. Wils.) Hahn (Douglas fir canker); *Scirrhia deflectens* (Karst.) Ellis (Needlecast disease); *Chrysomyxa ledi* (Alb. & Schw.) d By var. *rhododendri* (DC) Savile. (Rhododendron-spruce needle rust).
Corypha spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Cydonia spp. (quince) not meeting the conditions for importation in § 319.37–5(a).	All	A diversity of diseases including but not limited to items 1, 2, 19, 19, 20, 21, and 23 listed in § 319.37–5(b)(2).
Delura spp	Colombia	Delura Colombian virus.
Dictyosperma spp. (Princesspalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Elaeis spp. (oil palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Erianthus spp. (plumegrass)	All	*Puccinia melanocephala* H. Syd. & P. Syd. (Sugarcane rust).
Eucalyptus spp	Argentina	Leaf chlorosis virus.
Euonymus spp. (euonymus)	Federal Republic of Germany (West) and German Democratic Republic (East).	Euonymus mosaic virus.
Fragaria spp. (strawberry)	Australia, Austria, Czechoslovakia, France, Great Britain, Italy, Japan, Lebanon, The Netherlands, New Zealand, Northern Ireland, Republic of Ireland, Switzerland, and Union of Soviet Socialist Republics.	*Phytophthora fragariae* Hickman (Red stele disease).
Fraxinus spp. (ash)	Europe	*Pseudomonas savastanoi* var. *fraxini* (Brown) Dowson (Canker and dieback disease of ash).
Gaussia spp. (fishtailpalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Gladiolus spp. (gladiolus)	Africa	*Puccinia mocleanii* Doidge (Rust); *Uredo gladioli-kaulinae* Bub. (Rust); *Uromyces gladioli* P. Henn. (Rust); *U. rytherae* Syd. (Rust).
	Africa, Italy, Malta, and Portugal	*U. transversalis* (Thuem.) Wint. (Rust).
Gossypium spp	All	A diversity of diseases including but not limited to: cotton leaf curl virus; cotton virescence agent; small leaf virus.
Hibiscus spp. (hibiscus, rose mallow)	Trinidad and Tobago, and Nigeria	Okra mosaic virus.
	India	Okra yellow mosaic virus.
	Africa	Cotton leaf curl virus.
Howeia belmoreana (Sentry palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Hydrangea spp. (hydrangea)	Japan	*Aecidium hydrangeae-paniculatae* Dietel
Ipomoea spp. (sweetpotato)	All except Canada	A diversity of diseases including but not limited to: sweetpotato witches broom (little leaf); and sweetpotato viruses of eastern Africa.
Jasminum spp. (jasmine)	Belgium, Great Britain, Federal Republic of Germany (West), and German Democratic Republic (East).	Jasmine-variegation virus.
Latania spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Lens spp. seed (lentil)	South America	*Uromyces viciae-fabae* (Pers.) Schroet. (Rust).
Ligustrum spp. (privet)	Federal Republic of Germany (West) and German Democratic Republic (East).	Ligustrum mosaic virus.
Livistona spp. (fan palm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Mahoberberis spp. (plants of all species and horticultural varieties not designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter).	All	*Puccinia graminis* Pers. (Black stem rust).
Mahoberberis spp. destined to an eradication state listed in § 301.38–2(a) of this chapter (plants of all species and horticultural varieties designated as resistant to black stem rust in accordance with §301.38–1 of this chapter).	All	*Puccinia graminis* Pers. (Black stem rust).
Mahoberberis spp. seed	All	*Puccinia graminis* Pers. (Black stem rust).
Mahonia spp. (mahonia) (plants of all species and horticultural varieties not designated as resistant to black stem rust in accordance with §301.38–1 of this chapter.	All	*Puccinia graminis* Pers. (Black stem rust).
Mahonia spp. (mahonia) destined to an eradication state listed in § 301.38–2(a) in this chapter (plants of all species and horticultural varieties designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter).	All	*Puccinia graminis* Pers. (Black stem rust).
Mahonia spp. seed	All	*Puccinia graminis* Pers. (Black stem rust).
Malus spp. (apple, crabapple) not meeting the conditions for importation in § 319.37–5(a).	All	A diversity of diseases including but not limited to items 1, 2, 3, 6, 7, 8, and 23 listed in § 319.37–5(b)(2).
	Japan	*Valsa mali* Miyabe and Yamada ex. Id. Miura (Branch canker fungus).
Mangifera spp. (mango) seed	All except North and South America	*Cryptorhynchus mangiferae* F. (Mango weevil).
Manihot spp. (cassava)	All except Canada	A diversity of diseases, insects, and other pests including but not limited to: *Monophlebus tenuipes* (Border) (cassava mite); *Planococcus manihotis* Matile-Ferrero (cassava mealybug); *Xanthomonas manihotis* (Arthaud-Berthet) Starr (Bacterial blight); Cassava brown streak virus; Cassava latent virus; Cassava African mosaic virus; Cassava common mosaic virus.
Mascarena spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Morus spp. (mulberry)	People's Republic of China, Japan, India, and Union of Soviet Socialist Republics.	A diversity of diseases including but not limited to: Mulberry dwarf; Mulberry curly little leaf agent; Mulberry mosaic agent.
Nannorrhops spp. (mazaripalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.

Prohibited article (except seeds unless specifically mentioned)	Foreign country(ies) or locality(ies) from which prohibited	Tree, plant, or fruit disease, or injurious insect, or other plant pest determined as existing in the places named and capable of being transported with the prohibited article
Oryza spp. (rice) (seeds are prohibited by § 319.55)	All	A diversity of diseases including but not limited to: Rice dwarf virus; Rice stripe virus; Rice yellow dwarf agent; Rice black-streaked dwarf virus; Rice tungro virus; Rice transitory yellowing virus; Rice orange leaf agent; Rice grassy stunt agent; Rice ragged stunt virus; Rice yellow mottle virus; *Melanomma glumarum* Miy.; *Oospora oryzetorum* Saac.; *Rhynchosporium oryzae* Hashioka & Yokogi; *Xanthomonas oryzae* (Uyeda & Ishiyama) Dowson.
Persea spp. (avocado) seed	Mexico, Central and South America	*Heilipus lauri* Boh. (Avocado weevil); *Stenoma catenifer* Wals. (Avocado seed moth); *Conotrachelus* spp.
Philadelphus spp. (mock orange)	Europe	Elm mottle virus.
Phoenix spp. (date)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Populus spp. (aspen, cottonwood, poplar)	Europe	*Aplanobacter populi* Ride (Canker).
Pritchardia spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Prunus spp. (almond, apricot, cherry, nectarine, peach, plum, prune) not meeting the conditions for importation in § 319.37–5(b).	All	A diversity of diseases including but not limited to items 1 and 8 through 17 listed in § 319.37–5(b)(2).
Pyrus spp. (pear) not meeting the conditions for importation in § 319.37–5(b).	All	A diversity of diseases including but not limited to items 1 through 6, 21, and 23 listed in § 319.37–5(b)(2).
Quercus spp. (oak)	Japan	*Stereum hugenes* Imazeki (White rot); a gall-forming rust.
Ribes nigrum (black currant)	Australia, Province of British Columbia in Canada, Europe, and New Zealand	Black currant reversion agent.
Rosa spp. (rose)	Australia, Italy, New Zealand, and Republic of South Africa.	Rose wilt virus.
Salix spp. (willow)	Great Britain, The Netherlands, Federal Republic of Germany (West), and German Democratic Republic (East).	*Erwinia salicis* (Day) Chester (Watermark disease).
Seeds of all kinds when in pulp	All except Canada	Fruit flies, or other injurious insects.
Solanum spp. (potato) (including seeds)	All	Andean potato latent virus, Andean potato mottle virus; Potato mop top virus; Dulcamara mottle virus; Tomato blackring virus; Tobacco rattle virus; Potato virus Y (tobacco veinal necrosis strain); Potato purple top wilt agent; Potato marginal flavescence agent; Potato purple top roll agent; Potato witches broom agent; Stolbur agent; Parastolbur agent; Potato leaf-let stunt agent; Potato spindle tuber viroid.
Sorbus spp. (mountain ash)	Federal Republic of Germany (West) and German Democratic Republic (East).	Mountain ash variegation virus.
People's Republic of China, Japan, Philippine Islands, Oceania, Australia, and New Zealand.		*Taphrina piri* Kusano (Leaf distortion fungus).
Syringa spp. (lilac)	Europe	Elm mottle virus.
Trachycarpus spp. (windmillpalm)	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Ulmus spp. (elm) (including seeds)	Europe	Elm mottle virus.
Veitchia spp	All	A diversity of diseases including but not limited to: Lethal yellowing disease; Cadang-cadang disease.
Vitis spp. (grape)	All except Canada	A diversity of diseases including but not limited to: Arabis mosaic virus; Flavescence-doree agent; Raspberry ringspot virus; Hungarian chrome mosaic virus; Strawberry latent ringspot virus; *Xanthomonas ampelina* Panagopoulos (Bacterial blight); Grapevine fanleaf virus and its strains; Grapevine leaf roll virus and its strains; Tomato black ring virus; Artichoke Italian latent virus; Grapevine vein necrosis virus.
Zizania spp. (wild rice)	All	A diversity of diseases including but not limited to: Rice dwarf virus; Rice stripe virus; Rice yellow dwarf agent; Rice black-streaked dwarf virus; Rice tungro virus; Rice transitory yellowing virus; Rice orange leaf agent; Rice grassy stunt agent; Rice ragged stunt virus; Rice yellow mottle virus; *Melanomma glumarum* Miy.; *Oospora oryzetorum* Saac.; *Rhynchosporium oryzae* Hashioka & Yokogi; *Xanthomonas oryzae* (Uyeda & Ishiyama) Dowson.

Note.—The States listed below prohit the entry into such States of articles (except seeds, unless specifically mentioned) of the genera listed for each State:

California: *Planera* spp. (water elm, planer); *Ulmus* spp. (elm); *Zelkova* spp.; *Castanea* spp. (chestnut); *Castanopsis* spp. (chinquapin); *Pinus* spp. (pine).
Idaho: *Pinus* spp. (pine).
Massachusetts: *Ribes* spp. (currant, gooseberry) (including seeds).
Montana: *Pinus* spp. (pine).
Nevada: *Planera* spp. (water elm, planer); *Ulmus* spp. (elm); *Zelkova* spp.
New York: *Ribes* spp. (currant, gooseberry) (including seeds).
Oregon: *Planera* spp. (water elm, planer); *Ulmus* spp. (elm); *Zelkova* spp. *Castanea* spp. (chestnut); *Castanopsis* spp. (chinquapin); *Corylus* spp. (filbert, hazel, hazelnut, cobnut); *Pinus* spp. (pine).
Utah: *Pinus* spp. (pine).
Washington: *Corylus* spp. (filbert, hazel, hazelnut, cobnut).
West Virginia: *Ribes* spp. (currant, gooseberry) (including seeds).
Wisconsin: *Pinus* spp. (pine) (5-leaved); *Ribes* spp. (currant, gooseberry) (including seeds).

(b) The following listed "articles" are prohibited from all foreign countries and localities except Canada:

(1) *Rhododendron* spp. (rhododendron and azalea) or other genera or species of similar slow growth habit, other than artificially dwarfed trees or shrubs—

(i) Exceeding 3 years of age if grown from seeds or cuttings; or

(ii) Exceeding 2 years of age after severance from the parent plant if produced by layers; or

(iii) Having more than 3 years' growth from the bud or graft if produced by budding or grafting.

(2) Any naturally dwarf or miniature form of tree or shrub exceeding 12 inches (approximately 305 millimeters) in height from the soil line.

(3) Herbaceous perennials imported in the form of root crowns or clumps exceeding 102 millimeters (approximately 4 inches) in diameter.

(4) Stem cuttings (without leaves, roots, sprouts, or branches) exceeding 102 millimeters (approximately 4 inches) in diameter or exceeding 1.83 meters (approximately 6 feet) in length.

(5) Cacti cuttings (without roots or branches) exceeding 153 millimeters

(approximately 6 inches) in diameter or exceeding 1.22 meters (approximately 4 feet) in length.

(6) Plants (other than stem cuttings, cacti cuttings, and artificially dwarfed plants) exceeding 305 millimeters (approximately 12 inches) in height from soil line to terminal growing point and whose growth habits simulate the woody character of trees and shrubs, including but not limited to cacti, cycads, yuccas, and dracaenas.

(7) Any tree or shrub or a type not listed above, other than an artificially dwarf tree or shrub, and—

(i) Exceeding 2 years of age if grown from seeds or cuttings; or

(ii) Exceeding 1 year of age after severance from the parent plant if produced by layers; or

(iii) Having more than 2 years' growth from the bud or graft if produced by budding or grafting.

(c) Any article listed as a prohibited article in paragraphs (a) or (b) of this section may be imported or offered for entry into the United States if:

(1) Imported by the United States Department of Agriculture for experimental or scientific purposes; and

(2) Imported under conditions found by the Deputy Administrator and specified on the permit to be adequate to prevent the introduction into the United States of tree, plant, or fruit diseases, or injurious insects, or other plant pests, i.e., conditions of treatment, processing, growing, shipment, disposal.

§ 319.37-3 Permits.

(a) The restricted articles (other than articles for food, analytical, medicinal, or manufacturing purposes) in any of the following categories may be imported or offered for importation into the United States only after issuance of a written permit by the Plant Protection and Quarantine Programs:

(1) Articles subject to treatment and other requirements of § 319.37-6;

(2) Articles subject to the postentry quarantine conditions of § 319.37-7;

(3) Bulbs of *Allium sativum L.* (garlic);

(4) Articles of *Cocos nucifera* (coconut); and articles (except seeds) of *Chrysanthemum* spp. (chrysanthemum) and *Dianthus* spp. (carnation, sweet William) from any country or locality except Canada;

(5) Lots of 13 or more articles (other than seeds, bulbs, sterile cultures of orchid plants) from any country or locality except Canada;

(6) Seeds of trees or shrubs from any country or locality except Canada;

(7) Articles (except seeds) of *Fragaria* spp. (strawberry), *Malus* spp. (apple, crabapple), *Pyrus* spp. (pear), *Prunus* spp. (almond, apricot, cherry, nectarine, peach, plum, prune), *Cydonia* spp. (quince), *Chaenomeles* spp. (flowering quince), and *Rubus* spp. (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry), from Canada;

(8) Woody plants, shrubs, and trees (except seeds) grown out-of-doors in Prince Edward Island, Nova Scotia, the counties of Albert and Westmoreland in New Brunswick, the city of Richmond on Lulu Island in British Columbia, and Vancouver Island in British Columbia;

(9) Articles (except seeds) of *Castanea* spp. (chestnut) or *Castanopsis* spp. (chinquapin) destined to California or Oregon;

(10) Articles (except seeds) of *Pinus* spp. (pine), (5-leaved) destined to Wisconsin;

(11) Articles of *Ribes* spp. (currant, gooseberry), (including seeds) destined to Massachusetts, New York, West Virginia, or Wisconsin;

(12) Articles (except seeds) of *Planera* spp. (water elm, planer) or *Zelkova* spp. from Europe, Canada, St. Pierre, or Miquelon and destined to California, Nevada, or Oregon;

(13) Seeds of *Prunus* spp. (almond, apricot, cherry, nectarine, peach, plum, prune) from Canada and destined to Colorado, Michigan, New York, Washington, or West Virginia;

(14) Articles (except seeds) of *Vitis* spp. (grape) from Canada and destined to California, New York, Ohio, Oregon, and Washington;

(15) Articles (except seeds) of *Corylus* spp. (filbert, hazel, hazelnut, cobnut) from provinces east of Manitoba in Canada and destined to Oregon or Washington;

(16) Articles (except seeds) of *Pinus* spp. (pine) from Canada and destined to California, Idaho, Montana, Oregon, or Utah; and

(17) Articles (except seeds) of *Ulmus* spp. (elm) from Canada and destined to California, Nevada, or Oregon.

(b) Any restricted article not designated in paragraph (a) of this section may be imported or offered for importation into the United States only after issuance of an oral permit for importation issued by an inspector at the port of entry.

(c) An application for a written permit should be submitted to the Plant Protection and Quarantine Programs (Permit Unit, Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Federal Building, Hyattsville, MD 20782) at least 30 days prior to arrival of the article at the port of entry. The completed application shall include the following information:[3]

(1) Name, address, and telephone number of the importer;

(2) Approximate quantity and kinds (botanical designations) of articles intended to be imported;

(3) Country(ies) or locality(ies) where grown;

(4) Intended United States port of entry;

(5) Means of transportation, e.g., mail, airmail, express, air express, freight, airfreight, or baggage; and

(6) Expected date of arrival.

(d) After receipt and review of the application by Plant Protection and Quarantine Programs, a written permit indicating the applicable conditions for importation under this subpart shall be issued for the importation of articles described in the application if such articles under the conditions specified in the application appear to be eligible to be imported into the United States. Even though a written permit has been issued for the importation of an article, such article may be imported only if all applicable requirements of this Subpart are met and only if an inspector at the port of entry determines that no emergency measures pursuant to section 105 of the Federal Plant Pest Act (7 U.S.C. 150ee) are necessary with respect to such article.[4]

(e) An oral permit for importation of an article shall be issued at a port of entry by an inspector only if all applicable requirements of this Subpart are met, such article is eligible to be imported under an oral permit, and an inspector at the port of entry determines that no emergency measures pursuant to section 105 of the Federal Plant Pest Act (7 U.S.C. 150ee) are necessary with respect to such article.[4]

---

[3] Application forms are available without charge from the Permit Unit, Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Federal Building, Hyattsville, MD 20782, or local offices which are listed in telephone directories.

[4] Section 105 of the Federal Plant Pest Act (7 U.S.C. 150ee) provides, among other things, that the Secretary of Agriculture may, whenever he deems it necessary as an emergency measure to order to prevent the dissemination of any plant pest new to or not theretofore known to be widely prevalent or distributed within and throughout the United States, seize, quarantine, treat, apply other remedial measures to, destroy, or dispose of, in such manner as he deems appropriate, subject to provisions in section 105(b) and (c) of the Act (7 U.S.C. 150ee) (b) and (c), any product or article, including any articles subject to this Subpart, which is moving into or through the United States, and which he has reason to believe was infested or infected by or contains any plant pest at the time of such movement. Section 10 of the Plant Quarantine Act (7 U.S.C. 164a) and sections 105 and 107 of the Federal Plant Act (7 U.S.C. 150dd, 150ff) also authorizes emergency measures against prohibited and restricted articles which are not in compliance with the provisions of this subpart.

(f) Any permit which has been issued may be withdrawn by an inspector or the Deputy Administrator if he determines that the holder thereof has not complied with any condition for the use of the document. The reasons for the withdrawal shall be confirmed in writing as promptly as circumstances permit. Any person whose permit has been withdrawn may appeal the decision in writing to the Deputy Administrator within ten (10) days after receiving the written notification of the withdrawal. The appeal shall state all of the facts and reasons upon which the person relies to show that the permit was wrongfully withdrawn. The Deputy Administrator shall grant or deny the appeal, in writing, stating the reasons for his decision as promptly as circumstances permit. If there is a conflict as to any material fact, a hearing shall be held to resolve such conflict.

§ 319.37-4 Inspection and phytosanitary certificates of inspection.

(a) Any restricted article grown in a country maintaining an official system of inspection for the purpose of determining whether such article is free from injurious plant diseases, injurious insect pests, and other plant pests shall be accompanied by a phytosanitary certificate of inspection from the plant protection service of such country at the time of importation or offer for importation into the United States.

(b) Any restricted article accompanied by a valid phytosanitary certificate of inspection is subject to inspection by an inspector at the time of importation into the United States for the purpose of determining whether such article is free of injurious plant diseases, injurious insect pests, and other plant pests, and whether such article is otherwise eligible to be imported into the United States.

(c) Any restricted article grown in a country not maintaining an official system of inspection for the purpose of determining whether such article is free from injurious plant diseases, injurious insect pests, and other plant pests shall be inspected by an inspector at the time of importation into the United States for the purpose of determining whether such article is free of such diseases and pests and whether such article is otherwise eligible to be imported into the United States.

§ 319.37-5 Special foreign inspection and certification requirements.

(a) Any restricted article (except seeds; unrooted cuttings; and articles solely for food, analytical, or manufacturing purposes) from a country listed below, at the time of importation or offer for importation into the United States shall be accompanied by a phytosanitary certificate of inspection which shall contain an accurate additional declaration that such article was grown on land which has been sampled and microscopically inspected by the plant protection service of the country in which grown within 12 months preceding issuance of the certificate and found free from potato cyst nematodes, *Globodera rostochiensis* (Woll.) Mulvey and Stone and *G. pallida* (Stone) Mulvey and Stone: Algeria, Argentina, Austria, Azores, Belgium, Bolivia, Canada (only that portion comprising Newfoundland, and the Land District of South Saanich on Vancouver Island in British Colombia), Channel Islands, Chile, Columbia, Czechoslovakia, Denmark (including Faeroe Islands), Ecuador, Federal Republic of Germany (West), Finland, France, German Democratic Republic (East), Great Britain, Greece, Guernsey, Iceland, India, Ireland, Israel, Italy, Japan, Jersey, Lebanon, Luxembourg, Mexico, The Netherlands, New Zealand, Northern Ireland, Norway, Panama, Peru, Poland, Portugal, South Africa, Spain (including Canary Islands), Sweden, Switzerland, Union of Soviet Socialist Republics, Venezuela, and Yugoslavia.

(b)(1) Any article (except seeds) of *Chaenomeles* spp. (flowering quince); *Cydonia* spp. (quince); *Malus* spp. (apple, crabapple); *Prunus* spp. (almond, apricot, cherry, nectarine, peach, plum, prune); and *Pyrus* spp. (pear), at the time of importation or offer for importation into the United States, shall be accompanied by a phytosanitary certificate of inspection which shall contain an accurate additional declaration that such article was grown in a nursery in Belgium, Canada, France, Federal Republic of Germany (West), The Netherlands, or Great Britain, and found by the plant protection service of the country in which grown to be free of injurious plant diseases (i.e., for *Chaenomeles* items 1 and 21 listed in paragraph (b)(2) of this section, for *Cydonia* items 1, 18, 19, 20, and 21 listed in paragraph (b)(2) of this section; for *Malus* items 1, 3, 6, 7, 8, and 23 listed in paragraph (b)(2) of this section; for *Prunus* items 1 and 9 through 17 listed in paragraph (b)(2) of this section; for *Pyrus* items 1, 3, 4, 5, 21, and 23 listed in paragraph (b)(2) of this section) based on the testing of parent stock by visual examination and indexing, and that such article was grown in a nursery free of any such specified plant diseases.[5]

(2) List of diseases.

(i) *Monilinia fructigena* (Aderh. & Ruhl.) Honey (Brown rot of fruit).

(ii) *Guignardia piricola* (Nose) Yamomoto (Leaf, branch & fruit disease).

(iii) Apple proliferation agent.

(iv) Pear blister canker virus.

(v) Pear bud drop virus.

(vi) *Diaporthe mali* Bres. (Leaf, branch & fruit fungus).

(vii) Apple green crinkle virus.

(viii) Apple chat fruit virus.

(ix) Plum pox (=Sharka) virus.

(x) Cherry leaf roll virus.

(xi) Cherry rusty mottle (European) agent.

(xii) Apricot chlorotic leaf roll.

(xiii) Plum bark split virus.

(xiv) Arabis mosaic virus and its strains.

(xv) Raspberry ringspot virus and its strains.

(xvi) Tomato blackring virus and its strains.

(xvii) Strawberry latent ringspot virus and its strains.

(xviii) Quince sooty ringspot agent.

(xix) Quince yellow blotch agent.

(xx) Quince stunt agent.

(xxi) *Gymnosporangium asiaticum* Miyabe ex. Yamada (Rust).

(xxii) *Valsa mali* Miyabe and Yamada ex. Miura (Branch canker fungus).

(xxiii) Apple ringspot virus.

(c) Any article (except seeds) of *Chrysanthemum* spp. (chrysanthemum) from Great Britain shall at the time of importation or offer for importation into the United States be accompanied by a phytosanitary certificate of inspection containing an accurate additional declaration that such article was grown in a greenhouse nursery in Great Britain and found by the plant protection service of Great Britain to be free of white rust disease (caused by the rust fungus, *Puccinia horiana* P. Henn.)

---

[5] In all of the listed countries, indexing of parent stock for species of *Prunus* not immune to plum pox (i.e., other than *Prunus avium, P. cerasus, P. mahaleb, P. padus, P. serotina, P. serrula, P. serrulata, P. subhirtella, P. laurocerasus, P. virginiana, P. effusa, P. sargentii, P. yedoensis)* is currently done only at government operated nurseries (research stations). In France all indexing of parent stock for all *Chaenomeles* spp., *Cydonia* spp., *Malus* spp., *Prunus* spp., and *Pyrus* spp. is currently done only at government operated nurseries (research stations).

based on visual examination of parent stock and that such article was grown in a greenhouse nursery free of such plant disease.

(d) Any article (except seeds) of *Dianthus* spp. (carnation, sweet William) from Great Britain shall be grown under postentry quarantine conditions specified in § 319.37–7(c) unless at the time of importation or offer for entry into the United States the phytosanitary certificate of inspection accompanying such article contains an accurate additional declaration that such article was grown in a greenhouse nursery in Great Britain and found by the plant protection service of Great Britain to be free of injurious plant diseases caused by *Phialophora cinerescoens* (Wr.) U. Beyma (*Verticillium cinerescens* Wr.) and carnation etched ring, "streak" and "fleck" viruses, based on visual examination and indexing of the parent stock and that such article was grown in a greenhouse nursery free of such plant diseases.

(e) Any article (except seeds) of *Rubus* spp. (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry) from Ontario, Canada, shall be grown under postentry quarantine conditions specified in § 319.37–7(b) unless at the time of importation or offer for importation into the United States the phytosanitary certificate of inspection accompanying such article contains an accurate additional declaration that such article was found by the plant protection service of Canada to be free of rubus stunt virus based on visual examination and indexing of the parent stock.[6]

(f) Any article of *Cocos nucifera* (coconut) at the time of importation or offer for importation into the United States shall be accompanied by a phytosanitary certificate of inspection which shall contain an accurate additional declaration that such article was found by the plant protection service of Jamaica to be of Malayan dwarf variety (which is resistant to lethal yellowing disease) based on the visual examination of the parent stock.

§ 319.37–6 Specific treatment and other requirements.

(a) Seeds of *Hibiscus* spp. (hibiscus, rosemallow) and seeds of *Abelmoschus* spp. (okra), from any foreign country or locality, at the time of importation into the United States, shall be treated for possible infestation with *Pectinophora gossypiella* (pink bollworm) in accordance with the applicable provisions of the Plant Protection and Quarantine Treatment Manual.[7]

(b) Seeds of *Lathyrus* spp. (sweet pea, peavine); *Lens* spp. (lentil); and *Vicia* spp. (fava bean, vetch) from countries and localities other than those in North America and Central America, at the time of importation into the United States, shall be treated for possible infestation with insects of the family Bruchidae in accordance with the applicable provisions of the PPQ Treatment Manual.[7]

(c) Because of possible infestation with *Aleurocanthus woglumi* Ashby (citrus blackfly), any restricted article (other than seeds) of genera and species listed below from any country or locality (other than Canada, Europe, or any other country or locality bordering on the Mediterranean Sea) shall be (1) defoliated before arrival at a port of entry in the United States; or (2) treated in accordance with the applicable provisions of the PPQ Treatment Manual, at the time of importation into the United States.

Achras (see *Manilkara*)
Anacardium (cashew, marañon)
Annona (cherimoya, soursop, custard apple, sweetsop)
Ardisia
Bouvardia
Bumelia
Bursera
Buxus (boxwood)
Capsicum (pepper)
Cardiospermum (heartseed)
Cedrela
Cestrum
Cnidoscolus (tread-softly)
Coffea (coffee)
Crataegus (hawthorne)
Cydonia (quince)
Diospyros (persimmon)
Duranta (skyflower)
Eugenia (malay apple, Surinam Cherry)
Fraxinus (ash)
Hibiscus (hibiscus, rosemallow)
Hura (sandbox tree)
Ixora (ixora)
Jatropha (nettlespurge)
Lagerstroemia (crepe myrtle)
Magnolia (magnolia)
Mammea (mamey apple)
Mangifera (mango)
manilkara (Achras)(sapodilla)
Melia (chinaberry)
Myroxylon (balm tree)
Myrtus (myrtle)
Persea (avocado)
Plumeria (plumeria)
Populus (poplar, cottonwood, aspen)
Pouteria (Calocarpum)(sapote, mamey sapote)
Psidium (guava)
Punica (pomegranate)
Pyrus (pear)
Sapindus (soapberry)
Solandra (chalicevine)
Spondias (mombin, jobo plum, hog plum)
Strelitzia (bird of paradise)
Tabebuia (trumpet tree)
Vitis (grape)
Zingiber (ginger)

(d) Seeds of alfalfa and related plants (i.e., *Medicago falcata, M. gaetula, M. glutinosa, M. media, M. sativa)* from Europe, at the time of importation into the United States shall be treated for possible infection with *Verticillium alboatrum* by dusting with Arasan 50 (50 percent Thiram) at a rate of 6 ounces (approximately 226.8 grams) per 100 pounds (approximately 45.36 kilograms) of seeds, or by treating with a slurry of Arasan 50 Red at a rate of 8 ounces (approximately 226.8 grams) per pint (approximately 473.12 cubic centimeters) of water per 100 pounds (approximately 45.36 kilograms) of seeds.

(e) Seeds of *Glycine* spp. (soybean); *Dolichos* spp. (lablab); *Pachyrhizus* spp. (yam bean root, jicama); *Phaseolus* spp. (bean), *Pueraria* spp. (Chinese yam, kudzu bean, kudzu vine); and *Vigna* spp. (cowpea, catjang, asparagus bean, black-eyed pea, moth bean, azuki bean) from Africa, Australia, Burma, Cambodia, China, Costa Rica, India, Indonesia, Japan, Korea, Laos, Malaysia, Nepal, New Caledonia, Papua New Guinea, Philippines, Sri Lanka (Ceylon), Taiwan, Thailand, Union of Soviet Socialist Republics, Venezuela, Vietnam, or the West Indies, at the time of importation into the United States shall be treated for possible infection with *Phakopsora pachyrhizi* Syd. (soybean rust) by dusting with Patterson's Multipurpose Fungicide (a Zineb-Captan formulation) at the rate of 1.05 ounces (approximately 29.77 grams) actual Zineb per bushel (approximately 35.24 liters) or by treating with a slurry of Patterson's Multipurpose Fungicide at the rate of 0.74 ounces (approximately 20.98 grams) actual Zineb per bushel (approximately 35.24 liters) of seeds.

§ 319.37–7 Postentry quarantine.

(a) The following restricted articles from the designated countries and localities (1) may be imported or offered for importation into the United States only after a completed postentry quarantine agreement, as provided in paragraph (c) of this section, has been submitted to the Plant Protection and Quarantine Programs and (2) shall be grown under postentry quarantine conditions specified in paragraph (c) of this section:

[6] Such testing is done under the Raspberry Plant Certification Program of Ontario, Canada.

[7] The PPQ Treatment Manual was incorporated by reference on June 15, 1978, and is available upon request to the Deputy Administrator, Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Washington, DC 20250, and is on file at the Federal Register.

Restricted article (excluding seeds)	Foreign country(ies) or locality(ies) from which imported
Acacia spp. (acacia)	All except Canada, Australia, and Oceania.
Acer spp. (maple)	All except Belgium, Canada, Great Britain, France, Federal Republic of Germany (West), German Democratic Republic (East), and Japan.
Actinidia spp. (chinese gooseberry, kiwi)	All except Canada, Australia, Japan, New Zealand, and Taiwan.
Aesculus spp. (horse chestnut)	All except Canada, Czechoslovakia, Great Britain, Federal Republic of Germany (West), and German Democratic Republic (East).
Althaea spp. (althaea, hollyhock)	All except Canada, India, and Africa.
Anemone spp. (anemone, windflower)	All except Canada, Federal Republic of Germany (West), and German Democratic Republic (East).
Berberis spp. (barberry) destined to any State except the eradication States listed in § 301.38–2a of this chapter (plants of all species and horticultural varieties designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter).	All.
Bromeliads spp. (bromeliads) destined to Hawaii	All.
Chaenomeles spp. (flowering quince) meeting the conditions for importation in § 319.37–5(b).	Countries listed in § 319.37–5(b) except Canada.
Chrysanthemum spp. (chrysanthemum)	All except Argentina, Brazil, Canada, Europe, Hong Kong, Japan, Korea, Malaysia, New Zealand, People's Republic of China and Republic of South Africa.
Crataegus monogyna Jacq. (hawthorne, thornapple, red haw)	Europe.
Cydonia spp. (quince) meeting the conditions for importation in § 319.37–5(b).	Countries listed in § 319.37–5(b) except Canada.
Datura	All except Canada, Colombia and India.
Dianthus spp. (carnation, sweet William)	Great Britain, unless exempted from postentry quarantine conditions pursuant to § 319.37–5(d), and all other countries and localities except Canada.
Eucalyptus spp. (eucalyptus)	All except Canada, Argentina, Sri Lanka (Ceylon), Uruguay, and Europe.
Euonymus spp. (euonymus)	All except Canada, Federal Republic of Germany (West), and German Democratic Republic (East).
Fragaria spp. (strawberry)	All except Australia, Austria, Canada, Czechoslovakia, France, Great Britain, Italy, Japan, Lebanon, The Netherlands, New Zealand, Northern Ireland, Republic of Ireland, Switzerland, and Union of Soviet Socialist Republics.
Fraxinus spp. (ash)	All except Canada and Europe.
Fruit and nut articles listed by common name in paragraph (b) of this section.	All except Canada.
Gladiolus spp. (gladiolus)	All except Canada, Africa, Italy, Malta, and Portugal.
Hibiscus spp. (hibiscus, rosemallow)	All except Canada, Trinidad and Tobago, India, and Africa.
Humulus spp. (hops)	All.
Hydrangea spp. (hydrangea)	All except Canada and Japan.
Jasminum spp. (jasmine)	All except Belgium, Canada, Great Britain, Federal Republic of Germany (West), and German Democratic Republic (East).
Ligustrum spp. (privet)	All except Canada, Federal Republic of Germany (West), and German Democratic Republic (East).
Mahoberberis spp. destined to any State except the eradication States listed in § 301.38–2a of this chapter (plants of all species and horticultural varieties designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter).	All.
Mahonia spp. (mahonia) destined to any State except the eradication States listed in § 301.38–2a of this chapter (plants of all species and horticultural varieties designated as resistant to black stem rust in accordance with § 301.38–1 of this chapter).	All.
Malus spp. (apple, crabapple) meeting the conditions for importation in § 319.37–5(b).	Countries listed in § 319.37–5(b) except Canada.
Mespilus germanica L.	Countries listed in § 319.37–5(b) except Canada.
Morus spp. (mulberry)	All except Canada, People's Republic of China, Japan, India, and Union of Soviet Socialist Republic.
Nut and fruit articles (see fruit and nut articles)	
Passiflora spp. (passion fruit)	All except Canada.
Philadelphus spp. (mock orange)	All except Canada and Europe.
Populus spp. (aspen, cottonwood, poplar)	All except Canada and Europe.
Prunus spp. (almond, apricot, cherry, nectarine, peach, plum, prune) meeting the conditions for importation in § 319.37–5(b).	Countries listed in § 319.37–5(b) except Canada.
Pyrus spp. (pear) meeting the conditions for importation in § 319.37–5(b)	Countries listed in § 319.37–5(b) except Canada.
Quercus spp. (oak)	All except Canada and Japan.
Ribes nigrum spp. (black currant)	All except Australia, Canada, Europe, and New Zealand.
Rosa spp. (rose)	All except Australia, Canada, Italy, New Zealand, and Republic of South Africa.
Rubus spp. (cloudberry, blackberry, boysenberry, dewberry, loganberry, raspberry).	All unless exempted from postentry quarantine conditions pursuant to § 319.37–5(e).
Salix spp. (willow)	Europe except Great Britain, The Netherlands, the Federal Republic of Germany (West), and German Democratic Republic (East).
Sorbus spp. (mountain ash)	All except Australia, Canada, Federal Republic of Germany (West), German Democratic Republic (East), Japan, New Zealand, People's Republic of China, Philippine Islands, and Oceania.
Syringa spp. (lilac)	All except Canada and Europe.
Ulmus spp. (elm)	All except Canada and Europe.

NOTE.—California requires trees, plants, and shrubs of *Prunus* spp (almond, apricot, cherry, nectarine, peach, plum, prune) and plants of *Fragaria* spp. (strawberry) to be grown under postentry quarantine as a condition of entry into such State.

(b) *Fruit and Nut Articles* (common names are listed after scientific names).

Achras—(Synonym for *Manilkara*)
Annona—custard apple, cherimoya, sweetsop, sugarapple, soursop, bullock's heart, alligator apple, suncoya, ilama, guanabana, pond apple
Anacardium—cashew
Artocarpus—breadfruit, jackfruit
Averrhoa—carambola
Blighia—akee
Bouea—kundangan
Calocarpum—sapote
Carica—papaya, pawpaw
Carissa—natal plum
Carya—hickory, pecan
Castanea—chestnut
Ceratonia—St. Johnsbread
Chrysobalanus—coco plum
Chrysophyllum—starapple
Coccoloba—sea-grape, pigeon plum
Corylus—filbert, hazel, hazelnut, cobnut
Crataegus—hawthorne
Diospyros—persimmon, kaki, mabola
Durio—durian
Eriobotrya—loquat, Japanese medlar, Japanese plum
Euphoria—longan
Eugenia—roseapple, Malayapple, Curacaoapple
Feijoa—feijoa, pineapple guava
Ficus—fig
Garcinia—mangosteen, gourka
Juglans—walnut, butternut, heartnut, regranut, buartnut
Lansium—langsat
Litchi—lychee, leechee
Macadamia—macadamia nut, queensland nut
Malpighia—Barbados cherry
Mammea—mammeeapple, marney
Mangifera—mango
Manilkara—sapodilla

Melicoccus—honeyberry, mamoncilla, spanish lime, genip
Nephelium—rambutan, pulasan
Olea—olive
Persea—avocado, alligator pear
Phoenix—date
Phyllanthus—otaheite-gooseberry
Pistacia—pistachio
Pouteria—Lucuma
Psidium—guava, guayala
Punica—pomegranate, granada
Pyronia—quinpear
Rhodomyrtus—hill gooseberry, rose myrtle
Ribes (other than *Ribes nigrum*)—red currant, white currant, gooseberry
Spondias—yellow mombin, red mombin, hog plum
Syzygium—Malayapple, rose apple, java plum
Theobroma—cacao
Vaccinium—blueberry, cranberry
Ziziphus—jujube

(c) Any restricted article required to be grown under postentry quarantine conditions shall be grown under the supervision and control of a person who has signed a postentry quarantine agreement to comply with the following conditions for the period of time specified below:

(1) To grow such article or increase therefrom only on specified premises;

(2) To permit an inspector to have access to the specified premises for inspection of such article during regular business hours;

(3) To keep the article and any increase therefrom identified with a label showing the name of the article, port accession number, and date of importation;

(4) To keep the article separated from any domestic plant or plant product of the same genus by no less than 3 meters (approximately 10 feet); and from other imported plant or plant products by the same distance;

(5) To allow or apply remedial measures (including destruction) determined by an inspector to be necessary to prevent the spread of an injurious plant disease, injurious insect pest, or othr plant pest; and

(6) To notify Plant Protection and Quarantine Programs if any abnormality of the article is found or if the article dies. The above conditions apply to any such article for a period of 2 years after importation, except that they apply to an article of *Dianthus* spp. (carnation, sweet William) for 1 year after importation and to an article of *Chrysanthemum* spp. (chrysanthemum) for 6 months after importation.

(d) A completed postentry quarantine agreement shall accompany the application for a written permit for an article required to be grown under postentry quarantine conditions.[4]

§ 319.37-8 Growing media.

(a) Any restricted article at the time of importation or offer for importation into the United States shall be free of sand, soil, earth, and other growing media, except as provided in paragraphs (b), (c), or (d) of this section.

(b) A restricted article from Canada other than from Newfoundland or from the Land District of South Saanich on Vancouver Island in British Columbia may be imported in any growing medium.

(c) A restricted article growing solely in agar may be imported in such growing medium.

(d) A restricted article which is a herbaceous plant or shrub may be imported in peat, sphagnum moss, or vermiculite growing media, or in synthetic growing media or synthetic horticultural foams, i.e., plastic particles, glass wool, organic and inorganic fibers, polyurethane, polystyrene, polyethylene, phenol formaldehyde, ureaformaldehyde.

(1) If accompanied by a phytosanitary certificate of inspection containing an accurate additional declaration from the plant protection service of the country in which grown that the article was:

(i) Grown throughout its growing period only in a greenhouse with insect-proof screening on all vents and with automatic closing doors;

(ii) Grown in a greenhouse unit solely used for articles grown under all the criteria specified in this paragraph (d);

(iii) Grown in a greenhouse free of sand, soil, or earth;

(iv) Grown in a greenhouse where strict sanitary procedures are always practices, i.e., cleaning and disinfection of floors, benches and tools, the application of measures to protect against any injurious plant diseases, injurious insect pests, and other plant pests;

(v) Stored only in areas found by an official of the plant protection service of the country where grown to be free of injurious plant diseases, injurious insect pests, and other plant pests;

(vi) Shipped in containers found by such an official to be free of injurious plant diseases, injurious insect pests, and other plant pests; and

(vii) Inspected and found by such an official to have been grown, stored, packaged and shipped solely under conditions necessary to assure the absence of injurious plant diseases, injurious insect pests, and other plant pests; and

(2) If the accompanying phytosanitary certificate of inspection is endorsed by a PPQ inspector representing a finding that the conditions listed above are being met.

§ 319.37-9 Approved packing material.

Any restricted article at the time of importation or offer for importation into the United States shall not be packed in a packing material unless such packing material is free from sand, soil, or earth (except for sand, soil, or earth designated below); has not been used previously as packing material or otherwise; is not intermixed with other approved packing material; and is listed below:

Buckwheat hulls.
Coral sand from Bermuda, if the article packed in such sand is accompanied by a valid phytosanitary certificate of inspection containing an accurate additional declaration from the plant protection service of Bermuda that such sand was free from soil.
Excelsior.
Exfoliated vermiculite.
Ground cork.
Ground peat.
Ground rubber.
Paper.
Polymer stabilized cellulose.
Quarry gravel.
Sawdust.
Shavings—wood or cork.
Sphagnum moss.
Subsoil from Ryukyu Islands, Japan (only for lily bulbs accompanied by a phytosanitary certificate of inspection containing an accurate additional declaration from the plant protection service of Japan that such subsoil was dug from at least 2 feet below the soil surface, was sifted and dried, and was stored in isolation from injurious plant diseases, injurious insect pests, and other plant pests).
Vegetable fiber when free of pulp, including coconut fiber and Osmunda fiber, but excluding sugarcane fiber and cotton fiber.

§ 319.37-10 Marking and identity.

(a) Any restricted article for importation other than by mail, at the time of importation or offer for importation into the United States shall plainly and correctly bear on the outer container (if in a container) or the restricted article (if not in a container) the following information:

(1) General nature and quantity of the contents,

(2) Country and locality where grown,

(3) Name and address of shipper, owner, or person shipping or forwarding the article,

[4] Postentry quarantine agreement forms are available without charge from the Permit Unit, Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service, Federal Building, Hyattsville, MD 20782, or local offices of the Plant Protection and Quarantine Programs which are listed in the telephone directories.

(4) Name and address of consignee,
(5) Identifying shipper's mark and number, and
(6) Number of written permit authorizing the importation if one was issued.

(b) Any restricted article for importation by mail shall be plainly and correctly addressed and mailed to the Plant Protection and Quarantine Programs at a port of entry listed in § 319.37–14, shall be accompanied by a separate sheet of paper within the package plainly and correctly bearing the name, address, and telephone number of the intended recipient, and shall plainly and correctly bear on the outer container the following information:
(1) General nature and quantity of the contents,
(2) Country and locality where grown,
(3) Name and address of shipper, owner, or person shipping or forwarding the article, and
(4) Number of written permit authorizing the importation, if one was issued.

(c) Any restricted article for importation (by mail or otherwise), at the time of importation or offer for importation into the United States shall be accompanied by an invoice or packing list indicating the contents of the shipment.

§ 319.37–11 Arrival notification.

Promptly upon arrival of any restricted article at a port of entry, the importer shall notify the Plant Protection and Quarantine Programs of the arrival by such means as a manifest, Customs entry document, commercial invoice, waybill, a broker's document, or a notice form provided for that purpose.

§ 319.37–12 Prohibited articles accompanying restricted articles.

A restricted article for importation into the United States shall not be packed in the same container as an article prohibited importation into the United States by this part or Part 321.

§ 319.37–13 Treatment and costs and charges for inspection and treatment.

The services of the inspector during regularly assigned hours of duty and at the usual places of duty shall be furnished without cost to the importer.* No charge will be made to the importer for Government owned or controlled special inspection facilities and equipment used in treatment, but the inspector may require the importer to furnish any special labor, chemicals, packing materials, or other supplies required in handling an importation under the regulations in this subpart. The Plant Protection and Quarantine Programs will not be responsible for any costs or charges, other than those indicated in this section. Any treatment performed in the United States on a restricted article shall be performed by an inspector or under an inspector's supervision at a government-operated special inspection facility, except that an importer may have such treatment performed at a nongovernmental facility if the treatment is performed at non-government expense under the supervision of an inspector and in accordance with any applicable treatment requirements of this subpart and in accordance with any treatment required by an inspector as an emergency measure in order to prevent the dissemination of any injurious plant disease, injurious insect pest, or other plant pest, new to or not theretofore known to be widely prevalent or distributed within and throughout the United States. However, treatment may be performed at a nongovernmental facility only in cases of unavailability of government facilities and only if, in the judgment of an inspector, such articles can be transported to such nongovernmental facility without the risk of introduction into the United States of injurious plant diseases, injurious insect pests, or other plant pests.

§ 319.37–14 Ports of entry.

(a) Any restricted article required to be imported under a written permit pursuant to paragraphs (a)(1), (2), (3), (4), (5), (6), or (8) of § 319.37–3 of this subpart, shall be imported or offered for importation only at a port of entry designated by an asterisk in paragraph (b) of this section; any other restricted article shall be imported or offered for importation at any port of entry listed in paragraph (b) of this section. Any restricted article from Canada and not required to be imported under a written permit pursuant to paragraphs (a)(1), (2), (3), (4), (5), (6), or (8) of § 319.37–3 of this subpart may be imported at any port of entry listed in paragraph (b) of this section, or at any Customs designated port of entry on the United States-Canada border (Customs designated ports of entry are listed in 19 CFR Part 101).

(b) List of ports of entry

Ports with special inspection and treatment facilities (plant inspection stations) are indicated by an asterisk (*).

Alabama

Mobile—Federal Building, Room 147, Corner St. Louis and St. Joseph Streets, P.O. Box 1413, Mobile, AL 36601.

Alaska

Anchorage—Annex P.O. Box 6191, International Airport, Anchorage, AK 99502.

Arizona

*Nogales—202 Border Inspection Station, 100 Terrace Avenue, Nogales, AZ 85621.
Phoenix—Sky Harbor Airport, 3300 Sky Harbor Boulevard, Phoenix, AZ 85034.
San Luis—U.S. Border Station, P.O. Box 37, San Luis, AZ 85349.
Tucson—Tucson International Airport, Tucson, AZ 85706.

California

Calexico—Federal Inspection Building, Room 223, 200 First Street, P.O. Box 660, Calexico, CA 92231.
*Los Angeles—9650 LaCienega Boulevard, Building D North, Inglewood, CA 90301.
(Airport)—World Way Center Post Office, International Arrivals Area, Satellite 2, P.O. Box 90429, Los Angeles International Airport, Los Angeles, CA 90009.
*San Diego—U.S. Border Station, P.O. Box 431, San Ysidro, CA 92073.
(Airport)—San Diego International Airport, San Diego, CA 92103.
*San Francisco—San Francisco International Airport, P.O. Box 8028, Airport Station, San Francisco, CA 94128.
101 Agriculture Building, Embarcadero at Mission Street, P.O. Box 7073, San Francisco, CA 94119.
*San Pedro—(See Los Angeles).

(Airport)—Harry S. Truman Airport, Main Terminal Building, St. Thomas, Virgin Islands of the U.S. 00801.
St. Croix—P.O. Box 1548, Kingshill, St. Croix, Virgins Islands of the U.S. 00850.

Virginia

(Airport) (Chantilly)—Dulles International Airport, International Arrivals Area, P.O. Box 17134, Washington, DC 20041.
Newport News—P.O. Box 942, Newport News, VA 23607.
Norfolk—Room 211 Bank of Virginia Building, 870 North Military Highway, Norfolk, VA 23502.

Washington

Blaine—Custom House; Room 216, P.O. Drawer C, Blaine, WA 98230.
McChord AFB—MAC Terminal, P.O. Box 4116, McChord Air Force Base, Tacoma, WA 98458.
*Seattle—Federal Office Building, Room 9014, Seattle, WA 98104.
(Airport)—Seattle-Tacoma International Airport, Seattle, WA 98158.

Wisconsin

Milwaukee—International Arrivals Terminal, 5300 South Howell Avenue, Milwaukee, WI 53207.

Note.—This proposal has been reviewed under the USDA criteria established to implement Executive Order 12044, "Improving Government Regulations," and has been designated "significant." An approved Draft Impact Analysis is available from Plant Protection and Quarantine Programs, APHIS, Room 635, Federal Building, 6505 Belcrest Road, Hyattsville, MD 20782, 301–436–8247. The alternatives considered during the analysis are listed in the Draft Impact Analysis Statement.

Done at Washington, D.C., on 11th day of June 1979.

Thomas G. Darling,

Acting Deputy Administrator, Plant Protection and Quarantine Programs, Animal and Plant Health Inspection Service.

Part VIII

Securities and Exchange Commission

Uniform Net Capital Rule; Financial Requirements For Brokers and Dealers (Futures Commission Merchants)

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-15898]

17 CFR Part 240

Uniform Net Capital Rule

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Commission today has adopted previously proposed amendments to its uniform net capital rule and Appendices B and D thereto. The amendments primarily affect the financial requirements for brokers and dealers that are also futures commission merchants ("fcm") registered with the Commodity Futures Trading Commission. They are designed to conform the net capital rule with the minimum financial requirements of the Commodity Futures Trading Commission for fcm's, to avoid duplication, reduce regulatory burden, and coordinate regulation through uniform requirements as much as possible.

EFFECTIVE DATE: July 23, 1979.[1]

FOR FURTHER INFORMATION CONTACT: James G. Moody, Attorney Advisor, Division of Market Regulation, Securities and Exchange Commission, Washington, D.C. 20549 (202) 376-8135.

SUPPLEMENTARY INFORMATION: The Securities and Exchange Commission today announced the adoption of certain amendments to Rule 15c3-1 (17 CFR 240.15c3-1) under the Securities Exchange Act of 1934, the uniform net capital rule, and Appendices B and D thereto. The amendments, which become effective on July 23, 1979, are substantially the same as those proposed in Securities Exchange Act Release No. 15426, December 21, 1978; 44 FR 1754, January 8, 1979.

Discussion

Rule 15c3-1, the uniform net capital rule (17 CFR 240.15c3-1), in general requires a broker or dealer to maintain a certain specified minimum "net capital" depending on the nature of its securities business and its circumstances.[2] The amount of net capital required unless the broker or dealer computes its net capital under subsection (f) of the rule depends upon its "aggregate indebtedness."[3] Paragraph (c)(2) of the rule defines "net capital" as the net worth of a broker or dealer adjusted by certain described items. Paragraph (c)(1) of the Rule defines "aggregate indebtedness" as the total money liabilities of a broker or dealer in connection with any transaction, with limited exclusions. The rule requires brokers or dealers to have sufficient cash or liquid assets to protect the cash or securities positions carried in their customers' accounts. The thrust of the rule is to ensure that a broker or dealer has sufficient liquid assets to cover current indebtedness.

Recently, the Commodity Futures Trading Commission (the "CFTC") made substantial revisions in its minimum financial and related reporting requirements imposed upon fcm's. The CFTC stated that it was amending its rules first to eliminate duplicative financial requirements imposed upon fcm's. The CFTC gave as another purpose for the revised regulations to "correct substantial deficiencies" which had existed in the CFTC's minimum capital rules.[4]

Although the CFTC amendments apply only to fcm's, about half of all commodity customer business in the futures industry is done by fcm's that are also registered with the Commission as brokers or dealers and are, therefore, subject to the uniform net capital rule.

As the CFTC noted in its release announcing the adoption of its new minimum financial requirements, it has incorporated by reference the Commission's haircuts on securities. The CFTC believed that its rule, before being amended, required unnecessary "safety factors" for open commodities transactions and created new standards which were first proposed in 1977 and 1978.[5] These, as well as other commodity related amendments to its rule, have been the subject of extensive study by that agency and by those who will be subject to it. After careful consideration, in the interests of minimizing duplicative regulation, the Commission is deferring to the expertise of the CFTC in the area of financial responsibility regulation and is amending its rule to conform in the main to those provisions of the CFTC's rule which deals with the commodities futures business.[6]

The amendments adopted herein are designed insofar as possible to provide uniformity and avoid duplicative requirements as well as additional reporting for fcm's which are also brokers or dealers. The Commission believes it is important to achieve uniformity in this area in the interest of fair and equitable regulation consistent with its regulatory responsibility.

Most of the amendments to the net capital rule will be found in Appendix B as amended (17 CFR 240. 15.c3-1b). The most significant of the adopted amendments is the substitution of the CFTC's so-called safety factors on futures for the haircut deductions currently required by Appendix B to the net capital rule.

The majority of the remaining changes to the net capital rule affect the treatment of receivables relating to commodities. For example, under the amendments the length of time margin calls are allowed to remain outstanding for under-margined customer futures accounts will be 3 business days by December 31, 1982. Margin can remain uncollected for up to 5 business days until December 31, 1980, 4 business days until December 31, 1982 and 3 business days thereafter before a charge is made to net capital. The net capital rule now allows 5 business days, a period which will remain unchanged for transactions in securities.

Another significant time differential from the way commodities are now treated involves deficits or debit ledger balances in unsecured customers', non-customers' and proprietary accounts related to commodities transactions which are the subject of calls for margin or other required deposits. Under the amendments, the amount of funds required may be included in net capital for one day. In addition, the length of time margin calls pertaining to commodity transactions are allowed to

---

[1] A broker or dealer may conform to the amendments herein before July 23, 1979 if it so wishes.

[2] Rule 15c3-1(a).

[3] Brokers or dealers operating under paragraph (f) of Rule 15c3-1 determine their net capital requirement upon the "aggregate debit" items computed pursuant to the "Formula for Determination Reserve Requirement of Brokers and Dealers" as set forth at Rule 15c3-3a, 17 CFR 240.15c3-3a.

[4] 43 FR 39956, 39957, 39958 (September 8, 1978).

[5] Id. at 39957-39958.

[6] In general, the differences in the two rules will not affect broker-dealers who are fcm's. The CFTC believed that the "few differences" which might remain between the CFTC rule and the Commission rule would affect only fcm's which engage in a cash commodity, manufacturing or cooperative business/businesses "in which few, if any, FCM/broker-dealers engage." The CFTC has said that, in the case of each such difference of which it was aware, the Commission minimum financial requirements would be higher than the CFTC requirements. The CFTC said that, therefore, an fcm may be assured of compliance with the regulations of both agencies if it is in compliance with the Commission's. Some of the differences between the two rules include the treatment of certain unsecured receivables such as those in paragraph (c)(2)(ii)(A) of CFTC Rule 1.17 and certain inventories such as those in paragraphs (c)(2)(iv) (C) through (E). The CFTC will regard these as "current assets" for purposes of its rule. Appendix B requires their deduction from net worth.

remain outstanding for under-margined non-customer and omnibus commodity futures accounts has been reduced from 5 business days to 2 business days.

The amendments specify that receivables from a foreign clearing organization resulting from commodities transactions as well as stock held in a commodity clearing organization may be treated as net capital. Under the current Commission rule such items would generally be treated as assets not readily convertible into cash and would be deducted from net worth.

Next, for those brokers or dealers which have elected to operate under the alternative net capital provisions, the amendments will require securities brokers or dealers which are also fcm's to maintain net capital equal to 4 percent of the funds required to be segregated pursuant to the Commodity Exchange Act and the rules thereunder if such amount is greater than the alternative provisions would require it to maintain.

Finally, Appendix D which governs subordination agreements has been altered in several respects to conform its provisions to reflect the CFTC's requirements that an fcm on the alternative maintain net capital of 4% of the funds required to be segregated by the Commodity Exchange Act.

Because the subordinated loan provisions of Appendix D are being changed, it will be necessary to "grandfather" existing subordination loan agreements. Otherwise, existing loans would no longer met the requirements of Appendix D. The Commission has selected 5 years as the period after which the loan must conform to the new Appendix D, the same amount of time the Commission gave in 1975 when it adopted the present Appendix D.

As adopted the amendments define the terms "customer" and "non-customer" in Appendix B by incorporating the definitions of these terms which are in the General Regulations of the CFTC.

Statutory Basis and Competitive Considerations

Pursuant to the Securities Exchange Act of 1934 and particularly Sections 15(c)(93) and 23(a) thereof, 15 U.S.C. 78*o*(c)(3) and 78w(a), the Commission amends § 240.15c3–1 in Part 240 of Chapter II of Title 17 of the code of Federal Regulations in the manner set forth below, effective July 23, 1979. The Commission finds that any burden imposed upon competition by the amendments is necessary and appropriate in furtherance of the purposes of the Act, and particularly to implement the Commission's continuing mandate under section 15(c)(3) thereof, 15 U.S.C. 78*o*(c)(3), to provide minimum safeguards with respect to the financial responsibility of brokers and dealers.

Text of Amendments to §240.15c3–1

1. The introductory text of paragraph (a) and paragraphs (e) and (f) of § 240.15c3–1 are revised to read as follows:

§ 240.15c3–1 Net capital requirements for brokers or dealers.

(a) No broker or dealer shall permit his aggregate indebtedness to all other persons to exceed 1500 percentum of his net capital, except as otherwise limited by the provisions of paragraph (a)(1), or, in the case of a broker or dealer electing to operate pursuant to paragraph (f) of this section, no broker or dealer shall permit his net capital to be less than 4 percent of aggregate debit items as computed in accordance with § 240.15c3–3a of this chapter, or, if registered as a futures commission merchant, 4 percent of the funds required to be segregated pursuant to the Commodity Exchange Act, and the regulations thereunder, if greater, except as otherwise limited by paragraph (f) of this section, and every broker or dealer shall have the net capital necessary to comply with the following conditions, except as otherwise provided for in paragraph (f) of this section.

* * * * *

(e) *Limitation on withdrawal of equity Capital.* No equity capital of the broker or dealer or a subsidiary or affiliate consolidated pursuant to Appendix (C) (17 CFR 240.15c3–1c) whether in the form of capital contributions by partners excluding securities in the securities accounts of partners and balances in limited partners' capital accounts in excess of their stated capital contributions), par or stated value of capital stock, paid-in capital in excess of par, retained earnings or other capital accounts, may be withdrawn by action of a stockholder or partner, or by redemption or repurchase of shares of stock by any of the consolidated entities or through the payment of dividends or any similar distribution, nor may any unsecured advance or loan be made to a stockholder, partner, sole proprietor or employee if, after giving effect thereto and to any other such withdrawals, advances or loans and any Payments of Payment Obligations (as defined in Appendix (D) (17 CFR 240.15c3–1d) under satisfactory subordination agreements which are scheduled to occur within six months following such withdrawal, advance or loan, either aggregate indebtedness of any of the consolidated entities exceeds 1000 percentum of its net capital or its net capital would fail to equal 120 per centum of the minimum dollar amount required thereby or would be less than 7 percent of aggregate debit items computed in accordance with 17 CFR 240.15c3–3a, or, if registered as a futures commission merchant, 7% of the funds required to be segregated pursuant to the Commodity Exchange Act, and the regulations thereunder, if greater or in the case of any broker or dealer included within such consolidation if the total outstanding principal amounts satisfactory subordination agreements of the broker or dealer (other than such agreements which qualify as equity under paragraph (d) of this section) would exceed 70% of the debt-equity total as defined in paragraph (d). *Provided,* That this provision shall not preclude a broker or dealer from making required tax payments or preclude the payment to partners of reasonable compensation.

(f) *Alternative net capital requirement.* (1)(i) A broker or dealer who is not exempt from the provisions of 17 CFR 240.15c3–3 under the Securities Exchange Act of 1934 pursuant to paragraph (k)(1) or (k)(2)(i) may elect not to be subject to the limitations of paragraph (a) of this section respecting aggregate indebtedness as defined in paragraph (c)(1) of this section and certain deductions provided for in paragraph (c)(2) of this section. *Provided,* That in order to qualify to operate under this paragraph (f), such broker or dealer shall at all times maintain net capital equal to the greater of $100,000 ($25,000 in the case of a broker or dealer effecting transactions solely in municipal securities) or 4 percent of aggregate debit items computed in accordance with the Formula for Determination of Reserve Requirements for Brokers and Dealers (Exhibit A to Rule 15c3–3, 17 CFR 240.15c3–3a), or, if registered as a futures commission merchant, 4 percent of the funds required to be segregated pursuant to the Commodity Exchange Act, and the regulations thereunder, if greater, and shall notify the Examining Authority for such broker or dealer and the Regional Office of the Commission in which the broker or dealer has its principal place of business, in writing, of its election to operate under this provision. Once a broker or dealer has determined to operate pursuant to the provisions of this paragraph (f), he shall continue to

do so unless a change is approved upon application to the Commission.

(2) In the case of a broker or dealer who has consolidated a subsidiary pursuant to Appendix C (17 CFR 240.15c3–1c), such broker's or dealer's minimum net capital requirements shall be the sum of the greater of $100,000 or 4 percent of the parent broker's or dealer's aggregate debit items computed in accordance with 17 CFR 240.15c3–3a, or, if the parent is registered as a futures commission merchant, 4 percent of the funds required to be segregated pursuant to the Commodity Exchange Act and the regulations thereunder, if greater, and the total of each consolidated broker or dealer subsidiary's minimum net capital requirements. The minimum net capital requirements of a subsidiary electing to operate pursuant to paragraph (f) of this section shall be the greater of $100,000 or 4 percent of its aggregate debit items computed in accordance with 17 CFR 240.15c3–3a, or, if registered as a futures commission merchant, 4 percent of the funds required to be segregated by the subsidiary pursuant to the Commodity Exchange Act and the regulations thereunder, if greater. Where the subsidiary which has been consolidated has not elected to operate pursuant to paragraph (f) of this section, its minimum net capital requirement is the greater of its requirements under paragraph (a) of this section or 6⅔ percent of its aggregate indebtedness.

* * * * *

2. Section 240.15c3–1b is revised to read as follows:

§ 240.15c3–1b Adjustments to net worth and aggregate indebtedness for certain commodities transactions (Appendix B to 17 CFR 240.15c3–1).

(a) Every broker or dealer in computing net capital pursuant to 17 CFR 240.15c3–1 shall comply with the following:

(1) Where a broker or dealer has an asset or liability which is treated or defined in paragraph (c) of 17 CFR 240.15c3–1, the inclusion or exclusion of all or part of such asset or liability for the computation of aggregate indebtedness and net capital shall be in accordance with paragraph (c) of 17 CFR 240.15c3–1, except as specifically provided otherwise in this Appendix B. Where a commodity related asset or liability is specifically treated or defined in 17 CFR 1.17 and is not generally or specifically treated or defined in 17 CFR 240.15c3–1 or this Appendix B, the inclusion or exclusion of all or part of such asset or liability for the computation of aggregate indebtedness and net capital shall be in accordance with 17 CFR 1.17.

Aggregate Indebtedness

(2) The term "aggregate indebtedness" as defined in paragraph (c)(1) of this section shall exclude with respect to commodity-related transactions:

(i) Indebtedness arising in connection with an advance to a non-proprietary account when such indebtedness is adequately collateralized by spot commodities eligible for delivery on a contract market and when such spot commodities are covered.

(ii) Advances received by the broker or dealer against bills of lading issued in connection with the shipment of commodities sold by the broker or dealer; and

(iii) Equity balances in the accounts of general partners.

Net Capital

(3) In computing net capital as defined in paragraph (c)(2) of this section, the net worth of a broker or dealer shall be adjusted as follows with respect to commodity-related transactions:

(i) *Unrealized profit or loss for certain commodities transactions.* (A) Unrealized profits shall be added and unrealized losses shall be deducted in the commodities accounts of the broker or dealer, including unrealized profits and losses on fixed price commitments and forward contracts; and

(B) The value attributed to any non-transferable commodity option shall be the difference between the option's striking price and the market value for the actual commodity or futures contract which is the subject of the option. In the case of a long call commodity option, if the market value for the actual commodity or futures contract which is the subject of the option is less than the striking price of the option, it shall be given no value. In the case of a long put commodity option, if the market value for the actual commodity or futures contract which is the subject of the option is more than the striking price of the option, it shall be given no value.

(ii) Deduct any unsecured commodity futures or option account containing a ledger balance and open trades the combination of which liquidates to a deficit or containing a debit ledger balance only: *Provided, however,* Deficits or debit ledger balances in unsecured customers', non-customers' and proprietary accounts, which are the subject of calls for margin or other required deposits which are outstanding one business day or less need not be deducted from net worth;

(iii) Deduct all unsecured receivables, advances and loans except for:

(A) Management fees receivable from commodity pools outstanding no longer than thirty (30) days from the date they are due;

(B) Receivables from foreign clearing organizations;

(C) Receivables from registered futures commission merchants or brokers, resulting from commodity futures or option transactions, except those specifically excluded under paragraph (3)(ii) of this Appendix B.

(iv) Deduct all inventories (including work in process, finished goods, raw materials and inventories held for resale) except for readily marketable spot commodities; or spot commodities which adequately collateralize indebtedness under paragraph (c)(7) of 17 CFR 1.17;

(v) Guarantee deposits with commodities clearing organizations are not required to be deducted from net worth;

(vi) Stock in commodities clearing organizations to the extent of its margin value is not required to be deducted from net worth;

(vii) Deduct from net worth the amount by which any advances paid by the broker or dealer on cash commodity contracts and used in computing net capital exceeds 95 percent of the market value of the commodities covered by such contracts.

(viii) Do not include equity in the commodity accounts of partners in net worth.

(ix) In the case of all inventory, fixed price commitments and forward contracts, except for inventory and forward contracts in the inter-bank market in those foreign currencies which are purchased or sold for further delivery on or subject to the rules of a contract market and covered by an open futures contract for which there will be no charge, deduct the applicable percentage of the net position specified below:

(A) Inventory which is currently registered as deliverable on a contract market and covered by an open futures contract—No charge.

(B) Inventory which is covered by an open futures contract or commodity option—5% of the market value.

(C) Inventory which is not covered—20% of the market value.

(D) Fixed price commitments (open purchases and sales) and forward contracts which are covered by an open futures contract or commodity option—10% of the market value.

(E) Fixed price commitments (open purchases and sales) and forward

contracts which are not covered by an open futures contract or commodity option—20% of the market value.

(x) [Reserved]

(xi) [Reserved]

(xii) Deduct for undermargined customer commodity futures accounts the amount of funds required in such such account to meet maintenance margin requirements of the applicable board of trade or, if there are no such maintenance margin requirements, clearing organization margin requirements applicable to such positions, after application of calls for margin, or other required deposits which are outstanding five business days or less until December 31, 1980, four business days or less until December 31, 1982, and three business days or less thereafter. If there are no such maintenance margin requirements or clearing organization margin requirements on such accounts, then deduct the amount of funds required to provide margin equal to the amount necessary after application of calls for margin, or other required deposits outstanding five days or less until December 31, 1980, four days or less until December 31, 1982, and three days or less thereafter to restore original margin when the original margin has been depleted by 50 percent or more. *Provided,* To the extent a deficit is deducted from net worth in accordance with paragraph (3)(ii) of this Appendix B, such amount shall not also be deducted under this paragraph (3)(xii).

(xiii) Deduct for undermargined non-customer and omnibus commodity futures accounts the amount of funds required in each such account to meet maintenance margin requirements of the applicable board of trade or, if there are no such maintenance margin requirements, clearing organization margin requirements applicable to such positions after application of calls for margin, or other required deposits which are outstanding two business days or less. If there are no such maintenance margin requirements or clearing organization margin requirements, then deduct the amount of funds required to provide margin equal to the amount necessary after application of calls for margin, or other required deposits outstanding two days or less to restore original margin when the initial margin has been depleted by 50 percent or more. *Provided,* To the extent a deficit is deducted from net worth in accordance with paragraph (3)(ii) of this Appendix B, such amount shall not also be deducted under this paragraph (3)(xiii).

(xiv) In the case of open futures contracts held in proprietary accounts carried by the broker or dealer which are not covered by a position held by the broker or dealer or which are not the result of a "changer trade" made in accordance with the rule of a contract market deduct:

(A) For a broker or dealer which is a clearing member of a contract market for the positions on such contract market cleared by such member, the applicable margin requirement of the applicable clearing organization;

(B) For a broker or dealer which is a member of a contract market, 150% of the applicable maintenance margin requirement of the applicable board of trade or clearing organization, whichever is greater;

(C) For all other brokers or dealers, 200% of the applicable maintenance margin requirement of the applicable board of trade or clearing organization, whichever is greater; or

(D) For open contracts for which there are no applicable maintenance margin requirement, 200% of the applicable initial margin requirement.

Provided, The equity in any such proprietary account shall reduce the deduction required by this paragraph (3)(xiv) if such equity is not otherwise includable in net capital.

(xv) *Options.* In the case of a broker or dealer which is a taker of a commodity option, the deduction shall be the amount of any commodity option premium which has been used to increase net capital (however, in the case of a broker or dealer which is a grantor of a commodity option, the deduction may be reduced by the amount of any commodity option premium which has not been previously recognized as income).

(xvi) In the case of a commodity option which is carried long by the broker or dealer as a taker of a commodity option which has value and such value is used to increase net capital, the deduction should be ten percent of the market value of the commodity which is the subject of such option, but in no event shall the deduction be greater than the value attributed to such option.

(xvii) Deduction 5% of all unsecured receivables includable under paragraph (3)(iii)(C) of this Appendix B used by the broker or dealer in computing "net capital" and which are not receivable from (A) a futures commission merchant registered as such with the Commodity Futures Trading Commission, or (B) a broker or dealer which is registered as such with the Securities and Exchange Commission.

(xviii) A loan or advance or any other form of receivable shall not be considered "secured" for the purposes of paragraph (3) of this Appendix B unless the following conditions exist:

(A) The receivable is secured by readily marketable collateral which is otherwise unencumbered and which can be readily converted into cash equal to or in excess of that part of the receivable which is shown in the broker's or dealer's records as secured; and

(B)(*1*) The readily marketable collateral is in the possession or control of the broker or dealer; or

(*2*) The broker or dealer has a legally enforceable, written security agreement, signed by the debtor, and has a perfected security interest in the readily marketable collateral within the meaning of the laws of the State in which the readily marketable collateral is located.

(xix) The term "cover" for purposes of this Appendix B shall mean cover as defined in 17 CFR 1.17(j).

(xx) The term "customer" for purposes of this Appendix B shall mean customer as defined in 17 CFR 1.17(b) (2). The term "non-customer" for purposes of this Appendix B shall mean non-customer as defined in 17 CFR 1.17(b) (4).

3. Paragraphs (b) (6) (iii), (7), (8), (10) (ii) (B) and (c) (2), (5), and (7) of § 240.15c3–1d are revised to read as follows:

§ 240.15c3–1d Satisfactory subordination agreements (Appendix D to 17 CFR 240.15c3–1).

* * * * *

(b)* * *

(6)* * *

(iii) The secured demand note agreement may also provide that, in lieu of the procedures specified in the provisions required by paragraph (b) (6) (ii) of this section, the lender with the prior written consent of the broker or dealer and the Examining Authority for the broker or dealer may reduce the unpaid principal amount of the secured demand note. *Provided,* That after giving effect to such reduction the aggregate indebtedness of the broker or dealer would not exceed 1000 per centum of its net capital or, in the case of a broker or dealer operating pursuant to paragraph (f) of 17 CFR 240.15c3–1, net capital would not be less than 7% of aggregate debit items computed in accordance with 17 CFR 240.15c3–3a or, if registered as a futures commission merchant, 7% of the funds required to be segregated pursuant to the Commodity Exchange Act, and the regulations thereunder, if greater. *Provided, further,*

That no single secured demand note shall be permitted to be reduced by more than 15% of its original principal amount and after such reduction no excess collateral may be withdrawn. No Examining Authority shall consent to a reduction of the principal amount of a secured demand note if, after giving effect to such reduction, net capital would be less than 120% of the minimum dollar amount required by 17 CFR 240.15c3–1.

(7) *Permissive Prepayments.* A broker or dealer at its option but not at the option of the lender, may, if the subordination agreement so provides, make a Payment of all or any portion of the Payment Obligation thereunder prior to the scheduled maturity date of such Payment Obligation (hereinafter referred to as a "Prepayment"), but in no event may any Prepayment be made before the expiration of one year from the date such subordination agreement became effective: *Provided, however,* That the foregoing restriction shall not apply to temporary subordination agreements which comply with the provisions of paragraph (c) (5) of this Appendix D. No Prepayment shall be made, if, after giving effect thereto (and to all Payments of Payment Obligations under any other subordinated agreements than outstanding the maturity or accelerated maturities of which are scheduled to fall due within six months after the date such Prepayment is to occur pursuant to this provision or on or prior to the date on which the Payment Obligation in respect of such Prepayment is scheduled to mature disregarding this provision, whichever date is earlier) without reference to any projected profit or loss of the broker or dealer, either aggregate indebtedness of the broker or dealer would exceed 1000 per centum of its net capital or its net capital would be less than 120 per centum of the minimum dollar amount required by 17 CFR 240.15c3–1 or, in the case of a broker or dealer operating pursuant to paragraph (f) of 17 CFR 240.15c3–1, its net capital would be less than 7% of its aggregate debit items computed in accordance with 17 CFR 240.15c3–3a or if registered as a futures commission merchant, 7% of the funds required to be segregated pursuant to the Commodity Exchange Act and the regulations thereunder, if greater, or its net capital would be less than 120% of the minimum dollar amount required by paragraph (f) of 17 CFR 240.15c3–1. Notwithstanding the above, no Prepayment shall occur without the prior written approval of the Examining Authority for such broker or dealer.

(8) *Suspended Repayment.* (i) The Payment Obligation of the broker or dealer in respect of any subordination agreement shall be suspended and shall not mature if, after giving effect to Payment of such Payment Obligation (and to all Payments of Payment Obligations of such broker or dealer under any other subordination agreement(s) then outstanding which are scheduled to mature on or before such Payment Obligation) either (A) the aggregate indebtedness of the broker or dealer would exceed 1200% its net capital or, in the case of a broker or dealer operating pursuant to paragraph (f) of 17 CFR 240.15c3–1, its net capital would be less than 6 percent of aggregate debit items computed in accordance with 17 CFR 240.15c3–3a or, if registered as a futures commission merchant, 6% of the funds required to be segregated pursuant to the Commodity Exchange Act and the regulations thereunder, if greater, or (B) its net capital would be less than 120 percent of the minimum dollar amount required by 17 CFR 240.15c3–1 including paragraph (f), if applicable. *Provided,* That the subordination agreement may provide that if the Payment Obligation of the broker or dealer thereunder does not mature and is suspended as a result of the requirement of this paragraph (b)(8) for a period of not less than six months, the broker or dealer shall thereupon commence the rapid and orderly liquidation of its business but the right of the lender to receive Payment, together with accrued interest or compensation, shall remain subordinate as required by the provisions of 17 CFR 240.15c3–1 and 240.15c3–1d.

* * * * *

(10)* * *

(ii)* * *

(B) The aggregate indebtedness of the broker or dealer exceeding 1500% of its net capital or, in the case of a broker or dealer which has elected to operate under paragraph (f) of 17 CFR 240.15c3–1, its net capital computed in accordance therewith is less than 4% of its aggregate debit items computed in accordance with 17 CFR 240.15c3–3a or, if registered as a futures commission merchant, 4% of the funds required to be segregated pursuant to the Commodity Exchange Act and the regulations thereunder, if greater, throughout a period of 15 consecutive business days, commencing on the day the broker or dealer first determines and notifies the Examining Authority for the broker or dealer, of the Examining Authority or the Commission first determines and notifies the broker or dealer of such fact;

* * * * * *

(c) * * *

(2) *Notice of maturity or accelerated maturity.* Every broker or dealer shall immediately notify the Examining Authority for such broker or dealer if, after giving effect to all Payments of Payment Obligations under subordination agreements then outstanding which are then due or mature within the following six months without reference to any projected profit or loss of the broker or dealer, either the aggregate indebtedness of the broker or dealer, either the aggregate indebtedness of the broker or dealer would exceed 1200% of its net capital or its net capital would be less than 120% of the minimum dollar amount required by 17 CFR 240.15c3–1, or, in the case of a broker or dearler who is operating pursuant to paragraph (f) of 17 CFR 240.15c3–1, its net capital would be less than 6% of aggregate debit items computed in accordance with 17 CFR 240.15c3–3a or, if registered as a futures commission merchant, 6% of the funds required to be segregated pursuant to the Commodity Exchange Act and the regulations thereunder, if greater, or less than 120% of the minimum dollar amount required by paragraph (f) of 17 CFR 240.15c3–1.

* * * * *

(5) *Temporary Subordinations.* For the purpose of enabling a broker or dealer to participate as an underwriter of securities or other extraordinary activities in compliance with the net capital requirements of 17 CFR 240.15c3–1, a broker or dealer shall be permitted, on no more than three occasions in any 12 month period, to enter into a subordination agreement on a temporary basis which has a stated term of no more than 45 days from the date such subordination agreement became effective. *Provided,* That this temporary relief shall not apply to a broker or dealer if, at such time, it is subject to any of the reporting provisions of 17 CFR 240.17a–11 under the Securities Exchange Act of 1934, irrespective of its compliance with such provisions or if immediately prior to entering into such subordination agreement either (i) the aggregate indebtedness of the broker or dealer exceeds 1000 per centum of its net capital or its net capital is less than 120% of the minimum dollar amount required by 17 CFR 240.15c3–1, or (ii) in the case of a broker or dealer operating pursuant to paragraph (f) of 17 CFR 240.15c3–1, its net capital is less than 7 percent of aggregate debits computed in accordance with 17 CFR 240.15c3–3a or,

if registered as a futures commission merchant, 7% of the funds required to be segregated pursuant to the Commodity Exchange Act and the regulations thereunder, if greater, or less than 120% of the minimum dollar amount required by paragraph (f) of this section, or (iii) the amount of its then outstanding subordination agreements exceeds the limits specified in paragraph (d) of 17 CFR 240.15c3–1. Such temporary subordination agreement shall be subject to all the other provisions of this Appendix.

* * * * *

Subordination Agreements in Effect Prior to Adoption

(7) Any subordination agreement which has been entered into prior to December 20, 1978 and which has been deemed to be satisfactorily subordinated pursuant to 17 CFR 240.15c3–1 as in effect prior to December 20, 1978, shall continue to be deemed a satisfactory subordination agreement until the maturity of such agreement. *Provided,* That no renewal of an agreement which provides for automatic or optional renewal by the broker or dealer or lender shall be deemed to be a satisfactory subordination agreement unless such renewed agreement meets the requirements of this Appendix within 6 months from December 20, 1978. *Provided, further,* That all subordination agreements must meet the requirements of this Appendix within 5 years of December 20, 1978.

By the Commission.

George A. Fitzsimmons,

Secretary.

17 CFR Part 249

[Release No. 34-15939]

Forms, Securities Exchange Act of 1934

Focus Reporting System; Requirements for Financial Reporting

AGENCY: Securities and Exchange Commission.

ACTION: Rule amendment.

SUMMARY: The Commission today announced amendments to the financial and operational reporting requirements collectively known as the FOCUS reporting system by adopting the previously proposed Schedule of Segregation Requirements and Funds on Deposit in Segregation currently being used by the Commodity Futures Trading Commission for its registered futures commission merchants. This schedule will apply only to those brokers or dealers that are also futures commission merchants.

EFFECTIVE DATE: July 23, 1979.

FOR FURTHER INFORMATION CONTACT: James G. Moody, Attorney Advisor, Division of Market Regulation, Securities and Exchange Commission, Washington, D.C. 20549, (202) 376–8135.

SUPPLEMENTARY INFORMATION: The Securities and Exchange Commission today announced the adoption of certain amendments to Part II of Form X–17A–5, a financial and operational combined uniform single report under the Securities Exchange Act of 1934. The amendments will revise the form so as to incorporate the Schedule of Segregation Requirements and Funds on Deposit in Segregation currently being used by the Commodity Futures Trading Commission.

Discussion

On December 17, 1975 the Commission adopted Form X–17A–5 (§ 249.617), the Financial and Operational Combined Uniform Single ("FOCUS") Report, to become effective on January 1, 1976.[1] Part II of Form X–17A–5 is a general purpose financial and operational report designed to obtain essential regulatory information on a quarterly basis and to develop financial statements in a format consistent with generally accepted accounting principles.

On September 1, 1978, the Commodity Futures Trading Commission (the "CFTC") amended its rules pertaining to the minimum financial and related reporting requirements imposed upon futures commission merchants.[2] Although the CFTC amendments apply only to futures commission merchants, about half of all commodity customer business in the futures industry is done by futures commission merchants that are also registered with the Commission as securities broker-dealers and are therefore subject to the FOCUS reporting requirements. Accordingly, the amendments adopted herein are designed to incorporate the Schedule of Segregation Requirements and Funds on Deposit in Segregation currently being used by the CFTC. This will enable brokers and dealers that are also futures commission merchants to satisfy the CFTC's reporting requirements by filing the amended Part II [3] of the FOCUS Report on a quarterly basis, thereby eliminating the need to make burdensome duplicate reports.

Statutory Basis and Competitive Considerations

Pursuant to the Securities Exchange Act of 1934 and particularly sections 15(c)(3), 17 and 23 thereof, 15 U.S.C. 78*o*(c)(3), 78q and 78w, the Commission hereby amends 17 CFR 249.617 of Chapter II of Title 17 of the Code of Federal Regulations in the manner set forth below. The Commission believes that any burden imposed upon competition by the amendments is necessary and appropriate in furtherance of the purposes of the Act, and particularly to implement the Commission's continuing mandate under section 15(c)(3) thereof, 15 U.S.C. 78*o*(c)(3), to provide minimum safeguards with respect to the financial responsibility of brokers and dealers.

§ 249.617 [Amended]

Text of Schedule

The Commission amends Part II of Form X–17A–5, a financial and operational combined uniform single report under the Securities Exchange Act of 1934, by adding the following schedule.

Financial and Operational Combined Uniform Single Report

Broker or Dealer—as of ————.

Schedule of Segregation Requirements and Funds in Segregation

Customers' regulated commodity futures accounts[**]

Segregation requirements

1. Net ledger balance:	
a. Cash	$————
b. Securities (at market)	————
2. Net unrealized profit (loss) in open futures contracts	————
3. Net equity (deficit) (Total of 1—plus or minus 2	————
4. Add: accounts liquidating to a deficit and accounts with debit balances with no open trades	————
5. Amount required to be segregated (Total of 3 & 4)	$————

---

[1] Securities Exchange Act Release No. 11935, December 17, 1975; 40 FR 59706, December 30, 1975. Part IIA is an abbreviated version of Part II which is filed on a quarterly basis by brokers and dealers which neither clear transactions nor carry customer accounts. As these amendments were originally proposed, Part IIA would also have been amended to incorporate the CFTC's Schedule. However, since Part IIA is filed only by brokers and dealers which neither clear nor carry customer accounts, this additional information is unnecessary.

[2] 43 FR 39956 (September 8, 1978).

[3] The new Schedule will become page 10 of Part II. The current page 10 will become page 11 of Part II.

[**] The term "customer" shall mean "customer" as defined in 17 CFR 1.17(b)(2).

Funds on Deposit in Segregation

6. Deposited in segregated funds bank accounts:
   a. Cash.....
   b. Securities representing investments of customers' funds (at market).....
   c. Securities held for customers in lieu of cash margins (at market).....
7. Margins on deposit with clearing organizations of contract markets:
   a. Cash.....
   b. Securities representing investments of customers' funds (at market).....
   c. Securities held for customers in lieu of cash margins (at market).....
8. Settlement due from (to) contract market clearing organization.....
9. Net equities with other FCMs.....
10. Segregated funds on hand:
   a. Cash.....
   b. Securities representing investments of customers' funds (at market).....
   c. Securities held for customers in lieu of cash margins (at market).....
11. Total amount in segregation (Total of 6 through 10).....$
12. Excess funds (insufficiency) in segregation (11 minus 5).....$

By the Commission.

George A. Fitzsimmons,
Secretary.

June 5, 1979.

Part IX

Consumer Product Safety Commission

Method For Identifying Toys And Other Articles Intended For Use By Children Under 3 Years Of Age Which Present Choking, Aspiration, Or Ingestion Hazards Because Of Small Parts

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Parts 1500 and 1501

Method for Identifying Toys and Other Articles Intended for Use by Children Under 3 Years of Age Which Present Choking, Aspiration, or Ingestion Hazards Because of Small Parts

AGENCY: Consumer Product Safety Commission.

ACTION: Final regulation.

SUMMARY: The Commission is issuing a regulation that classifies as banned hazardous substances certain toys and other articles intended for use by children under 3 years of age. It covers products that the Commission believes present a choking, aspiration or ingestion hazard, based on their failure to comply with specified size criteria. By banning these products, the regulation is expected to reduce the risks to children under 3 from choking, aspirating, or ingesting small parts.

DATES: Products introduced into interstate commerce after January 1, 1980 are subject to the regulation.

FOR FURTHER INFORMATION CONTACT: Elaine Besson, Office of Program Management, Consumer Product Safety Commission, Washington, D.C. 20207, telephone: 301–492–6453.

SUPPLEMENTARY INFORMATION:

I. Introduction

The Consumer Product Safety Commission believes that toys and other articles intended for use by children under 3 that contain parts small enough to be aspirated or ingested present an unreasonable risk of injury. The Commission is issuing a regulation that would classify such articles as banned hazardous substances.

The regulation requires that toys and other articles intended for very young children be tested in a specially designed device. The design of this device is based both on anthropometric measurements and on actual injury data. The device is intended to screen out items which are small enough to be ingested or aspirated by very young children. The test method in the regulation incorporates the Commission's "use and abuse" test methods; use and abuse testing will permit identification of small parts that may separate from a covered product during its lifetime.

The scope of the regulation is limited to toys and other articles intended for use by children under 3. The Commission believes that these very young children are particularly susceptible to small parts-related injuries because they are relatively unaware of risks and because they tend to place objects indiscriminately in their mouths. Frequently, too, adults believe that items intended for use by this age group are designed for unsupervised play.

The Commission is taking this action under its Federal Hazardous Substances Act authority to ban children's products which present an unreasonable risk of injury. The Commission's belief that an unreasonable risk of injury exists is supported by injury information which indicates that a substantial number of injuries related to small parts involves children in this age group and items intended for their use. The Commission recognizes that by limiting the scope of the regulation to only those items intended for very young children, it will not eliminate all small parts incidents. However, the regulation will eliminate some of these frequently unanticipated and potentially life-threatening injuries.

Certain items have been exempted from the regulation. These include articles which have functional, educational, or other value which outweighs the risk they present, and articles already covered under other Commission regulations. In addition to these specific exemptions, the Commission notes that articles intended only for use by older children are not within the scope of the regulation; examples of such products are discussed below.

The regulation includes a list of articles which the Commission believes are intended for children under 3 and thus within the scope of the regulation. In addition, the regulation contains a list of factors which the staff will consider before determining whether products not specifically listed are covered. The Commission recognizes, however, that in some cases questions may arise. Therefore, the regulation references a procedure which firms may use to provide information on the intended use of the product before the Commission staff takes enforcement action.

II. Background

The Commission regulates the safety of toys and other children's articles under the Federal Hazardous Substances Act (FHSA, 15 U.S.C. 1261 *et seq.*). Before the Commission began operating in May 1973, the Food and Drug Administration (FDA) regulated toy safety under FHSA authority.

In 1970 the FDA issued two toy safety regulations which addressed the aspiration, ingestion, and choking hazards presented by particular small parts in toys, such as noisemaking components in rattles (these regulations are now codified with the Commission's regulations at 16 CFR 1500.18(a)(1) and (2)). Under the authority of these regulations, the FDA and later the Commission took many actions against particular toys which contained loose, small objects that could injure children.

In January 1973 the FDA proposed for public comment a comprehensive regulation designed to (1) identify toys and other articles intended for use by children under 3 years of age which present a mechanical hazard from small parts, (2) identify mouth-actuated toys intended for use by children under 8 years of age which present a mechanical hazard from small parts, and (3) classify all such products as "banned hazardous substances" under the FHSA (38 FR 2179–80, Jan. 22, 1973).

The January 1973 proposed regulation used a truncated, hollow cylinder of specified dimensions to determine which products were too small (or had components that were too small). In addition, the proposal referenced "use and abuse" test procedures to simulate the "normal use" and "reasonably foreseeable damage or abuse" which are part of the statutory definition of a mechanical hazard (section 2(s) of FHSA, 15 U.S.C. 1261(s)).

Some products which are normally intended by the manufacturer for children over 3 years of age may not be readily recognized by the purchaser as potentially unsuitable for younger children due to the presence of small parts. The FDA proposal therefore provided an exemption for those products only if they had the "negative" label "Caution: Not Recommended for Children Under 3 Years Old." A similar exemption based on cautionary negative labeling was proposed for mouth-actuated toys "not generally recognized as being suitable for use only by children 8 years of age or older." The proposal contained additional exemptions for chalk, crayons, and books made entirely from paper because the FDA believed the developmental benefits that children derive from the use of these products outweigh the potential danger of their being aspirated or ingested.

In response to its proposal, the FDA received over 90 comments from manufacturers, distributors, trade associations, the American Academy of Pediatrics, and individual consumers. Many of these comments were extensive and extremely critical. They addressed: the very broad and undefined scope of

the regulation; the lack of documentation for establishing the size and configuration of the test device; the vagueness of the labeling provisions and the exaggerated size requirements of lettering; the adverse effect of negative labeling; and the adequacy of lead time for compliance. In addition, the comments included requests for 20 different product class exemptions.

On October 16, 1978 the Commission proposed for public comment a revised small parts banning regulation (43 FR 47684–88). In this revised proposal, the Commission took into account the comments received in response to the FDA's January 1973 proposal.

III. Proposed Regulation

The October 1978 revised proposed small parts regulation was based on current injury data. It used the same cylindrical test device that the January 1973 proposal used, but it defined the scope of the regulation more clearly. The following is a discussion of the October 1978 proposal:

A. Injury Data

The government and industry toy safety efforts directed at small parts have been effective in reducing the risk of injury presented by small parts on toys and other articles intended for use by children under 3 years of age.[1] Nevertheless, the Commission published the October 1978 proposal because of its preliminary finding that an unreasonable risk still exists which should be addressed by a mandatory and comprehensive regulation. In particular, the fact that many of the injuries are fatal to children supported the Commission's belief about the unreasonableness of the risk from small parts.

During calendar year 1976, more than 7,000 children under 10 years of age were treated in U.S. hospital emergency rooms for injuries related to small parts in toys. This is a Commission estimate which is based on data from a statistical sample of 119 hospitals comprising the National Electronic Injury Surveillance System (NEISS). A number of Commission efforts have led to additional injury information that focuses on the hazard which small parts present to children under 3:

(1) *Special study.* Between December 24, 1976 and February 9, 1977 the Commission's epidemiological staff conducted a special study of small parts injuries reported through NEISS. The staff investigated and analyzed the injuries and found 153, representing an estimated 3,800 nationwide injuries for that period. These were verified to be ingestions, throat lodgments, or foreign body lodgments in ears or noses. Forty-six percent of these injuries were to children under 3 years of age, and 79 percent of all choking incidents were to children under three. (The complete study, "Injuries Associated with Small Objects," is available from the Office of the Secretary.)

(2) *Bendix study.* In 1976 the Commission contracted with the Bendix Company to conduct an investigation into the size of toys/small parts which have caused choking deaths or incidents in children under the age of 6 years. Bendix solicited information from the membership of the National Association of Medical Examiners.

Death certificates and injury reports obtained by Bendix indicated that toys, toy parts, and other objects ranging in size from 9/16 inch to 1¾ inches in greatest diameter can produce fatal obstruction of the air passage. (Copies of this Bendix report are available from the Office of the Secretary.)

(3) *Data on deaths associated with small parts.* The staff has compiled data, from its own files and from those of the Bendix Company, on deaths associated with small parts. Between March 1973 and March 1977 the Commission received 113 death certificates in which the cause of death was related to small parts. Forty-five deaths were associated with 14 different types of children's toys and nursery products.

The following causes of death were among those revealed by the certificates: (1) lodgment of an object in the pharynx or larynx area of the throat which blocked the air passage and resulted in suffocation; (2) asphyxiation due to partial or total blockage of air to the lungs, resulting from either direct obstruction of the trachea (windpipe) by a foreign object or indirect obstruction by vomitus; (3) swallowed sharp or pointed objects which cut or pierced internal organs; (4) aspiration of an object into a bronchus or lung.

Approximately half of the victims in the Commission's death certificate file on small parts were under 3 years of age. In the Bendix Company data on deaths associated with choking, more than two-thirds of those who died were children under 3 years of age.

(4) *Other data bases.* The Commission also reviewed over 200 indepth investigations and consumer complaints in its files which involved injuries from small parts. These involved foreign body throat lodgments, ingestions, and aspirations, as well as foreign body ear and nose lodgments. The throat lodgments cut off the breathing of many of the victims, and some children survived only because an adult was present to remove the object. Other victims died of suffocation. All of the victims who aspirated objects required hospital in-patient treatment.

B. Statutory Framework

Under section 2(f)(1)(D) of the FHSA, the definition of "hazardous substance" includes "[a]ny toy or other article intended for use by children which the [Commission] by regulation determines * * * presents an electrical, mechanical, or thermal hazard." Under section 2(s) of the FHSA, "[a]n article may be determined to present a mechanical hazard if, in normal use or when subjected to reasonably foreseeable damage or abuse, its design or manufacture presents an unreasonable risk of personal injury or illness * * * because the article (or any part or accessory thereof) may be aspirated or ingested * * * or * * * because of any other aspect of the article's design or manufacture."

The Commission proposed to define as hazardous substances certain toys and other articles intended for use by children under 3 years of age, based on the small parts hazard they present. Following issuance of a final regulation defining them as "hazardous substances," toys that contain small parts, as defined in the regulation are automatically "banned hazardous substances" under section 2(q)(1)(A) of the FHSA, because they would be "toy[s] or other article[s] intended for use by children which [are] hazardous substance[s]."

Under section 3(e) of the FHSA, the Commission must follow the informal notice and comment rulemaking procedures of 5 U.S.C. 553 to determine that a toy presents a mechanical hazard, unless it elects alternative procedures. In this small parts proceeding the Commission has followed the 5 U.S.C. 553 procedures.

C. Scope

As proposed, the small parts regulation applied to nearly all toys and other articles intended for children under 3 years of age. All children and adults are potential victims of the hazard presented by small parts, but children under 3 are particularly susceptible.

Children under 3 indiscriminately put things into their mouths and do not have the knowledge of cause and effect relating to protecting themselves from potential hazards as does an older child

[1] In an effort to simplify the preamble discussion, the term toy(s) will be used inclusively for both toys and other articles intended for use by children.

or adult. (This is discussed fully in an April 17, 1978 staff report, entitled "Normal Developmental Behavior in Young Children and Their Relationship to Potential Hazards," which is available from the Office of the Secretary.) In addition, very small parts on toys that are intended for use by children under 3 usually serve a limited or no functional purpose.

Finally, it is easier to control the products to which children under 3 have access than to control the products to which older children have access. Children under 3 could, of course, encounter and choke on a coin, hairpin, or other adult item or on toys intended for use by their older brothers and sisters. However, the Commission's proposal was based on its belief that a regulation directed at toys intended to be used by children under 3 will have a positive impact in reducing injuries.

In determining which toys and other articles are intended for children under 3, the Commission proposed to consider such factors as the manufacturer's stated intent (such as on a label) if it is a reasonable one; the advertising, promotion, and marketing of the toy; and whether the toy is commonly recognized as being intended for children under 3. As proposed, none of these factors would necessarily be determinative. (It should be noted that products which are intended both for children under 3 and for older children would fall within the scope of the regulation.)

The proposed regulation covered all toys and other articles intended for use by children under 3 that were included in a long list of product categories. The list was developed from a number of sources including the Toy Manufacturers of America classification system, published commercial promotional materials, and a retail store survey conducted by the Commission staff. While this list was not intended to be exhaustive, the Commission believed that the vast majority of toys covered by the regulation would fall within at least one of these categories. Because of the very broad scope of the proposed regulation, the Commission expected the list of product categories to help industry representatives and consumers focus on the products being regulated. The Commission emphasized that, even if a toy did not fall within a category on the list, it would be covered by the regulation as long as it is intended for use by children under 3 and is not specifically excluded from coverage.

The Commission proposed exemptions for a number of products whose functional, educational, or other value outweigh any possible hazard from small parts. In some cases, compliance with the small parts regulation would mean drastic redesign of useful everyday products at substantial cost to the consumer. In other cases, compliance would be physically impossible because the product could not perform its function if redesigned.

As examples, books made of paper and writing materials are educational. Children's clothing and accessories, such as shoe lace holders and buttons, are functional. Modeling clay and fingerpaints cannot practicably be manufactured so that small bits of these substances will never break off. (Under the FHSA, any such products which are harmful to children because of their toxicity, as an example, are automatically banned.)

The Commission also proposed to exempt marbles and balloons from the small parts regulation. If the regulation covered marbles and balloons, these entire product types would be effectively banned. The Commission believed that the negative effect of removing traditional toys such as these from the selections available to consumers would outweigh the net safety gain. In any case, the Commission expressed its belief that marbles, when used in the game of "marbles," are generally intended for children over 3. However, the proposed regulation did cover any marbles which are part of a toy that is intended for children under 3.

Finally, the Commission proposed to exempt pacifiers and rattles from the small parts regulation. The Commission's existing regulations for these products both contain requirements which specifically address the risk of injury presented by small parts (see 16 CFR Part 1510 for the rattle regulation and 16 CFR Part 1511 for the pacifier regulation).

A comment to the January 1973 proposal had requested an exemption for vending machine products. This was based on the claim that these products are not intended for children under 3 because such children cannot activate the machines. The Commission expressed its belief that some vending machine products are nevertheless intended for children under 3, and the proposed regulation did not exempt vending machine products as a broad category. Instead, the Commission proposed to evaluate them individually as to whether they are intended for use by children under 3.

D. Regulatory Criteria

The Commission's October 1978 proposed regulation centered on a measuring device—a truncated, hollow cylinder—which separates toys and their components into two classes, according to their size and shape. The Commission proposed that a toy or component which fits entirely within the cylinder is to small for children under 3 and should be banned.

The same cylinder has been used as the basis of voluntary toy safety efforts by the FDA and by Commission staff members. In addition, the Toy Manufacturers of America (TMA) incorporated the cylinder into its Toy Safety Voluntary Product Standard PS 72–76 (1976).

The dimensions of the cylinder, as proposed, were identical to those proposed by FDA in January 1973. Data obtained by the Commission and analyses performed since 1973 confirmed that a cylinder with those dimensions is the most meaningful, effective, and practical way to identify toys and components that present unreasonable risks of choking, aspiration, or ingestion to children under 3 years of age.

The Commission staff first evaluated the relevant medical data found in the existing literature. These data on the actual dimensions of air and food passages in humans are sparse and alone are probably insufficient to support the determination that objects of a particular size are hazardous. However, the data proved useful in establishing certain approximate size boundaries.

The staff then evaluated the sizes and shapes of the objects known to be involved in choking, aspiration, or ingestion incidents in children under 3. Many of these objects were identified in the Bendix contract report. The staff found that the cylinder would "screen out" the vast majority of such objects.

The staff also evaluated a test device with dimensions used by the Commission (43 FR 22002, May 23, 1978) and the Canadian government to define hazardous rattles. This device also screened out many objects which were involved in actual choking, aspiration, or ingestion incidents. However, the rattle test device additionally screened out a large number of products not so involved and not otherwise believed by the staff to be hazardous. Based on this analysis, the Commission decided to incorporate the test cylinder into its proposed regulation.

A June 5, 1978 Commission staff report, entitled "Human Factors

Analysis of Ingestion, Aspiration, and Choking Injuries," discusses in some detail the link between the cylinder and the risks of injury it addresses. In particular, the report (which is available from the Office of the Secretary) traces the evolution of the cylinder and its dimensions.

Briefly, the design of the cylinder is derived from two screening devices originally proposed by the Toy Manufacturers of America. These devices consisted of a hollow sphere with an inside diameter of 1¼ inches and a long narrow cylinder having an inside diameter of ⅛ inch and a length of 2¼ inches. The purpose of the sphere and the cylinder was to eliminate objects which had been involved in ingestions, aspirations, and airway obstructions, such as small balls and slender pins. However, use of the two devices incorrectly implied that two separate and distinct problems existed. therefore, FDA combined the concepts of the two TMA devices into a single measuring tool, a truncated cylinder, which incorporated the dimensions of each.

The diameter of the cylinder is based upon a set of recommendations made by the Accident Prevention Committee of the American Academy of Pediatrics. As stated in this committee's correspondence, "an item having a 1¼ inch minimum width is not likely to . . . suddenly and completely obstruct the airway." The depth of the cylinder is based upon data and medical literature available to the Commission which indicate that the vast majority of objects involved in injuries to children under 3 years of age were less than 2¼ inches in length.

The regulation, as proposed, also referenced certain "use and abuse" test procedures which the Commission published in final form in the **Federal Register** on January 7, 1975 (40 FR 1484–85) and which appear at 16 CFR 1500.51 and 1500.52 (excluding the bite test procedure—section (c) of both provisions). These procedures are intended to simulate the normal use and reasonably foreseeable damage or abuse to which a toy for children under 3 would be subjected. As mentioned in the Background section above, this concept is contained in the statutory definition of a mechanical hazard.

Under the proposed regulation, toys (and detachable components) would be tested as potential small parts by being placed in the cylinder. They must be large enough so that they do not fit entirely within the cylinder. If a toy does not fit entirely within the cylinder, it would then be subjected to the referenced "use and abuse" procedures. The toy is again tested by being placed in the cylinder. In addition, any components or pieces that have become detached from the toy during the "use and abuse" procedures are separately tested in the cylinder. If any toy or any component or piece of a toy fails the test criteria (by being small enough to fit entirely within the cylinder), the toy is a banned hazardous substance.

E. Labeling

The regulation, as proposed in October 1978, did not contain any labeling requirements. The Commission considered and rejected the "negative" labeling approach that FDA used in its 1973 proposal. Because there was no attempt in the FDA proposal to define specific categories of toys to be covered, any toy not intended for children under 3, which contained small parts, had to be labeled with the warning "Caution: Not Recommended for Children Under 3 Years Old."

The 1973 labeling proposal, although never issued by the FDA or the Commission, prompted many manufacturers and importers to apply this label to many of their products. Such labeling was apparently designed to exempt products automatically from coverage of any final small parts regulation that might be applied to toys intended for children under 3.

As part of its October 1978 proposal, the Commission expressed its belief that the label has been used indiscriminately and without regard for the intentions of the original proposal. For example, certain items, such as squeeze toys and stuffed animals which are clearly intended for infants, have been distributed in commerce bearing the label.

In its proposal, the Commission strongly discouraged improper use of age labeling on children's products. The Commission proposed to disregard any label on a toy clearly intended for children under 3 that states otherwise. However, the Commission encouraged the use of proper age labeling, and proposed that such labeling be one factor it would consider before determining whether a particular toy is intended for use by children under 3 years of age (as discussed in the Scope section above). The Commission decided that a negative labeling requirement was not needed because the proposal clearly stated the intended scope of the regulation.

F. Effective Date

The Commission proposed that the final small parts regulation become effective six months after its issuance. This was based on the Commission's desire to make the regulation effective sooner than one year after its final issuance. The proposal was supported by the fact that the test cylinder has been available since 1973 to toy companies, most of which already produce complying products. The Commission sought comment especially on this proposal that the small parts regulation become effective six months after its publication in final form.

G. Economic Considerations

In its discussion of the October 1978 proposal, the Commission stated its expectation that the industry-wide economic impact of the small parts regulation would be small. The results of a standardized retail store survey suggested that the vast majority of toys and children's articles already meet the requirements of the proposed regulation. In part because of the existing voluntary standard and the specific exemptions of certain toys, only a small fraction of toys would be affected by the small parts regulation, as proposed.

Of those firms whose products did not then meet the requirements, the majority were expected to need only minor changes to bring their products into compliance. Frequently, the necessary adjustments would simply involve removal from the products of a small part which does not change the basic nature or function of the product. Alternatively, the manufacturer could redesign the product so that the small part is larger and thus complies with the regulation.

In some cases the regulation was expected to pose problems for manufacturers of products which contain small parts that a child can easily detach from a toy. The Commission expressed its belief that existing technology could solve such problems because nearly identical products exists which do not have such easily-detached small parts. More glue, rivets, or other similar solutions may be sufficient to bring a product into compliance, with only minor cost increases.

The Commission did not expect small businesses to face undue hardship in meeting the requirements of the regulation, as proposed. The economic considerations concerning the small parts proposal were fully discussed in the May 1978 staff report, entitled "Economic Assessment of the Proposed Small Parts Regulation," which is available from the Office of the Secretary.

H. Environmental Considerations

The Commission assessed the potential environmental impact of the small parts regulation, as proposed, and concluded that no potentially significant environmental impacts are associated with it. Therefore, the Commission decided that no environmental impact statement was necessary. (Copies of the environmental assessment are available from the Office of the Secretary.)

IV. Discussion of Public Comments

The Commission received 46 comments from the public on its October 1978 small parts proposed regulation. Eighteen of these came from industry and 17 came from individuals unaffiliated with any groups or organizations. Included among the 11 other comments were submissions from representatives of the medical profession and of state and local governments. All comments received are available for inspection in the Office of the Secretary.

The following discussion of the comments is categorized by subject. It does not correspond exactly with the discussion of the proposed regulation in section III, but it covers most of the same subjects.

A. Risk of Injury

1. *Injury data.* A number of commenters have asserted that the injury data cited by the Commission do not justify issuance of the small parts regulation. The most common comment was that many of the small products and components causing the deaths and injuries that were cited by the Commission would not be addressed by the regulation.

Based on the injury data which supported the proposed regulation, the Commission continues to believe that small parts present a serious hazard to children under 3 years of age. All of the available injury data, taken together, support the finding that the risk which small parts present to children under 3 is an unreasonable one.

For example, the NEISS data show the scope of the problem. Of the estimated 3,800 incidents uncovered during the 6-week special study of NEISS data on small parts injuries, 46 percent were to children under 3 and 79 percent of all life-threatening choking incidents were to children under 3. In addition, 68 percent of the NEISS injuries in the special study involving children's products involved products for children under 3 (if products exempted from the regulation are not counted, it is 64 percent).

The Commission's regulation will not eliminate all aspiration, choking and ingestion incidents. Some reported injuries were caused by household articles that are not intended for use by children under 3, including toys intended for use by older children. Other injuries may have resulted from misuse of the products that was not reasonably foreseeable.

By the same token, the NEISS data are not intended to pinpoint every injury which a proposed regulation might address. NEISS merely provides injury statistics which identify the broad categories of products and victims that are associated with injuries treated in hospital emergency rooms. The NEISS data relevant to the small parts regulation indicate that children under 3 bear a disproportionate share of the choking and other injuries caused by small parts. In conjunction with other injury data, the NEISS data support the finding that the risk which small parts present to children is an unreasonable one.

An example of other injury data which support the unreasonable risk finding is the significant number of deaths that small parts have caused to children under 3. The Commission's files contain 113 certificates on deaths caused by small parts. Of these, 45 were associated with various children's toys and nursery products, and approximately half of the victims in the 113 cases were under 3 years of age. A recent check of the Commission's death certificate data base reveals that at least 25 deaths from small parts involved products that are not exempt from the regulation.

Again, the Commission's regulation would not have prevented all of the deaths of children under 3 that were caused by small parts. Because products not intended for children caused some of the deaths, even a ban of all children's products involved in fatal incidents could not eliminate all risk. Nevertheless, the death certificate data support the existence of a serious risk from small parts. The Commission's regulation addresses a substantial portion of this risk in a fair, practical and effective way.

Injury statistics understate the risk of injury addressed by the small parts regulation. Even if every injury and death could be recorded and analyzed, incidents in which children under 3 barely escaped death and serious injury are unlikely to appear in statistical studies.

A parent who finds an infant choking on a teething ring and not breathing will immediately dislodge the ring. The infant may be fine in a few moments. Although death was nearly the tragic result, this incident would probably not show up in hospital emergency room records and would not be reported on a death certificate.

Such "close calls" are important indicators that a risk of injury from small parts exists. Although "close calls" are not routinely reported to the Commission, two mothers did describe such incidents in their official comments on the proposed small parts regulation. Both reports involved babies under six months and both involved crib toys. Although neither baby was injured, one or both could have choked to death on the small parts that came off the toys involved.

The Commission believes that it should not wait for deaths, injuries, or even "close calls" to occur before determining that a children's product presents an unreasonable risk of injury under the FHSA. As the Chairman of the National Commission on Product Safety said at a Senate subcommittee hearing in 1969, in testimony concerning toy safety amendments to the FHSA, "[w]hen your intelligence tells you that something will create an injury and it seems conceptually clear that an injury will occur, it is primitive to wait until a number of people have lost their lives or sacrificed their limbs before we attempt to prevent those accidents" (Hearing before the Consumer Subcommittee of the Committee on Commerce, April 16, 1969, pp. 31–32).

The Commission does know that small parts have caused the deaths of children under 3. By size and intended use, the Commission has categorized the products which present the greatest risk and which can be effectively regulated. Especially because deaths are involved, the Commission will not delay acting against the risk until every item in the category has been involved in a specific incident.

A trade association of firms associated with bulk vending products, the National Bulk Vendors Association (NBVA), has questioned whether such products present an unreasonable risk of injury to children under 3. NBVA has claimed that bulk vending products are not associated with particular small parts injury incidents.

The Commission believes that potential future incidents should be prevented, for the reasons discussed in this section. In addition, NBVA has stated that only two injury incidents in the Commission's data base might have involved bulk vending products. However, these two incidents were found in a 6-week special survey of

incidents in a sample of hospital emergency rooms. Therefore, each statistically represents many more emergency room incidents and many other incidents which would never show up in emergency room statistics. More importantly, products are generally categorized by type, not by method of distribution, for injury reporting purposes. The injuries associated with "bulk vending products" cannot therefore be accurately quantified using existing data.

2. *Legislative history of FHSA.* NBVA has made an additional argument, based on the legislative history of the FHSA, that vending machine products do not present an unreasonable risk of injury. As discussed under Statutory Framework (section III, B, above), the Commission is regulating small parts by classifying as "mechanical hazards" toys which are or which contain small parts. This classification must be based on a Commission finding that such toys present "an unreasonable risk of personal injury or illness."

NBVA's argument, based on its interpretation of the FHSA, is that "in contrast to electrical or thermal risks, mechanical risks are to be judged quantitatively before being classified as unreasonable risks." More specifically, NBVA has asserted that the Commission cannot classify a toy as a mechanical hazard merely because it is small. Rather, the Commission must also consider factors other than size.

The Commission agrees with all but a minor portion of MBVA's analysis of the legislative history. It is true that the definition of "electrical hazard" in the FHSA does not contain the "unreasonable risk" phrase. (Presumbly, any electrical risk is a serious one and a separate "unreasonable risk" finding is unnecessary.) However, the definition of "thermal hazard" does contain the same language about "unreasonable risk" that the definition of "mechanical hazard" contains.

The crucial point is that the Commission has not proposed to classify any toy as a mechanical hazard merely because of its size. As explained under Proposed Regulation (section III, above), the Commission has considered a number of factors. First, the Commission has identified the most vulnerable population at risk, children under 3. Because of the relative helplessness of these children and because of their propensity to place things in their mouths (as discussed in section III, C, above), the Commission's regulation is limited to toys and other articles intended for children under 3. If size were the only factor, the Commission would have banned all small toys intended for use by children of any age.

Another factor which the Commission has considered is the educational and functional value of the products potentially covered by the regulation. Some educational and functional products cannot be redesigned to comply with the regulation. Modeling clay is not modeling clay unless bits can break off. Buttons must be relatively small and are extremely useful on children's clothing. Therefore, the Commission granted exemptions for these and other products. If size were the Commission's only consideration, the regulation would have the practical effect of banning clay, paints, diaper pins, hair barrettes, and a host of other products.

Finally, the Commission has considered the severity of the injuries caused by the small toys. If a risk less severe than possible death were involved, the Commission may not have found it necessary to issue any small parts banning regulation at all.

NBVA's argument based on the FHSA legislative history might be convincing if the Commission had limited its consideration of factors to the size of the toys involved. However, the Commission has not done this. Instead, as required by the provisions of the FHSA, the Commission evaluated whether the toys it has regulated present an unreasonable risk of injury. The determination that they do is based on a careful consideration of such factors as the age of the children involved, the educational and functional value of the toys, the severity of the injuries involved, and the size of the toys.

B. Scope

1. *Products covered by regulation.* Many commenters have expressed views about the scope of the small parts regulation. A recurring comment from the toy industry was that the regulation does not clarify which toys and other articles are "intended for use by children under 3 years of age."

When proposing the small parts regulation in October 1978 the Commission provided a specific list of the toys which are covered. The Commission also listed the factors it would consider before determining which other toys might be intended for children under 3. As summarized above in the Scope section under Proposed Regulation (section III, C), these factors include the manufacturer's stated intent (such as on a label) if it is a reasonable one; the advertising, promotion, and marketing of the toy; and whether the toy is commonly recognized as being intended for children under 3.

Since none of the factors is determinative, many toy manufacturers expressed the concern that they will not know for certain whether their toys are covered by the regulation. Therefore, many suggested that the manufacturer's labeling should be conclusive on the question of whether a toy is intended for children under 3.

The Commission made a special effort to define clearly the scope of the small parts proposed regulation. The scope section (1501.2) included a lengthy list of the types of products that are definitely covered. This list was based on the Commission staff's retail survey of toys and children's articles. The Commission believes that this list covered most products which might reasonably be intended for children under 3.

The nature of any broad, generic regulation is that a few products will not be conclusively included in or excluded from the defined class. Therefore, the Commission has indicated factors to help determine fairly which "borderline" products might be covered by the regulation.

No single factor can determine conclusively whether a borderline toy is intended for children under 3. The manufacturer's labeling is undoubtedly one factor. If a toy's carton recommends "For children ages 2–5," it is likely that purchasers of that toy will give it to children of those ages. However, it is also likely that some purchasers will buy the toy for precocious children who are only one-and-one-half years old. Thus, despite the labeling, such a toy will actually be used by children for whom the manufacturer apparently does not intend it.

Similarly, the ways in which toys are packaged, promoted, and otherwise marketed will be factors in determining the age group for which they are intended. As an example, an exclusive import shop might be selling an expensive collector's item for adults or older children. A toy store might be selling inexpensive imitations of this item as toys for young children. In this example, place of sale and price would be important factors. The type and manner of advertising might also be factors.

Most marketing factors cannot be conclusive in determining whether a toy is intended for children under 3. Using the collector's item example, what would be the price cut-off and what would be the definitive description of what is an import shop and what is a toy store? In order to write a rule in which specific marketing factors clearly

separated toys intended for children under 3 from all other products, the Commission would have to disregard many subtle but relevant factors.

If the manufacturer's intent as stated on a label were solely determinative, hazardous toys that are genuinely intended for children under 3 could be intentionally or unintentionally mislabeled to fall outside of the Commission's small parts regulation.

Another deficiency with making labeling the sole and conclusive factor is that there are no industry-wide guidelines on age labeling. Consumers must contend with the differing practices of individual manufacturers. The Commission has observed at least one extreme example of how much these practices differ. On one page of a newspaper advertising supplement, a major toy retailer pictured and described a number of "baby dolls". In essence, these were the same dolls but were made by different companies. The manufacturers' age recommendations, which were also noted, were 3–8, 3–9, 2–up, 3–10, 3–up, 2–7, 1–7, and 2–8. Nevertheless, the Commission has every reason to believe that these baby dolls are all appropriate for use by children in the same age group.

The Commission believes that many factors are relevant to the determination of whether particular toys are intended for children under 3 and that none of these factors can be conclusive in isolation. In addition, manufacturers are not powerless to affect the marketing of their toys and are not ignorant of the way their toys are actually marketed.

Because of the importance of the factors, the Commission has decided to incorporate them into the small parts regulation. (They were discussed in the preamble to the small parts proposal.) Section 1501.2(b) of the final regulation below reflects this change.

The factors are most meaningful when they are carefully applied to the particular toys involved. Under a recently-amended procedure, the Commission's compliance and enforcement staff will be required to do this in every case, before initiating any enforcement action under the small parts regulation. The Commission believes that the scope of its small parts regulation is sufficiently clear. However, many commenters from the industry disagree. The procedure, along with the Commission's willingness to entertain requests for advice about the coverage of specific toys, addresses the strongly-stated industry comments that some toys are not clearly included in or excluded from the regulation.

Specifically, people and firms will have an opportunity to present written and/or oral evidence and arguments that enforcement action against their products would be unjustified. The longstanding practice of the Commission staff, which the Commission believes is a reasonable and important practice, has been to provide such an opportunity. Therefore, this procedure is now contained in staff enforcement guidelines.[2] The procedure (as contained in the guidelines, which are available from the Office of the Secretary), is summarized in the small parts regulation at § 1501.5 below.

Under the procedure, affected persons and firms will have the opportunity to present their arguments and evidence that a particular toy does not violate the regulation or that enforcement action is unwarranted. This opportunity is available anytime within 10 days of the time the staff sends them a "Letter of Advice" that their toys are noncomplying and that enforcement action might be necessary. The contentions will be addressed to the Area Office which sent the Letter of Advice. If the Area Office staff remains convinced that the toy is in violation of the regulation, its recommendation to initiate enforcement action (seizure, prosecution, or injunction), along with the firm's response to the Letter of Advice, must be made to the Commission or to a delegated staff member. The Commission has delegated this function to the Associate Executive Director for Compliance and Enforcement.[3]

This timely opportunity for submissions addresses the industry's concern that the regulation will be enforced against toys that are not intended for children under 3. At the same time, the ten-day period will not unduly delay necessary enforcement actions. (When required to protect the public safety in an emergency situation, the Commission may utilize more expeditious alternatives.) Especially because of the need for prompt consideration of the submissions, those that discuss the § 1501.2(b) factors will be particularly helpful.

2. *Expansion of scope.* One commenter—Edward M. Swartz, a Boston attorney who has been active in toy safety matters—has suggested that the Commission expand the scope of the small parts regulation to include toys foreseeably used by children up to age 5. Although this suggested change would almost surely result in some additional protection from hazardous toys, the Commission must reject it for the present time.

If the small parts regulation were broadened at this time, the scope of products covered would become uncertain. While most products intended for use by children under 3 are easily categorized as such, this may not be true for products intended for children between 3 and 5 years of age. In addition, although children 3 and older have been injured and endangered by small parts, a broadening of the regulation would require follow-up economic and injury data analyses to support an unreasonable risk of injury finding. Rather than delaying the present regulation, the Commission may consider as a separate regulatory possibility the protection of children 3 and older from the small parts hazard.

Other commenters suggested that polyurethane pellets, nut shells, and other toy stuffing materials be added to the scope of the small parts regulation. Since the integrity of covering materials will be tested under the use and abuse procedures, any stuffing materials that could pose a risk to children under 3 are already covered by the regulation. Neither the pellets nor shells nor any other stuffings need to be specifically or separately mentioned.

3. *Exemptions.* The Commission received numerous comments stating that particular products should or should not be exempted from the small parts regulation. As proposed, the following products were exempted: balloons; most marbles; books and other articles made of paper; writing materials; children's clothing and accessories; grooming, feeding, and hygiene products; records; modeling clay and similar products; paints; rattles; and pacifiers.

A few commenters suggested that marbles and balloons should be covered by the small parts regulation. As discussed in the Scope section under Proposed Regulation (section III. C), the Commission believes that marbles are not intended for use by children under 3 unless they are incorporated in a toy that is intended for such children. Therefore, the listing of marbles under exemptions was merely for clarification. They are not covered by the regulation (when sold on their own) and technically need not be exempted. In the final regulation they have been deleted from the list of exemptions.

Balloons represent a special situation. They cannot be regulated by the criteria in this regulation to address the small parts risk without being completely

---

[2] Enforcement guidelines were filed as a part of the original document.

[3] Copies of the authority delegation were filed as a part of the original document.

banned. The Commission has therefore decided not to include balloons in the final banning regulation below, and may consider a separate regulatory action for them. If so, the Commission will consider the possibility of requiring cautionary labeling, as two commenters suggested. (One of these commenters singled out balloons shorter than six inches, but the Commission knows of no safety-related basis for this distinction.)

Aside from the specific exemptions, the Commission's proposed regulation excluded from coverage certain substances that could become exposed as a result of the use and abuse testing. These were bits of fabric, yarn, paper, and fuzz. The reason for these exclusions was that these fibrous-type materials cannot be meaningfully tested with the truncated cylinder when they are pulled off or out of a toy. For example, the bits of fuzz that can be "picked-off" a teddy bear and the clumps of yarn hair that can be plucked from a doll's head cannot be tested in the cylinder with any precision. The Commission does not expect these minor exclusions to affect the overall effectiveness of the regulation.

A number of commenters have named other substances that they believe should be similarly excluded from coverage if exposed during use and abuse testing. The Commission agrees that some of the additional fibrous-type substances named in the comments should be added because they present the same testing limitations as fabric, yarn, paper, and fuzz. Therefore, the parenthetical exclusion in the final regulation (§ 1501.4(b)(2)) has been modified to include elastic and string. Because cotton and wool are fabrics, and therefore already covered by the parenthetical exclusion, the requests to add them to the list are denied as unnecessary.

There are a number of other substances and products which commenters specifically discussed:

(a) *Foam and other porous materials, such as sponge.* These products break off in distinct "chunks" and can be tested. In addition, the Commission believes that they are particularly hazardous because they can lodge in a child's throat and then expand to make it difficult to dislodge them. The Commission has numerous reports of choking incidents associated with foam from playpen rails and playpen pads. In fact, one of the comments to the small parts regulation discusses just such a "close call" involving foam from a playpen. The Commission has not added to the regulation any exemption for foam or similar products.

(b) *Doll clothing and other accessories.* While accessories on children's clothing are functional, the same accessories on doll's clothing are not. A child may play with the button on his or her sweater, but this is different from playing with a button on a doll's sweater which is specifically and solely designed for play purposes. Therefore, doll's accessories are not exempt from the small parts regulation. Toy dishes are similarly not exempt.

(c) *Teddy bears.* One commenter seems to imply that a teddy bear should be exempt from the regulation because its psychological value is as great as the educational value of balloons or crayons. Since it would be virtually impossible to design crayons (which break into pieces) or balloons that comply with the regulation, they have been exempted. However, it is possible to design teddy bears that comply with the regulation. Therefore, the Commission has not banned teddy bears by issuing this regulation, and no exemption for them is needed.

(d) *Ohajikes.* A Japanese trade association has asked whether Ohajikes are covered by the regulation. The Commission has learned that these are the Japanese equivalent of marbles and are not intended for use by children under 3. Therefore, they are not included within the scope of the regulation, unless they are incorporated in a toy intended for this age group.

(e) *Craft items.* Because craft items are not intended for use by children under 3, no exemption from the regulations is necessary.

(f) *Bulk vending products.* At the time it proposed the small parts regulation, the Commission specifically solicited comments on the question of whether these products should be exempt. The American Academy of Pediatrics has commented that they should not be. The National Bulk Vendors Association (NBVA) has submitted an extensive set of comments arguing that they should be.

NBVA has asserted that many bulk vending products are not intended for children under 3. To the extent that this is true, the small parts regulation does not apply and the issue of an exemption does not arise. However, NVBA's comments have assumed that some bulk vending products do fall within the scope of the regulation. The comments include a request for an exemption for the category of bulk vending products, a category which is defined by methods of distribution rather than by nature of the product.

The regulation contains exemptions for certain specific products, such as balloons. After considering the products in the category and balancing numerous factors, the Commission has determined that an exemption for balloons is appropriate. Similarly, the Commission has exempted some broader categories of products, such as those made of paper. Because all such products have a common characteristic, the Commission can determine whether an exemption based on that characteristic is appropriate.

However, NBVA seeks an entirely different kind of exemption. The category of bulk vending products includes many different types of products and products made of many different substances. The only link is that they are sold in vending machines. Only if this link were a factor which related significantly to the risk presented would an exemption be appropriate. NBVA has submitted no data establishing such a link. The Commission does not see any such link and has therefore declined to grant the exemption.

The NBVA has asserted that children under 3 cannot operate vending machines, but his is not a relevant consideration. Even if children under 3 could not obtain bulk vending toys directly from the machines without assistance from an adult or older child, it is still possible that the toys are intended for use by children under 3. The crucial point is that children under 3 are unlikely to go into stores and buy any toys at all. Adults generally buy toys and give them to children in this age group. This is true whether the toy is bought from a salesperson at a toy store or from a machine. This factor does not in any way undermine the obvious fact that many toys are intended for children under 3.

The Commission is not convinced that an exemption based on the method of distribution of certain toys is justified or appropriate for the small parts regulation. This generic regulation covers the products in a particular category which present a particular unreasonable risk of injury. Unless there is a reason to exempt products from the category, based on some common characteristic of those products or on compelling economic considerations, an exemption would contradict the rationale of the regulation.

The NBVA has not provided any such reason or any such characteristic. NBVA's comments do contain assertions, but no data, concerning the economic impact the small parts regulation would have on bulk vending products. However, the Commission does not share the view that its

regulation will put members of the NBVA out of business. In its evaluation of a representative sample of bulk vended products, the Commission has found none that will be covered by the regulation. Even if some bulk vending products were banned by the small parts regulation in the future (because of new designs or changed marketing patterns), the Commission is not persuaded that the industry could not avoid serious harm by shifting away from those products.

(g) *Articles made of fabric, yarn, fuzz, and paper.* The proposed regulation excluded from the test procedure any piece or "bit" of paper, fabric, yarn, or fuzz that became detached from a toy as a result of use and abuse testing. As already discussed in this section, these exclusions (as well as exclusions for elastic and string) are contained in the final regulation (§ 1501.4 (b) (2)). They are based on the testing limitations posed by these bits of materials.

A number of commenters have suggested that products made of the same materials be added to the list of exempted products in § 1501.3. The Commission declines to do so because products made entirely of these materials present the same potential small parts risk as products made of all other materials. It is only bits of the materials which cannot be tested meaningfully and which have therefore been excluded in § 1501.4(b)(2). (For a different reason, products made of paper are already exempted. In addition, fuzz is, by definition, a bit of material and an entire product would not be made of fuzz.)

(h) *Other.* A number of other commenters supported exemptions that the Commission proposed. These included pencils and felt tip pens. The Commission has left these exemptions unchanged.

C. Regulatory Criteria

1. *Size and nature of test cylinder.* To comply with the Commission's small parts regulation, toys must be too large to fit totally within the test cylinder. Therefore, the larger the cylinder, the more stringent the test would be. One commenter has suggested that the Commission make the cylinder larger and another has suggested that it be made smaller, However, neither of these commenters provided any technical data concerning a more appropriate size. More specifically, the commenter who suggested a smaller device noted that he personally could not swallow an object 1¼ inches in diameter. However, objects this size enter the mouth and block the throat precisely because they cannot be swallowed. In fact, 19 percent of the throat lodgment incidents the Commission knows of involved objects between ¾ and 1¼ inches in maximum dimension.

Another commenter suggested that the test template the Commission has used for rattles be used in the small parts regulation. On the basis of data on choking deaths of children 0–6 years of age, a team of experts who wrote the Bendix report recommended use of the rattle template. However, the Commission believes that the truncated cylinder is more appropriate for screening out products that are too small for children under 3. The rattle template, if substituted into the regulation below, would ban many products that the Commission does not believe present an unreasonable risk of injury to such children.

In addition, Canada's Consumer Standards Directorate has informed the Commission about the size of its small parts test cylinder. The shape of Canada's cylinder is the same as the Commission's and the dimensions, recently changed to the metric system, are nearly the same. After considering the comments on the size of the proposed test cylinder, the Commission has decided not to change the dimensions for the final regulation.

Unlike the Commission's regulation, Canada's regulation specifies that a force of 1 pound be exerted on objects when they are inserted into the cylinder for testing. The Commission does not believe that such a requirement would result in any significant increase in protection for children under 3.

A human factors engineer for Arthur D. Little, Inc. has suggested that the proposed cylinder be used temporarily "with the assurance that in-depth research and analysis would follow to develop the necessary scientific information to reduce the risk of small parts and form the basis of a permanent standard." The Commission must agree that any test device can be continually refined and improved, based on continuing scientific study. However, the Commission believes that its existing regulation fairly and effectively addresses a significant portion of the small parts risk to children under 3. The regulation incorporates a test cylinder which is based on epidemiological data indicating the population at prime risk, medical data, death certificates in which the size of the offending object is reported, and injury reports in which the size of the offending object is reported (see discussion of regulatory criteria in section III, D, above). If newly-available data indicate that the regulation could be improved, there are adequate procedures for amending it.

The Arthur D. Little engineer has also suggested that the Commission replace the proposed cylinder with cylinders of graduated sizes that reflect the range of differences in size and function of a child's aerodigestive system during the first three years of life. The Commission has adopted this type of approach, as one example, in certain provisions of its use and abuse regulations. Based on the fact that a child's strength increases with age, these provisions are divided into three parts (0–18, 19–36, and 37–96 months) which have differing test criteria. However, a child's gaining of strength occurs gradually and continually, rather than in an abrupt or discrete process. Therefore, these test criteria represent a compromise between the existing data and practicality. The compromise is justified only because the relevant data indicated an increasing trend and several benchmarks on which the Commission could base the different levels of test criteria.

In contrast, substantially less is known about the sizes of children's mouths, throats, windpipes and other critical passages. No data currently indicate even that the passages increase in size with age. Without such data and without the necessary benchmarks, a series of cylinders, as suggested by the Arthur D. Little engineer, is impractical. Although the Commission believes it would take years to develop a method for measuring these passages, it will periodically consider whether any available data would permit adoption of the suggested approach.

Finally, the same engineer has raised a potential problem concerning "implied safety." If a toy meets the Commission's standard and nevertheless presents a risk to children, there may be a false sense of security by purchasers of the toy. The Commission does not believe that all toys meeting the regulation are safe. However, the fact that some people may believe this is not a sufficient reason to withhold issuance of a regulation which will increase the safety of many toys.

Commenting on a different aspect of the test device, a toy manufacturer has suggested that the absence of dimensional tolerances and material or hardness requirements for the cylinder could contribute to inaccurate results. The Commission's test cylinders are manufactured from acrylic plastic. However, the Commission believes that any test cylinder made of a material sufficiently rigid to maintain the stated dimensions will yield equivalent results.

Neither hardness nor material requirements are necessary.

On the issue of tolerances, the Commission's cylinders will be designed and constructed to ensure that they will be no larger than the specified dimensions. In contrast, the Commission advises manufacturers to ensure that their test cylinders are no smaller than the specified dimensions. Manufacturers can provide themselves with a margin of safety, and increase the likelihood that their toys will comply with the regulation when tested by the Commission, by using a test cylinder that is slightly larger than the specified dimensions.

2. *Use and abuse test procedures.* Incorporated as part of the small parts test procedure are the "use and abuse" test methods at 16 CFR 1500.51 and 52. A number of commenters have raised a question about how the tension test method should be applied to toys and toy components made of porous materials such as polyurethane foam. The commenters are concerned that a failure will occur at the site of the clamps used for testing, and that such a failure would lead to a ban of their toys. Such a ban would be unfair if the failure were caused by the nature of the clamps rather than by the weakness of the material being tested. To assure that this result does not occur, the Commission will not ban any toys based on failures occurring at clamp sites during performance of the tension test.

D. Statutory Approach

As proposed, the Commission's small parts regulation would classify all non-complying toys as "banned hazardous substances" under the FHSA. Many industry commenters have urged the Commission to substitute a two-stage banning procedure for the proposed procedure. The main basis for this comment seemed to be the concern that insufficient due process procedures would be available to permit manufacturers to contest questionable Commission judgments that their non-complying toys are intended for children under 3 and thus banned. (This comment is also discussed in section B(1), above.)

The Commission uses a two-stage procedure to ban certain toys, intended for children under 8 years of age, that present unreasonable risks due to sharp points or sharp edges. In the first stage, the Commission uses its regulations to define what edges and points are both sharp and accessible (16 CFR 1500.48 and .49). After evaluating the risk presented by these points and edges, the Commission must then decide whether they present an unreasonable risk of injury to children under 8. If so, the Commission must complete a second stage, an informal notice and comment rulemaking procedure, before determining that the toys are banned under the FHSA.

The Commission decided to regulate sharp points and sharp edges on toys intended for children under 8 years of age using this two-stage procedure because the sharp point and sharp edge test devices classified as sharp some points and edges that might not under all circumstances present an unreasonable risk of injury to children under 8. Because of the extremely broad scope of products covered, the Commission wanted to evaluate the edges and points classified as sharp on an individual basis before deciding that the toys containing them should be banned. In addition, the nature of the risks of injury involved—less than life-threatening lacerations, avulsions, and punctures—did not require that the more expeditious one-stage approach be used.

Before deciding on a statutory approach for small parts, the Commission considered many of the same factors it had considered before deciding in favor of a two-stage approach for sharp points and sharp edges. Despite some articulate comments from the industry favoring the same approach for small parts, the Commission believes that it should be basically a one-stage banning regulation, with a modification to address this industry concern. Specifically, the ten-day opportunity for submissions, discussed above, does provide affected persons and firms with an opportunity to present to the Commission staff any contentions that their noncomplying toys are not intended for children under 3, before they or their toys are subjected to any enforcement action. This effectively addresses industry's concern without imposing the delay that is inherent in a two-stage procedure.

There are a number of reasons why different procedures are justified for the small parts and sharp points/sharp edges regulations:

1. The severity of the risk from small parts is extreme, especially when compared to the risk from sharp points and sharp edges. Some avulsions, lacerations, and punctures are serious, but the Commission knows of no incidents in which children injured by a sharp point or edge did not recover. In contrast, a small part can totally cut off a child's air supply within a few moments, causing death or irreversible brain damage. The industry comments did not discuss the severity of the risk as a factor to consider.

2. If a small part exists, it presents a direct danger to children. This contrasts with the sharp points and edges regulations in which the location of the point or edge on the toy needs to be carefully evaluated before the Commission can be sure that an unreasonable risk is present. The added uncertainty of this factor is an additional reason for adopting the two-stage approach in those regulations.

3. The small parts regulation covers only toys intended for children under 3. This is a much smaller range than the 0–8 years age range covered by the sharp point and sharp edge regulations. As discussed above, the Commission believes that the regulation is sufficiently clear so that toys in this category are readily identifiable.

If an industry member needs advise on the applicability of the regulation to a particular toy, the Commission staff will be happy to provide it, either before or after the regulation becomes effective. (A particular example of this, one that concerns bulk vending products, is discussed under Economic Considerations (see item 1 under section F, below).) In addition, the Commission has a policy on the granting of emergency exemptions from regulations (16 CFR 1009.9; 43 FR 19215–16, May 4, 1978). In a qualifying situation, an industry member could escape liability for marketing what the Commission considers to be a noncomplying product.

E. Effective Date

Many commenters discussed the issue of the effective date of the small parts regulation. Manufacturers uniformly have expressed a preference that it coincide with the established marketing cycle of the toy industry, and should not impact the industry in mid-season, between June and October, when toys are being shipped. The manufacturers have objected to the proposed 6-month effective date, and have recommended instead that the small parts regulation become effective during the first part of calendar year 1980, or one year from the date of final publication in the Federal Register, whichever is later.

Non-industry commenters on the effective date, including local consumer protection offices, have urged the Commission to make the final regulation effective immediately. They have pointed out that this would keep dangerous toys off the market during the 1979 Christmas season.

The Commission believes that some lead time is necessary, even though evidence suggests that many toys

already meet the small parts regulation. If six months of lead time were provided, as the Commission proposed, the regulation would become final just before Christmas this year. Some of the many toys sold for Christmas might be covered, but the vast majority of such toys would have already been introduced into interstate commerce and would not be covered.

The potential added safety stemming from a pre-Christmas effective date must be balanced against the disruption to the marketplace which it could cause. In addition to the impact on the industry, consumers would not know which toys on the shelves were covered by the regulation and which were not. In fact, if the regulation became effective just before or during the Christmas buying season, toy purchasers might relax their vigilance against small parts hazards. They would likely assume, wrongly, that all the toys on the shelves were covered by the newly-effective small parts regulation.

After balancing all of the relevant considerations, the Commission has decided to make the small parts regulation effective on January 1, 1980 so that toys introduced into interstate commerce after that date will be covered.

F. Economic Considerations

Aside from comments on the effective date, the major comment on economic considerations came from the National Bulk Vendors Association. As representatives of the distributors, manufacturers, and operators of bulk vending equipment and products, NBVA has claimed that the small parts regulation could destroy their industry by banning up to 33 percent of the products currently sold; by forcing many of their members out of business; by causing loss of jobs among the 10,000 to 15,000 employees in the industry; and by making millions of dollars of equipment obsolete. NBVA has commented that "[t]he drastic economic impact of the regulation * * * outweighs any possible benefit which might accrue from banning small toy items."

It is of course possible that the small parts regulation will have some future adverse economic impact on a segment of the bulk vending industry. This was discussed in the May 1978 staff economic report referenced in the October 1978 proposal (see section III, G, above). However, NBVA's assertions seem clearly to be based on "worst case" economic projections and speculation. NBVA has not provided the Commission with specific data showing the likelihood that severe economic consequences will result.

As examples, the following points undercut NBVA's points on economic impact:

1. The Commission staff has obtained (in most cases from NBVA) and evaluated a large number of products which are dispensed by random selection bulk vending machines and which it believes are representative of the products dispensed by the machines. As discussed above, the Commission believes that none of these products is "intended for use by children under 3," according to the criteria which define the scope of the small parts regulation (§ 1501.2).

2. NBVA has claimed that adverse safety-related publicity might hurt the sales of vending machine toys which are not banned. However, this would be no more true for vending machine toys for children over 3 than for any other toys.

3. Bulk vended toys and novelties for all ages represent only 33 percent of the industry's total revenue from bulk vending operations, although for some individual firms the percentage is much higher (figures provided by NBVA). Based on the anticipated banning of some portion of these items, NBVA has claimed that the entire industry could be destroyed. This claim remains unsupported by the submission by NBVA of any data or convincing arguments. Therefore, it is just as possible that the bulk vending products unaffected by the Commission's regulation—gum balls, other food, complying items, and items for children over 3—would pick up the slack caused by any items banned in the future. It may even be that the shift to products not banned would stimulate machine manufacturing and employment, as obsolete machines are retrofitted or replaced.

4. The manufacture of toys and novelties sold in bulk vending machines apparently occurs largely in foreign countries. Even if employment in these industries were temporarily affected, non-U.S. markets could probably be developed.

G. Miscellaneous

1. A number of commenters expressed disagreement with the entire small parts regulation because it represents government interference in an area where parents have the responsibility to protect their children. Especially because deaths are occurring, the Commission believes that parental discretion alone is not sufficient to provide children under 3 with the protection they need and deserve.

2. A commenter has asked what percentage of defective products will be considered acceptable by the Commission. This raises the issue of whether a sampling plan is necessary. The Commission acknowledges that it is impossible to be 100 percent certain that every product will comply with the regulation. A test of every toy, especially with the use and abuse procedures, is impossible.

Nevertheless, the Commission will not use a specific sampling plan. If Commission testing indicates a violation, the Commission will perform additional testing and will examine a manufacturer's testing records. Before taking any enforcement action, the Commission will decide whether there is a violation which could affect significant numbers of the product. In addition, the Commission expects manufacturers to design their toys to exceed the minimum performance levels required by the regulation. Such design would likely eliminate the need for any sampling plan that sanctions the manufacture and distribution of non-complying toys.

3. NBVA has proposed that the Commission address the small parts risk by requiring cautionary labeling on bulk vending machines instead of by banning noncomplying bulk vended toys intended for children under 3. Bulk vending machine labeling is generally equivalent to package labeling for other toys and signs in stores where other toys are sold. The Commission believes that none of these alternatives would provide the same degree of protection as a ban of noncomplying toys. In addition, while the Commission encourages voluntary cautionary labeling, it would demand unrealistic staff resources to enforce any such mandatory requirements.

V. Final Regulation

In October 1971, the FDA proposed for public comment a regulation which addressed the aspiration, ingestion, and other risks of injury presented by certain dolls, stuffed animals, and similar toys (36 FR 19980, October 14, 1971). Based in part on its publication of the small parts regulation below, the Commission withdraws that FDA proposal.

The Commission finds that certain toys and other articles intended for use by children under 5 years of age present an unreasonable risk of injury to children in this age group. Before making this finding, the Commission balanced the relevant economic, epidemiological, and other considerations associated with the small parts regulation issued below.

The regulation, applicable to the very broad category of "toys and other articles intended for use by children under 3," covers many products. However, the only aspect of the toy which is regulated is the size (this should not be confused with the discussion of the scope of the regulation, section IV, A(2) above, where it is explained that size and other factors led to the Commission's determination that only certain products would be regulated). In addition, the size is regulated by a performance requirement so that toy design is affected as little as possible.

Also balanced against the broad scope of the small parts regulation is the severe risk that it addresses. Children under 3 die every year from small parts. This occurs, in part, because they indiscriminately put things in their mouths and lack the protective reactions and knowledge of older children and adults. Children over 3 and even adults choke to death on small parts, but the regulation below does not address the risk to them. Similarly, the regulation recognizes that children under 3 cannot be protected from every small part and the regulation does not include every product with which they may come into contact.

The Commission has exempted from the regulation certain products which do serve a functional, educational, or other positive need. There is widespread compliance with the regulation among toys currently on the market which are not exempted. Therefore, most toys for children under 3 will not have to be redesigned or modified in any way to comply with the size requirement. For those that do, it is reasonable to require that they be constructed large enough and sturdy enough so that they will not fracture, disassemble or otherwise expose children under 3 to hazardous small parts.

Available injury data show that chokings, aspirations, and ingestions are caused by the small size of certain toys intended for children under 3 that are on the market. The Commission expects the small parts regulation to address this risk. It is an unreasonable risk because the relatively small economic impact that would result from regulation of these products is far outweighed by the reduction of the risk that will also result from the regulation.

Accordingly, pursuant to provisions of the Federal Hazardous Substances Act (secs. 2(f)(1)(D), 2(q)(1)(A), 2(s), 3(e)(1) and 10, 74 Stat. 372, 374, 375 as amended 80 Stat. 1304–05, 83 Stat. 187–89 (15 U.S.C. 1261, 1262, 1269)), in accordance with the provisions of 5 U.S.C. 553, and under authority vested in the Commission by the Consumer Product Safety Act (Pub. L. 92–573, sec. 30(a), 86 Stat. 1231 (15 U.S.C. 2079(a)), the Commission amends title 16, chapter II, subchapter C by adding a new paragraph (a)(9) to § 1500.18 and by adding a new part 1501, as follows:

PART 1500—HAZARDOUS SUBSTANCES AND ARTICLES; ADMINISTRATION AND ENFORCEMENT REGULATIONS

§ 1500.18 Banned toys and other banned articles intended for use by children.

(a) *Toys and other children's articles presenting mechanical hazards.* Under the authority of section 2(f)(1)(D) of the act and pursuant to provisions of section 3(e) of the act, the Commission has determined that the following types of toys or other articles intended for use by children present a mechanical hazard within the meaning of section 2(s) of the act because in normal use, or when subjected to reasonably foreseeable damage or abuse, the design or manufacture presents an unreasonable risk of personal injury or illness:

* * * * *

(9) Any toy or other article intended for use by children under 3 years of age which presents a choking, aspiration, or ingestion hazard because of small parts as determined by Part 1501 of this chapter and which is introduced into interstate commerce after January 1, 1980. For purposes of this regulation, introduction into interstate commerce is defined as follows: A toy or children's article manufactured outside the United States is introduced into interstate commerce when it is first brought within a U.S. port of entry. A toy or children's article manufactured in the United States is introduced into interstate commerce (1) at the time of its first interstate sale, or (2) at the time of its first intrastate sale if one or more of its components and/or raw materials were received interstate, whichever occurs earlier. Part 1501 defines the term "toy or other article intended for use by children under 3," as used in this regulation, and exempts certain products from banning under this regulation.

PART 1501—METHOD FOR IDENTIFYING TOYS AND OTHER ARTICLES INTENDED FOR USE BY CHILDREN UNDER 3 YEARS OF AGE WHICH PRESENT CHOKING, ASPIRATION, OR INGESTION HAZARDS BECAUSE OF SMALL PARTS

Sec.
1501.1 Purpose.
1501.2 Scope.
1501.3 Exemptions.
1501.4 Size requirements and test procedure.
1501.5 Enforcement procedure.

Authority—Sec. 2(f)(1)(D), (q)(1)(A), (s), 3(e)(1), and 10; 74 Stat. 372, 374, 375 as amended 80 Stat. 1304–05, 83 Stat. 187–89 (15 U.S.C. 1261, 1262, 1269).

§ 1501.1 Purpose.

Section 1500.18(a)(9) of this chapter classifies as a banned hazardous substance any toy or other article intended for use by children under 3 years of age that presents a choking, aspiration, or ingestion hazard because of small parts. This Part 1501 describes certain articles that are subject to § 1500.18(a)(9); lists certain articles that are specifically exempted; and provides a test method for determining whether an article is hazardous to children under 3 because it, or one of its components that can be detached or broken off during normal or reasonable foreseeable use, is too small.

§ 1501.2 Scope.

(a) This regulation (§ 1500.18(a)(9) and the criteria described in § 1501.4 below) applies to all toys and other articles intended for use by children under 3 years (36 months) of age that are introduced into interstate commerce after the effective date. Such articles include, but are not to limited to: squeeze toys; teethers; crib exercisers; crib gyms; crib mobiles; other toys or articles intended to be affixed to a crib, stroller, playpen, or baby carriage; pull and push toys; pounding toys; blocks and stacking sets; bathtub, wading pool and sand toys; rocking, spring, and stick horses and other figures; chime and musical balls and carousels; jacks-in-the-box; stuffed, plush, and flocked animals and other figures; preschool toys, games and puzzles intended for use by children under 3; riding toys intended for use by children under 3; infant and juvenile furniture articles which are intended for use by children under 3 such as cribs, playpens, baby bouncers and walkers, strollers and carriages; dolls which are intended for use by children under 3 such as baby dolls, rag dolls, and bean bag dolls; toy

cars, trucks, and other vehicles intended for use by children under 3. In addition, such articles include any other toys or articles which are intended, marketed or labeled to be entrusted to or used by children under 3 years of age.

(b) In determining which toys and other articles are intended for use by children under 3 years (36 months) of age, for purposes of this regulation, the following factors are relevent: the manufacturer's stated intent (such as on a label) if it is a reasonable one; the advertising, promotion, and marketing of the article; and whether the article is commonly recognized as being intended for children under 3.

(c) This regulation does not apply to toys or articles which are solely intended for use by children 3 years of age or older. In addition, it does not apply to all articles to which children under 3 years of age might have access simply because of presence in a household. Certain articles which are specifically exempted from this regulation are listed in § 1501.3 below.

§ 1501.3 Exemptions.

The following articles are exempt from this regulation (§§ 1500.18(a)(9) and 1501.4 below):

(a) Balloons;

(b) Books and other articles made of paper;

(c) Writing materials such as crayons, chalk, pencils, and pens;

(d) Children's clothing and accessories, such as shoe lace holders and buttons;

(e) Grooming, feeding, and hygiene products, such as diaper pins and clips, barrettes, toothbrushes, drinking glasses, dishes and eating utensils;

(f) Phonograph records;

(g) Modeling clay and similar products;

(h) Fingerpaints, watercolors, and other paint sets;

(i) Rattles (as defined at 16 CFR 1510.2); and

(j) Pacifiers (as defined at 16 CFR 1511.2(a)).

§ 1501.4 Size requirements and test procedure.

(a) No toy or other children's article subject to § 1500.18(a)(9) and to this Part 1501 shall be small enough to fit entirely within a cylinder with the dimensions shown in Figure 1, when tested in accordance with the procedure in paragraph (b) of this section. In testing to ensure compliance with this regulation, the dimensions of the Commission's test cylinder will be no greater than those shown in Figure 1. (In addition, for compliance purposes, the English dimensions shall be used. The metric approximations are included only for convenience.)

(b)(1) Place the article, without compressing it, into the cylinder. If the article fits entirely within the cylinder, in any orientation, it fails to comply with the test procedure. (Test any detached components of the article the same way.)

(2) If the article does not fit entirely within the cylinder, subject it to the appropriate "use and abuse" tests of 16 CFR 1500.51 and 1500.52 (excluding the bite tests of §§ 1500.51(c) and 1500.52(c)). Any components or pieces (excluding paper, fabric, yarn, fuzz, elastic, and string) which have become detached from the article as a result of the use and abuse testing shall be placed into the cylinder, one at a time. If any such components or pieces fit entirely within the cylinder, in any orientation and without being compressed, the article fails to comply with the test procedure.

§ 1501.5 Enforcement procedure.

The Commission will enforce this regulation, unless it determines that an emergency situation exists, only in accordance with Chaper 2C—Letters of Advice/Notices of Noncompliance of the CPSC Enforcement Policy and Procedural Guides, issued in May 1979 and available from the CPSC's Office of the Secretary, 1111 18th Street, NW., Washington, D.C. 20207. Under the procedure described in this chapter, firms must be informed by letter that they or their products may be the subject of enforcement action and must be provided ten days within which to submit evidence and arguments that the products are not violative or are not covered by the regulation, prior to the initiation of enforcement action by the Commission or by its delegated staff member. The function of approving such enforcement actions is currently delegated by the Commission to the Associate Executive Director for Compliance and Enforcement (copies of the existing delegation documents are also available from the CPSC's Office of the Secretary).

Effective date: January 1, 1980.

Dated: June 12, 1979.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

DEPARTMENT OF THE INTERIOR

Bureau of Reclamation

43 CFR Part 420

Off-Road Vehicle Use

AGENCY: Bureau of Reclamation, Interior.

ACTION: Adoption of Amendments to final rules.

SUMMARY: On August 23, 1974, final regulations of the Bureau of Reclamation concerning off-road vehicles on Bureau of Reclamation lands became effective. These regulations have been reviewed in accordance with Executive Order 11989, May 24, 1977 (relating to off-road vehicles on public lands), which amends Executive Order 11644. These amendments fulfill requirements set forth in Executive Order 11989, and require all Bureau lands to be closed to off-road vehicle use unless designated "open" under the regulation.

DATE: These amendments become effective June 15, 1979.

FOR FURTHER INFORMATION CONTACT: Mr. L. David Williamson, Senior Staff Assistant for Land Resources Management, Operation and Maintenance Policy Staff, Bureau of Reclamation, Washington, D.C. 20240 (202) 343–5204.

SUPPLEMENTARY INFORMATION: On August 22, 1978, proposed amendments to Title 43 CFR Part 420 were published in the Federal Register. These amendments were designed to bring the Bureau of Reclamation's regulations into agreement with provisions of Executive Orders 11644 and 11989. The three changes made by these amendments are: (1) add to the exclusions from Off-Road Vehicles (ORV) "combat vehicles used in support of national defense;" (2) add a restatement of Section 420.2 into Section 420.21 by inserting the phrase "All Bureau lands shall be closed to off-road vehicle use unless designated open;" and (3) make provisions for Bureau Regional Directors to order the closure of off-road vehicle lands under their jurisdiction when, in their opinion, considerable adverse effects are being caused by the vehicles.

Comments received generally supported these amendments except for the general closing of the lands, which was merely a restatement of rules already in effect (43 CFR 420.2). Since Reclamation's lands have been acquired or withdrawn from the public domain for the construction of water impoundment and distribution and for agricultural development, the unrestricted use of ORV's on these lands would be unwise. In fact, the nature of these lands and their intended use dictates that the majority of these lands be closed to such ORV use. For the above reasons, the amendment to the rules proposed in the Federal Register, page 37206, Vol. 43, No. 163, of Tuesday, August 22, 1978, are adopted, unchanged, as follows.

The impacts of the implemention of Executive Order 11644, as amended by Executive Order 11989 (42 FR 26959), are evaluated under final Environmental impact statement (FES 78–5) entitled "Departmental Implementation of Executive Order 11644, as amended by Executive Order 11989, pertaining to use of Off-Road Vehicles on the Public Lands." Bureau of Reclamation existing regulations for off-road vehicle use, as modified by these amendments, implement the Department of the Interior's policy which was evaluated in the final environmental impact statement, and require all Bureau lands to be closed to off-road vehicle use unless designated open under procedures of Section 420.21. Notice of the availability of this final environmental impact statement was published in the Federal Register on April 21, 1978, (FR Vol. 43 page 17063).

Primary author of this document is Mr. Terence G. Cooper, Staff Assistant for Land Resources Management, Operations and Maintenance Policy Staff, Bureau of Reclamation.

DETERMINATION OF SIGNIFICANCE: The Department of the Interior has determined that this document is not a significant rule and does not require a regulatory analysis under Executive Order 12044 and 43 CFR Part 14.

Dated: June 4, 1979.

Guy R. Martin,

Assistant Secretary of the Interior.

Pursuant to the authority of the Secretary of the Interior contained in Executive Order No. 11989 of May 24, 1977, Part 420 of Title 43 is amended as follows:

PART 420—OFF-ROAD VEHICLE USE

1. Paragraph (a) is amended by redesignating (5) "official use" vehicles as number (6) and adding a new paragraph (5) to read as follows:

§ 420.5 Definitions.

(a) * * *

(5) any combat or combat support vehicle when used in times of national defense emergencies; and (6) "official use" vehicles

* * * * *

2. Immediately following the section heading and preceding the words "The Regional Director shall . . . ," insert the following sentence: "All Bureau lands shall be closed to off-road vehicle use under Section 420.2 unless designated as open under the following procedures." Paragraph (c) is amended to read as follows:

§ 420.21 Procedure for designating areas of off-road vehicle use.

* * * * *

(c) The Regional Director will inspect designated areas and trails periodically to determine conditions resulting from off-road vehicle use. If he determines that the use of off-road vehicles will cause or is causing considerable adverse effects on the soil, vegetation, wildlife, wildlife habitat, or cultural or historic resources of particular areas or trails of the public lands, he shall immediately close such areas or trails to the type of off-road vehicle causing such effects. No area or trail shall be reopened until the Regional Director determines that adverse effects have been eliminated and that measures have been implemented to prevent future recurrence. The public shall be notified of restrictions or closure in accordance with § 420.23.

would you like to know

if any changes have been made in certain titles of the CODE OF FEDERAL REGULATIONS without reading the Federal Register every day? If so, you may wish to subscribe to the LSA (List of CFR Sections Affected), the "Federal Register Index," or both.

LSA (List of CFR Sections Affected)
$10.00
per year

The LSA (List of CFR Sections Affected) is designed to lead users of the Code of Federal Regulations to amendatory actions published in the Federal Register, and is issued monthly in cumulative form. Entries indicate the nature of the changes.

Federal Register Index $8.00
per year

Indexes covering the contents of the daily Federal Register are issued monthly, quarterly, and annually. Entries are carried primarily under the names of the issuing agencies. Significant subjects are carried as cross-references.

A finding aid is included in each publication which lists Federal Register page numbers with the date of publication in the Federal Register.

Note to FR Subscribers: FR Indexes and the LSA (List of CFR Sections Affected) will continue to be mailed free of charge to regular FR subscribers.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $5.00 per month or $50 per year, payable in advance. The charge for individual copies of 75 cents for each issue, or 75 cents for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register**.

Area Code 202-523-5240

Highlights

34960 **Federal Motor Carrier Drivers** DOT/FHWA changes criteria for placing drivers out of service; effective 6-18-79

35106 **New Construction and Substantial Rehabilitation Rental Projects** HUD/FHC proposes fair market rents for all market areas; comments by 7-3-79 (Part II of this issue)

35075, 35077 **Treasury Notes** Treasury/Sec'y invites tenders for notes of series U-1981 and series E-1983 (2 documents)

34934 **Commodity and Securities Exchanges** CFTC prescribes manner for making public disciplinary or other adverse action; effective 7-18-79

34923 **Consumer Product Safety** CPSC adopts rules governing scope and conduct of investigations, inspections, and inquiries, and procedures for consent order agreements; comments by 7-18-79

35176 **Environmental Protection** EPA adopts rules on intergovernmental consultation to assist States in preparing implementation plan revisions under Clean Air Act; effective 6-18-79 (Part IV of this issue)

35158 **Environmental Protection** EPA proposes rules on uniform procedures for implementing National Enviromental Policy Act; comments by 7-18-79 (Part III of this issue)

34936 **Energy** DOE/FERC establishes procedure for submission and treatment of settlement agreements; effective 6-15-79

34946 **Emergency Energy Conservation** CSA amends rules regarding certification time period and termination and reporting dates under Fiscal Year 1979 Crisis-Intervention Program; effective 6-18-79

34962 **Locomotives** DOT/FRA proposes regulations to require display of flashing alerting lights at rail-highway grade crossings; comments by 9-28-79; hearings on 9-17 and 9-20-79

35064 **Three Mile Island Incident** NRC sets forth policy guidelines of special inquiry

35102 **Sunshine Act Meetings**

Rules and Regulations

Federal Register
Vol. 44, No. 118
Monday, June 18, 1979

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 78-CE-22-AD; Amendment 39-3491]

Airworthiness Directives; Beech Models E50, F50, G50, H50, J50, 55, A55, A55-S200 55-60, 55-A60-S600, 55-B60, 55-58, 70, C50, D50, D50A, D50B, D50C and D50E Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Revision of final rule.

SUMMARY: This amendment revises Airworthiness Directive (AD), AD 79-01-02, Amendment 39-3365, applicable to the above Beech Model airplanes, by revising the applicability statement to except those airplanes modified in accordance with STC SA444SW. This revision is required because the powerplant changes incorporated by this STC are so extensive as to make the inspections prescribed by this AD unnecessary and inappropriate.

EFFECTIVE DATE: June 4, 1979.

FOR FURTHER INFORMATION CONTACT:
Donald L. Page, Aerospace Engineer, Engineering and Manufacturing Branch, FAA, Central Region, 601 East 12th Street, Kansas City, Missouri 64106; Telephone (816) 374-3446.

SUPPLEMENTARY INFORMATION: Amendment 39-3365, AD 79-01-02 required various modifications and repetitive inspection of the powerplant installation and nacelles on certain Beech Model airplanes. Subsequent to this action, the FAA has determined that the modifications incorporated by STC SA444SW are so extensive as to make the inspections prescribed by the AD unnecessary and inappropriate.

Therefore, the agency is revising Amendment 39-3365 by amending the AD applicability statement to except those airplanes modified in accordance with STC SA444SW.

Since this amendment is relieving in nature and imposes no additional burden on any person, notice and public procedure hereon are impracticable and good cause exists for making this amendment effective in less than 30 days after the date of publication in the Federal Register.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, Amendment 39-3365 [44 FR 1079, 1080], AD 79-01-02, of section 39.13 of Part 39 of the Federal Aviation Regulations [14 CFR 39.13] is amended as follows:

(1) Delete the existing applicability statement and in its place add the following new applicability statement:

Beech: Applies to: (1) Models E50, F50, G50, H50, J50, 55, A55, A55-S200, 55-60, 55-A60, 55-A60-S600, 55-B60, 55-58, and 70 airplanes except those airplanes modified in accordance with STC SA444SW, and (2) those Models C50, D50, D50A, D50B, D50C, and D50E airplanes modified per STC SA76SW.

This amendment becomes effective on June 4, 1979.

(Secs. 313(a), 601 and 603 of the Federal Aviation Act of 1958, as amended, [49 U.S.C. 1354(a), 1421 and 1423]; sec. 6(c) Department of Transportation Act [49 U.S.C. 1655(c)]; § 11.89 of the Federal Aviation Regulations [14 CFR 11.89].)

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures [44 FR 11034; February 26, 1979]. A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to Donald L. Page, Aerospace Engineer, Engineering and Manufacturing Branch, Federal Aviation Administration, Central Region, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 374-3446.

Issued in Kansas City, Missouri on June 4, 1979.

C. R. Melugin, Jr.,
Director, Central Region.

BILLING CODE 4910-13-M

14 CFR Part 39

[Docket No. 79-CE-19-AD; Amendment 39-3492]

Airworthiness Directive; Cessna Models 500, 501, 550 and 551 Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new Airworthiness Directive (AD), applicable to Cessna Models 500, 501, 550 and 551 airplanes. The AD requires repetitive inspections of the wing main spar cap web stems at wing station 37.0. This action is necessary to detect and monitor fatigue cracks that may exist or develop in this area which can impair the ability of the spar cap to carry design loads if not detected and an approved repair incorporated.

EFFECTIVE DATE: June 21, 1979.

COMPLIANCE SCHEDULE: As prescribed in the body of the AD.

ADDRESSES: Cessna Citation Service Letter SL 57-2, Rev. 2, dated May 1, and SL 550-57-1, Rev. 1, dated May 1, 1979, applicable to this AD, may be obtained from Cessna Aircraft Company, Marketing Division, Attention: Customer Service Department, Wichita, Kansas 67201; Telephone (316) 685-9111. Copies of these service letters are contained in the Rules Docket, Office of the Regional Counsel, Room 1558, 601 East 12th Street, Kansas City, Missouri 64106 and at Room 916, 800 Independence Avenue, S.W., Washington, D.C. 20591.

FOR FURTHER INFORMATION CONTACT:
Vincent R. Reinert, Chief, Airframes Unit, Engineering and Manufacturing District Office Number 43, Room 238, Mid-Continent Airport, Wichita, Kansas 67209; Telephone (316) 942-4219.

SUPPLEMENTARY INFORMATION: The FAA has become aware through service reports and results of the manufacturer's full scale wing cyclic testing of crack potential in the spar cap web stem area at wing station 37.0 on Cessna Models 500, 501, 550 and 551 airplanes. The manufacturer has issued Cessna Citation Service Letters SL 57-2, Revision 2, dated May 1, 1979, and SL 550-57-1, Revision 1, dated May 1, 1979, which prescribe inspections to detect and monitor these cracks. If cracks in

this area are not detected and an approved repair incorporated, impairment of the ability of the spar cap to carry design loads could result. If cracks are found, reduced inspection intervals are specified in the service letter with an appropriate crack length limitation to permit continued safe operation of the airplane until an approved repair is incorporated. In addition, incorporation of the approved repair is required if the crack limitation is exceeded. Accordingly, since the condition described herein is likely to exist or develop on other airplanes of the same type design, the FAA is issuing an AD applicable to Cessna 500, 501, 550 and 551 airplanes making compliance with the inspection procedures set forth in Cessna Citation Service Letters SL 57–2, Revision 2, and SL 550–57–1, Revision 1, mandatory.

Since a situation exists that requires the expeditious adoption of this regulation, it is found that notice and public procedure hereon are impracticable, and good cause exists for making this amendment effective in less than 30 days.

Adoption of the Amendment

In consideration of the foregoing, and pursuant to the authority delegated to me by the Administrator, § 39.13 of Part 39 of the Federal Aviation Regulations (14 CFR 39.13) is amended by adding the following new Airworthiness Directive:

Cessna: Applies to Models 500, 501, 550 and 551 airplanes with 600 or more hours time-in-service.

Compliance: Required as indicated unless already accomplished.

(A) Within the next 100 hours time-in-service after the effective date of this AD and thereafter within each 600 hours time in service until the number of landings or time-in-service threshold for dye penetrant inspection in Table I is reached, visually inspect the upper and lower spar cap stems at Wing Station 37.0 in the areas specified in Cessna Citation Service Letter SL 57–2, Revision 2, dated May 1, 1979, or SL 550–57–1, Revision 1, dated May 1, 1979, as applicable for cracks and/or:

(B) Upon reaching or if at or beyond the dye penetrant inspection threshold specified in Table I, within 100 hours time-in-service or 100 landings, whichever occurs first, and thereafter within 600 hours time-in-service or 600 landings, whichever occurs first, dye penetrant inspect the upper and lower spar cap stem at Wing Station 37.0 in the areas specified in Cessna Citation Service Letter SL 57–2, Revision 2, dated May 1, 1979, or SL 550–57–1, Revision 1, dated May 1, 1979, as applicable, for cracks.

Table I

Model	Serial Nos.	Dye penetrant inspection threshold (Landings or time-in-service-hrs)
500	500–001 thru 500–349	4300
	500–350 and on	1300
501	501–001 and on	1300
550	550–001 and on	4300
551	551–001 and on	4300

(C) If, as a result of any inspection required by Paragraph A) or B) a crack of less than .3 inches in length is found in the upper spar cap stem, reduce the dye penetrant inspection interval on this spar cap to 200 landings or 200 hours time-in-service, whichever occurs first.

(D) If, as a result of any inspection required by Paragraph A) or B) a crack of less than .3 inches in length is found in the lower spar cap stem, reduce the dye penetrant inspection interval on this spar cap to 100 landings or 100 hours time-in-service, whichever occurs first.

Note.—The FAA encouraged compliance with the manufacturer's request that all cracks be reported to the Cessna Customer Service Department.

(E) If, as a result of any inspection required by Paragraph A), B), C) or D), a crack of .3 inches in length or longer is found in either spar cap, prior to further flight, repair or modify the wing in accordance with instructions obtained from Cessna Aircraft Company, Jet Marketing Division, Customer Service, P.O. Box 7706, Wichita, Kansas 67277.

(F) The time-in-service for initial and between repetitive inspections required herein may be adjusted up to 10 hours to facilitate accomplishing them concurrent with other scheduled maintenance on the airplane.

(G) Aircraft may be flown in accordance with Federal Aviation Regulation 21.197 to a location where this AD can be accomplished.

(H) Any equivalent method of compliance with this AD must be approved by the Chief, Engineering and Manufacturing Branch, FAA, Central Region.

Cessna Citation Service Letter SL 57–2, Revision 2 dated May 1, 1979, covers the subject matter of this AD.

This Amendment becomes effective June 21, 1979.

Secs. 313(a), 601 and 603, Federal Aviation Act of 1958, as amended, (49 U.S.C. 1354(a), and 1423); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); and Sec. 11.89 of the Federal Aviation Regulations (14 CFR 11.89).

Note.—The FAA has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by Department of Transportation Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). A copy of the final evaluation prepared for this document is contained in the docket. A copy of it may be obtained by writing to FAA, Office of the Regional Counsel, Room 1558, 601 East 12th Street, Kansas City, Missouri 64106.

Issued in Kansas City, Missouri on June 4, 1979.

C. R. Melugin, Jr.,
Director, Central Region.

BILLING CODE 4910-13-M

14 CFR Part 39

[Docket No. 79–SO–42; Amdt. 39–3480]

Airworthiness Directives; Piper Model PA–44–180 Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new Airworthiness Directive (AD) which requires the replacement, on both engines, of the engine primer lines on certain Piper PA–44–180 airplanes. This AD is prompted by reports of broken primer lines and cracked or broken fittings that result in fuel leakage creating a potential fire hazard.

DATE: Effective June 21, 1979.

Compliance required as indicated.

ADDRESSES:

The applicable service bulletin may be obtained from Piper Aircraft Corporation, 820 East Bald Eagle Street, Lock Haven, Pennsylvania 17745.

A copy of the Service Bulletin is contained in the AD Docket File and may be examined in Room 275, Federal Aviation Administration, Southern Region, 3400 Whipple Street, East Point, Georgia.

FOR FURTHER INFORMATION CONTACT:

Gil Carter, ASO–214, Propulsion Section, Engineering and Manufacturing Branch, FAA, Southern Region, P.O. Box 20636, Atlanta, Georgia 30320, telephone (404) 763–7435.

SUPPLEMENTARY INFORMATION: There have been reports of broken primer lines and cracked and broken fittings on Piper Model PA–44–180 series airplanes which result in fuel leakage into the engine compartment near the engine exhaust manifolds thus creating a potential fire hazard. Since this condition is likely to exist or develop in other airplanes of the same type design, an Airworthiness Directive is being issued which requires the installation of new engines primer lines on certain Piper PA–44–180 airplanes.

Since a situation exists that requires immediate adoption of this regulation, it is found that notice and public procedure hereon are impracticable, and good cause exists for making this amendment effective in less than 30 days.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, § 39.13 of Part 39 of the Federal Aviation Regulation (14 CFR 39.13) is amended by adding the following new Airworthiness Directive:

Piper Aircraft Corporation: Applies to Model PA-44-180, serial numbers 44-7995001 through 44-7995130 airplanes certificated in all categories.

Compliance is required within the next 25 hours' time in service after the effective date of this AD or within 30 days after the effective date of this AD, whichever occurs first, unless already accomplished.

To prevent a potential fire hazard due to fuel leakage from failed primer lines and cracked and broken fittings, accomplish the following on both engines:

(a) Install the fuel primer modification kit, Piper Part Number 760 805V in accordance with Piper Service Bulletin 634 dated December 26, 1978, or later revision approved by the Chief, Engineering and Manufacturing Branch, Federal Aviation Administration, Southern Region.

(b) Make an appropriate maintenance record entry.

An equivalent method of compliance may be approved by the Chief, Engineering and Manufacturing Branch, Federal Aviation Administration, Southern Region.

This amendment becomes effective June 21, 1979.

(Secs. 313(a), 601, and 603, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1421, and 1423); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); 14 CFR 11.89.)

Issued in East Point, Georgia, on June 4, 1979.

George R. La Caille,

Acting Director, Southern Region.

[FR Doc. 79-18560 Filed 6-15-79; 8:45 am]

BILLING CODE 4910-13-M

14 CFR Part 71

[Airspace Docket No. 79-SO-26]

Designation of Federal Airways, Area Low Routes, Controlled Airspace, and Reporting Points; Designation of Transition Area, Springfield, Kentucky

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This Rule designates the Springfield, KY, Transition Area. It will afford protected airspace for IFR aircraft using the new public use instrument approach procedure established for that airport by lowering the base of controlled airspace from 1200 to 700 feet AGL.

EFFECTIVE DATE: August 9, 1979.

ADDRESS: Federal Aviation Administration, Chief, Air Traffic Division, P.O. Box 20636, Atlanta, Georgia 30320.

FOR FURTHER INFORMATION CONTACT: Gerald S. Collins, Airspace and Procedures Branch, Federal Aviation Administration, P.O. Box 20636, Atlanta, Georgia 30320; telephone: 404-763-7646.

SUPPLEMENTARY INFORMATION: An instrument approach procedure has been developed to enable aircraft operating in Instrument Flight Rule (IFR) weather conditions to conduct a safe approach for landing at Springfield-Lebanon Airport, KY. Consequently, adequate controlled airspace is required to provide airspace protection for IFR use of the procedure. This action is designed to meet that requirement as well as change the operating status of Springfield-Lebanon Airport from VFR to IFR. Notice to this effect was published in the Federal Register Thursday, April 19, 1979 (44 FR 23259). No objections were received from this Notice.

Adoption of the Amendment

Accordingly, Subpart C, § 71.181 (44 FR 442) of Part 71 of the Federal Aviation Regulations (14 CFR 71) is amended, effective 0901 GMT, August 9, 1979, by adding the following:

Springfield, Kentucky

That airspace extending upward from 700 feet above the surface within a 6.5-mile radius of the Lebanon-Springfield Airport (Latitude 37°39'02"N., Longitude 85°14'30"W.); within 3 miles either side of the New Hope, Kentucky, VORTAC, 069° radial extending from the 6.5-mile radius area to 14 miles east of the VORTAC.

(Sec. 307(a) of the Federal Aviation Act of 1958, as amended (49 U.S.C. 1348(a)) and sec. 6(c) of the Department of Transportation Act (49 U.S.C. 1655(c)).)

Note.—The Federal Aviation Administration has determined that this document involves a regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in East Point, Georgia, on June 8, 1979.

Lonnie D. Parrish,

Acting Director, Southern Region.

[FR Doc. 79-18559 Filed 6-15-79; 8:45 am]

BILLING CODE 4910-13-M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

14 CFR Part 1203

Information Security Program

AGENCY: National Aeronautics and Space Administration.

ACTION: Final rule.

SUMMARY: This amendment is necessary to comply with the provisions of Executive Order 12065, "National Security Information." This amendment sets forth guides and guidelines for classifying, declassifying and downgrading information and material under the NASA Information Security Program. This amendment also assigns responsibilities for the management and direction of the Program.

DATE: June 18, 1979.

ADDRESS: Director, Security Division, National Aeronautics and Space Administration, Washington, DC 20546.

FOR FURTHER INFORMATION CONTACT: Arnold K. Daue, telephone (202) 755-3400.

SUPPLEMENTARY INFORMATION: This regulation involves national security and is exempt from the procedures of 5 U.S.C. 553.

1. 14 CFR Part 1203 is amended by revising Subparts A through E and by adding new Subparts F and G.

PART 1203—INFORMATION SECURITY PROGRAM

Subpart A—Scope

Sec.
1203.100 Legal basis.
1203.101 Other applicable NASA regulations.

Subpart B—NASA Information Security Program

1203.200 Background and discussion.
1203.201 Information security objectives.
1203.202 Responsibilities.
1203.203 Degree of protection.

Subpart C—Classification Principles and Considerations

1203.300 General.
1203.301 Identification of information requiring protection.
1203.302 Combination, interrelation or compilation.
1203.303 Dissemination considerations.
1203.304 Internal effect.
1203.305 Restricted data.

Subpart D—Guides for Original Classification

1203.400 Specific classifying guidance.
1203.401 Effect of open publication.
1203.402 Classifying material other than documentation.
1203.403 State-of-the-art and intelligence.
1203.404 Handling of unprocessed data.

Sec.
1203.405 Proprietary information.
1203.406 Additional classification factors.
1203.407 Duration of classification.
1203.408 Assistance by installation security classification officers.
1203.409 Exceptional cases.
1203.410 Identification and marking.
1203.411 Prohibitions.
1203.412 Classification guides.

Subpart E—Derivative Classification

1203.500 Use of derivative classification.
1203.501 Applying derivative classification markings.

Subpart F—Declassification and Downgrading

1203.600 Policy.
1203.601 Responsibilities.
1203.602 Public interest vs. declassification.
1203.603 Systematic review for declassification.
1203.604 Mandatory review for declassification.

Subpart G—Foreign Government Information

1203.700 Identification.
1203.701 Classification.
1203.702 Duration of classification.
1203.703 Declassification.

* * * * *

Authority: 42 U.S.C. 2451 et seq. and E. O. 12065.

Subpart A—Scope.

§ 1203.100 Legal basis.

(a) *E.O. 12065.* The responsibilities and authority of the Administrator of NASA with respect to the original classification of official information or material requiring protection against unauthorized disclosure in the interest of national defense or foreign relations of the United States (hereinafter collectively termed "national security"), and the standards for such classification, are established by Executive Order 12065 (43 FR 28949) and the Information Security Oversight Office Directive No. 1, September 29, 1978.

(b) *E.O. 10865.* Executive Order 10865 (24 FR 1583) requires the Administrator to prescribe by regulation such specific requirements, restrictions and other safeguards as the Administrator may consider necessary to protect:

(1) Releases of classified information to or within United States industry that relate to contracts with NASA; and

(2) Other releases of classified information to industry that NASA has responsibility for safeguarding.

(c) *The National Aeronautics and Space Act.* (1) Section 304(a) of the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2451 et seq.), states in part: "The Administrator shall establish such security requirements, restrictions, and safeguards as he deems necessary in the interest of the national security * * *"

(2) Section 303 of the Act states: "Information obtained or developed by the Administrator in the performance of his functions under this Act shall be made available for public inspection, except (i) information authorized or required by Federal Statute to be withheld, and (ii) information classified to protect the national security: *Provided,* That nothing in this Act shall authorize the withholding of information by the Administrator from the duly authorized committees of the Congress."

§ 1203.101 Other applicable NASA regulations.

(a) Subpart H of this Part, "Delegation of Authority to Make Determinations in Original Security Classification Matters."

(b) Subpart I of this Part, "NASA Information Security Program Committee."

(c) NASA Handbook 1620.3, "NASA Physical Security Handbook."

Subpart B—NASA Information Security Program

§ 1203.200 Background and discussion.

(a) In establishing a civilian space program, the Congress required NASA to "provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof," and for the withholding from public inspection of that information that is classified to protect the national security.

(b) To balance the public's interest in access to Government information with the need to protect certain national security information from unauthorized disclosure, Executive Order 12065 was promulgated. It designates the National Aeronautics and Space Administration as having certain responsibility for matters pertaining to national security, and confers on the Administrator of NASA, or such responsible officers or employees as the Administrator may designate, the authority for original classification of official information or material which requires protection in the interest of national security. It also provides for:

(1) Basic classification, downgrading and declassification guidelines;

(2) The issuance of directives prescribing the procedures to be followed in safeguarding classified information or material;

(3) A monitoring system to ensure the effectiveness of the Order;

(4) Appropriate administrative sanctions against officers and employees of the United States Government who are found to be in violation of the Order or implementing directive; and

(5) Classification prohibitions as discussed in § 1203.411.

(c) Executive Order 12065 requires the timely identification and protection of that NASA information the disclosure of which would be contrary to the best interest of national security. Accordingly, the determination in each case must be based on a judgment as to whether disclosure of information could reasonably be expected to result in identifiable damage to the national security.

§ 1203.201 Information security objectives.

The objectives of the NASA Information Security Program are to:

(a) Ensure that information is classified only when a sound basis exists for such classification and only for such period as is necessary.

(b) Prevent both the unwarranted classification and the overclassification of NASA information.

(c) Ensure the greatest practicable uniformity within NASA in the classification of information.

(d) Ensure effective coordination and reasonable uniformity with other Government departments and agencies, particularly in areas where there is an interchange of information, techniques or hardware.

(e) Provide a timely and effective means for downgrading or declassifying information when the circumstances necessitating the original classification change or no longer exist.

§ 1203.202 Responsibilities.

(a) The Chairperson, NASA Information Security Program Committee (Subpart I of this Part), is responsible for:

(1) Directing the NASA Information Security Program in accordance with NASA policies and objectives and applicable laws and regulations.

(2) Ensuring effective compliance with and implementation of Executive Order 12065 and the Information Security Oversight Office Directive No. 1 relating to security classification matters.

(3) Reviewing, in consultation with the NASA Information Security Program Committee, questions, suggestions, appeals and compliance concerning the NASA Information Security Program and making determinations concerning them.

(4) Coordinating NASA security classification matters with NASA installations, the Department of Defense, the Department of Energy and other Government agencies.

(5) Issuing Security Classification Guides for NASA programs and projects.

(6) Developing, maintaining and recommending to the Administrator guidelines for the systematic review covering 20-year old classified information under NASA's jurisdiction.

(7) Reviewing and coordinating with appropriate offices all appeals of denials of requests for records under sections 552 and 552a of Title 5, United States Code (Freedom of Information and Privacy Acts) when the denials are based on the records continued classification.

(8) Recommending to the Administrator appropriate administrative action to correct abuse or violations of any provision of the NASA Information Security Program, including notifications by warning letter, formal reprimand and to the extent permitted by law, suspension without pay and removal.

(b) All NASA employees are responsible for bringing to the attention of the Chairperson of the NASA Information Security Program Committee any information security problems in need of resolution, any areas of interest wherein information security guidance is lacking, and any other matters likely to impede achievement of the objectives prescribed herein.

(c) Each NASA official to whom the authority for original classification is delegated shall be accountable for the propriety of each classification (see Subpart H) and is responsible for:

(1) Ensuring that classification determinations are consistent with the policy and objectives prescribed above, and other applicable guidelines.

(2) Bringing to the attention of the Chairperson, NASA Information Security Program Committee, for resolution, any disagreement with classification determinations made by other NASA officials.

(3) Ensuring that information and material which no longer requires its present level of protection is promptly downgraded or declassified in accordance with applicable guidelines.

(d) Other Officials-in-Charge of Headquarters Offices are responsible for:

(1) Ensuring that classified information or material prepared within their respective offices is appropriately marked.

(2) Ensuring that material proposed for public release is reviewed to eliminate classified information.

(e) Directors of Field Installations and, for Headquarters, the Director, Headquarters Administration Division, are responsible for:

(1) Developing proposed Security Classification Guides.

(2) Ensuring that classified information or material prepared in their respective installations is appropriately marked.

(3) Ensuring that material proposed for public release is reviewed to eliminate classified information.

(4) Designating Security Classification Officers at their respective installations, to whom the responsibilities listed in paragraphs (e) (1), (2), and (3) of this section may be reassigned.

(f) The NASA Security Classification Manager, Security Division, NASA Headquarters, who serves as a member and Executive Secretary of the NASA Information Security Program Committee, is responsible for the NASA-wide coordination of security classification matters.

(g) The Director of Security is responsible for establishing procedures for the safeguarding of classified information or material (e.g., accountability, control, access, storage, transmission, marking, etc.) and for ensuring that such procedures are systematically reviewed and those which are duplicative or unnecessary are eliminated.

§ 1203.203 Degree of Protection.

(a) *General.* Upon determination that information or material must be classified, the degree of protection (security classification) commensurate with the sensitivity of the information must be determined. The lowest category of classification necessary to provide the appropriate degree of protection should be assigned. If the classifier has a reasonable doubt as to which security classification category is appropriate, or whether the material should be classified at all, the least restrictive designation should be used, or the information should not be classified.

(b) *Authorized Categories of Classification.* The three categories of classification, as authorized and defined in Executive Order 12065 are set out below. No other restrictive markings are authorized to be placed on NASA classified documents or materials except as expressely provided by statute or by NASA Directives.

(1) *Top Secret.* Top Secret is the designation applied to information or material the unathorized disclosure of which could reasonably be expected to cause exceptionally grave damage to the national security. Examples of exceptionally grave damage include armed hostilities against the United States or its allies; disruption of foreign relations vitally affecting the national security; the compromise of vital national defense plans or complex cryptologic and communications intelligence systems; the revelation of sensitive intelligence operations; and the disclosure of scientific or technological developments vital to national security.

(2) *Secret.* Secret is the designation applied to information or material the unathorized disclosure of which could reasonably be expected to cause serious damage to the national security. Examples of serious damage include disruption of foreign relations significantly affecting the national security; significant impairment of a program or policy directly related to the national security; revelation of significant military plans or intelligence operations; and compromise of significant scientific or technological develpments relating to national security.

(3) *Confidential.* Confidential is the designation applied to that information or material the unauthorized disclosure of which could reasonably be expected to cause identifiable damage to the national security.

Subpart C—Classification Principles and Considerations

§ 1203.300 General.

In general, the types of NASA-generated information and material requiring protection in the interest of national security lie in the areas of applied research, technology or operations.

§ 1203.301 Identification of information requiring protection.

Classifiers shall identify the level of classification of each classified portion of a document (including subject and titles), and those portions that are not classified.

§ 1203.302 Combination, interpretation or compilation.

An interrelationship of individual items, classified or unclassified, may result in a combined item requiring a higher classification than that of any of the individual items. Compilations of unclassified information are considered unclassified unless some additional significant factor is added in the process of compilation. For example: (a) The

way unclassified information is compiled may be classified; (b) the fact that the information is complete for its intended purpose may be classified; or (c) the fact the compilation represents an official evaluation may be classified. In these cases, the compilations would be classified.

§ 1203.303 Dissemination considerations.

The degree of intended dissemination, use of the information and whether the end purpose to be served renders effective security control impractical are considerations during the classification process. These factors do not necessarily preclude classification, but must be considered in order not to impose security controls which are impractical to enforce.

§ 1203.304 Internal effect.

The effect of security protection on program progess and cost and on other functional activities of NASA should be considered. Impeditive effects and added costs inherent in a security classification must be assessed in light of the detrimental effects on the national security interests which would result from failure to classify.

§ 1203.305 Restricted data.

Restricted Data or Formerly Restricted Data is so classified when originated, as required by the Atomic Energy Act of 1954, as amended. Specific guidance for the classification of Restricted Data is provided in "Classification Guides" published by the Department of Energy.

Subpart D—Guides for Original Classification

§ 1203.400 Specific classifying guidance.

Technological and operational information and material, and in some exceptional cases scientific information, falling within any one or more of the following categories must be classified if its unauthorized disclosure could reasonably be expected to cause identifiable damage to the national security. In cases where it is believed that a contrary course of action would better serve the national interests, the matter should be referred to the Chairperson, NASA Information Security Program Committee, for a determination. It is not intended that this list be exclusive; original classifiers are responsible for initially classifying any other type of information which, in their judgment, requires protection within the intent of Executive Order 12065:

(a) Information which provides the United States, in comparison with other nations, with a significant scientific, engineering, technical, operational, intelligence, strategic, tactical or economic advantage related to national security.

(b) Information which if disclosed would significantly diminish the technological lead of the United States in any military system, subsystem or component thereof, resulting in identifiable damage to such a system, subsystem or component thereof.

(c) Scientific or technological information in an area where an advanced military application that would in itself be classified is foreseen during exploratory development.

(d) Information which, if known, would: (1) Provide a foreign nation with an insight into the defense application or the war or defense plans or posture of the United States;

(2) Allow a foreign nation to develop, improve or refine a similar item of defense application;

(3) Provide a foreign nation with a base upon which to develop effective countermeasures;

(4) Weaken or nullify the effectiveness of a defense or military plan, operation, project, weapon system or activity which is vital to the national security.

(e) Information or material which is important to the national security of the United States in relation to other nations when there is sound reason to believe that those nations are unaware that the United States has or is capable of obtaining the information or material; i.e., through intelligence activities, sources, or methods.

(f) Information which if disclosed could be exploited in a manner prejudicial to the national security posture of the United States by discrediting its technological power, capability or intentions.

(g) Information which reveals an unusually significant scientific or technological "breakthrough" which there is sound reason to believe is not known to or within the state-of-the-art capability of other nations. If the "breakthrough" supplies the United States with an important advantage of a technological nature, classification also would be appropriate if the potential application of the information, although not specifically visualized, would afford the United States a significant national security advantage in terms of technological lead time or an economic advantage relating to national security.

(h) Information of such nature that an unfriendly government in possession of it would be expected to use it for purposes prejudicial to U.S. national security and which, if classified, could not be obtained by an unfriendly power without a considerable expenditure of resources.

(i) Information which if disclosed to a foreign government would enhance its military research and development programs to the detriment of U.S. counterpart or competitive programs.

(j) Operational information pertaining to the command and control of space vehicles, the possession of which would facilitate malicious interference with U.S. space mission, that might result in identifiable damage to the national security.

(k) Information which if disclosed could jeopardize the foreign relations or activities of the United States; for example, the premature or unauthorized release of information relating to the subject matter of international negotiations, foreign government information or information regarding the placement or withdrawal of NASA tracking stations on foreign territory.

(l) United States Government programs for safeguarding nuclear materials or facilities.

(m) Other categories of information which are related to national security and which require protection against unauthorized disclosure as may be determined by the Administrator. The Chairperson, NASA Information Security Program Committee, will promptly inform the Director, Information Security Oversight Office, General Services Administration (GSA) of such determinations.

§ 1203.401 Effect of open publication.

Public disclosure, regardless of source or form, of information currently classified or being considered for classification does not preclude initial or continued classification. However, such disclosure requires an immediate reevaluation to determine whether the information has been compromised to the extent that downgrading or declassification is indicated. Similar consideration must be given to related items of information in all programs, projects, or items incorporating or pertaining to the compromised items of information. In these cases, if a release were made or authorized by an official Government source, classification of clearly identified items may no longer be warranted. Questions as to the propriety of continued classification should be referred to the Chairperson, NASA Information Security Program Committee.

§ 1203.402 Classifying material other than documentation.

Items of equipment or other physical objects may be classified only where classified information may be derived by visual observation of internal or external appearance, structure, operation, test, application or use. The overall classification assigned to equipment or objects shall be at least as high as the highest classification of any of the items of information which may be revealed by the equipment or objects, but may be higher if the classifying authority determines that the sum of classified or unclassified information warrants such higher classification. In every instance where classification of an item of equipment or object is determined to be warranted, such determination must be based on a finding that there is at least one aspect of the item or object which requires protection. If mere knowledge of the existence of the equipment or object would compromise or nullify the reason or justification for its classification, the fact of its existence should be classified.

§ 1203.403 State-of-the-art and intelligence.

A logical approach to classification requires consideration of the extent to which the same or similar information available from intelligence sources is known or is available to others. It is also important to consider whether it is known publicly, either domestically or internationally, that the United States has the information or even is interested in the subject matter. The known state-of-the-art in other nations is an additional substantive factor requiring consideration.

§ 1203.404 Handling of unprocessed data.

It is the usual practice to withhold the release of raw scientific data received from spacecraft until it can be calibrated, correlated and properly interpreted by the experimenter under the monitorship of the cognizant NASA office. During this process, the data are withheld through administrative measures, and it is not necessary to resort to security classification to prevent premature release. However, if at any time during the processing of raw data it becomes apparent that the results require protection under the criteria set forth in this Subpart D, it is the responsibility of the cognizant NASA office to obtain the appropriate security classification.

§ 1203.405 Proprietary information.

Proprietary information made available to NASA is subject to examination for classification purposes under the criteria set forth in this Subpart D. Where the information is in the form of a proposal and accepted by NASA for support, it should be categorized in accordance with the criteria of § 1203.400. If NASA does not support the proposal but believes that security classification would be appropriate under the criteria of § 1203.400 if it were under Government jurisdiction, the contractor should be advised of the reasons why safeguarding would be appropriate, unless security considerations preclude release of the explanation to the contractor. NASA should identify the Government department, agency or activity whose national security interests might be involved and the contractor should be instructed to protect the proposal as though classified pending further advisory classification opinion by the Government activity whose interests are involved. If such a Government activity cannot be identified, the contractor should be advised that the proposal is not under NASA jurisdiction for classification purposes, and that the information should be sent, under proper safeguards, to the Director, Information Security Oversight Office, General Services Administration, Washington, D.C. 20405, for a determination.

§ 1203.406 Additional classification factors.

In determining the appropriate classification category, the following additional factors should be considered:

(a) *Uniformity Within Government Activities.* The effect classification will have on technological programs of other Government departments and agencies should be considered. Classification of official information must be reasonably uniform within the Government.

(b) *Applicability of Classification Directives of Other Government Agencies.* It is necessary to determine whether authoritative classification guidance exists elsewhere for the information under consideration which would make it necessary to assign a higher classification than that indicated by the applicable NASA guidance. Generally, the classification by NASA should not be higher than that of equivalent information in other departments or agencies of the Government.

§ 1203.407 Duration of classification.

(a) Except as permitted in paragraph (b) of this section, each original classification authority shall set a date or event for automatic declassification no more than six years later.

(b) Only officials with Top Secret classification authority listed in Subpart H may classify information for more than six years from the date of the original classification. This authority shall be used sparingly. In such cases, a declassification date or event, or a date for review, shall be set. This date or event shall be as early as national security permits and shall be no more than 20 years after original classification except as provided under the provisions of § 1203.603.

§ 1203.408 Assistance by installation security classification officers.

Installation Security Classification Officers, as the installation point-of-contact, will assist installation personnel in:

(a) Interpreting security classification guides and classification assignments for the installation.

(b) Answering questions and considering suggestions concerning security classification matters.

(c) Ensuring a continuing review of classified information for the purpose of declassifying or downgrading in accordance with Subpart E of this part.

(d) Reviewing and approving, as the representative of the contracting officer, the DD Form 254, Contract Security Classification Specification, issued to contractors by the installation.

§ 1203.409 Exceptional cases.

(a) In those cases where a person not authorized to classify information orginates or develops information which is believed to require classification, that person should safeguard the material as though it were classified until it has been evaluated and a decision made by an appropriate classifying authority. For NASA employees the classifying authority is normally the Installation Security Classification Officer. Persons other than NASA employees should forward, under appropriate safeguards, material in which NASA has primary interest to the NASA Information Security Program Committee, Security Division, Washington, DC 20546 for a classification determination.

(b) Information in which NASA does not have primary interest shall be returned promptly, under appropriate safeguards, to the sender in accordance with § 1203.405.

(c) Material received from another agency for a NASA security classification determination shall be processed within 30 days. If a classification cannot be determined during that period, the material shall be

sent, under appropriate safeguards, to the Director, Information Security Oversight Office, GSA, for a determination.

§ 1203.410 Prohibitions.

(a) Classification may not be used to conceal violations of law, inefficiency of administrative error; to prevent embarrassment to a person, organization or agency; or to restrain competition.

(b) Basic scientific research information not clearly related to the national security may not be classified.

(c) A product of non-government research and development that does not incorporate or reveal classified information to which the producer or developer was given prior access may not be classified under this Part 1203 until and unless the Government acquires a proprietary interest in the product. This Part 1203 does not affect the provisions of the Patent Secrecy Act of 1952 (35 U.S.C. 181–188).

(d) References to classified documents that do not disclose classified information may not be classified or used as a basis for classification.

(e) Classification may not be used to limit dissemination of information that is not classifiable under the provisions of this Part 1203 or to prevent or delay the public release of such information.

(f) No document originated on or after December 1, 1978, may be classified *after* NASA has received a request for the document under the Freedom of Information Act or the mandatory review provisions of this Part 1203, unless such classification is consistent with this Part 1203 and is authorized by the Administrator or Deputy Administrator. Documents originated before December 1, 1978, and subject to such a request may not be classified unless such classification is consistent with this Part 1203 and is authorized by the Chairperson, NASA Information Security Program Committee, or by an official with Top Secret classification authority. Classification authority under this provision shall be exercised personally, on a document-by-document basis.

(g) Classification may not be restored to documents already declassified and released to the public.

§ 1203.412 Classification guides.

(a) *General.* A classification guide, based upon classification determinations made by appropriate program and classification authorities, shall be issued for each classified system, program or project. Classification guides shall:

(1) Identify the information elements to be protected, using categorization and subcategorization to the extent necessary to ensure that the information involved can be readily and uniformly identified.

(2) State which of the classification designations (i.e., Top Secret, Secret or Confidential) apply to the identified information elements.

(3) State the duration of each such specified classification in terms of a period of time or future event. When such duration is to exceed six years, the decision must be made by an original Top Secret classification authority and the specific reason for prolonging classification beyond the six-year period shall be provided in the guidance in accordance with the provisions of § 1203.407. If the reason for prolonging classification beyond six years would be the only cause for classification of the guide or would raise the level of the classification of the guide, it need by recorded only on the record copy of the guide.

(4) Indicate specifically, that the designations, time limits, markings and other requirements of Executive Order 12065 are to be applied to information classified pursuant to the guide.

(5) Be approved personally and in writing by an official with original Top Secret classification authority; the identity of the official will be shown on the guide. Such approval constitutes an original classification decision. Normally, all guides will be approved by the Chairperson, NASA Information Security Program Committee, whose office will maintain a list of all classification guides in current use.

(b) *Review of Classification Guides.* Classification guides shall be reviewed by the originator for currency and accuracy not less than once every two years. Changes shall be in strict conformance with the provisions of this Part 1203 and shall be issued promptly. If no changes are made, the originator shall so annotate the record copy and show the date of the review.

Subpart E—Derivative Classification.

§ 1203.500 Use of derivative classification.

Derivative application of classification markings is a responsibility of those who incorporate, paraphrase, restate, generate in new form or respond to information which is already classified or those who apply markings in accordance with a security classification guide issued by an authorized classifier. Persons who apply derivative classifications shall take care to determine whether their paraphrasing, restating or summarizing of classified information has removed all or part of the basis for classification.

§ 1203.501 Applying derivative classification markings.

Persons who apply derivative classification markings shall:

(a) Respect original classification decisions;

(b) Verify the information's current level of classification so far as practicable before applying the markings; and

(c) Carry forward to any newly created documents the assigned dates or events for declassification or review and any additional authorized markings. Where checks with originators or other appropriate inquiries show that no classification or a lower classification than originally assigned is appropriate, the derivative document shall be issued unclassified or shall be marked accordingly.

Subpart F—Declassification and Downgrading

§ 1203.600 Policy.

Declassification of classified information shall be given emphasis comparable to that accorded classification. Information classified pursuant to Executive Order 12065 and prior orders shall be declassified as early as national security considerations permit. Decisions concerning declassification shall be based on the loss of the information's sensitivity with the passage of time or on the occurrence of a declassification event. When information is reviewed for declassification pursuant to this Part 1203 or the Freedom of Information Act, it shall be declassified unless the classification authority established pursuant to Subpart H determines that the information continues to meet the classification guidelines prescribed in § 1203.400 despite the passage of time.

§ 1203.601 Responsibilities.

Officials authorized original classification authority may declassify or downgrade information that is subject to the final classification jurisdiction of NASA and shall take such action in accordance with the provisions of this Subpart F.

§ 1203.602 Public interest vs. declassification.

It is presumed that information which continues to meet the classification requirements in § 1203.407(b) requires continued protection. In rare cases, however, the need to protect such

information may be outweighed by the public interest in disclosure of the information, and in these cases the information should be declassified. When such questions arise concerning NASA information, they shall be referred to the Administrator; the Chairperson, NASA Information Security Program Committee; an official with Top Secret classification authority; or, in the case of Presidential papers, the Archivist of the United States. That official, after appropriate consultation with other agencies or Government components, will determine whether the public interest in disclosure outweighs the damage to national security that might be reasonably expected from disclosure and, if the determination is affirmative, declassify the information.

§ 1203.603 Systematic review for declassification.

(a) *General.* (1) Except for foreign government information as provided in Subpart G of this part, classified information constituting permanently valuable records of the Government, as defined by 44 U.S.C. 2103, and information in the possession and control of the Administrator of General Services, pursuant to 44 U.S.C. 2107 or 2107 note, shall be reviewed for declassification as it becomes 20 years old. Transition to systematic reviews at 20 years shall be implemented as rapidly as practicable and shall be completed by December 1, 1988.

(2) The Administrator may extend classification beyond 20 years, but only in accordance with §§ 1203.600, 1203.601 and 1203.602 and paragraph (b) of this section. This authority may not be delegated. When classification is extended beyond 20 years, a date no more than 10 years later shall be set for declassification or for the next review. That date and specified action shall be marked on the document. Subsequent reviews for declassification shall be set at no more than 10-year intervals unless a longer interval has been authorized by the Director of the Information Security Oversight Office.

(3) A request for extension of the period between subsequent reviews for specific categories of documents or information shall be submitted to the Chairperson, NASA Information Security Program Committee, and shall include personal certification that the classified information for which the waiver is sought was systematically reviewed as required, that a definitive date for declassification could not be determined, and that results of the review established an identifiable need to retain classification for a period in excess of 20 additional years and a recommendation concerning the interval before the next required review.

(4) The Chairperson, NASA Information Security Program Committee, shall designate experienced personnel to assist the Archivist of the United States in the systematic review of 20-year old U.S. originated information and 30-year old foreign information. Such personnel shall:

(i) Provide guidance and assistance to National Archives employees in identifying and separating documents and specific categories of information within documents which are deemed to require continued classification; and

(ii) Develop reports of information or document categories so separated, with recommendations concerning continued classification.

(b) *Systematic Review Guidelines.* The Chairperson, NASA Information Security Program Committee, shall develop, in coordination with NASA organizational elements, guidelines for the systematic review for declassification of 20-year old classified information under NASA's jurisdiction. (See § 1203.700, Foreign Government Information.) The guidelines shall state specific limited categories of information which, because of their national security sensitivity, should not be declassified automatically but should be reviewed item-by-item to determine whether continued protection beyond 20 years is needed. These guidelines are authorized for use by the Archivist of the United States and, with the approval of the Administrator, by an agency having custody of the information covered by the guidelines. All information, except foreign government information, not identified in these guidelines as requiring review and for which a prior automatic declassification date has not been established shall be declassified automatically at the end of 20 years from the date of original classification. The guidelines shall be reviewed at least every other year and revised as necessary unless earlier review for revision is requested by the Archivist of the United States. Copies of the declassification guidelines promulgated by NASA will be provided to the Information Security Oversight Office, GSA.

(c) *Systematic Review Procedures.* (a) All security classified records 20 years old or older, whether held in storage areas under installation control or in Federal Records Centers, will be surveyed to identify those that require scheduling for future disposition. Such scheduling must be accomplished by December 1, 1980.

(2) All NASA information or material in the custody of the National Archives and Records Service that is permanently valuable and more than 20 years old is to be systematically reviewed for declassification by the Archivist of the United States with the assistance of the personnel designated for the purpose pursuant to paragraph (a)(4)(i) of this section. The Archivist shall refer to NASA that information or material which NASA has indicated requires further review. In the case of 20-year old information or material in the custody of NASA installations, such review will be accomplished by the custodians of the information or material. The installation having primary jurisdiction over the information or material received from the Archivist or in its custody, shall proceed as follows:

(i) Classified information or material over which NASA exercises exclusive or final original classification authority and which is to be declassified in accordance with the systematic review guidelines developed under paragraph (b) of this section shall be so marked.

(ii) Classified information or material over which NASA exercises exclusive or final original classification authority and which, in accordance with the systematic review guidelines developed under paragraph (b) of this section, is to be kept protected, shall be listed by category by the responsible custodian and referred to the Chairperson, NASA Information Security Program Committee. This listing shall:

(A) Identify the information or material involved.

(B) Recommend classification beyond 20 years to a specific future event scheduled to happen or a specific period of time not to exceed 10 years or, in the alternative, recommend a subsequent review date not to exceed 10 years.

(C) State the reason for the recommended continued classification.

(iii) The Administrator shall consider and determine which category of information or material shall be kept classified and the dates for automatic declassification or subsequent review. The Archivist of the United States will be notified in writing of this decision.

(d) *Declassification by the Director of the Information Security Oversight Office.* If the Director of the Information Security Oversight Office, GSA, determines that NASA information is classified in violation of Executive Order 12065, the Director may require the information to be declassified. Any such decision by the Director may be appealed through the NASA Information Security Program Committee to the National Security Council. The

information shall remain classified until the appeal is decided or until 1 year from the date of the determination by the Director of the Information Security Oversight Office, whichever comes first.

§ 1203.604 Mandatory review for declassification.

(a) *Information covered.* All classified information, except as provided below, upon request by a member of the public or a Government employee or agency to declassify and release such information under the provisions of Executive Order 12065, shall be subject to review by the originating NASA organization for possible declassification in accordance with the procedures of this section. After review, the information or any reasonable segregable portion thereof that no longer requires protection shall be declassified and released unless withholding is otherwise warranted under applicable law.

(b) *Presidential Papers.* (1) Information less than 10 years old which was originated by the President, by the White House Staff, or by committees or commissions appointed by the President, or by others acting on behalf of the President, is exempted from mandatory review for declassification.

(2) Such information 10 years old or older is subject to mandatory review for declassification in accordance with procedures developed by the Archivist of the United States which provide for consultation with NASA in matters of primary subject interest to NASA.

(c) *Submission of requests for review.* Requests for mandatory review of classified information shall be submitted in accordance with the following:

(1) Requests originating within NASA shall, in all cases, be submitted directly to the NASA installation which originated the information.

(2) For most expeditious action, requests from other Governmental agencies or from members of the public should be submitted directly to NASA installations which originated the material, or, if the originating component is not known, the requestor may submit the request to:

(i) The Chairperson, NASA Information Security Program Committee; or the head of the NASA organization most concerned with the subject matter of the material requested; or

(ii) The office designated to receive requests for records under the Freedom of Information Act pursuant to Part 1206 of this chapter.

(d) *Requirement for processing.* (1) Requests which are submitted under the Freedom of Information Act shall be processed in accordance with Part 1206 of this chapter.

(2) Other requests for declassification review and release of information shall be processed in accordance with the provisions of this section, subject to the following conditions:

(i) The request is in writing and reasonably describes the information sought with sufficient particularity to enable the installation to identify it and does not involve a large number of documents originated by numerous classifying authorities and requiring extensive coordination for accomplishment of the requested review.

(ii) The requestor shall be asked to correct a request that does not comply with paragraph (d)(2)(i) of this section, to provide additional information or to narrow the scope of the request and shall be notified that no action will be taken until the requestor complies.

(iii) If the request requires the rendering of services for which fees may not be charged under Part 1206, but may be charged under 31 U.S.C. 483a (1976), the rates prescribed in § 1206.700 shall be used, if appropriate.

(e) *Processing of Requests.* Requests that meet the requirements of paragraph (d)(2) of this section will be processed as follows:

(1) NASA installation action upon the initial request shall be completed within 60 days.

(2) Receipt of the request shall be acknowledged promptly. The NASA installation shall determine whether, under the declassification provisions of this Part 1203, the requested information may be declassified and, if so, shall make such information available to the requestor, unless withholding is otherwise warranted under applicable law. If the information may not be released in whole or in part, the requestor shall be given a brief statement of the reasons for denial, a notice of the right to appeal the determination to the Chairperson, NASA Information Security Program Committee, National Aeronautics and Space Administration, Washington, DC 20546, and a notice that such an appeal must be filed within 60 days in order to be considered.

(3) All appeals of denials of requests for declassification shall be acted upon and determined finally within 30 days after receipt and the requestor shall be advised that the appeal determination is final. If continued classification is required under the provisions of this Part 1203, the requestor shall be notified of the reasons thereof.

(4) The declassification and release of foreign government information that is subjected to mandatory review under this section shall be determined only in accordance with § 1203.703.

(5) When a NASA installation receives a request for declassification of information in a document which is in the custody of the installation but was classified by another NASA installation or Government agency, the installation shall refer the request to the classifying installation or Government agency, with a copy of the document containing the information requested when practicable, and shall notify the requestor of the referral. When NASA receives such a referral, it shall process the request in accordance with the requirements of this section and, if so requested, shall notify the referring agency of the determination made on the request.

(f) *Prohibition.* No NASA installation in possession of a classified document may, in response to a request for the document under this section or under Part 1206 of this chapter, refuse to confirm the existence or nonexistence of the document unless the fact of its existence or nonexistence would itself be classifiable under this Part 1203.

(g) *Declassification of Transferred Documents or Material.*—(1) *Material Officially Transferred.* In the case of classified information or material transferred by or pursuant to statute or Executive Order to NASA in conjunction with a transfer of functions (not merely for storage purposes) for NASA's use and as part of its official files or property, as distinguished from transfers merely for purposes of storage, NASA shall be deemed to be the original classifying authority over such material for purposes of downgrading and declassification.

(2) *Material Not Officially Transferred.* When any NASA installation has in its possession classified information or material originated by an agency which has since ceased to exist and that information has not been officially transferred to another department or agency, or when it is impossible for the possessing NASA installation to identify the originating agency, and a review of the material indicates that it should be downgraded or declassified, the possessing NASA installation shall be deemed to be the originating agency for the purpose of declassifying or downgrading such material. If it appears probable that another agency or another NASA organization may have a substantial interest in whether the classification of any particular information should be maintained, the possessing NASA

installation shall not exercise the power conferred upon it by this paragraph, until after consultation with any other agency or NASA organization having an interest in the subject matter.

(3) *Transfer for Storage or Retirement.* (i) Insofar as practicable, classified documents shall be reviewed to determine whether or not they can be downgraded or declassified prior to being forwarded to records centers or to the National Archives for storage. Any downgrading or declassification determination shall be indicated on each document by appropriate markings.

(ii) Classified information transferred to the General Services Administration for accession into the Archives of the United States shall be downgraded or declassified by the Archivist of the United States in accordance with Executive Order 12065, the directives of the Information Security Oversight Office, GSA; and NASA guidelines.

(h) *Downgrading and Declassification Actions.*—(1) *Notification of changes in Classification or Declassification.* When classified material has been marked with specific dates or events for downgrading or declassification, it is not necessary to issue notices of such actions to any holders. However, when such actions are taken earlier than originally scheduled, or the duration of classification is shortened, the authority making such changes shall, to the extent practicable, ensure prompt notification to all addressees to whom the information or material was originally transmitted. The notification shall specify the marking action to be taken, the authority therefor, and the effective date. Upon receipt of notification, recipients shall effect the proper changes and shall notify addressees to whom they have transmitted the classified information or material.

(2) *Posted Notice.* If prompt remarking of large quantities would be unduly burdensome, the custodian may attach declassification, downgrading, or upgrading notices to the storage unit in lieu of the remarking action otherwise required. Each notice shall indicate the change, the authority for the action, the date of the action, and the storage units to which it applies. Items withdrawn from such storage units shall be promptly remarked. However, when information subject to a posted downgrading or declassification notice is withdrawn from one storage unit solely for transfer to another, or a storage unit containing such information is transferred from one place to another, the transfer may be made without remarking if the notice is attached to or remains with each shipment.

(i) *Foreign Relations Series.* In order to permit the State Department editors of *Foreign Relations of the United States* to meet their mandated goal of publishing 20 years after the event, NASA shall assist these editors by facilitating access to appropriate classified materials in its custody and by expediting declassification review of items from its files selected for publication.

Subpart G—Foreign Government Information

§ 1203.700 Identification.

In order to qualify as foreign government information, information must fall into one of the two following categories:

(a) Information provided to the United States by a foreign government or international organization of governments, such as the North Atlantic Treaty Organization (NATO), where the United States has undertaken an obligation, expressed or implied, to keep the information in confidence. The information is considered to have been provided in confidence if it is marked in a manner indicating it is to be treated in confidence or if the circumstances of the delivery indicate that the information be kept in confidence.

(b) Information requiring confidentiality produced by the United States pursuant to a written, joint arrangement with a foreign government or international organization of governments. A written, joint arrangement may be evidenced by an exchange of letters, a memorandum of understanding, or other written record of the joint arrangement.

§ 1203.701 Classification.

(a) Foreign government information that is classified by a foreign entity shall either retain its original classification designation or be marked with a United States classification designation that will ensure a degree of protection equivalent to that required by the entity that furnished the information. Original classification authority is not required for this purpose.

(b) Foreign government information that was not classified by a foreign entity but was provided to NASA with the expressed or implied obligation that it be held in confidence must be classified. Executive Order 12065 states a presumption of at least identifiable damage to the national security in the event of unauthorized disclosure of foreign government information. Therefore, such foreign government information shall be classified at least Confidential. However, at the time of classification, judicious consideration shall be given to the sensitivity of the subject matter and the impact of its unauthorized disclosure upon both the United States and the originating foreign government or organization of governments in order to determine the most appropriate level of classification. Levels above Confidential must be assigned by an original classification authority.

§ 1203.702 Duration of classification.

Foreign government information is exempt from the declassification and 20-year systematic review requirements of § 1203.603(b). Unless the guidelines for the systematic review of 30-year old foreign government information developed pursuant to § 1203.603(b) prescribe dates or events for declassification or for review for declassification:

(a) Foreign government information shall not be assigned a date or event for declassification unless such is specified or agreed to by the foreign entity.

(b) Foreign government information classified after December 1, 1978, shall be assigned a date for review for declassification at 30 years from the time the information was originated by the foreign entity or acquired or classified by NASA, whichever is earlier. Such information received undated shall be dated upon receipt.

§ 1203.703 Declassification.

(a) In weighing the public interest in disclosure against the need to protect foreign government information and confidential foreign sources, the need to protect such information shall be presumed to predominate.

(b) Following consultation with the Archivist of the United States and, where appropriate, with the foreign government or international organization concerned, and, with the assistance of the Department of State, NASA will issue guidelines for the systematic review of 30-year old foreign government information that will apply to foreign government information of primary concern to NASA. These guidelines are authorized for use by the Archivist of the United States and, with the approval of NASA, by an agency having custody of such information. The Chairperson, Information Security Program Committee, will initiate administrative functions necessary to effect review of these guidelines at least once every two years and submit recommendations to the Administrator based on these reviews. If, after applying the guidelines to 30-year old

foreign government information, a determination is made by the reviewer that continued classification is necessary, a date for declassification or for review no more than 10 years later shall be set. That action and date shall be marked on the document. Subsequent review dates shall be set at no more than 10-year intervals.

(c) Requests for mandatory review for declassification of foreign government information shall be processed and acted upon in accordance with the provisions of § 1203.603 except that foreign government information will be declassified only in accordance with the guidelines developed for that purpose under § 1203.702 and after consultation with other Government agencies with subject matter interest as necessary. In those cases where these guidelines cannot be applied to the foreign government information requested, the foreign originator normally should be consulted, through appropriate channels, prior to final action on the request. However, when the responsible NASA installation knows the foreign originator's view toward declassification or continued classification of the types of information requested, consultation with the foreign originator is not necessary.

(d) Requests for mandatory review for declassification of foreign government information which NASA has not received or classified shall be referred to the Government agency having a primary interest. The requestor shall be advised of the referral.

Robert A. Frosch,
Administrator.

[FR Doc. 79-18874 Filed 6-15-79; 8:45 am]
BILLING CODE 7510-01-M

FEDERAL TRADE COMMISSION

16 CFR Part 13

[Docket No. C-2964]

Prohibited Trade Practices, and Affirmative Corrective Actions; Aluminum Company of America, et al.

AGENCY: Federal Trade Commission.

ACTION: Final Order.

SUMMARY: In settlement of alleged violations of federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order, among other things, requires a Pittsburgh, Pa. producer of aluminum building products and its subsidiary, Alcoa Building Products, Inc., to cease disseminating or participating in the dissemination of advertisements which contain fuel reduction, heat loss reduction, energy savings or thermal insulation representations regarding residential aluminum siding. The order also requires that the R-value for insulating material be disclosed in advertisements which merely use the term "insulated aluminum siding" for descriptive purposes.

DATES: Complaint and order issued May 11, 1979.[1]

FOR FURTHER INFORMATION CONTACT: Paul R. Peterson, Director, 4R, Cleveland Regional Office, Federal Trade Commission, 1339 Federal Office Building, 1240 East Ninth St., Cleveland, Ohio, 44199, (216) 522-4207.

SUPPLEMENTARY INFORMATION: On Friday, January 12, 1979, there was published in the **Federal Register**, 44 FR 2600, a proposed consent agreement with analysis In the Matter of Aluminum Company of America, a corporation, and Alcoa Building Products, Inc., a corporation, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions, or objections regarding the proposed form of order.

Comments were filed and considered by the Commission. The Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered its order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, are as follows:

Subpart-Disseminating Advertisements, Etc.: § 13.1043 Disseminating advertisements, etc.

(Sec. 6, 38 Stat. 721; (15 U.S.C. 46). Interprets or applies sec. 5, 38 Stat. 719, as amended; (15 U.S.C. 45))

Carol M. Thomas,
Secretary.

[FR Doc. 79-18821 Filed 6-15-79; 8:45 am]
BILLING CODE 6750-01-M

16 CFR Part 13

[Docket No. C-2966]

Prohibited Trade Practices, and Affirmative Corrective Actions; General Motors Corporation

AGENCY: Federal Trade Commission.

ACTION: Final Order.

SUMMARY: In settlement of alleged violations of federal law prohibiting unfair acts and practices and unfair methods of competition, this consent agreement, among other things, requires a Detroit, Mich. motor vehicle manufacturer to cease misrepresenting the manufacturing source of engine options and the availability of standard or optional equipment. The order also requires the firm to make designated disclosures regarding the manufacturing source, ordering code, and availability of each engine option offered for the model years 1979 through 1981; notify dealers promptly of engine option substitutions; and provide them with the replacement parts and maintenance information necessary to service such equipment. Additionally, the company is prohibited from using any wholesale order system which could prevent dealers from designating specific options requested by purchasers.

DATES: Complaint and order issued May 18, 1979.[1]

FOR FURTHER INFORMATION CONTACT: Paul R. Peterson, Director, 4R, Cleveland Regional Office, Federal Trade Commission, 1339 Federal Office Bldg., 1240 East Ninth St., Cleveland, Ohio. 44199. (216) 522-4207.

SUPPLEMENTARY INFORMATION: On Friday, January 26, 1979, there was published in the **Federal Register**, 44 FR 5457, a proposed consent agreement with analysis In the Matter of General Motors Corporation, a corporation, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions, or objections regarding the proposed form of order.

Comments were filed and considered by the Commission. The Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered its order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, are as follows:

Subpart-Advertising Falsely or Misleadingly: § 13.10 Advertising falsely or misleadingly; 13.10-1 Availability of merchandise and/or facilities; § 13.90 History of product or offering; § 13.160 Promotional sales plans; § 13.205 Scientific or other relevant facts; § 13.235 Source or origin; 13.235-35 History. Subpart-Corrective Actions and/or Requirements: § 13.533 Corrective actions and/or requirements; 13.533-20 Disclosures. Subpart-Misrepresenting Oneself and Goods—

[1] Copies of the Complaint, and the Decision and Order filed with the original document.

[1] Copies of the Complaint, and the Decision and Order filed with the original document.

Goods: § 13.1572 Availability of advertised merchandise and/or facilities; § 13.1650 History of product; § 13.1745 Source or origin; 13.1745–60 Maker or seller; § 13.1750 Style or type.—Promotional Sales Plans: § 13.1830 Promotional sales plans. Subpart-Neglecting, Unfairly or Deceptively, To Make Material Disclosure: § 13.1854 History of products; § 13.1866 Quality, grade or type; § 13.1895 Scientific or other relevant facts; § 13.1900 Source or origin.

(Sec. 6, 38 Stat. 721; (15 U.S.C. 46). Interprets or applies sec. 5, 38 Stat. 719, as amended; (15 U.S.C. 45))

BILLING CODE 6750-01-M

16 CFR Part 13

[Docket No. C-2966]

Prohibited Trade Practices, and Affirmative Corrective Actions; Inland Empire Roofing Contractors Association

AGENCY: Federal Trade Commission.

ACTION: Final order.

SUMMARY: In settlement of alleged violations of federal law prohibiting unfair acts and practices and unfair methods of competition, this consent agreement, among other things, requires a Spokane, Wash. roofing association to cease entering into agreements with others to establish and maintain terms of guarantees, prices, or other conditions of sale in connection with the sale of roofs and related services; suggesting that members adhere to any particular price, guarantee, or other condition of sale; or limiting by any means a member's right to give any guarantee, price or other term or condition of sale to its customers. The association is also prohibited from investigating and/or policing its members with regard to prices charged and guarantees imposed in the sale of their products and services.

DATES: Complaint and order issued May 22, 1979. [1]

FOR FURTHER INFORMATION CONTACT: Thomas Armitage, Director, 10R, Seattle Regional Office, Federal Trade Commission, 28th Floor, Federal Bldg., 915 Second Ave., Seattle, Wash. 98174 (206) 442–4655.

SUPPLEMENTARY INFORMATION: On Monday, March 19, 1979, there was published in the **Federal Register**, 44 FR 16441, a proposed consent agreement with analysis In the Matter of Inland Empire Roofing Contractors Association, an unincorporated association, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions, or objections regarding the proposed form of order.

No comments having been received, the Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered its order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR 13, are as follows:

Subpart-Coercing and Intimidating: § 13.367 Members. Subart-Combining or Conspiring: § 13.395 To control marketing practices and conditions; § 13.430 To enhance, maintain or unify prices; § 13.470 To restain or monopolize trade. Subpart-Controlling, Unfairly, Seller-Suppliers: § 13.530 Controlling, unfairly, seller-suppliers. Subpart-Corrective Actions and/or Requirements: § 13.533 Corrective actions and/or requirements; 13.533–20 Disclosures; 13.533–60 release of general, specific or contractual constrictions, requirements, or restraints. Subpart-Maintaining Resale Prices: § 13.1165 Systems of espionage.

(Sec. 6, 38 Stat. 721; (15 U.S.C. 46). Interprets or applies sec. 5, 38 Stat. 719, as amended; (15 U.S.C. 45).)

[Docket No. C-2963]

Prohibited Trade Practices, and Affirmative Corrective Actions; International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local Union

AGENCY: Federal Trade Commission.

ACTION: Final Order.

SUMMARY: In settlement of alleged violations of Federal law prohibiting unfair acts and practices and unfair methods of competition, this consent agreement, among other things, requires an Anchorage, Alaska labor union local to cease entering into agreements or understandings which restrict signatory construction companies to deal only with subcontractors who agree with the same terms and conditions binding between the union and the contractors. Additionally, the agreement would prohibit the local from taking any action that would discriminate or economically injure non-compliers.

DATES: Complaint and order issued May 9, 1979. [1]

FOR FURTHER INFORMATION CONTACT: Thomas Armitage, Director, 10R, Seattle Regional Office, Federal Trade Commission, 28th Floor, Federal Bldg., 915 Second Ave., Seattle Wash. 98174. (206) 442–4655.

SUPPLEMENTARY INFORMATION: On Wednesday, July 19, 1978 there was published in the **Federal Register**, 43 FR 31022, a proposed consent agreement with analysis In the Matter of International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local Union 959, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions, or objections regarding the proposed form of order.

Comments were filed and considered by the Commission. The Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered its order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, are as follows:

Subpart-Coercing and Intimidating: § 13.370 Suppliers and sellers. Subpart-Combining or Conspiring: § 13.390 To control employment practice; § 13.395 To control marketing practices and conditions.

(Sec. 6, 38 Stat. 721; (15 U.S.C. 46). Interprets or applies sec. 5, 38 Stat. 719, as amended; (15 U.S.C. 45).)

BILLING CODE 6750-01-M

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Part 1118

Investigations, Inspections, and Inquiries Under the Consumer Product Safety Act

AGENCY: Consumer Product Safety Commission.

[1] Copies of the Complaint, and the Decision and Order filed with the original document.

[1] Copies of the Complaint, and the Decision and Order filed with the original document.

ACTION: Final rules.

SUMMARY: In this document, the Commission sets forth rules to govern the scope and conduct of investigations, inspections, and inquiries under the Consumer Product Safety Act as well as procedures for disposing of matters by consent order agreements. The rules state the manner in which officers or employees of the Commission are authorized to enter and inspect premises; to have access to and copy documentary evidence; and to obtain information. These rules are intended to provide the Commission with an effective and efficient method of conducting investigations, inspections, and inquiries in order to determine whether there has been compliance with the Consumer Product Safety Act and the standards, rules, and regulations issued under the Act. In addition, the rules will inform the public of the Commission's procedures and the safeguards available during investigational activities.

EFFECTIVE DATE: July 18, 1979.

FOR FURTHER INFORMATION CONTACT: Ronald G. Yelenik, Consumer Product Safety Commission, Directorate for Compliance and Enforcement, Washington, D.C. 20207, Telephone No. (301) 492-6629.

SUPPLEMENTARY INFORMATION: On August 9, 1978, the Consumer Product Safety Commission published proposed Nonadjudicative Rules of Procedure for Investigations, Inspections, and Inquiries under the Consumer Product Safety Act in the **Federal Register** (43 FR 35440). The Commission invited the public to submit written comments regarding the rules by September 22, 1978.

The Commission received numerous written comments from businesses, trade associations, law firms and others. Most of the commenters support the purpose of the proposal. The rules issued below, in final form, reflect changes made in the proposed rules in response to questions and suggestions raised by commenters as well as changes suggested by the Commission staff. Following is a discussion of major comments received and the Commission's responses to them.

Discussion of Major Comments

Inspections and the Fourth Amendment

The majority of the comments refer to the recent Supreme Court decision in *Marshall v. Barlow's Inc* 436 U.S. 307 (1978), and the possible impact of this decision upon the proposed rules. In *Marshall v. Barlow's Inc.*, the Supreme Court held that non-consensual inspections which are conducted by the Occupational Safety and Health Administration (OSHA) without a warrant or its "functional equivalent" violate the Fourth Amendment of the United States Constitution. The Fourth Amendment states in pertinent part: "The rights of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures, shall not be violated and no warrants shall issue, but upon probable cause * * *"

Several commenters expressed the view that proposed §§ 1118.2(a) (1) and (2) and 1118.2(d) are in conflict with the *Barlow* decision in that these subsections would authorize Commission officers and employees to enter and inspect premises without first obtaining a search warrant. The Commission believes that the commenters have improperly construed *Barlow*. The Supreme Court ruled that where an OSHA inspector in the course of his/her duties is refused entry and inspection to business premises, OSHA must obtain a search warrant or its "functional equivalent" to obtain entry. The Court, however, did not indicate that OSHA must procure a search warrant prior to refusal of entry and/or inspection. On the contrary, the opinion expressly anticipates that "the great majority of businessmen can be expected in normal course to consent to inspection without a warrant." 436 U.S. 307, 314 (1978). If voluntary entry is refused, *Barlow* requires that OSHA obtain either a search warrant or its functional equivalent if it wishes to enter and inspect.

Section 16 of the Consumer Product Safety Act (15 U.S.C. 2065) authorizes officers or employees of the Commission to conduct inspections at reasonable times and in a reasonable manner for purposes of implementing the Act. The Commission has carefully considered this provision in light of the Supreme Court's decision in *Barlow*. The Commission in § 1118.2 has provided for the use of search warrants or their functional equivalent in situations where entry and/or inspection has been refused. Therefore, the Commission believes that these rules follow the *Barlow* decision, and has made no change in the rules issued below.

Several commenters stated that proposed §§ 1118.2(a) (1) and (2) and 1118.2(d) should make clear that an individual has the right to request that a warrant be obtained, and that it is not a violation of the Act or the rules for any person or firm to refuse entry or inspection to a Commission officer or employee who does not present a lawfully obtained search warrant. The Commission believes that the rules as proposed, adequately reflect the rationale of the Supreme Court in *Barlow*. Accordingly, the Commission declines to make the suggested revisions. However, the Commission has revised proposed § 1118.2(c) to provide for the inclusion of a statement in the notice of inspection that "the inspection will be conducted and the information provided with the cooperation of the person or firm being inspected."

Conduct and Scope of Inspections

Several commenters expressed the view that proposed §§ 1118.2(a) (1) and (2) should be revised to state that Commission investigators do not have the authority to inspect certain areas of a firm's facilities such as offices, file rooms and supply space where consumer products are neither manufactured nor held. An analysis of the applicable legislative history indicates that the Commission has the authority, in accordance with its obligation to protect the public health and safety, to investigate and inspect these and other areas of a factory, warehouse or establishment. House Commerce Committee Report No. 92-1153 (1972) at p. 43, clearly states: "Such inspection may extend to any portion of any premises or facility which may relate to the safety of such products." Therefore, the Commission declines to adopt the suggested changes.

One commenter suggested that proposed § 1118.2 be modified to show that the inspectional authority of the Commission does not extend to retailers. Although retailers have been excluded from the recordkeeping requirements of § 16(b) of the Act, they have not been exempted from the inspection provisions of § 16(a). House Committee Rep. No 92-1153 p. 44 (1972). Section 16, which pertains to entry and inspection of premises, grants to the Commission broad authority to conduct on-site inspections of any establishment where consumer products are held in connection with their distribution in commerce. Since retailers are establishments within the meaning of § 16, they are therefore subject to inspection by the Commission. Accordingly, the Commission believes that it has the statutory authority to inspect the business premises of retailers, and therefore, declines to make the suggested change.

Several commenters contended that the Commission lacks statutory authority to have access to records, books, documents, papers, packaging or

labeling as as provided in proposed § 1118.2(a)(3), without first promulgating a rule requiring such information to be kept and made available. Careful analysis of § 16 of the CPSA clearly indicates that the sole limitation on the Commission's authority to have access to and copy records is that said records be " * * * appropriate books, records and papers relevant to determining whether such manufacturer, private labeler or distributor has acted or is acting in compliance with this Act and rules under this Act. 15 U.S.C. 2065 (1972)." Furthermore, the legislative history of § 16 of the Consumer Product Safety Act indicates that the broad remedial purposes of the Act, a public safety statute, authorizes the Commission to have access to all books, papers, records and other relevant information. The Commission concludes that such authority is not dependent upon the prior promulgation of a Commission rule requiring the establishment and maintenance of such information. Accordingly, the Commission declines to make any substantive changes in § 1118.2(a)(3) to reflect such a limitation.

One commenter expressed the opinion that the scope of proposed § 1118.2(a)(3), exceeds the Commission's statutory authority, in that it provides for the copying of printed information. The Commission believes that this view is unduly restrictive. When § 16, which relates to inspections and recordkeeping, is read in conjunction with § 19(a)(3) of the Act, which makes it unlawful to fail or refuse to permit the copying of records, it is apparent that the Commission has the authority to copy information which shows or relates to the firm's compliance with the Act and the rules. Therefore, the Commission declines to modify § 1118.2(a)(3) in the manner suggested.

Another commenter suggested that the language of proposed § 1118.2(a)(3) purports to authorize access to and copying of virtually any data, whether or not such data relates to the firm's compliance with the Act or rules. Although such was not the intent of this provision, the Commission recognizes that the language of this subsection may give such an impression. Accordingly, proposed § 1118.2(a)(3) has been revised in the following manner to authorize access to and copying of only relevant information: "(3) to have access to and to copy all relevant records, books, documents, papers, packaging or labeling which: (i) Are required by the Commission to be established, made or maintained, or (ii) show or relate to the production, inventory, testing, distribution, sale, transportation, importation, or receipt of any consumer product, or that are otherwise relevant to determining whether any person or firm has acted or is acting in compliance with the act and regulations, rules and others promulgated under the act, and * * *" The Commission believes that this language change will remove any possible ambiguity.

One commenter expressed the view that the Commission lacks statutory authority to inspect packaging and labeling of consumer products. The Commission believes that packaging and labeling are component parts of consumer products within the meaning of § 3(a)(1) of the CPSA (see 16 CFR 1115.4) and are therefore obtainable and subject to inspection to the same extent as other consumer products and components. Therefore, the Commission has not deleted "packaging" and "labeling" from § 1118.2(a)(3).

Several commenters argued that proposed § 1118.2(a)(4) exceeds the Commission's statutory authority in that it provides that the Commission may obtain information during the course of an on-site inspection by interviewing employees. These commenters would require the Commission to rely exclusively on compulsory process to obtain oral and/or written statements from employees. However, the Supreme Court in *Barlow* voiced the expectation that most inspections would be conducted with the consent of the person or firm involved. This expectation also applies to oral and written comments of employees. Although the Act and these rules provide methods for compelling answers to questions, the Commission expects that most questions will be answered by employees in a cooperative manner. To resort to compulsory process at the outset would create unjustified expense for both the Commission and the subject of the investigation. It may also generate antagonism and resistance towards the Commission. The Commission believes that employee cooperation should be sought and encouraged.

Another comment, similar to the preceding one, has stated that the seeking of oral information is intrusive, and that the same information is more easily obtainable by use of a subpoena. In response to the preceding comment, the Commission expressed its preference for relying on public cooperation in the first instance. The Commission does not believe it necessary at this time to change a long-standing regulatory enforcement procedure in the absence of compelling evidence that there has been an undue disruption of normal business activities. It is the practice of the staff to accommodate business firms to every extent possible to prevent the kind of disruptions referred to by the commenter. The Commission believes that the unnecessary issuance of compulsory process would be far more disruptive and expensive to the firms involved. Therefore, the Commission will continue first to seek and obtain oral information.

Other Comments

Definitions; Initiation of Investigations, Inspections and Inquiries

The Commission, on its own initiative, has, for the purpose of clarity, divided proposed § 1118.1(b) into two subsections: § 1118.1(b) and § 1118.1(c). Proposed § 1118.1(c) now appears as final § 1118.1(d).

One commenter objected to the phrase "includes but is not limited to" within the proposed definition of "investigation" in proposed § 1118.1(a)(1) (now final § 1118.1(a)(4)). The Commission believes that there should be no limitations on the types of investigations, inspections and inquiries that may be pursued in the future, so long as adequate notice and opportunity to be heard are afforded to the firms involved. The Commission has therefore declined the commenter's suggestion that the phrase be deleted.

Several commenters objected to the inclusion of retailers within the proposed definition of "firm" in proposed § 1118.1(a)(2) (now final § 1118.1(a)(3)). They argue that since retailers are excluded from the recordkeeping requirements of section 16(b), such retailers should not be included within the broad definition of "firm". Despite the fact that the recordkeeping requirement is not applicable to retailers, retailers are generally subject to the other provisions of the Act. Section 16(a)(1) of the Act authorizes the Commission to enter any establishment in which consumer products are held in connection with distribution in commerce. The definition of "distribution in commerce" includes holding consumer products for sale. Section 3(a)(6) of the Act defines a retailer as one to whom a consumer product is delivered or sold for purposes of sale or distribution to consumers. Thus, a retailer comes within the statutory scope of § 16(a)(1) of the Act. Therefore, the Commission declines to adopt the suggestion of the commenters to delete the word retailer from the definition of "firm". However, in order to clarify the applicability of the Act and

these rules to retailers, the Commission has added the following language to proposed § 1118.1(a)(2) "* * * except as otherwise provided by § 16(b) of the Act.

Trade Secrets

Several commenters have claimed that proposed § 1118.2 does not provide adequate protection against the disclosure of trade secrets and other confidential or proprietary information. The Commission points out that §§ 1118.2(c) and 3(c) of these rules exempt such information from disclosure to anyone except other officers or employees of the Commission who are concerned with enforcing or administering the Act. These two subsections paraphrase and restate the Commission's Freedom of Information Act Regulations, 16 CFR Part 1015 (42 FR 10490, February 22, 1977), the Freedom of Information Act and apply the maximum protection provided for under the FOIA (15 U.S.C. 552) to all information obtained by the Commission. Accordingly, the Commission declines to modify § 1118.2 of the final rules.

Samples

Several commenters, including a number of trade associations and manufacturers, objected to proposed § 1118.2(a)(4)(ii). The commenters claim that this subsection authorizes the Commission to obtain samples of consumer products without payment. The Commission did not intend this subsection to have such an effect. Section 27(f) of the Act provides that the Commission "may require any manufacturer, distributor or retailer of a consumer product to sell the product to the Commission at manufacturer's, distributor's or retailer's cost." Accordingly, the Commission has clarified final § 1118.2(a)(4)(ii) by adding the phrase "at manufacturer's, distributor's, or retailer's cost, unless voluntarily provided * * *"

Other commenters expressed the view that the Commission is only authorized to buy finished products and not components. Since § 3(a)(1) of the Act includes "components" within the definition of "consumer product" the Commission disagrees with the commenter. Therefore, the Commission believes that § 1118.2(a)(4) correctly interprets the statute and that the Commission has the authority to obtain components.

Compulsory Process

In order to clarify the fact that the Commission may initiate investigations, inspections or inquiries by either issuance of a notice of inspection or by seeking ex parte search warrants or using the compulsory processes enumerated in proposed § 1118.3, the staff has modified the language of § 1118.3 of the final rules.

One commenter objected to the language "including but not limited to" in proposed § 1118.3 as excessively broad. The Commission agrees with the commenter and has revised final § 1118.3 by adding the words "the following compulsory processes" after the phrase "including but not limited to."

Another commenter expressed the view that the use of the term "notice" in proposed § 1118.3(b) is unclear and could be construed to allow mail service of search warrants. Final § 1118.3(b) has been modified by deleting the words "of notice" from the subsection. Moreover, the phrase "the following compulsory processes" has been added to final § 1118.3(a) to make clear that the service involved refers solely to compulsory process and not to search warrants.

Several commenters suggested that proposed § 1118.3(b)(3) is probably unconstitutional in that it permits service of general or special orders by publication in the **Federal Register**. Other commenters stated that this means of service is unfair to small businessmen who do not subscribe to the **Federal Register**. The Commission is neither aware of any case law supporting the constitutional claim of the commenters, nor was any cited in the comment. However, in order to assure the commenter that service by publication will only be used as a last resort, the Commission has deleted the phrase "is impractical or" from final § 1118.3(b)(3). Therefore, the Commission does not believe that this form of service is unfair to small businessmen.

A few commenters complained that the date of service of compulsory processes in proposed § 1118.3(c) should be the date on which the document is received rather than the date on which the document is mailed. The commenters claimed that since it might take three or four days for process to be received by mail, such delay would unreasonably shorten the time period in which they are permitted or required to respond. Although the proposed rules provide for a three-day extension of time when service by mail is involved, the Commission believes that the commenter's views are well founded. The Commission has therefore modified § 1118.3(c) in the manner suggested by the commenter.

Subpoenas

One commenter suggested that proposed § 1118.4 is overbroad since it allows for discovery of documents beyond the authority granted in section 16 of the CPSA. The authority to issue subpoenas is granted by section 27(b)(3) of the CPSA. This section empowers the Commission to require the production of all documents relating to the execution of Commission duties. Accordingly, the Commission declines to make any change in final § 1118.4.

Investigational Hearings

Several commenters stated that the purpose of investigational hearings set forth in proposed § 1118.5(a) is too expansive in that it relates to "any matter under investigation." For this reason, the commenters claim that there is no guarantee that the hearings will be limited to matters in the public interest. The Commission did not intend that "any matter under investigation" be read in such a broad manner. Section § 1118.1 of these rules defines "investigation" as "an undertaking by the Commission to obtain information for implementing, enforcing or determining compliance with the Consumer Product Safety Act, and the regulations, rules and orders issued under that Act."

Therefore, the scope of an investigational hearing will be limited to the areas enumerated above, which are undoubtedly matters in the public interest. Moreover, a witness at an investigational hearing has the right to be represented by counsel and to object to any matter relevant to the hearing, as provided in § 1118.7(a.) In light of this built-in procedural safeguard and the inherent subject matter limitations of such investigations, the Commission believes that it is unnecessary to adopt the views of the commenters.

One commenter suggested that the language of proposed § 1118.5(a) be changed from "may order and by subpoena may compel" to "by subpoena may require" in order to comport with the statutory language of section 27(b)(3) of the CPSA. The Commission agrees with the commenter and has adopted the suggested language.

Another commenter expressed the opinion that only persons with legal training be allowed to preside at investigational hearings. Section 27(a) of the CPSA, which authorizes the Commission to conduct hearings provides no such limitation, either explicit or implicit, on the qualifications of presiding officials. However, the commenter can be assured that the

Commission will appoint persons with legal training to preside at Commission hearings when the Commission deems necessary. Therefore, the Commission declines to amend this section.

Another commenter argued that a Commissioner who participates in a hearing, investigation or inspection should be disqualified from participating in a subsequent decision on the same matter. The statutory language of section 27(a) of the CPSA provides that "a Commissioner who participates in * * * a hearing or other inquiry shall not be disqualified *solely* by reason of such participation from subsequently participating in a decision of the Commission in the same matter (emphasis added)." Accordingly, the Commission has decided not to incorporate the suggestion of the commenter. However, in order to clarify the meaning of proposed § 1118.5(b) and to track the language of the statute, the Commission has added the word "solely" to § 1118.5(b) of the final rules.

One commenter expressed the view that proposed § 1118.5(b) should be amended to provide that if a Commissioner is to participate in a Commission decision involving a matter in which he or she had previously participated at the investigational level, a written statement indicating why the Commissioner should not be disqualified should be included as part of the record. The Commission believes that the inclusion of such a written statement is unnecessary in view of the language of § 27(a) of the Act providing for a Commissioner to participate in a Commission decision after conducting a hearing or after inquiry regarding the same matter. Moreover, a person believing that a Commissioner has lost his or her objectivity may, of course, move to disqualify that Commissioner under the CPSC Adjudicative Rules, 16 CFR 1025.42(e)(2). Accordingly, the Commission declines to make the suggested change.

Another commenter claimed that proposed § 1118.5(d), which limits the release of the record of an investigational hearing in accordance with the Freedom of Information Act is in conflict with proposed § 1118.7(d) which allows any person who is required to appear at an investigational hearing or a deposition to obtain a copy of his/her testimony by paying the prescribed costs. To clarify that a person giving testimony may obtain a copy of the transcript, final § 1118.5(d) has been amended by adding the following language: " * * * except that any person required to give testimony or to be deposed may in accordance with § 1118.7(d) obtain a copy of his or her testimony or deposition."

Depositions

The Commission has modified proposed § 1118.6 in the same manner and for the same reasons stated in the comments pertaining to § 1118.5(d).

One commenter suggested that the language of proposed § 1118.6 should be modified to require that changes in depositions be made on the face of the document rather than on a separate document accompanying the deposition. The commenter's rationale for such suggestion is that the change would avoid the potential loss of such separate documents. The Commission concurs and has incorporated appropriate language into § 1118.6 of the final rules.

Several commenters objected to the language of proposed § 1118.6(b) which allows the Commission to reduce the time period in which a deposition must be signed to less than ten days. The commenters claim that such a practice may lead to harassment by the Commission. The Commission believes that circumstances may arise in which the public interest may require that a deposition regarding consumer safety be signed and submitted in less than ten days. However, the Commission has modified final § 1118.6(b) by providing that the Commission must state the reason for requiring a deposition to be signed in less than ten days.

Another commenter expressed the view that it is inappropriate for the Commission to establish rules of admissibility of evidence for the courts. The Commission agrees with this observation and has modified § 1118.6(b) of the final rules to clearly indicate that admissibility of such testimony in court is not governed by these rules.

Rights of Witnesses at Investigational Hearings and of Deponents at Depositions

The Commission, on its own initiative, has amended proposed §§ 1118.7(a)(4) and § 1118.7(e) to make clear that the conduct of witnesses at investigational hearings is subject to direction and regulation by the presiding official. The Commission believes that it has the statutory authority to so empower the presiding official.

The Commission has also substituted the term "representative" for the term "counsel" in final § 1118.7(a). The Commission believes that it is inappropriate to refer to laymen who are not admitted to practice before any bar as "counsel." Moreover, to insure that lay representatives have adequate knowledge of the business affairs of the firm, the Commission has limited persons who may serve as representatives to partners of the partnership or officers of the corporation whose activities are under investigation by the Commission during that proceeding.

Thirdly, the Commission, on its own initiative, has revised final § 1118.7(a)(4) to provide a witness or his or her attorney or representative with the opportunity to make a brief statement at the conclusion of the hearing regarding the position of the firm as to matters under investigation. Furthermore, the Commission has for the purpose of clarity, divided proposed § 1118.7(a)(4) into two subsections: § 1118.7(a)(4) and § 1118.7(a)(5).

Several companies and trade associations objected to the limitation in proposed § 1118.7(a)(1) which precludes individuals who have been subpoenaed to produce documentary evidence or give testimony at any investigational hearing or deposition from acting as counsel for another witness or deponent at the same proceeding. The Commission believes that the possibility exists that an individual who has been present during the testimony of a witness and is later called to testify at the same proceeding may be influenced by the previous testimony he or she has heard. Therefore, the Commission believes that the limitation of § 1118.7(a) is a reasonable one.

Several commenters expressed the view that proposed § 1118.7(a)(1) discriminates against firms with in-house counsel who normally testify regarding documents maintained by the firm. The Commission disagrees with the position of the commenters and suggests that another person could present the subpoenaed documents, thereby allowing the in-house counsel to act as legal representative of the firm. If the firm maintains more than one attorney, one lawyer could present the documents and another could act as counsel. Accordingly, the Commission declines to incorporate the suggested change in these rules.

One commenter stated that proposed §§ 1118.7(a)(3) and (4) do not provide a witness, deponent, their attorney or representative with the opportunity to object on the record to anything other than a question that has been posed. It was suggested that the right to object should be expanded to include any matter pertinent to the hearing. The Commission agrees with the commenter and has modified final § 1118.7(a)(1) to comply with the suggestion.

Another commenter suggested that proposed § 1118.7(b) be modified to require the Commission to issue a separate notice to firms under investigation, indicating the nature of the information to be sought from a deponent or witness at an investigational hearing. The Commission believes that administrative subpoenas issued pursuant to § 1118.3 serve this purpose. Such subpoenas specify in detail the information sought from each witness, the nature of the investigation, and all other factors relevant to the inquiry. Accordingly, the Commission declines to make the suggested modification.

One commenter stated that the term "reasonably available" in proposed § 1118.7(b), referring to the information to which a witness or deponent shall testify, is vague and may result in overreaching by the Commission. The Commission believes that this language, taken from similar provisions of the Federal Rules of Civil Procedure, adequately describes the matters to which a witness must testify, while providing the witness reasonable grounds for refusing to supply that information, if it is not available. Accordingly, the Commission has decided not to revise this subsection.

The same commenter suggested that the Commission be required "to notify the firm sufficiently in advance of the hearing or deposition of those matters and information to which testimony would be sought, to afford the firm a reasonable time to gather the requested * * * information for use of its agent or offices during his testimony." Under § 1118.10(a)(3), any firm may request an extension of time for the purpose of complying with compulsory processes, including investigational hearings and depositions. Therefore, the Commission believes that these rules provide an adequate period of time to gather requested information, and has therefore not modified this subsection.

Another commenter expressed the view that proposed § 1118.7(d) should provide that witnesses who testify under compulsory process should be allowed to keep a copy of their testimony at government expense. The Commission is of the opinion that the procedure contained in § 1118.7(d) by which a witness or deponents may obtain a copy of testimony given by paying the prescribed costs is adequate and reasonable. Such procedure comports with similar provisions of the Freedom of Information Act. Therefore, the Commission has not incorporated the suggested change in § 1118.7(d) of the final rules.

Written Interrogatories

One commenter questioned whether it was necessary for the rules to provide for both written interrogatories and general and special orders. After careful consideration, the Commission has concluded that no useful purpose will be served by providing for the use of written interrogatories. Any information obtainable through written interrogatories may also be obtained through general and special orders. Therefore, proposed § 1118.8 has been deleted. The number sequence of the rules which follow has been modified accordingly.

Modification of Terms for Compliance

The Commission believes that proposed § 1118.10(b)(2) and (3) both provide for an extension of time to limit or quash subpoenas and general or special orders. In order to eliminate this redundancy, § 1118.10(b)(2) has been deleted. Section 1118.10(b)(3) of the proposed rules now appears as final rule § 1118.9(b)(2).

Consent Order Agreements

The Commission on its own initiative has amended proposed § 1118.20(b) by adding subpart (4), which requires that a statement describing the alleged hazard, noncompliance or violation be included in a consent order agreement. This subpart was added in order to comport with provisions in the Interim Rules of Practice for Adjudicative Proceedings under the CPSA and the Flammable Fabrics Act, 42 FR 31431 (1977) (16 CFR Part 1025) and the Policy and Procedures Regarding Substantial Product Hazards, 16 CFR Part 1116 (43 FR 34988, August 7, 1978).

Additionally, the Commission believes that the language of proposed § 1118.20(b)(8) lacks clarity. The Commission has therefore modified this subsection to avoid any possible confusion.

One commenter suggested that the time period in which the Commission will notify a consenting party of its decision not to accept a consent order agreement on a final basis should be stated in proposed § 1118.20(c) of these rules. The Commission endeavors to inform a consenting party within a reasonable period of time of its decision not to accept agreements on a final basis. Accordingly, final § 1118.20(g) has been amended to provide that the Commission shall, within a reasonable time, issue and serve an order indicating its rejection of the consent agreement.

Another commenter observed that proposed § 1118.20(g) should include a provision requiring the Commission to state in writing the reasons for rejecting a proposal. The Commission does not believe that it is practicable for the Commission to set forth in detail the basis for rejecting a proposed agreement in each and every case. However, although the Commission declines to make the suggested change in § 1118.20(g) of the final rules, the Commission will make every effort to respond in writing where practicable.

On its own initiative, the Commission has revised the language of §§ 1118.20(f) and 1118.20(g) to clarify the procedure the Commission will follow in finally accepting or rejecting an agreement that has been tentatively accepted. If no public objections to the agreement are received within 15 days of placing the agreement on the public record in accordance with § 1118.20(e), the agreement is accepted by operation of law. Where the Commission receives one or more requests that it not finally accept an agreement, it shall make its final decision after considering the requests and reasons contained in them. The Commission's final decision will be made within a reasonable time following the end of the fifteen day comment period.

The Commission, on its own initiative, has added § 1118.20(h) to provide a procedure to vacate or modify an order issued pursuant to an agreement. The procedure is begun either by a petition filed by a party or by the Commission acting on its own initiative. The petition shall include the change sought and the reasons for it. The grounds for a petition are (1) false statements were relied upon by the Commission in accepting the agreement or (2) there has been a change in facts or law. Parties affected by the petition shall be allowed to submit a response to it. In deciding whether to grant the petition, the Commission shall consider the public interest.

Effective Date and Promulgation

Effective Date. These rules become effective July 18, 1979.

Promulgation

Accordingly, pursuant to the provisions of the Consumer Product Safety Act, §§ 16, 19 and 27, 86 Stat. 1222, 1224, and 1227, as amended, 90 Stat. 509; 15 U.S.C. 2065, 2068, and 2076, Chapter II of Title 16 is amended by adding a new Part 1118 as follows:

PART 1118—INVESTIGATIONS, INSPECTIONS AND INQUIRIES UNDER THE CONSUMER PRODUCT SAFETY ACT

Subpart A—Procedures for Investigations, Inspections and Inquiries

Sec.

1118.1 Definitions, initiation of investigations, inspections, and inquiries delegations.
1118.2 Conduct and scope of inspections.
1118.3 Compulsory processes and service.
1118.4 Subpoenas.
1118.5 Investigational hearings.
1118.6 Depositions.
1118.7 Rights of witnesses at investigational hearings and of deponents at depositions.
1118.8 General or special orders seeking information.
1118.9 Motions to limit or quash subpoenas and general or special orders and delegation to modify terms of compliance.
1118.10 Remedies for failure to permit authorized investigations.
1118.11 Nonexclusive delegation of power.

Subpart B—Consent Order Agreements

1118.20 Procedures for consent order agreements.

Authority: Sec. 16, Pub. L. 92-573, 86 Stat. 1222 (15 U.S.C. 2065); sec. 19, Pub. L. 92-573, 86 Stat. 1224 (15 U.S.C. 2068); sec. 27, Pub. L. 92-573, 86 Stat. 1227 (15 U.S.C. 2076); as amended by Pub. L. 94-284, 90 Stat. 509.

Subpart A—Procedures for Investigation Inspections, and Inquiries

§ 1118.1 Definitions, initiation of investigations, inspections, and inquiries and delegations.

(a) *Definitions.* For the purpose of these rules, the following definitions apply:

(1) "Act" means the Consumer Product Safety Act (15 U.S.C. 2051, *et seq.*).

(2) "Commission" means the Consumer Product Safety Commission.

(3) "Firm" means a manufacturer, private labeler, distributor, or retailer of a consumer product, except as otherwise provided by § 16(b) of the Act.

(4) "Investigation" is an undertaking by the Commission to obtain information for implementing, enforcing, or determining compliance with the Consumer Product Safety Act and the regulations, rules, and orders issued under the Act. The term investigation includes, but is not limited to, inspections (§ 1118.2), investigational hearings (§ 1118.5), and inquiries employing subpoenas (§ 1118.4), depositions (§ 1118.6), and general or special orders (§ 1118.9).

(5) The definition of the terms set forth in section 3 of the Consumer Product Safety Act (15 U.S.C. 2052) shall apply to this part 1118.

(b) *Initiation of Investigations and Inquiries.* Investigations and inquiries will be initiated by the Commission in any manner authorized by law.

(c) *Initiation of Inspections.* An inspection as described in § 1118.2 is initiated when the Commission or its delegate authorizes the issuance of a written notice of inspection, described in § 1118.2(c).

(d) *Delegations of Authority.* The Commission hereby delegates to the Associate Executive Director for Compliance and Enforcement; the Solicitor, the Directors of the Divisions of Enforcement; the Solicitor, the Directors of the Divisions of Enforcement, Product Defect Correction, and Regulatory Management; and the directors of area offices, the power to initiate inspections in the same manner as the Commission.

§ 1118.2 Conduct and scope of inspections.

(a) After an inspection is initiated as set forth in § 1118.1, an officer or employee duly designated by the Commission shall issue the notice of inspection (hereinafter: notice). Upon presenting the notice, along with appropriate credentials, to the person or agent in charge of the firm to be inspected, the Commission officer or employee is authorized for the purposes set forth in § 1118.1(a):

(1) To enter, at reasonable times, any factory, warehouse, or establishment in which consumer products are manufactured or held, in connection with distribution in commerce, or any conveyance being used to transport consumer products in connection with distribution in commerce; and

(2) To inspect, at reasonable times and in a reasonable manner, any conveyance or those areas of the factory, warehouse, or establishment where consumer products are manufactured, held, or transported and which may relate to the safety of those products; and

(3) To have access to and to copy all relevant records, books, documents, papers, packaging or labeling which: (i) Are required by the Commission to be established, made or maintained, or (ii) show or relate to the production, inventory, testing, distribution, sale, transportation, importation, or receipt of any consumer product, or that are otherwise relevant to determining whether any person or firm has acted or is acting in compliance with the Act and regulations, rules and orders promulgated under the Act, and

(4) To obtain: (i) Information, both oral and written, concerning the production, inventory, testing, distribution, sale, transportation, importation, or receipt of any consumer product, and the organization, business, conduct, practices, and management of any person or firm being inspected and its relation to any other person or firm; (ii) samples of items, materials, substances, products, containers, packages and packaging, and labels and labeling, or any component at manufacturer's, distributor's or retailer's cost unless voluntarily provided; and (iii) information, both oral and written, concerning any matter referred to in the Act and these rules.

(b) A separate notice shall be given for each inspection, but a notice is not required for each entry made during the course of the same inspection. Each inspection shall be commenced at and completed within a reasonable period of time.

(c) The notice of inspection shall include the name and address of the person or firm being inspected; the name and title of the Commission officer or employee; the date and time of the anticipated entry; pertinent extracts from the statutory provisions upon which the right to access is based; pertinent extracts from § 1118.2 of these rules setting forth the authority of Commission officers or employees and the types of information and items they are authorized to obtain; a statement that the inspection will be conducted and the information will be provided with the cooperation of the person or firm being inspected; a statement which sets forth the purposes of the inspection and the nature of the information and items to be obtained and/or copied; and a statement that those from whom information is requested should state in writing whether any of the information submitted is believed to contain or relate to a trade secret or other matter which should be considered by the Commission to be confidential in accordance with section 6(a)(2) of the Act (15 U.S.C. 2055(a)(2)) and whether any of the information is believed to be entitled to exemption from disclosure by the Commission under the provisions of the Freedom of Information Act (5 U.S.C. 552) and the Commission's regulations under that Act, 16 CFR Part 1015 (42 FR 10496, February 22, 1977) or as amended. Any statement asserting this claim of confidentiality must be in writing, and any request for exemption of the information from disclosure must be made in accordance with the

Commission's Freedom of Information Act regulations, 16 CFR Part 1015 (42 FR 10490, February 22, 1977) or as amended.

(d) If upon being presented with a notice by an officer or employee duly designated by the Commission, the person or agent-in-charge of the firm being inspected refuses to allow entry or inspection, the Commission may then seek a search warrant or take other appropriate legal action. If the person refuses to provide information, to allow access to or the copying of records, or to supply samples as provided in these rules, the officer or employee of the Commission shall complete the investigation to the extent that voluntary cooperation is provided. The Commission may take such additional action, including but not limited to seeking an ex parte search warrant, employing the compulsory process provided for in these rules, and/or taking other suitable legal action. If the person or agent in charge refuses to accept the notice upon its presentation, the officer or employee may affix the notice to a public entrance way on the premises and this shall constitute presentation of the notice.

§ 1118.3 Compulsory processes and service.

(a) In addition to or in lieu of authorizing the issuance of a notice, the Commission may elect either to seek an ex parte search warrant and/or use any other reasonable means authorized by law to initiate investigations, inspections, or inquires to obtain information for the purposes set forth in § 1118.1(a), including but not limited to the following compulsory processes:

(1) Subpoenas;

(2) Investigational hearings;

(3) Depositions; and

(4) General or special orders.

(b) Service in connection with any of the compulsory processes in § 1118.3(a) shall be effected:

(1) By personal service upon the person or agent in charge of the firm being investigated, inspected or inquired of; or

(2) By certified mail or delivery to the last known residence or business address of anyone being investigated, inspected or inquired of; or

(3) In the case of general or special orders where personal service, mailing or delivery has been unsuccessful, service may also be effected by publication in the **Federal Register**.

(c) The date of service of any form of compulsory process shall be the date on which the document is received by mail, delivered in person or published in the **Federal Register**. In computing a period of time in which a party is required or permitted to act, the day from which the time begins to run shall not be included. The last day of the period shall be included, unless it is a Saturday, Sunday or legal holiday, in which event the period runs until the end of the next day that is not a Saturday, Sunday or legal holiday.

(d) These rules shall be referred to in any notice of compulsory process served upon a person or firm.

(e) Anyone submitting information in response to any of the compulsory processes referred to in §1118.3(a) should state whether any of the information submitted is believed to contain or relate to a trade secret or other matter which should be considered by the Commission to be confidential in accordance with section 6(a)(2) of the Consumer Product Safety Act (15 U.S.C. 2055(a)(2)) and whether any of the information is believed to be exempt from disclosure by the Commission under the provisions of the Freedom of Information Act (5 U.S.C. 552) and the Commission's regulations under that Act, 16 CFR Part 1015 (42 FR 10490, February 22, 1977) or as amended. Any claim of confidentiality must be in writing, and any request for exemption from disclosure must be made in accordance with the Commission's Freedom of Information Act regulations, 16 CFR Part 1015 (42 FR 10490, February 22, 1977), or as amended.

§ 1118.4 Subpoenas.

The Commission may issue to any person or firm a subpoena requiring the production of documentary evidence (subpoena duces tecum) and/or attendance and testimony of witnesses (subpoena ad testificandum) relating to any matter under investigation. Procedures regarding compliance with subpoenas and motions to limit or quash subpoenas are provided for in §1118.9.

§ 1118.5 Investigational hearings.

(a) The Commission by subpoena may require any person or firm to provide information at an investigational hearing. These hearings shall be for the purpose of taking the testimony, under oath, of witnesses and receiving documents and other data relating to any subject under investigation. The hearings shall be presided over by the Commission, by one or more of the Commissioners, by an administrative law judge, or by a duly designated officer or employee, who shall be referred to as the presiding official. The hearings shall be stenographically reported, and the transcript shall be made a part of the record.

(b) A Commissioner who participates in a hearing or other investigation, inspection, or inquiry shall not be disqualified solely by reason of that participation from subsequently participating in a Commission decision in the same matter.

(c) Investigational hearings shall be closed to the public, unless otherwise ordered by the Commission.

(d) The release of the record of the hearing shall be governed by the Freedom of Information Act (5 U.S.C. 552), the Commission's regulations under that Act, 16 CFR Part 1015 (42 FR 10490, February 22, 1977) or as amended and/or other applicable laws or regulations, except that a person required to give testimony or a deposition may, in accordance with §1118.7(d), obtain a copy of his or her testimony or deposition.

§ 1118.6 Depositions.

(a) The Commission by subpoena may require testimony to be taken by deposition at any stage of any investigation. Depositions may be taken before any person who is designated by the Commission and has the power to administer oaths. The person before whom the deposition is taken shall put the deponent under oath. The testimony given shall be reduced to writing by the person taking the deposition or under that person's direction and shall then be submitted to the deponent for signature unless the deponent waives the right to sign the deposition. All depositions shall be closed to the public, unless otherwise ordered by the Commission. The release of the record of such depositions shall be governed by the Freedom of Information Act (5 U.S.C. 552), the Commission's regulations under that Act, 16 CFR Part 1015 (42 FR 10490, February 22, 1977) or as amended and/or other applicable laws or regulations, except that the deponent may, in accordance with §1118.7(d), obtain a copy of his or her deposition.

(b) Any changes which the deponent desires to make shall be entered on the face of the deposition and shall state the reasons for such changes. The deposition shall then be signed by the deponent, unless the deponent waives the right to sign, cannot be found, or is unable or refuses to sign. The deponent must sign the deposition within 30 days of its submission to him or her, or within such shorter time period as the Commission may designate. Whenever a deponent is required to sign in less than ten days, the Commission shall notify the deponent of the reasons for such shorter time period.

If the deponent does not sign the deposition within the prescribed time period, the Commission designee shall sign it and state on the record the fact of the waiver of the right to sign or of the illness or absence of the deponent, or the deponent's inability or refusal to sign, together with the reason if any is given. The deposition may be used in any administrative proceeding, as provided by these rules, or any other proceeding, as allowed by applicable rules.

§ 1118.7 Rights of witnesses at investigational hearings and of deponents at depositions.

(a) Any person, agent, or officer of a firm, who is required to produce documentary evidence or give testimony as a witness at an investigational hearing conducted under provisions of § 1118.5 or as a deponent at a deposition taken under provisions of § 1118.6 may be accompanied by an attorney, or an officer or partner of the firm, who may act as representative for the witness or the deponent. However, a person who is subpoenaed to produce documentary evidence or give testimony at an investigational hearing or deposition cannot act as attorney or representative for another witness or deponent at the same proceeding. The term attorney refers to members of the bar of a Federal court or the courts of any State or Territory of the United States, the Commonwealth of Puerto Rico, or the District of Columbia. The witness or deponent and his or her attorney or representative may act as follows during the course of an investigational hearing or deposition:

(1) A witness or deponent may confer, in confidence, with his or her attorney or representative concerning any questions asked of the witness or deponent. If the witness, deponent, or his or her attorney or representative objects to a question or any other matter relevant to the investigational hearing or deposition, the objection and basis for it shall be stated on the record. In the case of an objection based upon self-incrimination, the privilege must be asserted by the witness or deponent. If a witness at an investigational hearing refuses to answer a question or provide other information, the presiding official shall have the authority to immediately order the witness to answer the question or provide the information requested, except in circumstances where, in the discretion of the presiding official an immediate ruling would be unwarranted and except where a refusal is based upon the privilege against self-incrimination. Otherwise all objections shall be ruled upon by presiding official at the time the objection is made.

(2) Objections timely made under the provisions of § 1118.7(a) shall be noted on the record, shall be treated as continuing, and shall be preserved throughout the proceeding without the necessity of repetition during similar lines of inquiry.

(3) Except as provided by § 1118.7(a), counsel for a witness or deponent may not interrupt the examination of the witness or the deponent by making objections or statements on the record.

(4) Upon completion of the examination, any witness at an investigational hearing may clarify on the record any of his or her answers, or, if the witness is accompanied by an attorney or representative, the attorney or representative may examine the witness on the record as to answers previously given. In addition, the witness or his or her attorney or representative may make a brief statement at the conclusion of the hearing giving his, her or the firm's position with regard to matters under investigation. In order to prevent abuse of the investigational process, the presiding official shall have the authority to impose reasonable limitations on the period of time allowed for objections, clarification of answers, and statements of position.

(5) Upon completion of all testimony, a deponent may clarify on the record any of his or her answers. The attorney or representative for a deponent may examine that deponent on the record to clarify answers previously given.

(b) Any person, agent, or officer who is required to appear in person at an investigational hearing or at a deposition shall testify as to matters and information known and/or reasonably available to the person or firm involved.

(c) Any person, agent or officer who is compelled by subpoena to appear in person at an investigational hearing or at a deposition shall receive the same fees and mileage allowances as are paid witnesses in the courts of the United States.

(d) Any person, agent, or officer who is required to appear at an investigational hearing or at a deposition shall be entitled to retain a copy of any document submitted by him or her and, upon payment of lawfully prescribed costs, in accordance with the Commission's regulations under the Freedom of Information Act, shall be entitled to procure a copy of his or her own testimony as recorded.

(e) The presiding official shall take all necessary action to regulate the course of the hearing, to avoid delay and to assure that reasonable standards of orderly and ethical conduct are maintained. The presiding official, for reasons stated on the record, shall immediately report to the Commission any instance in which a witness or his or her attorney or representative has refused to comply with the presiding official's directions or to adhere to reasonable standards of orderly and ethical conduct in the course of the hearing. The Commission shall take whatever action is appropriate under the circumstances.

§ 1118.8 General or special orders seeking information.

The Commission may require by the issuance of general or special orders any person or firm to submit in writing any reports and answers to questions as the Commission may prescribe. The reports or answers shall be made under oath, and shall be filed within the time prescribed by the Commission. Procedures regarding compliance with general or special orders and motions to limit or quash such orders are provided for in § 1118.9.

§ 1118.9 Motions to limit or quash subpoenas and general or special orders and delegation to modify terms for compliance.

(a) The Commission hereby delegates to the Associate Executive Director for Compliance and Enforcement; the Solicitor; the Directors of Divisions of Enforcement, Product Defect Correction, and Regulatory Management; and the General Counsel the authority:

(1) To negotiate and approve the terms of satisfactory compliance with subpoenas and general or special orders; (2) to impose conditions upon compliance with such compulsory processes; (3) and to extend the time for compliance and the time for filing motions to limit or quash.

(b) The person or firm served with a subpoena or general or special order may file a motion to limit or quash the subpoena or order. Any motion to limit or quash shall set forth the reasons why the subpoena or order should be limited or quashed and may be accompanied by memoranda, affidavits, or other documents submitted in support of the motion. The motion must be received in the Office of the Secretary of the Commission within 10 calendar days of receipt of the subpoena or order unless: (1) The subpoena or order provides for a different time; or (2) the Commission, for good cause shown, grants an extension of time to file a motion.

(c) Upon receipt of a motion to limit or quash, the Office of the Secretary shall

immediately notify and transmit a copy to the appropriate staff member. Unless a different period of time is specified in the subpoena or order, the staff shall file an answer with the Office of the Secretary within 10 calendar days after receipt of the motion. A copy of the answer shall be served upon the moving party or the counsel of the moving party. No reply to the answer will be permitted.

(d) All motions to limit or quash shall be ruled upon by the Commission. The Office of the Secretary shall serve the decision on a motion to limit or quash upon the moving party or the counsel for the moving party and shall furnish a copy of the decision to the appropriate staff member. The Commission's decision is a final decision. Motions for reconsideration will not be received.

§ 1118.10 Remedies for failure to permit authorized investigations.

In the event a person or firm fails to comply with any investigative process authorized by these rules, the Commission may seek appropriate action within its authority under the Consumer Product Safety Act (15 U.S.C. 2051, et seq.)

§ 1118.11 Nonexclusive delegation of power.

No provision contained herein delegating any of the Commission's powers shall be construed as limiting the authority of the Commission to exercise the same powers.

Subpart B—Consent Order Agreements

§ 1118.20 Procedures for consent order agreements.

(a) For the procedure to be followed regarding consent order agreements involving section 15 of the Act (15 U.S.C. 2064), refer to the Commission's regulations relating to substantial product hazards (16 CFR Part 1115). For all other consent order agreements under the Consumer Product Safety Act, the provisions set forth below are applicable.

(b) The consent order agreement is a document executed by a person, or firm (consenting party) and a Commission staff representative which incorporates both a proposed complaint setting forth the staff's charges and a proposed order by which such charges are resolved. A consent order agreement shall contain the following provisions, as appropriate:

(1) An admission of all jurisdictional facts by the consenting parties;

(2) A waiver of any rights to an administrative or judicial hearing and of any other procedural steps including any rights to seek judicial review or otherwise challenge or contest the validity of the Commission's order;

(3) A statement that the agreement is in settlement of the staff's charges and does not constitute an admission by the consenting party that the law has been violated;

(4) A statement describing the alleged hazard, non-compliance or violation.

(5) A statement that the Commission's order is issued under the provisions of the Act (15 U.S.C. 2051, et seq.); and that a violation of such order may subject the consenting party to appropriate legal action.

(6) An acknowledgment that the consent order agreement only becomes effective upon its final acceptance by the Commission and its service upon the consenting party;

(7) An acknowledgment that the Commission may disclose terms of the consent order agreement to the public;

(8) A statement that the consenting party shall comply with the provisions of the agreement and order;

(9) A statement that the requirements of the order are in addition to and not to the exclusion of other remedies under the Act.

(c) At any time in the course of an investigation, the staff, with the approval of the Commission, may propose to the person or firm being investigated that any alleged violation be resolved by an agreement containing a consent order. Additionally, such a proposal may be made to the Commission staff by such person or firm.

(d) Upon receiving an executed agreement, the Commission may: (1) provisionally accept it; (2) reject it and issue the complaint (in which case the matter will be scheduled for hearing in accordance with the Commission's Rules of Practice for Adjudicative Proceedings, 16 CFR Part 1025, June 21, 1977 or as amended) and/or (3) take such other action as it may deem appropriate.

(e) If the agreement is provisionally accepted, the Commission shall place the agreement on the public record and shall announce provisional acceptance of the agreement in the Federal Register. Any interested person may ask the Commission not to accept the agreement by filing a written request in the Office of the Secretary. Any request must be received in the Office of the Secretary no later than the close of business of the 15th calendar day following the date of announcement in the Federal Register.

(f) If no requests are received, the agreement shall be deemed finally accepted by the Commission on the 16th calendar day after the date of the announcement in the Federal Register. Notice of final acceptance will be given and the order issued within a reasonable time.

(g) If the Commission receives one or more requests that it not finally accept an agreement, it shall, within a reasonable time, either finally accept or reject the agreement after considering the requests. The Commission shall promptly issue and serve an order indicating its decision.

(1) If the agreement is accepted, the Commission shall issue the complaint and order. The order is a final order in disposition of the proceeding and is effective immediately upon its service on the consenting party under these rules. The consenting party shall thereafter be bound by and take immediate action in accordance with the final order.

(2) If the agreement is rejected, the order so notifying the consenting party shall constitute withdrawal of the Commission's provisional acceptance. The Commission may then issue its complaint, may order further investigation, or may take any action it considers appropriate.

(h) An agreement that has been finally accepted may be vacated or modified upon petition of any party or the Commission's own initiative. The petition shall state the proposed changes in the agreement and the reasons for granting the petition. The Commission may modify or vacate where (1) false statements were relied upon in accepting the agreement or (2) there are changed conditions of fact or law. In deciding whether to grant a petition, the Commission shall consider the public interest. A petitioner, or the Commission when acting on its own initiative, shall serve a copy of the petition or notice of reconsideration, respectively, on all parties. Parties affected by the petition or notice of reconsideration may file a response within 10 calendar days. No replies shall be accepted. The Commission shall decide the petition or notice of reconsideration within a reasonable time and, by order, shall indicate its decision and its reasons.

Dated: June 13, 1979.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355-01-M

16 CFR Part 1700

Exemption From Child Resistant Packaging Standards for Potassium Supplements in Effervescent Tablets, Each Containing No More Than 25 Milliequivalents of Potassium

AGENCY: Consumer Product Safety Commission.

ACTION: Final rule.

SUMMARY: In this document the Commission issues a final amendment under the Poison Prevention Packaging Act (PPPA) to exempt potassium supplements in effervescent tablet form, each tablet containing no more than 25 milliequivalents of potassium from the special packaging requirements imposed by the act. The Commission is taking this action because of the low incidence of accidental ingestions of this drug by children as well as the lack of potential for serious illness or injury from the drug.

EFFECTIVE DATE: This amendment is effective June 18, 1979.

FOR FURTHER INFORMATION CONTACT: Sandra Eberle, Directorate for Compliance and Enforcement, Consumer Product Safety Commission, Washington, D.C. 20207, (301) 492–6400.

SUPPLEMENTARY INFORMATION:

Background

Regulations issued under the Poison Prevention Packaging Act of 1970 (PPPA) (15 U.S.C. 1471–1476) establish child-protection packaging requirements for human oral prescription drugs in order to protect children from serious personal injury or illness resulting from handling, using, or ingesting these substances.

On September 13, 1973, the Commission received a petition from Mead Johnson, Evansville, Ind. (PP 74–18) to exempt its effervescent potassium supplement (K-Lyte) containing 25 milliequivalents (mEq) of potassium per tablet from the special packaging requirements of the human oral prescription drug regulation. On September 24, 1973, the Commission received a similar petition from Dorsey Laboratories, (PP 74–24) to exempt its effervescent potassium supplement, Klorvess, containing 20 mEq of potassium from the special packaging requirements of the human oral prescription drug regulation. The Commission granted both petitions, and proposed an exemption for potassium supplements in individually wrapped effervescent tablets, each tablet containing not more than 25 mEq of potassium.[1] (39 FR 5107, February 11, 1974.) At the same time, the Commission suspended the applicability of the special packaging requirement to this drug pending issuance of a final exemption, along with similar actions for a series of other drugs.

Potassium supplements are generally used to counter potassium deficiencies in the body caused by diuretics, diet deficiencies or other factors. Overdosages of potassium may result in listlessness, mental confusion, or muscle weakness in the extremities. Severe overdosages can result in cardiac arrest.

Response to Comments

Fifteen comments were received by the Commission in response to the proposed exemption; none discussed the specific issue of whether potassium supplements should be exempted. Some of the comments addressed the proposed exemptions of the other drugs listed in the February 11, 1974 Federal Register notice; these comments will not be discussed here.

Five comments discussed the general issue of whether any exemptions to the special packaging requirements should be granted. One commenter noted that exemptions should be granted only "with restraint" and that criteria other than toxicological issues should be examined. Two commenters suggested that manufacturers should be required to inform the public, through advertising and product labeling, of which drugs have been exempted and in what amounts. Other commenters envisioned the difficulties pharmacists might face in filling prescriptions for exempted drugs, in particular, in determining what quantities of a drug may be in regular packaging and what quantities require child-protection closures. Other respondents simply opposed any exemptions from the PPPA's requirements, citing the possibility of individual reactions, long term effects, and errors in compounding prescriptions, as justification for safety packaging for all oral prescription drugs. Some commenters expressed concern that consumers would be confused over the two categories of drug containers in the home; others felt that non-complying packaging would increase health care costs.

[1] On November 23, 1977, the Commission received an additional petition from Mead Johnson Laboratories (PP 78–1) to exempt its effervescent potassium supplement, Double-Strength K-Lyte (30 milliequivalents) from the special packaging requirements. Elsewhere in this issue of the Federal Register the Commission issues a proposed exemption from the child-resistant packaging requirements for potassium supplements in tablet form containing not more than 60 milliequivalents of potassium per tablet.

A summary of these comments and the Commission's detailed responses were published in the Federal Register on January 31, 1979 (44 FR 6340). In brief, the Commission determined that none of the general comments were convincing as to the point that exempting specific drugs which cannot cause serious personal injury or illness to children from the PPPA's special packaging requirements is unsafe or ill-advised.

Grounds for Exemption

The Commission bases its decision to issue a final exemption for potassium supplements in effervescent tablet form containing no more than 25 mEq of potassium per tablet, in part, on the lack of significant adverse experience reported by the National Clearinghouse for Poison Control Centers (NCPCC), the National Electronic Injury Surveillance System (NEISS), and other data sources, including in-depth investigations, death certificates, and consumer complaints on file at the Commission. Two cases of accidental ingestion of the substance were reported by the Commission's Poison Control Center Contract Data Base, but neither of these involved symptoms or required medical treatment.

The Commission also bases its decision on studies involving children exposed to effervescent potassium tablets containing 20 and 25 mEq of potassium conducted for Dorsey Laboratories and Mead Johnson, respectively. The studies indicate that children found the effervescent quality and the taste of the tablets repulsive; and consequently, did not ingest significant or toxic quantities of potassium. Of the 302 children studied by Mead Johnson, none consumed more than ½ tablet. Dorsey Laboratories evaluated the reactions of 200 children to their product and found that only one child ingested more than 1¼ tablets. The Commission's staff has analyzed and evaluated these test results and concur with the conclusion reached by the manufacturers that the substance's characteristics discourage ingestion by children.

The Commission has found potassium salts to be relatively low in toxicity. Normal blood plasma levels of potassium are 5 mEq/liters. Fainting and muscular weakness can occur at 7–8 mEq/liters and cardiac arrest at 9–10 mEq/liters. Commission scientists believe that ingestion of 1¼ 25 mEq tablets could yield plasma levels of 8 mEq/liters but only if one does not consider the fact that the normally functioning kidney rapidly eliminates excess potassium and maintains a

constant blood level unless a severe overdose is consumed very rapidly. Thus, even under a worst case situation, the expected blood plasma potassium level would be below the level associated with adverse toxic effects.

One of the petitioners, Dorsey Laboratories, cited from the scientific medical literature that potassium poisoning by ingestion is rare and that as much as 30 grams of the substance provides only gastric irritation. Acute toxicity by ingestion is unlikely since large doses induce only vomiting and, unless there has been prior kidney damage, absorbed potassium is excreted rapidly.

Comments From the Technical Advisory Committee

Nine responses on the petitions to exempt potassium supplements in effervescent tablets, each tablet containing no more than 25 mEq of potassium were received from the Technical Advisory Committee on Poison Prevention Packaging. Seven members recommended granting the petition on the basis of the low toxicity of the drug, the lack of injury data, and the fact that an amount sufficient to approach a toxic dose was not likely to be ingested by children. Of the two members recommending denial of the petition, one felt that more information was necessary, while the other noted that alternative packaging was available and that exemption from the regulations was unnecessary. That member of the TAC also noted that in one of the manufacturers' taste-tests, the one child who consumed more than 1¼ tablets was stopped from eating more than 1¾ tablets.

In response, the Commission believes that adequate information exists to make a decision on the petition in question. Regarding the availability of alternative packaging, the Commission points out that this is not a basis for denying exemption from the special packaging regulations. The requirement for special packaging is triggered because of a risk of serious personal injury or illness to children and the data indicates that this substance does not present such a risk. The Commission staff emphasizes that the blood serum level for the one child who ingested 1¾ tablets (approximately 1.4 grams of potassium) would be much lower than that expected to cause any serious personal injury or illness.

Finding

Having considered the petition and the comments on the proposal, human experience data from the National Clearinghouse for Poison Control Centers and the Commission's own data sources, the relatively low toxicity of the substance and children's inclination to ingest only small amounts, as well as having consulted with the Technical Advisory Committee on Poison Prevention Packaging established under section 6 of the Act, the Commission finds that potassium supplements in effervescent tablet form containing no more than 25 mEq of potassium per tablet does not create such a hazard to children that special packaging is required to protect them from serious personal injury or illness resulting from ingesting, handling, using the substance.

Effective Date

Since this rule grants an exemption, the delayed effective date provisions of the Administrative Procedure Act are inapplicable (5 U.S.C. 553(d)(1)). Accordingly, this exemption becomes effective on June 18, 1979.

Environmental Considerations

The Commission's interim rules for carrying out its responsibilities under the National Environmental Policy Act (see 16 CFR Part 1021; 42 FR 25494) provide that exemptions to an existing standard that do not alter the principal purpose or effect of the standard normally have no potential for affecting the environment and environmental review of exemptions from regulations is, therefore, generally not required. (Section 1021.5(b)(1).) The rules also state that environmental review of rules requiring poison prevention packaging is generally not required. (Section 1021.5(b)(3).)

With respect to this exemption of potassium supplements from poison prevention packaging, the Commission finds that the rule will have no significant effect on the human environment and that no environmental review is necessary.

Conclusion and Promulgation

Having considered the petition, the comments on the proposal, and other relevant material, the Commission concludes that the final rule should be adopted as set forth below.

Accordingly, pursuant to the provisions of the Poison Prevention Packaging Act of 1970 (Pub. L. 91–601, sections 2(4), 3, 5, 84 Stat. 1670–72; 15 U.S.C. 1471(4), 1472–1474) and under authority vested in the Commission by the Consumer Product Safety Act (Pub. L. 92–573), section 30(a), 86 Stat. 1231, 12 U.S.C. 2079(a)), the Commission amends 16 CFR 1700.14 by adding a new paragraph (a)(10)(vi) as follows (the introductory portion of paragraph (a)(10), although unchanged, is included for context):

§ 1700.14 Substances requiring special packaging.

(a) * * *

(10) *Prescription drugs.* Any drug for human use that is in a dosage form intended for oral administration and that is required by Federal law to be dispensed only by or upon an oral or written prescription of a practitioner licensed by law to administer such drug shall be packaged in accordance with the provisions of § 1700.15 (a), (b), and (c), except for the following:

* * * * *

(vi) Potassium supplements in individually packaged effervescent tablets, each containing not more than 25 milliequivalents of potassium.

(Pub. L. 91–601, secs. 2(4), 3, Stat. 1670–72 (15 U.S.C. 1471(4)), 1472, 1474; Pub. L. 92–573, sec. 30(a), 86 Stat. 1231 (15 U.S.C. 2079(a)).)

Effective date: June 18, 1979.

Dated: June 13, 1979.

Sadye E. Dunn,
Secretary, Consumer Product Safety Commission.

BILLING CODE 6355-01-M

COMMODITY FUTURES TRADING COMMISSION

17 CFR Part 9

Commission Review of Exchange Disciplinary or Other Adverse Action; Publication of Violations

AGENCY: Commodity Futures Trading Commission.

ACTION: Final rule.

SUMMARY: The Commodity Futures Trading Commission is adopting a new regulation § 9.12 which prescribes the manner in which an exchange is to make public its findings and reasons for acting whenever a person has been suspended, expelled, or disciplined by, or denied access to, the exchange. Under the new rule, exchanges are required to post promptly at the exchange a notice of each such action and to retain a record of the notices for public inspection. This regulation implements Section 18 of the Futures Trading Act of 1978, which requires exchanges to make this information public.

EFFECTIVE DATE: July 18, 1979.

FOR FURTHER INFORMATION CONTACT: William F. Tueting or Toby Kaczensky, Division of Trading and Markets, Commodity Futures Trading

Commission, 2033 K Street, N.W., Washington, D.C. 20581, telephone (202) 254-8955.

SUPPLEMENTAL INFORMATION: The Commodity Futures Trading Commission is adopting a new § 9.12 to implement section 19 of the recently enacted Futures Trading Act of 1978, Pub. L. 95-405, 92 Stat. 865, 874-75 (October 1, 1978). That Section amends section 8c(1)(B) of the Commodity Exchange Act by replacing the requirement that an exchange keep confidential the notice and reasons for the exchange action in disciplinary and access denial proceedings with the statutory requirement that an exchange

"* * * make public its findings and the reasons for the exchange action in any such proceeding, including the action taken or the penalty imposed, but shall not disclose the evidence therefor, except to the person who is suspended, expelled, or disciplined, or denied access, and to the Commission." [1]

The Proposed Rule

The Commission sought public comment on a rule that was published in the Federal Register on February 1, 1979 (44 FR 6428). Under the proposed rule, almost all disciplinary actions were required to be made public by posting a notice near the trading floor and by making a written advisory available to the media as soon as the disciplinary action became effective or within five days after the affected person received notice of the action as provided in § 9.11. It was intended that publication in this manner would serve to deter others from violating exchange rules and to inform customers and members of the public who rely upon the futures markets of rule violations and disciplinary actions which may affect them.

The proposed rule also distinguished between those rule violations which were to be published in the above-described manner and certain minor infractions, that is, violations of rules of decorum, attire and similar rules which were to be subject only to limited publication. Under the proposed rule, an exchange could make these minor infractions public by maintaining a record of them at the exchange that would be available for public inspection.

[1] The Commission has previously adopted rules governing the procedures to be employed by exchanges for taking disciplinary actions. 17 CFR Part 8, 43 FR 41888 *et seq.* (September 18, 1978). Rules governing Commission review of exchange disciplinary and other adverse action have also been adopted. 17 CFR Part 9, 43 FR 58343 *et seq.* (December 20, 1978).

References in this document to Commission regulations (*e.g.*, § 9.11) are to Title 17 of the Code of Federal Regulations (*e.g.*, 17 CFR § 9.11 as published in the Federal Register).

The Comments

Six exchanges submitted comments in response to the proposal. While the exchanges generally supported the public policy underlying public disclosure of disciplinary actions, they suggested a number of amendments to the proposed rule. Based upon these comments as well as the Commission's independent re-evaluation of its proposal, the Commission has determined to adopt a regulation which differs in some respects from the proposed § 9.12. A discussion of the significant comments received and the major changes in the rule as adopted is set forth below.

(1) *Should disciplinary actions be made public before they become effective?*

The proposed requirement that exchanges make their findings public as soon as the disciplinary action is effective or within five days after notifying the affected person (as provided in § 9.11), whichever occurs first, evoked several comments. The exchanges did not believe disciplinary actions should be made public until after they become effective. One reason cited was that a person might appeal the exchange decision to the Commission. If the decision were reversed on appeal, the "harm" to the member caused by public disclosure could not be undone. Exchanges also asserted that the public purpose served by making the disciplinary actions public would still be achieved if disciplinary actions are published only after the disciplined person has exhausted his rights of appeal to the Commission and the penalty has been imposed.

The Commission does not believe that the publication of exchange penalties before they become effective will unfairly subject the disciplined member to harmful publicity. In the first place disciplinary penalties are often imposed as a result of a settlement to which both the exchange and the member agree. But even if the affected person wishes to contest the charges, he is still adequately protected under Commission rules since he must be afforded a hearing in which he will have the opportunity to present evidence and cross-examine witnesses. Furthermore, under both the proposed and the final versions of the rule, disciplinary information does not have to be made public until after the affected person has exhausted all rights of appeal within the exchange and the exchange action has become final.

Exchange disciplinary actions are, of course, somewhat analogous to administrative actions and judicial decisions. The Commission perceives no greater "harm" to an exchange member if the Commission should reverse the disciplinary action after the exchange's findings are made public than occurs when initial administrative or court decisions, which are a matter of public record, are reversed on appeal. Most importantly, the Commission finds that the public interest served by promptly disclosing disciplinary actions outweighs the private interest of the affected member. Among other things, speedy routine disclosure should help to prevent further rule violations by apprising all members of the self-regulatory efforts of the exchanges.[2] The Commission is therefore retaining the requirement that findings in exchange disciplinary actions be immediately made public.

(2) *Must all disciplinary actions be made public?*

Some exchanges commented that only the most serious violations and disciplinary actions should be made public. For example, it was suggested that only suspensions, expulsions, denials of access and rule violations of the magnitude of manipulation or attempted manipulation of a market should be disclosed. An alternative proposal was to expand the category of disciplinary actions and penalties for which limited publication is permitted by means of a record available at the exchange for inspection.

The plain language of section 8c(b) of the Act, as amended, requires an exchange to make public its findings whenever it suspends, expels, disciplines or denies any person access to the exchange. The Commission has determined, however, that it is not necessary to require exchanges to prepare an advisory to the media in connection with these actions since the press will have access to the information when it is posted at the exchange. The Commission has therefore modified its proposal by eliminating the requirement of an advisory to the media. Accordingly, § 9.12, as adopted, requires each exchange to make public all disciplinary actions by posting a notice at the exchange for a period of five days and thereafter to retain a record of the information for public inspection.

[2] As the Commission stated in its Federal Register release proposing § 9.12: "The general public and members of an exchange should be informed of the disciplinary actions taken by an exchange. Notice of these disciplinary actions would preclude an otherwise unknowing general public and/or members of an exchange from dealing with a member who has been suspended, expelled, or denied access to the exchange." 44 FR 6428 (February 1, 1979).

(3) *Effect of public disclosure of disciplinary actions on exchange rule enforcement programs.*

The Commission is disturbed by the comments of some exchanges that publication of less significant rule violations would have an adverse impact on their rule enforcement programs. One exchange stated that non-enforcement of its rules might be the most reasonable approach to such a requirement. Another commented that indiscriminate publication in the news media of every disciplinary action no matter how technical or minor the violation could lead to disrespect among exchange members for the actions of exchange disciplinary bodies. These comments are particularly troublesome since some exchanges viewed less significant rule violations as including all violations except those resulting in a suspension, expulsion or denial of access or violations of the magnitude of manipulation or attempted manipulation of a market.

In response to these comments, the Commission emphasizes that the publication requirements in Section 8c should not, and cannot, be read to relieve exchanges of their self-regulatory responsibilities under the Act. Exchanges may not relax self-regulatory programs or allow them to be circumvented by members who wish to avoid publication of disciplinary actions taken against them.

The Rule As Adopted

Regulation § 9.12 provides that whenever an exchange suspends, expels, or otherwise disciplines or denies any person access to the exchange, it must make its findings public. This rule applies to every disciplinary action within the meaning of § 9.12 regardless of whether the action is imposed pursuant to a settlement to which the disciplined person agrees or whether it is otherwise imposed by the exchange in accordance with its disciplinary procedures. Rule 9.12 also applies to all disciplinary penalties imposed for violations of rules of decorum attire or similar rules. It does not apply to warning letters issued pursuant to § 8.07(c), since warning letters issued in accordance with that section are not penalties and do not indicate that a finding of a violation has been made. See 43 FR 41956, 41963 (September 19, 1978).

In making its findings public an exchange must disclose at least the information contained in the notice called for by § 9.11(a)(1)–(4). An exchange is therefore required to make public: (1) The name of the person disciplined or denied access; (2) a statement of each rule found to have been violated or otherwise underlying the exchange's action or, in the event of a settlement, each rule which the exchange has reason to believe was violated; (3) the reason for the exchange's action; and (4) the action taken or penalty imposed.

In specifying the findings and reasons for the disciplinary action the exchange, at a minimum, should indicate the nature of the violation involved, *e.g.*, failure to meet minimum financial requirements or to have obtained a customer's consent to the execution of an offset trade in which the broker takes the other side. Where a person is found to have violated an exchange rule that encompasses several different types of violative conduct, the exchange should specify the particular violation that was committed. Thus, if a rule generally prohibits fictitious trades, it should be clear from the notice whether the disciplined person engaged in an accommodation trade, wash sale or some other type of fictitious trade. Of course, an exchange may also provide additional details, if it chooses, which might include dates, amounts (such as the number of contracts or accounts involved or the amount of undermargining) and the number of times a violation has occurred. Generally, the exchange should be guided by the public interest to be served by releasing this information. Where any serious violations are involved or where a particular market may be affected, an exchange should provide more information than would be required for a routine disciplinary matter. As provided in Section 8c(b) of the Act, as amended, an exchange may not disclose to the public the evidence underlying its findings.

For each disciplinary action or penalty subject to this regulation, the exchange is required to post a notice containing the required information in a conspicuous place on its premises to which the members and the public regularly have access. This notice must be posted as soon as the disciplinary action or penalty becomes effective or within five days after the exchange provides the notice required by § 9.11 to the person against whom the action was taken, whichever occurs first. After the notice has been posted for five consecutive business days it may be removed, but the exchange must maintain and make available for public inspection a record of the information in the notice.

This regulation is adopted pursuant to the Commission's authority in Sections 8a(5) and 8c of the Commodity Exchange Act, 7 U.S.C. 12a(5) and 12c (1976), as amended by the Futures Trading Act of 1978, Pub. L. No. 95-405 sec. 18, 92 Stat. 874–75 (1978). In consideration of the foregoing the Commission hereby adopts 17 CFR 9.12 to read as follows:

§ 9.12 Publication of disciplinary actions and rule violations.

Whenever an exchange suspends, expels, or otherwise disciplines or denies any person access to the exchange, it must make public its findings by disclosing at least the information contained in the notice required by § 9.11(a)(1)–(4) of this chapter. As soon as the disciplinary action becomes effective or within five days after an exchange provides the notice required by § 9.11 to the person against whom the action was taken, whichever occurs first, the exchange shall disclose the required information by posting a notice in a conspicuous place on its premises to which the members and the public regularly have access for a period of five consecutive business days. Thereafter, the exchange shall maintain and make available for public inspection a record of the information contained in the disciplinary notice.

Jane K. Stuckey,
Secretary to the Commission.

BILLING CODE 6351-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

18 CFR Parts 1, 2

[Docket No. RM79-16]

Procedure for Submission of Settlement Agreements

AGENCY: Federal Energy Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Commission is promulgating a rule which contains procedures for the submission of settlement agreements and Commission treatment of contested and uncontested offers of settlement. The rule defines for the first time the information to be included in offers of settlement and prescribes settlement procedures that enable the Commission to expedite consideration of settlements filed directly with the Commission or

certified by the presiding officers. By streamlining settlement procedures, it is expected that parties to proceedings before the Commission will find the settlement process a more attractive alternative to litigation.

EFFECTIVE DATE: June 15, 1979.

FOR FURTHER INFORMATION CONTACT: Kenneth E. Richardson, Federal Energy Regulatory Commission, Office of Opinions and Review, 825 North Capitol Street, N.E., Room 9216–C, Washington, D.C. 20426, (202) 275–4200.

Background

On July 24, 1978, the Commission issued a Notice of Proposed Rulemaking on Settlement Agreements, in which the Commission advanced for public comment revised procedures for the submission of offers of settlements.[1] Twenty-eight responses[2] to the Commission's request for written comments were received. The majority of those commenting supported the Commission's proposed rulemaking, and several commentors offered helpful suggestions for clarifying the proposed procedures.

The purpose of the proposed rule is to define in the regulations for the first time information which shall be included in offers of settlement and to prescribe settlement procedures that enable the Commission to expedite consideration of settlements filed directly with the Commission or certified by Presiding Officers, particularly uncontested settlements. By improving our settlement procedures and reducing the length of time presently required for processing settlements of all types, it is our hope that participants in proceedings before the Commission will increasingly seek the benefits of the settlement process to avoid the alternative of costly and often times lengthy litigation before the Commission. The direct costs of regulation are borne most often by the ultimate consumer but indirect or nonquantifiable costs arising from litigation due to uncertainty and delayed managerial decisions or opportunities foregone may be suffered by shareholders as well.

The Commission wishes to emphasize the importance of voluntary settlements to the orderly and expeditious conduct of its business. During the period when responsibility for administering the Natural Gas Act and the Federal Power Act was in the hands of the Federal Power Commission, that agency had a strong policy favoring the disposition of cases through settlements. The FPC and the courts recognized that the Commission could not possibly cope with the flood of business engendered by its jurisdictional statutes if the outcome of a substantial proportion of that business were not the result of voluntary settlements entered into by the parties. *See, Mitchell Energy Corp.* v. *FPC*, 519 F. 2d 36, 40 (5th Cir. 1975); *Texas Eastern Transmission Corp.* v. *FPC*, 306 F. 2d 345, 347 (5th Cir. 1962). We adhere to that view.

Enactment of the Natural Gas Policy Act of 1978, 92 Stat. 3351 (1978), and other portions of the National Energy Act will increase substantially the volume of adjudicative business which this Commission, as successor to the Federal Power Commission, must handle under both the old and the new energy legislation. These developments would seem to make it even more important for those charged with carrying on the Commission's business to do so with a view towards promoting settlements whenever they are in the public interest.

The Commission's Administrative Law Judges have a special responsibility in this respect. Both the Commission's rules of practice and procedure (18 CFR 1.18) and the Administrative Procedure Act (5 U.S.C. 556(c)(6)) authorize Administrative Law Judges to call the parties to a dispute together for the purpose of settlement of the issues.

The Commission is particularly desirous of having its Judges attempt to secure settlements in all cases where settlement is possible and would be in the public interest. The Administrative Law Judges are encouraged to use all of the tools and resources at their command to that end.

Summary of the Rule

The new rule expands upon the present rules regarding settlements by requiring all offers of settlement to be filed with the Secretary and by providing a means of expeditious Commission consideration of contested and uncontested offers of settlement. While clarifying the procedure applicable to offers of settlements, the amended § 1.18(e) does not alter § 1.18(a) of the present rule which gives wide latitude to participates in any proceeding to hold conferences to provide the opportunity for the submission and consideration of offers of settlement. Any party to a proceeding may submit at any time an offer of settlement to all parties, or request a conference for consideration of a settlement offer. the rule does, however, eliminate the current clause in paragraph (e) permitting Submission at any time of offers of settlement to the commission (or to staff counsel for transmittal to the Commission). The new § 1.18(e) also sets forth the information which at a minimum must be submitted by persons filing offers of settlement. An offer of settlement must now include a proposed Commission order accepting the settlement. The new rule also retains the privilege afforded offers of settlement and proposed stipulations not agreed to.

The new portions of § 1.18(e) provide that once a hearing has been ordered until the time the Presiding Officer certifies the record to the Commission, an offer of settlement must be filed with the Secretary of the Commission for transmittal to the Presiding Officer assigned the case, or, if a Presiding Officer has not yet been assigned, to the Office Director responsible for the assignment.[3] Offers of settlement will be filed with the Secretary for transmission to the Commission if a hearing has not been ordered or the case has been certified by the Presiding Officer.

In order to expedite the process after an offer of settlement is filed, the present provisions (§ 2.1) that an offer of settlement be noticed for comment in the Federal Register are replaced by new service provisions. Section 1.17(b) of the regulations requires that papers filed with the Commission be served upon persons designated on the official service list. However, in order to strike a balance between the need for expedition and the desirability of giving notice to those persons most likely affected by such an offer, new § 1.18(e)(1)(vi) provides that all offers of settlement filed with the Secretary of the Commission shall be served on all persons who were required by the Commission's rules to be served with the applications or pleadings initiating the proceeding. All persons served shall also be informed at the time of service the date on which comments are due on the offer of settlement. This procedure provides a greater opportunity for those persons who are not parties to the proceeding but who are most likely to be interested in a settlement to be apprised of its terms. They will now receive actual notice rather than constructive Federal Register notice of settlement offers.

The due date for comments will no longer be delayed until after notice of

---

[1] July 28, 1978, 43 FR 32814.

[2] Requests to file comments after the August 31, 1978, deadline are hereby granted.

[3] An Office Director is chosen rather than the Chief Administrative Law Judge because in certain cases the Commission may refer a matter to a Presiding Officer who is not an Administrative Law Judge and who is designated by the General Counsel or, for appeals for rulings of the Office of Hearings and Appeals, Department of Energy, by the Director of the Office of Opinions and Review.

the settlement offer is published in the Federal Register. Regardless of whether the settlement is filed for transmittal to the Commission or for transmittal to the Presiding Officer, comments on an offer of settlement must be filed with the Presiding Officer or the Commission, as appropriate, on or before 20 days of the filing of the offer of settlement. Replies are to be filed on or before 30 days after filing of the settlement offer. However, the Presiding Officer or the Commission may provide for a different deadline for comments or reply comments. Failure to file comments will be deemed a waiver of the right to file comments on the offer of settlement (§ 1.18(e)(2)). This time period for comments is shorter than the time which has been permitted previously.

The revision of the notice procedure is intended to reduce the time now consumed in obtaining comments necessary to determine whether a settlement is contested and to enable earlier review of a settlement for decision. If the comments indicate that a settlement offer is uncontested, or that at least a portion of it is uncontested and severable from the contested part of the settlement, the new rule permits quicker decisionmaking. If the settlement is transmitted to the Presiding Officer, the Officer is to certify the settlement and the filings and submittals and the formal record (if one is compiled) together with a statement that the settlement is uncontested (§ 1.18(e)(3)). the Commission will expedite consideration of uncontested settlements filed with the Secretary of the Commission for transmittal to the Commission or certified by a Presiding Officer.

Under the Commission's present rules, a Presiding Officer may certify a settlement even if the comments indicate that the settlement is contested. However, if the settlement is contested by a party to the proceeding, then the rule permits a Presiding Officer to certify a contested settlement or a contested portion of a settlement only in accordance with certain conditions imposed in order to assure that a sufficiently developed record exists on which a reasoned decision can be based. The Presiding Officer may certify such offer of settlement to the Commission only if the parties concur on a waiver of the initial decision or if no contested issue of material fact exists, if the Presiding Officer determines that the record contains substantial evidence to enable the Commission to reach a decision on the merits of contested issues, and if the parties have had an opportunity to exercise such rights as they may have with respect to the opportunity to present evidence and cross-examine opposing witnesses (§ 1.18(e)(4)(ii)). If these conditions are not present, the Presiding Officer may direct such further procedures as he deems appropriate, including certification of the settlement at a later time if the conditions are then met.

If the Commission staff is the only contesting participant, the Presiding Officer may exercise his discretion to certify the offer of settlement even if the above conditions are not met. In this regard, the Commission wishes to emphasize the importance it places on the role of the Commission staff in representing the public interest in proceedings before the Commission. The staff performs an important public function in developing the records and testing the case presented by the other parties. Where the staff has not had an opportunity to present evidence and to cross-examine the witnesses of other parties, the Commission expects that the Presiding Officer will consider very carefully the basis for certifying an offer of settlement opposed by the staff. In accordance with present procedure, this decision is left to the sound discretion of the Presiding Officer. However, the Commission would expect that in the exercise of this discretion the Presiding Officer will give careful consideration to the need to develop the record as well as the importance of expediting decision-making.

Settlements which are contested in whole or in part and which are filed with the Secretary for transmittal to the Commission may be considered and approved or disapproved if the record contains substantial evidence upon which to base a reasoned decision. If substantial evidence is lacking or the contested portion of the settlement cannot be severed from the remainder of the settlement for decision, the Commission may order proceedings before a Presiding Officer for receiving substantial evidence upon which a decision can reasonably be based or other appropriate procedures. (§ 1.18(e)(4)(i))

Section-by-Section Analysis and Comment Analysis

Section 1.18(e)(1)

This subparagraph is revised to provide new procedures for the filing offers of settlement with the Secretary of the Commission.

The new § 1.18(e) applies to offers of settlement filed on or after June 15, 1979 in any Commission proceeding other than a rulemaking of general applicability or an investigation under Part 1b of the Regulations. An offer of settlement includes any proposal to modify an offer of settlement.

Any participant to a proceeding may submit at any time an offer of settlement to the Secretary of the Commission or request a conference for purposes of discussing settlement. The Secretary will transmit the offer to the Presiding Officer, Office Director, or the Commissioners, as appropriate. A settlement offer must contain the offer itself, an explanatory statement, and references to documentary support for the offer. An offer of settlement shall also include a proposed Commission order accepting the settlement and disavowing any precedential value for the decision. The settlement offer must be served on all participants and on all persons required to be served with the applications or pleadings initiating the proceeding.

Any offer of settlement which is not approved by the Commission is privileged.

Florida Power & Light Company suggests that the Commission allow the party submitting an offer of settlement to include "any explanatory data it deems appropriate" in the offer of settlement. The definition of "offer of settlement" has been modified to include an "explanatory statement."

To avoid the confusion which Florida Power & Light foresees over what must be included in formal offers of settlement as opposed to preliminary offers of settlement prepared only for purposes of negotiation and conferences, the new rule provides for consideration by the Commission only of offers of settlement filed with the Secretary.

Exxon Corporation, Consolidated Edison Corporation, and Southern California Edison Corporation each noted that this section should provide more clearly that, before a hearing has been ordered, offers of settlement should be filed directly with the Commission and subparagraph (1)(ii) has been modified accordingly.

Exxon, Southern California Edison, and Tenneco also request that adjustments to offers of settlement, offers of settlement not agreed to, and accepted settlements be privileged, in the same manner that unaccepted offers of settlement are privileged. The Commission agrees, insofar as the comments refer to offers not approved by the Commission, and has changed the clause (v) to reflect this recommendation. The privilege cannot

be accorded to offers approved by the Commission.

Pennzoil Company, Tenneco Oil Company and Florida Power & Light Company request the Commission to change the word "participant" to "party". The term participant has been used as defined in § 1.1(f)(2) of the regulations, to include the Commission's staff, and to indicate a limited participation in proceedings by persons other than parties. The word "party" does not include staff.

The Public Service Commission of New York (PSNY), Tenneco, United Gas Company, and the Interstate Natural Gas Association of America (INGAA) [4] request that the Commission delete the sentence requiring the participants submitting the offer of settlement to "state whether the settlement is a package, with no severable parts, or whether any specific issues may be separated from the settlement for separate decision, should the need for a separate decision arise." The commentors believe that this requirement would hamper settlement negotiations, and could create contested issues which might otherwise more easily be settled. The Commission agrees that this could hinder settlement negotiations and accordingly accepts the recommendation to delete this sentence from the rule. However, we encourage those persons filing offers of settlement to decide and determine during negotiations if parts of settlements are severable and advise the Presiding Officer or Commission in order to permit a prompt decision on the uncontested parts of a settlement.

Section 1.18(e)(2)

This subparagraph provides for a date certain for the filing of comments and reply comments. It has been clarified to provide for the filing of comments on the offer of settlement with the Presiding Officer, if the offer of settlement has been filed for transmittal to the Presiding Officer, or with the Commission if the offer of settlement has been filed for transmittal to the Commission.

Exxon Corporation recommends that, rather than publishing a notice with the Federal Register, the Commission should allow each participant to comment on the offer of settlement within 10 days of its submission to the Presiding Officer or the Commission. The thrust of this recommendation is adopted. Notice in the Federal Register will no longer be required. Participants must submit comments to the Presiding Officer or to the Commission, as appropriate, within 20 days of the filing of the offer of settlement. An additional 10 days is allowed for filing reply comments. A participant's failure to file comments within that period of time will be deemed a waiver of its right to file comments.

Niagara Mohawk Power Corporation recommends that the comment procedure be used only if the settlement is opposed. Comments are necessary in order to determine if the offer of settlement is opposed or unopposed. It is important to note, however, that the participants may present their comments to the Presiding Officer orally, on the record. This procedure may be used in lieu of written comments to the Presiding Officer, and this procedure is encouraged.

Section 1.18(e)(3)

This subparagraph provides that uncontested offers of settlement before the Presiding Officer will be certified to the Commission together with the statement that the settlement is uncontested, any hearing record or pleadings which include support for the settlement offer. It also states that the Commission may approve uncontested offers of settlement upon a finding that the settlement appears to be fair and reasonable and in the public interest.

Florida Power & Light recommends that we change the language "the record, which shall include support for the offer of settlement" to "the evidentiary record as support for the offer of settlement." The company maintains that this change is necessary to insure that hearings are not held after an unopposed offer of settlement is filed. A modified version of this recommendation is adopted.[5]

Both PSNY and Niagara Mohawk seek clarification of the word "support" when used in reference to unopposed offers of settlement in this subparagraph. Under the rule as modified, certification of an uncontested offer of settlement must include whatever matter in the record or pleadings supports the offer. However, as recommended by PSNY, it is a matter for the Presiding Officer to determine to what extent a compromise requires support in order for the Commission to make an adequate evaluation of the unopposed offer of settlement. The rule is clear, however, that substantial evidence is not required as support for unopposed offers of settlement.

INGAA suggests that the Commission specifically disallow comments to the Commission on an unopposed offer of settlement once that unopposed offer of settlement is certified to the Commission. This is unnecessary, since nothing in the rule allows or can be interpreted to allow the filing of such comments after certification of an unopposed offer of settlement by Presiding Officer. INGAA suggests that a certified offer of settlement should become a final Commission order if no adverse comments are received by the Commission within 35 days of certification. Under the new regulation the Commission plans to expedite unopposed offers of settlement. The Commission should not be bound by the recommended restriction. The Commission reserves its discretion to review each settlement agreement certified to it.[6] The requirement that an offer of settlement include a proposed Commission order will assist the Commission in acting expeditiously on unopposed settlement.

Section 1.18(e)(4)

This subparagraph provides for the handling of contested offers of settlement. Those filed with the Commission may be decided on the merits if the record contains substantial evidence on which to base a reasoned decision. If it does not, or if the contested issues cannot be severed, the Commission will order further procedures to obtain sufficient evidence or other appropriate procedures.

If comments on an offer of settlement were filed with the Presiding Officer who then determines that the offer was contested, the Officer may certify all or part of such offer to the Commission. However, if an offer was contested by any party, it may be certified only if (A) all parties concur on a motion for omission of the initial decision or the Presiding Officer finds that no contested issue of material fact remains; (B) the Presiding Officer determines the record contains substantial evidence from which the Commission may reach a reasoned decision on the merits of the contested issues; and (C) all parties have had an opportunity to avail themselves of such rights as they may have with respect to the opportunity to present evidence and cross-examine

---

[4] INGAA's comments were supported by Tennessee Gas Pipeline Company, East Tennessee Natural Gas Company, Midwestern Gas Transmission Company, El Paso Natural Gas Company, Northern Natural Gas Company, and Great Lakes Transmission Company. United Gas Company also supports INGAA's comments, but filed its own additional comments.

[5] Tennsco requests that the Presiding Officer be given full discretion to require additional evidence in support of an unopposed offer of settlement. This is permitted by the rule.

[6] For this reason, the Commission provided in this rule that the Presiding Officer merely certify the settlement agreement to the Commission, rather than issue an initial decision approving an unopposed offer of settlement.

opposing witnesses. Severable, uncontested issues may be certified immediately to the Commission for decision.

Northwest Pipeline suggested additional procedures in lieu of those provided in the proposed rule which the Commission believes would add unnecessary and time-consuming steps in the proposed procedure by providing for notice of "partial certification" of a settlement and by disallowing certification of uncontested portions over one participant's objections.

Continental Oil Company recommends that the Commission allow a Presiding Officer to certify an offer of settlement even if one participant refuses to present evidence, to cross-examine other witnesses, or to waive its right to further hearing, if the Presiding Officer decides that there is adequate record evidence to decide the contested issues on the merits. The purpose of the rule is to require that each participant agree to the proposed offer of settlement, seek the appropriate administrative remedies available to him before the Presiding Officer, or waive its right to those remedies. Thus the rule reflects Continental's suggestions. If a party objecting to a settlement declines to pursue his right to present evidence or cross-examine, the party has had an opportunity to exercise his rights and the Presiding Officer may then certify the contested settlement to the Commission. Unless every party does this, one party, who has not voiced an objection to the offer of settlement or pursued its procedural rights before the Presiding Officer, may seek to oppose an offer of settlement before the Commission and delay the decision-making process. It is this situation which the Commission wishes to eliminate by amending the procedures for the submission of settlement agreements.

INGAA and United Gas Company recommend that, in the event that a participant opposes an offer of settlement, the participant present evidence as to the "substantial adverse impact on the public interest that would result if that portion of the settlement objected to is not modified." The Commission rejects this recommendation. This would be inconsistent with statutory requirements, as it places the burden of going forward on the contested issue on the participant contesting the issue. Both the Natural Gas Act and the Federal Power Act provide that a person filing an application for a change in rates, or for a certificate, must bear the burden of coming forward with evidence and proving that the approval of its application is just and reasonable or in the public interest. An offer of settlement does not modify that burden. It is for the offeror, not the offeree, to show that approval of the offer of settlement would conform to statutory requirements. The new rule specifically provides that as long as there is substantial evidence in the record on which a reasoned decision can be made on the contested issues, *and* each of the participants have been afforded due process of law, no further proceedings before the Presiding Officer are necessary, and he may certify the offer of settlement to the Commission.

Section 1.18(e)(5)

This subparagraph reserves to participants their procedural rights in the event that the Commission does to approve an uncontested offer of settlement as it is certified or filed with the Commission. Several parties argue that the word "Substantially" be deleted from this subsection, so that a participant will be deemed to have reserved its rights to a hearing if the Commission imposes any condition upon an offer of settlement. The Commission agrees and has modifed the proposed rule accordingly.

Miscellaneous

Mobil Oil Company and the Missouri Public Utilities Company both suggest procedures for expedited Commission review of certified offers of settlement. The Commission intends to give special and expedited consideration to all offers of settlement, once they are certified or filed with this Commission. *See* § 1.18(e)(3).

Effective Date

Section 553(d)(3) of the Administrative Procedure Act requires publication of a rule in the **Federal Register** not less than 30 days before the effective date of a rule unless good cause exists for an earlier effective date. The Commission finds that good cause exists to waive the effective date provisions of the Administrative Procedure Act. The rule is intended to simplify and expedite the Commission's settlement procedures. Both the Commission and regulated parties have an interest in facilitiating the settlement process so that an expeditious handling of settlements can result. Such expedition will reduce the Commission's caseload and also resolve disputes between parties faster. Accordingly, the Commission rule is effective June 15, 1979 and applies to offers of settlement filed on or after that date. Offers of settlement filed before June 15, 1979 will be considered under the Commission's settlement procedures in effect prior to promulgation of this rule.

(Department of Energy Organization Act, 42 U.S.C. 7107 *et seq.*; E.O. 12009, 42 FR 46267; Administrative Procedure Act, 5 U.S.C. 551 *et seq.*; Natural Gas Act, 15 U.S.C. 717 *et seq.*; Federal Power Act, 16 U.S.C. 792 *et seq.*; Natural Gas Policy Act of 1978, Pub. L. 95-621, 92 Stat. 3350; Public Utilities Regulatory Policies Act of 1978, Pub. L. 95-617, 92 Stat. 317.)

In consideration of the foregoing, Parts 1 and 2, Subchapter A, Chapter I of Title 18 of the Code of Federal Regulations, is amended as set forth below.

By the Commission.

Kenneth F. Plumb,

Secretary.

PART 1—RULES OF PRACTICE AND PROCEDURE

1. Section 1.18 is amended by revising paragraph (e) to read as follows:

§ 1.18 Conferences; offers of settlement.

* * * * *

(e) *Procedures for submission of offers of settlement to Commission*—(1) *General*—(i) *Scope.* This paragraph applies to offers of settlement filed on or after June 15, 1979 in any proceeding before the Commission other than a rulemaking of general applicability or formal or preliminary investigation under Part 1b of this chapter. For purposes of this paragraph, the term "offer of settlement" includes any proposal to modify an offer of settlement.

(ii) *Submission of offer.* Any participant to a proceeding may submit at any time an offer of settlement or request a conference for purposes of discussing settlement. An offer of settlement must be filed with the Secretary of the Commission. The Secretary will transmit such offer to the presiding officer if such offer is filed after a hearing has been ordered and before the time the presiding officer certifies the record to the Commission, except that if a presiding officer has not yet been assigned, such offer shall be transmitted to the Office Director responsible for assignment of the presiding officer. [Such Office Director will assign a presiding officer upon receipt of the offer.] In any other case, the Secretary shall transmit the offer of settlement to the Commission.

(iii) *Contents of offer.* [A] An offer of settlement shall include a document embodying the settlement offer, an explanatory statement, references (including record citations if there is a

record) to all documents, testimony, exhibits which provide support for the offer of settlement, and a list of all schedules, contracts, documents or data relevant to the settlement. An offer of settlement shall also include a proposed order of the Commission accepting the settlement, which order shall include the following provision:

The Commission's approval of this settlement shall not constitute approval of or precedent regarding any principle or issue in this proceeding.

(B) If it is a rate settlement that is being offered, the offer shall include the proposed settlement or tariff changes in a form suitable for inclusion in the filed rate schedules or tariffs together with a sufficient number of copies to conform with the filing requirements of these regulations.

(vi) *Service.* A copy of the offer of settlement shall be served on all participants listed on the official service list on file with the Secretary of the Commission and on all persons who were required by the Commission's regulations to be served with the applications or pleadings initiating the proceeding. The participant serving the offer of settlement shall notify those persons served of the date comments on the settlement are due.

(v) *Privilege.* Offers of settlement which are not approved by the Commission shall be privileged and shall not be admissible in evidence against any person claiming such privilege.

(2) *Comments.* Comment on an offer of settlement shall be filed with the Commission if the offer was transmitted to the Commission, or with the presiding officer in any other case. Comments may be filed on or before 20 days after the filing of the offer of settlement and reply comments may be filed on or before 30 days after filing of such offer, unless otherwise provided for by the Commission or the presiding officer. Failure to file comments will be deemed a waiver of the right to file comments on the offer of settlement.

(3) *Uncontested offers of settlement.* If comments on an offer were required to be filed with the presiding officer and such officer finds that the offer is uncontested, the presiding officer shall certify to the Commission the offer of settlement, a statement that the offer of settlement is uncontested, and any hearing record or pleadings which include support for the offer of settlement. If comments on an offer of settlement were required to be filed with the Commission, the Commission will determine whether the offer is uncontested. Any uncontested offer of settlement may be approved by the Commission upon a finding that the settlement appears to be fair and reasonable and in the public interest.

(4) *Contested offers of settlement.* (i) If comments on an offer of settlement were required to be filed with the Commission and the Commission determines the offer of settlement is contested in whole or in part, the Commission may reach a decision on the merits of the contested settlement issues if the record contains substantial evidence upon which to base a reasoned decision. If the Commission finds that the record is lacking in substantial evidence or that the contested issues cannot be severed from the offer of settlement, the Commission shall establish procedures before a presiding officer for the purpose of receiving substantial evidence upon which a decision on the contested issues can reasonably be based or take such other action as it determines to be appropriate. When contested issues are severable, the uncontested portions may be severed and decided in accordance with paragraph (e)(3) of this section.

(ii) If comments on an offer of settlement were filed with the presiding officer and such officer determines that the offer was contested in whole or part, such officer may certify all or part of such offer to the Commission; except that an offer contested by a party may be certified only if (A) either (*1*) all parties concur on a motion for omission of the initial decision as provided in § 1.30 of this chapter or (*2*) the Presiding Officer determines that there is no contested issue of material fact; (B) the presiding officer determines the record contains substantial evidence from which the Commission may reach a reasoned decision on the merits of the contested issues; and (C) all parties have had an opportunity to avail themselves of such rights as they may have with respect to the opportunity to present evidence and cross-examine opposing witnesses. When the contested issues are severable, the uncontested portions of the settlement may be certified immediately to the Commission for decision as provided in paragraph (e)(3) of this section.

(5) *Reservation of rights.* The procedural rights of each participant are reserved if the Commission does not accept and approve, or approves subject to condition, the unopposed portion of the offer of settlement.

* * * * *

§ 1.18 [Amended]

2. Section 1.18 is amended in paragraph (f) by adding at the end thereof the following sentence: "Proposed stipulations not agreed to are privileged and shall not be admissible in evidence against any counsel or person claiming such privilege."

§ 1.30 [Amended]

3. Section 1.30(c)(1), is amended in the first sentence thereof by inserting "(except as provided in § 1.18(e)(4))," before "all other parties."

§ 1.30 [Amended]

4. In § 1.30(c)(3), the proviso is amended by inserting "(except as provided in § 1.18(e)(4))" after the word "who".

PART 2—GENERAL POLICY AND INTERPRETATIONS

§ 2.1 [Amended]

5. In § 2.1(a)(1), clauses (i) (C), (D) and (H), and clause (vii)(F) are revoked.

Social Security Administration

20 CFR Parts 404, 422

[Regs. 4 and 22]

Reference Changes to Reflect Transfer and Recodification of Medicare Regulations

AGENCY: Social Security Administration, HEW.

ACTION: Final rule.

SUMMARY: On September 30, 1977, the regulations for the Medicare program under title XVIII of the Social Security Act, which were contained in 20 CFR Part 405, were redesignated as 42 CFR Part 405 (42 FR 52828). Therefore, we are modifying various references to 20 CFR Part 405 in the Social Security Administration's regulations to refer instead to 42 CFR Part 405.

As these are solely technical amendments which basically correct cross-references to reflect the recent redesignation of the Medicare regulations, we find that Notice of Proposed Rule Making and public comment in issuing these amendments are unnecessary, and good cause exists for waiving these requirements under the Administrative Procedure Act.

EFFECTIVE DATE: June 18, 1979.

(Catalog of Federal Domestic Assistance Programs No. 13.802, Social Security—Disability Insurance Benefits; 13.803 Social Security—Retirement Insurance; 13.804 Social Security—Special Benefits for Persons Aged 72 and Over; 13.805, Social Security—Survivors Insurance.)

Dated: May 21, 1979.

Stanford G. Ross,

Commissioner of Social Security.

Approved: June 12, 1979.

Joseph A. Califano, Jr.,

Secretary of Health, Education, and Welfare.

Parts 404 and 422 of 20 CFR Chapter III are amended as follows:

PART 404—FEDERAL OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE (1950—)

§ 404.501 [Amended]

1. In § 404.501, paragraph (a)(7) is amended by changing the cross-reference from "(see §§ 405.350–405.351)" to "(see 42 CFR 405.350–405.351)."

§ 404.507 [Amended]

2. Section 404.507 is amended by changing the cross-reference in the first sentence from "(see §§ 404.506 and 405.355)" to "(see § 404.506 and 42 CFR 405.355)".

§ 404.924b [Amended]

3. Section 404.924b is amended by revising the last sentence in paragraphs (a) and (b) to read as follows: "In such hearing, the provisions of this Subpart J, Subpart F of Part 410, and Subpart N of Part 416 of this chapter and Subpart G of 42 CFR Part 405 shall be applied, as appropriate to such other claim."

PART 422—ORGANIZATION AND PROCEDURES

§ 422.130 [Amended]

4. Section 422.130 is amended by revising the last sentence in paragraph (a) to read as follows: "See 42 CFR Part 405, Subpart A, for conditions of entitlement to hospital insurance benefits and 42 CFR Part 405, Subpart B, for information relating to enrollement under the supplementary medical insurance benefits program."

§ 422.201 [Amended]

5. Section 422.201 is amended as follows:

(a) In paragraph (c), the cross references are changed from "§§ 405.720–405.750, §§ 405.1530–405.1570, and § 405.2060 of this chapter" to "42 CFR 405.720–405.750, 405.1530–405.1595, and 405.2060–405.2063";

(b) In paragraph (d), the cross-reference is changed from "see § 405.801 et seq." to "see 42 CFR 405.820–405.860"; and

(c) In paragraph (d) the cross-reference is changed from "see §§ 405.1809 et seq." to "see 42 CFR 405.1809–405.1890".

§ 422.203 [Amended]

6. Section 422.203 is amended as follows:

(a) In paragraph (a)(3), change the first cross-reference from "pursuant to § 405.1530 of this chapter" to "under 42 CFR 405.1531", and change the second cross-reference from "see § 405.1501(c) and (f)" to "see 42 CFR 405.1501(c) and (f)"; and

(b) In paragraph (b)(2), change the cross-references from "in section 405.1502 (b)(2), (c), (d)(2), and (e) (see §§ 404.916, 405.722, 405.1530, 405.1531, 405.2060, 410.631, and 416.1426 of this chapter)" to "in 42 CFR 405.1502(b)(2), (c), (d)(2), and (e) (see §§ 404.916, 410.631, and 416.1426 of this chapter and 42 CFR 405.722, 405.1530, 405.1531, and 405.2060)".

§ 422.205 [Amended]

7. Section 422.205 is amended as follows:

(a) In paragraph (a), the cross-reference "(see § 405.1532 of this chapter)" in the second sentence is changed to "(see 42 CFR 405.1532)" and the cross references following the last sentence are changed from "(For time and place of filing, see §§ 404.946, 405.722, 405.1562, 405.2060, 410.661, and 416.1462 of this chapter.)" to "(For time and place of filing, see §§ 404.946, 410.661, and 416.1462 of this chapter, and 42 CFR 405.724, 405.1562, and 405.2061.)";

(b) In paragraph (b), the cross-references in the first sentence are changed from "in accordance with §§ 404.947, 405.724, 405.2061, 410.662, 416.1463, or 416.1464 of this chapter" to "under §§ 404.947, 410.662, 416.1463, or 416.1464 of this chapter, or 42 CFR 405.724 or 405.2061"; and

(c) In paragraph (d), the cross-reference in this first sentence is changed from "as provided in Subpart O, Part 405 of this chapter in accordance with § 405.1563" to "under 42 CFR 405.1563".

§ 422.210 [Amended]

8. Section 422.210 is amended as follows:

(a) In paragraph (a), the cross-references in the second sentence are changed from "as provided in §§ 404.916e, 405.718d, 410.629e, or 416.1424d of this chapter" to "under §§ 404.916e, 410.629e, or 416.1424d of this chapter or 42 CFR 405.718d". The cross-reference in the sixth sentence is changed from "and § 405.1501(f)" to "and 42 CFR 405.1501(f)"; and

(b) In paragraph (c), the cross references in the third sentence are changed from "as set forth in §§ 404.916d, 405.718c, 410.629d, or 416.1424c of this chapter" to "under §§ 404.916d, 410.629d, or 416.1424c of this chapter or 42 CFR 405.718c".

9. Section 422.410 is amended by adding a new paragraph (k) to read as follows:

§ 422.410 Publications for sale.

* * * * *

(k) Health Care Financing Administration Rulings.

10. In § 422.430, paragraph (a)(3) is revised to read as follows:

§ 422.430 Materials available at district offices and branch offices.

(a) *Materials available for inspection.*

* * *

(3)(i) Social Security Administration regulations under the retirement, survivors, disability, and supplemental security income programs, i.e., Regulation No. 1 (Part 401 of this chapter), Regulations No. 4 (Part 404 of this chapter); Regulations No. 16 (Part 416 of this chapter); and Regulations No. 22 (this Part 422); and the Social Security Administration's regulations under Part B of title IV (Black Lung Benefits) of the Federal Coal Mine Health and Safety Act of 1969, Regulations No. 10 (Part 410 of this chapter); and (ii) Medicare Program regulations issued by the Health Care Financing Administration, 42 CFR Part 405.

* * * * *

§ 422.510 [Amended]

11. Section 422.510, paragraph (a), is amended as follows:

(a) By changing the cross-reference in the parenthetical phrase following the second sentence from "see § 405.102 of this chapter" to "see 42 CFR Part 405, Subpart A"; and

(b) By changing the cross-reference in the parenthetical phrase at the end of paragraph (a) from "see § 405.202 et seq. of this chapter" to "see 42 CFR Part 405, Subpart B".

BILLING CODE 4110-07-M

DEPARTMENT OF JUSTICE

Federal Prison Industries

28 CFR Part 301

Inmate Accident Compensation; Final Rules

AGENCY: Federal Prison Industries, Justice.

ACTION: Final rules.

SUMMARY: This document contains final rules on the procedures for determining claims for inmate accident compensation of former Federal prison inmates for injuries sustained while working in prison. The rules authorize the Claims Examiner to make the initial determination on a claim for inmate accident compensation. The Claims Examiner now presents the claim to an Inmate Accident Compensation Committee. This practice occasions delays in the decision-making process due to difficulty in establishing a meeting time suitable to the Committee members or due to the difficulty in ensuring a quorum at the meeting. The final rules are intended to provide an earlier response to the claimant without affecting the quality of the review or placing any increased burden or responsibility on the claimant.

DATE: This amendment is effective June 18, 1979.

ADDRESS: Office of General Counsel, Bureau of Prisons, Room 910, 320 First Street, NW., Washington, D.C. 20534.

FOR FURTHER INFORMATION CONTACT: Mike Pearlman, Office of General Counsel, Bureau of Prisons, phone 202/724-3062.

SUPPLEMENTAL INFORMATION: By virtue of the authority vested in the Attorney General by 18 U.S.C. 4126 and delegated by the Attorney General at 28 C.F.R. 0.99 to the Board of Directors of Federal Prison Industries, Inc., Part 301 of Chapter III of Title 28, Code of Federal Regulations is hereby amended as set forth below. As this amendment places no increased burden on a claimant but is an amendment of procedures, the provisions of the Administrative Procedures Act (5 U.S.C. 553) requiring notice of proposed rulemaking, opportunity for public participation and delay in effective date are inapplicable.

Under current regulations (§ 301.12), the initial determination of a claim for inmate accident compensation is made by an Inmate Accident Compensation Committee. Before a claim is considered by the Committee, a Claims Examiner compiles all available evidence on the claim, reviews and evaluates the evidence, schedules a meeting of the Inmate Accident Compensation Committee, and presents the merits of the claim with a recommended disposition. Experience has shown that in performing these functions, the Claims Examiner becomes thoroughly familiar with the claim and is qualified to make the initial determination on the merits of the claim. Accordingly, § 301.12 is amended to reflect that the Claims Examiner is empowered to make the initial determination on the merits of a claim for inmate accident compensation. In accord with this change, §§ 301.6, 301.13, 301.19(c), and 301.23 are also amended. Section 301.6 is amended to required that an FPI Form 43, an Administrative Form 19 and the findings of the local Board of Inquiry be forwarded to the Claims Examiner, Federal Prison Industries, Washington, D.C. and not to the Office of General Counsel and Review. Section 301.13 is amended by substituting "Claims Examiner" for "Committee" in the first sentence of § 301.13(a) and in the first and second sentences of § 301.13(b). These changes reflect the fact that the Claims Examiner now makes the initial determination. § 301.19(c) is amended by deleting reference to the Associate Commissioner, since the role of the Associate Commissioner, which remains unchanged, is fully set forth in § 301.20. Section 301.23 is amended to read that the "Claims Examiner", as opposed to the Commissioner of Industries, is advised with respect to the need for further medical or hospital treatment, as the Claims Examiner is responsible for authorizing and approving payment for such treatment on behalf of the Corporation. In this section the word "assigned" has been substituted for "employed", to better reflect inmate work status.

The amendments expedite the review process without affecting the quality of the review. A claimant who is dissatisfied with the decision may appeal the decision to the Inmate Accident Compensation Committee and may request a further review by the Associate Commissioner. The amendments allow for an earlier response to the claim as they eliminate the difficulty previously encountered in arranging a meeting-time of the Committee convenient to the members. They also eliminate delays due to a lack of a decision-making quorum at a scheduled meeting.

In consideration of the foregoing, Part 301 of Title 28, Code of Federal Regulations is amended as set forth below. The effective date of these rules is June 18, 1979.

Dated: June 6, 1979.

Norman A. Carlson,

Commissioner, Federal Prison Industries, Inc.

PART 301—INMATE ACCIDENT COMPENSATION

1. By revising § 301.6 to read as follows:

§ 301.6 Report of death.

If a work-related injury results in death, an FPI Form 43, an Administrative Form 19, and the findings of the local Board of Inquiry will be promptly forwarded to the Claims Examiner, Federal Prison Industries, Inc., Washington, D.C. 20534.

2. By revising §§ 301.12 and 301.13 to read as follows:

§ 301.12 Processing of claims.

(a) A claim for inmate accident compensation shall be determined by a Claims Examiner, appointed by the Commissioner, Federal Prison Industries, Inc., under authority delegated to him by the Board of Directors of Federal Prison Industries, pursuant to 28 CFR 0.99. In determining the claim, the Claims Examiner will consider all available evidence. Written notice of the decision, including the reasons therefor, together with information as to the right to appeal the decision, shall be mailed to the claimant at his or her last known address.

(b) Appeal of the decision rendered by the Claims Examiner may be made to the Inmate Accident Compensation Committee (hereinafter referred to as the "Committee") appointed by the Commissioner, Federal Prison Industries, Inc., under authority delegated to him by the Board of Directors of Federal Prison Industries pursuant to 28 CFR 0.99. The Committee shall consist of four members and four alternates, with any combination of

three thereof required to form a quorum for decision-making purposes.

§ 301.13 Request for hearing or reconsideration, disclosure.

(a) Any claimant not satisfied with the decision of the Claims Examiner shall, upon written request made within 30 days after the date of issuance of such decision or thereafter, upon a showing of good cause, be afforded an opportunity for either a hearing before the Committee, or Committee reconsideration of the decision. A claimant may request a hearing or reconsideration by writing to the Inmate Accident Compensation Committee, Federal Bureau of Prisons, Washington, D.C. 20534.

(b) Upon receipt of claimant's request, a copy of the information upon which the Claims Examiner's initial determination was based shall be mailed to the claimant at his or her last known address. Where the Claims Examiner determines the release of information to the claimant or to the claimant's beneficiary is not in the best interest of the claimant or his beneficiary, the Claims Examiner may release the information to the claimant's or beneficiary's representative or personal physician upon receipt of both a written authorization from the claimant or beneficiary and a written request from the representative or personal physician. If the individual concerned is mentally incompetent, insane or deceased, the next-of-kin or legal representative must authorize in writing the release of records to the representative or personal physician.

3. By revising § 301.19(c) to read as follows:

§ 301.19 Representation of claimant.

* * * * *

(c) A representative appointed in accordance with paragraph (a) of this section may make or give, on behalf of the claimant he or she represents, any request or notice relative to any proceeding before the Committee. A representative shall be entitled to present or elicit evidence or make allegations as to facts and law in any proceeding affecting the claimant he or she represents and to obtain information with respect to the claim of such claimant to the same extent as such party. Notice to any claimant of any administrative action, determination, or decision, may be sent to the representative of such claimant, and such notice or request shall have the same force and effect as if it had been sent to the claimant.

4. By revising § 301.23 to read as follows:

§ 301.23 Medical treatment required following discharge.

If medical or hospital treatment is required subsequent to discharge from the institution for an injury sustained while assigned to Federal Prison Industries, Inc., or to an institutional work assignment, claimant should advise the Claims Examiner and if the cost of such treatment is allowed by the Corporation, advice to this effect and instructions for obtaining such services will be forwarded. The Corporation will under no circumstances pay the cost of medical, hospital treatment, or any related expense not previously authorized by it.

(18 U.S.C. 4126, 28 CFR 0.99 and by Board of Directors of Federal Prison Industries, Inc.)

DEPARTMENT OF DEFENSE

Office of the Secretary

32 CFR Part 367

[DoD Directive 5136.1] [1]

Assistant Secretary of Defense (Health Affairs); Revision of Reporting Relationship

AGENCY: Office of the Secretary of Defense.

ACTION: Revision of final rule.

SUMMARY: This revision changes the reporting relationship of the Assistant Secretary of Defense (Health Affairs) with the Secretary of Defense in that the ASD(HA) will now report directly to the Secretary of Defense instead of reporting through the Assistant Secretary of Defense (Manpower, Reserve Affairs, and Logistics) on certain manpower and logistic matters.

EFFECTIVE DATE: May 31, 1979.

FOR FURTHER INFORMATION CONTACT: Mr. Arthur H. Ehlers, Director for Organizational and Management Planning, Office of the Deputy Assistant Secretary of Defense (Administration), Washington, D.C. 20301, Telephone 202-695-4278.

SUPPLEMENTARY INFORMATION: In FR Doc. 79-5975 appearing in the **Federal Register** on February 28, 1979 (44 FR 11227) the Office of the Secretary of Defense published the Charter of the Assistant Secretary of Defense (Health Affairs) effective January 22, 1979. This revises § 367.4 which now reads as follows:

§ 367.4 Relationships.

(a) In the performance of assigned duties, the ASD(HA) shall:

(1) Report directly to the Secretary of Defense.

(2) Coordinate and exchange information with other DoD organizations having collateral or related functions.

(3) Use existing facilities and services, whenever practicable, to achieve maximum efficiency and economy.

(4) Represent the Secretary of Defense, as an ex officio member, on the Board of Regents of the Uniformed Services University of the Health Sciences.

(5) Provide policy guidance to, and exercise direction, authority, and control over the Office of Civilian Health and Medical Program of the Uniformed Services consistent with 10 U.S.C. Chapter 55 "Medical and Dental Care" and DoD Directive 5105.46 [1], "Civilian Health and Medical Program of the Uniformed Services," December 4, 1974.

(6) Provide policy guidance to, and exercise direction, control and authority over the Office of the Tri-Service Medical Information System.

(b) All DoD organizations shall coordinate all matters concerning the functions cited in § 367.3 with the ASD(HA).

June 13, 1979

COUNCIL ON ENVIRONMENTAL QUALITY

40 CFR Part 1517

Public Meeting Procedures of the Council on Environmental Quality

AGENCY: Council on Environmental Quality.

ACTION: Final Amendments to Procedures.

SUMMARY: These final amendments clarify and supplement the procedures followed by the Council in complying with the Government in Sunshine Act. The amendments reflect the Council's intention to conduct, open to public observation, bi-weekly meetings

involving Council discussions of agency business including, where appropriate matters outside the scope of these procedures. The amendments reflect the intent of the Council to conduct its official collegial business in accordance with the requirements of the Act. They also clarify that actions by the Council Chairman, acting as Director of the Office of the Environmental Quality, and Council actions involving advice to the President are outside the scope of the procedures.

EFFECTIVE DATE: June 18, 1979.

FOR FURTHER INFORMATION CONTACT: Foster Knight, Counsel, Council on Environmental Quality, 722 Jackson Place, N.W., Washington, D.C. 2006, tel: (202)395–4616.

SUPPLEMENTARY INFORMATION: On March 16, 1979 the Council published in the Federal Register proposed amendments to its procedures implementing the Government in Sunshine Act (44 FR 16024, March 16, 1979) and requested public review and comments by April 16, 1979. The Council received only two comments. These comments concisely summarize the background and issues raised by the proposed amendments, and therefore are reprinted below without enclosures.

The Conservation Fundation,
1717 Massachusetts Avenue, N.W., Washington, D.C., April 3, 1979.

Mr. Nicholas C. Yost,
General Counsel, Council on Environmental Quality, 722 Jackson Place, N.W., Washington, D.C.

Dear Mr. Yost: The comments below are offered in support of CEQ's amended rules for compliance with the Government in Sunshine Act (44 Fed. Reg. 16024, March 16, 1979). These are my personal views and are not necessarily those of the Conservation Foundation.

CEQ's proposed rules rest on the assumption that CEQ's primary role is advisor to the President, and the requirements of the role are such as the preclude application of the carrying out those tasks lying outside its advisory role. I have written extensively about CEQ and have concluded that CEQ's advisory role is truly unique and merits protection. [See, e.g., "The Council on Environmental Quality," *Environmental Law Reporter*, 3 ELR 50051 (August 1973); *A National Policy for the Environment: NEPA and its Aftermath* (Bloomington: Indiana University Press, 1976); "The Council on Environmental Quality: The Need to Take a Second Look," *Natural Resources Journal*, 16:357 (April 1976); and (with Alan S. Miller and Frederick R. Anderson), "Comments on the Performance of the Council on Environmental Quality," in "The Council on Environmental Quality, Responses to a Committee Questionnaire," United States Senate Committee on Interior and Insular Affairs, 95th Congress, 1st Session, January 1977 (Committee Print).]

When first established, CEQ was designed primarily to be an advisor to the president. It was not to become involved in the day-to-day decision making of federal agencies but it was to provide a general evaluation of federal programs and to recommend, when appropriate, changes in program direction. While emphasizing the advisory role, NEPA's architects anticipated a second role for the Council, that of environmental ombudsman. CEQ was intended to be the body within the government to which citizens could turn for objective information on the state of the environment. This role was elaborated upon in executive order 11514, which granted the Council the power to convene public hearings on matters of environmental significance.

NEPA and executive order 11514 thus established a role conflict for CEQ. On the one hand the Council was directed to advise the president confidentially concerning ongoing federal programs. On the other hand, it was supposed to be a source of public information on environmental problems. Shortly after its creation, the Council had to choose. It could be restrained in its public information activities and in its public involvement in environmental controversies, in order to assure its continued welcome at the White House; or it could publicly reveal its views on a broad range of issues and face the possibility of being removed from effective participation in the formation of White House policy. As Chairman Russell Train stated in House oversight hearings in December 1970:

> We cannot be, in a sense, the public ombudsman on environment and at the same time be the confidential advisors to the President on the development of policy. It is just an impossibility to fill both these roles.

CEQ is modelled explicitly after the Council on Edonomic Advisors. A study of the Council of Economic Advisors underscore the uncertainties and rivalries that characterize the *Economic Advice and Presidential Leadership: The Council of Economic Advisors*, Edward Flash concluded that the relationship between CEA and the president is moved more by the president's acceptance of CEA than by his dependence upon it, and it is more personal than institutional. The president relies on CEA for advice and CEA derives strength from its presidential affiliation, but this interdependence is asymmetric. For while the president is CEA's only source of strength, the president need not depend solely upon CEA for economic advice.

Because it has no constituency of its own, CEA has always sold its views rather than prescribed them; it lacks the power to impose its will on others. Its operations have been determined less by what the president wants it to do than by what he does not object to its doing.

The characteristics that Flash attributed to the CEA's presidential relationship would seem to apply in some measure as well as to the CEA's. The Council's advisory relationship with the president has limited its ability to take public actions. To preserve its entry to executive level deliberations, the Council has to be a "team player." The Council has wisely adopted the view that it cannot adopt tough public adversary stances concerning particular agency projects. Although in the Carter Administration the CEQ has been more outspoken than under previous administrations, it remains true that the Council's prevailing view is that more can be achieved through private exhortation than through public disparagement.

Based on this view of CEQ, I have concluded that the Council's amended guidelines strike the proper balance between the special advisory relationship CEQ has with the President and the requisites of the Government in Sunshine Act.

Sincerely yours,

Richard A. Liroff,
Senior Associate.

Pacific Legal Foundation,
1990 M Street N.W. Suite 500, Washington, D.C., April 16, 1979.

Mr. Nicholas C. Yost,
General Counsel, Council on Environmental Quality, 722 Jackson Place, N.W., Washington, D.C.

Dear Mr. Yost:

In re: Proposed Amendments to CEQ Sunshine Regulations (44 Fed. Reg. 16024 (March 16, 1979).

CEQ has proposed to explicitly remove from the coverage of its Sunshine regulations all business of the Council involving advice to the President. It has further proposed to limit its regulations to what it terms "official collegial Council business"—that is, business requiring affirmative votes of Council members. There is no justification in the Sunshine Act for either of these limitations. With one minor exception, the Act applies to all Council business regardless of subject matter. The requirements of the Act are not triggered by the actual castings of Council-member votes on items of business; any matter in which two or more Council members are involved, regardless of whether or not votes are taken, falls within the scope of 5 U.S.C. § 552b(b).

In support of PLF's position, I have attached copies of two documents filed in PLF's pending action against CEQ regarding the Council's past failure to observe the Sunshine Act (D.D.C. Civil No. 79–116).

Yours Truly,

Sam Kazman,
Attorney.

Enclosures: Plaintiff's Memorandum of Points & Authorities in Opposition to Defendants' Motion for Summary Judgement; Memorandum of *Amicus Curiae* Senator Lawton Chiles in Support of Plaintiff's Opposition.

The Council has carefully considered these comments and has determined that the proposed amendments, which are supported by the first of these comments, should be adopted. Therefore the Council is publishing the

amendments to its public meeting procedures without change.

June 13, 1979.

Charles H. Warren,

Chairman, Council on Environmental Quality.

Sections 1517.1, 1517.2 and 1517.3 are revised to read as follows:

§ 1517.1 Policy and scope.

Consistent with the policy that the public is entitled to the fullest information regarding the decisionmaking processes of the Federal Government, it is the purpose of this part to open the *collegial* meetings of the Council on Environmental Quality to public observation while protecting the rights of individuals and the ability of the Council to carry out its primary responsibility of providing advice to the President. Actions taken by the Chairman acting as Director of the Office of Environmental Quality and Council actions involving advice to the President are outside the scope of this part. In addition to conducting the meetings required by this part, it is the Council's policy to conduct, open to public observation, bi-weekly meetings involving Council discussions of Council business, including where appropriate, matters outside the scope of this part. This part does not affect the procedures set forth in Part 1515 pursuant to which records of the Council are made available to the public for inspection and copying, except that the exemptions set forth in § 1517.4(a) shall govern in the case of any request made to copy or inspect the transcripts, recording or minutes described in § 1517.7.

§ 1517.2 Definitions.

For the purpose of this part—

(a) The term "Council" shall mean the Council on Environmental Quality established under Title II of the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4347).

(b) The term "meeting" means the deliberations of at least two Council members where such deliberations determine or result in the joint conduct or disposition of official collegial Council business, but does not include deliberations to take actions to open or close a meeting under §§ 1517.4 and 1517.5 or to release or withhold information under §§ 1517.4 and 1517.7. "Meeting" shall not be construed to prevent Council members from considering individually Council business that is circulated to them sequentially in writing.

(c) The term "official collegial Council business" means any Council action which by statute, regulation, Executive Order, or internal Council procedures requires an affirmative vote of at least two Council members in order to be taken on behalf of the Council. It shall include the adoption of regulations and shall not include advice to the President, nor actions taken by the Chairman acting as Director of the Office of Environmental Quality under the Environmental Quality Improvement Act of 1970.

(d) "Director" means the Chairman of the Council on Environmental Quality acting as the head of the Office of Environmental Quality pursuant to the Environmental Quality Improvement Act of 1970, Pub. L. 91–224, 42 U.S.C. 4371–4374.

§ 1517.3 Open meeting requirement.

(a) Every portion of every meeting of the Council is open to public observation subject to the exemptions provided in §§ 1517.4. Members of the Council may not jointly conduct or dispose of the business of the Council other than in accordance with this part.

(b) The Council will conduct open to public observation a bi-weekly meeting involving Council discussions of Council business including where appropriate matters outside the scope of this part. Such meetings will be noticed pursuant to § 1517.6.

(c) Members of the public may attend open meetings of the Council for the sole purpose of observation and may not participate in or photograph any meeting without prior permission of the Council. Members of the public who desire to participate in or photograph an open meeting of the Council may request permission to do so from the General Counsel of the Council before such meeting. Members of the public may record open meetings of the Council by means of any mechanical or electronic device unless the Council determines such recording would disrupt the orderly conduct of such meeting.

BILLING CODE 3125–01–M

COMMUNITY SERVICES ADMINISTRATION

45 CFR Part 1061

Emergency Energy Conservation; Fiscal Year 1979 Crisis Intervention Program

AGENCY: Community Services Administration.

ACTION: Amendment of rule.

SUMMARY: The Community Services Administration is amending the rule on its FY 79 Crisis Intervention Program published at 44 FR 4481 to reflect comments received from the public and from grantees operating the program. In general the amendments provide for a thirty-day extension from May 31, 1979 to June 30, 1979 during which eligible individuals can be certified for assistance in crisis situations arising prior to June 1, 1979 and a consequent extension of program termination and reporting dates.

EFFECTIVE DATE: This final rule is effective July 18, 1979, as a thirty-day waiting period would have been impractical and contrary to the public interest.

FOR FURTHER INFORMATION CONTACT: CSA grantees and program beneficiaries: Appropriate CSA Regional Office. Others: Community Services Administration, Office of Community Action, 1200–19th Street, N.W., Washington, D.C. 20506. Telephone: (202) 632–6503; Teletypewriter: (202) 254–6218.

(Sec. 602, 78 Stat. 530; 42 U.S.C. 2942.)

Graciela (Grace) Olivarez,

Director.

Part 1061 of Title 45 of the Code of Federal Regulations is amended as follows:

(1) Section 1061.52–4 is revised to read as follows:

§ 1061.52–4 Duration of program.

(a) Grants will be effective January 1, 1979 and will have a termination date of August 31, 1979.

(b) No grant funds may be committed by grantees to provide assistance to certified households after June 30, 1979; and funds may only be committed during the period June 1 to June 30, 1979 for winter-related energy emergencies which placed eligible households in a crisis situation prior to June 1, 1979.

(c) Administrative funds may be committed until August 31, 1979.

(d) Grant funds which remain uncommitted by the grantee after August 31, 1979 shall be deobligated and returned by check to CSA for refund to the U.S. Treasury.

§ 1061.52–11 [Amended]

(2) Section 1061.52–11(b) is amended as follows:

Delete the date in the third sentence which now reads "July 1, 1979" and insert "October 1, 1979."

[FR Doc. 79–18962 Filed 6–15–79; 8:45 am]

BILLING CODE 6315–01–M

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 0

[FCC 79-373]

Delegation Authority for Commercial Time Standards

AGENCY: Federal Communications Commission.

ACTION: Order.

SUMMARY: This action modifies the limitations in the delegation standard, Section 0.281(a)(7)(i), as it relates to the amount of political advertising matter proposed in application for radio licenses. Pursuant to the delegation rule, the Broadcast Bureau staff must refer to the Commission all applications in which a specified limit on commercial time proposals is exceeded. The rule as amended here permits additional time for political advertising in excess of the specified limit on commercial matter.

EFFECTIVE DATE: June 25, 1979.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Mark N. Lipp, Broadcast Bureau, (202-632-7792).

SUPPLEMENTARY INFORMATION:

In the Matter of amendment of Part 0 of the Commission's rules concerning delegation authority for commercial time standards.

Adopted: June 7, 1979.

Released: June 13, 1979.

By the Commission: Commissioner Fogarty absent.

1. The Commission adopted a policy statement on April 26, 1976 (FCC-76-360), regarding the amount of time which can be devoted to political advertising in excess of the limits on commercial time for radio under the delegation standard in Section 0.281(a)(7)(i). We are taking this opportunity to codify that policy by amendment of our rules.

2. Section 0.281(a)(7)(i) provides that the staff has delegated authority to act on proposals for commercial time which do not exceed 18 minutes per hour, with exceptions up to 20 minutes per hour during no more than 10% of the station's total weekly hours of operation. Pursuant to the previously issued policy statement, the permissible limits for the proposal and for the exception have been extended during periods of high demand for political advertising by four additional minutes.[1] Also, instead of using the period of 10% of the station's total weekly hours of operation we now use the standard of 10% of the station's total operating hours in the applicable period when lowest-unit-charges[2] are mandated for political advertising. Thus in proposals pertaining to commercial matter, the new limits for delegated action by the staff during periods of high demand for political advertising are extended to permit up to an additional four minutes not to exceed 10% of the station's total operating hours in the lowest-unit-charge periods. In each case the additional time which must be devoted to purely political advertising applies both to non-seasonal (Section 0.281(a)(7)(i)) and seasonal (Section 0.281(a)(7)(ii)) markets. This change has not yet been incorporated into the delegation standard, Section 0.281(a)(7). The attached Appendix amends this section for the purpose of implementing the existing policy. The commencement of a separate rule making is not necessary to accomplish the amendment since the rule is procedural in nature. See Section 553(a)(3)(A) of the Administrative Procedure Act [5 U.S.C. 553(a)(3)(A)].

3. It is ordered, That effective June 25, 1979, Section 0.287(a)(7) of the Commission's Rules and Regulations is amended in the manner set forth in the Appendix.

(Secs. 4, 303, 48 stat., as amended, 1066, 1082; 47 U.S.C. 154, 303)

Federal Communications Commission.

William J. Tricarico,

Secretary.

Part 0 of Chapter I of Title 47 of the Code of Federal Regulations is amended as follows:

1. In Section 0.281, subparagraph (a)(7)(i) is amended, present subparagraph (a)(7)(iii) is redesignated (a)(7)(iv), and a new subparagraph (a)(7)(iii) is added to read as follows:

§ 0.281 Authority delegated.

* * * * *

[FR Doc. 79-18982 Filed 6-15-79; 8:45 am]

BILLING CODE 6712-01-M

[1] Previously the permissible excess time during periods of high political demand was 22 minutes where the excess over 20 minutes is used for purely political advertising.

[2] The lowest-unit-charge periods are specified as 45 days preceding the date of a primary or primary runoff election and 60 days preceding the date of a general or special election.

47 CFR Part 1

[Gen. Docket No. 79-137; FCC 79-331]

Processing of Contested Broadcast Applications; Revised Procedures

AGENCY: Federal Communications Commission.

ACTION: Report and Order—Gen. Docket No. 79-137.

SUMMARY: The FCC adopted a Report and Order revising Part 1 of its rules and procedures to expedite the processing of contested broadcast applications, prior to and after designation for hearing. The amended rules, in substance, simplify and shorten the cut-off lists; eliminate the sending of "deficiency letters" as part of the processing procedure, except where the staff needs further information; restrict the predesignation voluntary amendments of applications; eliminate the current provision for predesignation issue pleadings; and require pleadings affecting issues to be filed with the Administrative Law Judge after designation. The Commission also modified its procedures for handling applicant showings dealing with community ascertainment surveys and financial qualifications. In connection with evaluating ascertainment surveys of community needs, the Commission modified the standards to be applied to all existing and future contested and uncontested applications by returning to the earlier policy requirement of "substantial compliance." A separate public notice containing the Commission's modified policy in this regard is being issued in conjunction with the Report and Order. The Report contains a section on implementation of the new procedures, which is intended to accomplish an orderly and equitable transition to the new procedures for the

vast majority of pending and new applicants.

The actions resulted from recommendations in a report entitled "Evaluation of Operation of New Predesignation Procedures in Processing of Broadcast Applications," and consideration of written comments on the report and the participation by the Commission, its staff and the public in a public symposium on the report.

Reconsideration petitions may be filed on or before July 18, 1979.

EFFECTIVE DATE: June 18, 1979.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Jerold L. Jacobs at (202) 632-6485.

Report and Order

Adopted: June 1, 1979.
Released: June 8, 1979.

By the Commission: Commissioner Brown concurring and issuing a Statement; Commissioner Jones absent.

In the matter of: revised procedures for the Processing of Contested Broadcast Applications; Amendments of Part 1 of the Commission's rules, Gen. Docket No. 79-137.

I. Introduction and Background

1. In its Report and Order on Adjudicatory Reregulation (Docket No. 20628), adopted March 17, 1976 (58 FCC 2d 885) and published in the **Federal Register** on April 8, 1976 (41 FR 14865), the Commission amended its procedures governing processing of contested broadcast applications in order to "reduce unwarranted 'delay' in the performance of its (adjudicatory) functions." In the "Conclusion" to the Report and Order, the Commission stated that it would "* * * continue to * * * (monitor) our processes to evaluate the results of these changes as well as to discover other sources of delay which can be eliminated." (*Report and Order*, supra, at para. 43; 58 FCC 2d 865, 878). In an effort to learn how the revised procedures were actually functioning in practice, the Commission, in 1978, contracted for a study and evaluation of the operation of the new procedures, with particular regard to their impact on the handling of mutually exclusive and other contested broadcast applications.

2. After the Contractor, Max D. Paglin,[1] submitted his Report entitled *"Evaluation of Operation of New Predesignation Procedures in Processing of Broadcast Applications,"* the Commission scheduled consideration of the Report and its recommendations for the Agenda of its Open Meeting of March 15, 1979. Upon such consideration and review, the Commission concluded, tentatively, that adoption of the recommended revisions in its pre-designation and post-designation procedures would eliminate the delay problems which the Report found had been experienced and would improve the efficiency and effectiveness of its broadcast application processing system.

3. In light of the provisions of the Administrative Procedure Act exempting rules of procedure and practice from the notice and comment requirements of its Section 553 (see 5 U.S.C. 553(b)), it appeared that a rulemaking proceeding was not required before revised regulations of the nature recommended in the Report were adopted. Nevertheless, the Commission desired first to have the comments, on an informal but expedited basis, of interested organizations, government agencies and persons, including representatives of the Federal Communications Bar Association, the American Bar Association, the Association of Federal Communications Consulting Engineers and other practitioners, citizens organizations, the National Telecommunications and Information Administration (NTIA) (U.S. Department of Commerce), the Administrative Conference of the United States and interested Congressional Committee staffs.

4. Accordingly, the Commission issued a Public Notice, dated March 15, 1979 (FCC 79-159) [2] releasing for informal public comment the Contractor's Report, together with an Executive Summary. Copies of the Report were sent to the above-mentioned groups for their information and comment, and it was stated in the Public Notice that additional copies were available for inspection and distribution in the Commission's Office of Public Affairs. The Notice requested that comments be submitted on or before April 6, 1979, in view of the existing situation with regard to application backlogs and delays, and the obvious need to take remedial action on an expedited basis. The Public Notice also stated the Commission's intention to hold a public symposium on April 17, 1979, after receipt of the written comments, to discuss the recommendations of the Report and to obtain, through a panel format, an exchange of views among the Commissioners, the staff, and outside groups on the proposed changes in the pre-designation and post-designation procedures.

5. Thereafter, by Public Notice dated March 22, 1979, the Commission announced that a public briefing session would be held on March 29 at the Commission's headquarters, in conjunction with the Federal Communications Bar Association's Continuing Legal Education Program. The briefing session was held as scheduled, at which the Contractor and members of the Commission's staff participated in answering questions and comments by the audience regarding the procedural revisions proposed in the Report, in an effort to assist those preparing to file written comments or intending to participate in the forthcoming symposium.

6. The Commission received written comments on the Report and its recommendations from thirteen organizations and interested practitioners and from two Government Agencies by the April 6th deadline.[3] Copies of the comments have been kept on file in the office of the Secretary for public inspection and reference.

7. On April 17, 1979, the Commission held a Public Symposium on the Report, as previously announced. The Commissioners were in attendance and participated in the questioning, and the presentations and colloquy were conducted by the Contractor and a panel composed of representatives of the Commission's Broadcast Bureau, the Office of Administrative Law Judges, the Federal Communications Bar Association and the American Bar Association. Following these presentations, other interested members of the Bar and the public were given an opportunity to comment on the Report's recommendations and to engage in an exchange of views with the panelists and the Commissioners. The proceedings were recorded and a

[1] The Contractor, Mr. Paglin, has had extensive experience with the Federal Communications Commission, serving some 28 years in positions of varied responsibilities, including that of trial attorney in Common Carrier and Broadcast, legal assistant to a Commissioner, Assistant General Counsel for Litigation, General Counsel, Executive Director and Special Assistant for Administrative Procedure.

[2] Copies of the Report and the Executive Summary will be available for inspection in the Office of Public Affairs, Room 202, at the Commission's headquarters.

[3] Comments have been received from: Federal Communications Bar Association; Association of Federal Communications Consulting Engineers; members of the Communications Committee, Administrative Law Section, American Bar Association (though not the organization's official position); National Association of Broadcasters; Association of Independent Television Stations, Inc.; National Telecommunications and Information Administration (NTIA); Administrative Conference of the U.S.; McKenna, Wilkinson & Kittner, Esqs.; Cohen & Berfield, Esqs.; Stambler & Shrinsky, Esqs. (Bruce Eisen, Esq.); James E. Greeley, Esq.; Media Access Project; Business Communications, Inc.; Office of Communication of the United Church of Christ (Earle K. Moore, Esq.).

transcript of the Symposium has been made a part of the public documentation in this matter. The written comments and the dialogue during the Symposium have afforded the Commission a valuable airing of views on the need for urgent revisions in the procedures by which contested broadcast applications are processed, in order to assure that the public's business is being handled efficiently and with dispatch. Some of the modifications suggested by the written and oral comments will be quite useful in accomplishing the objectives sought, and some will be adopted as indicated in more detail below.

II. Findings of Contractor's Report on Pre-Designation Procedures in Processing Contested Broadcast Applications

8. Before proceeding to a discussion of the Report's findings and recommendations, it should be noted that the Report was given wide dissemination to those organizations and persons whose activities and interests would be affected by its proposals, and whose expertise would be most beneficial to the Commission in commenting on the proposed revised procedures. Thus, it would seem unnecessary to reiterate in detail the Report's findings and conclusions as to what happened under the current pre-designation procedures. In the interest of brevity, therefore, the Contractor's Report, together with its Executive Summary, will be incorporated by reference and made a part of the documentation associated with this Docket.

9. As has already been indicated, the Commission has reviewed the Report and its recommendations and has accepted it as a valid evaluation of the current situation regarding the processing of contested broadcast applications. A brief summary of the Report's findings and conclusions would, however, be useful at this point to serve as background for the more detailed discussion of, and determination on the specific recommendations for procedural revisions dealt with below.

10. One of the principal aspects of the Commission's 1976 adjudicatory re-regulation effort was the amendment of its rules pertaining to the processing of mutually exclusive broadcast applications. It established a new pre-designation procedure whereby competing applicants would perfect their applications within a specified period after the cut-off date for the filing of mutually exclusive applications, and would participate in the framing of issues against each other before the applications were designated for hearing. The declared objective of these new procedures was to "promote the expeditious and early preparation of cases * * * and to "* * * encourage (the) earliest possible specification of issues and disclosure of (competitive) positions." Although it was realized that the new procedures would impose "a greater burden on the processing line staff with attendant manpower implications," the Commission felt that:

> * * * greater emphasis on pre-designation procedures will result in substantial time savings during the hearing process. Moreover, early preparation of their own cases and analysis of their opponent's case should result in greatly increased numbers of buy-outs and mergers. This early analysis of the strengths and weaknesses of cases can be expected to encourage early settlement with accompanying savings in time and money expended during a hearing. *(Notice of Proposed Rulemaking, Docket 20628,* FCC 75-1250, 40 F.R. 54436, 54439, November 14, 1975).

The procedures were also designed to function as a part of other modifications of the rules providing for rigid time limits for responses to "deficiency letters" sent out in the initial processing of the applications, proposals for narrow framing of issues in the designation order, and the shift of jurisdiction over interlocutory petitions to enlarge, modify or delete hearing issues from the Review Board to the Administrative Law Judges.

11. The Contractor's study involved an extensive analysis of the new pre-designation procedures as they have actually functioned in operation, and was based on close examination of Commission records and data, and comprehensive interviews and conferences with Commission staff and practicing attorneys who have had actual experience with the pre-designation procedures. In essence, the Report concluded that the current procedures for processing contested broadcast applications have failed to accomplish their intended purpose of eliminating delay and simplifying and expediting the pre-designation process; and that, in fact, the new procedures have resulted in greater delays and may, if allowed to continue in their present form, result in a serious breakdown of the system.

12. Accordingly, the Report recommended that the present procedures be replaced by a streamlined, expedited system of processing contested broadcast applications which eliminates or replaces those elements in the process which have resulted in extensive delays amounting to two years or more before such applications are even reached for designation for hearing. The recommendation would, in substance, simplify and shorten cut-off lists; eliminate the sending of "deficiency letters" as part of the processing procedure, except where the staff needs further information; restrict the pre-designation voluntary amendments of applications; eliminate the current provision for pre-designation issue pleadings; require pleadings affecting issues to be filed with the Administrative Law Judge after designation; and encourage the issuance of brief Memoranda Opinions and Orders of designation for hearing.

13. The Report also suggested an innovative approach for the handling of community ascertainment surveys and financial qualifications, as a further step in expediting the process. The Contractor recommended consideration of a procedure whereby, after the applicant makes a satisfactory threshold showing in its application of compliance with the Commission's requirements and policies for conducting a proper community ascertainment survey and in demonstrating financial capability to build and operate the proposed station—which showing passes the muster of Commission review—these two factors would no longer be subject to the adversary pleading or hearing process, absent a strong and persuasive showing by other parties of misrepresentation, gross omission or later developing circumstances.

14. These recommendations will be considered in the light of the written comments and the views expressed during the Symposium.

III. Discussion of Report's Recommendations for Procedural Revisions; Consideration of Comments in Written Filings and at the Public Symposium

15. The comments which were filed were unanimous in commending the Commission for undertaking this effort to improve its processing of broadcast applications, and urged the Commission to adopt new procedures as soon as possible, taking into consideration the views expressed in some of the comments as to suggested modifications.

16. The specific recommendations in the Report will now be addressed substantially in the order in which they appeared in the document.

A. Revision of Processing Line Procedures

17. *Revision of Cut-off List Procedures.*—The Report recommended that the existing cut-off list procedures and notices be repealed, and that there be substituted a simplified Public Notice system of publication of tenders, and, later, of acceptances for filing of applications. The Notice of Acceptance for Filing would contain an announcement that applications desiring to be considered as in conflict with those on the list, or petitions to deny, would have to be filed within a date certain and stated, i.e., that date being set on the basis of requiring filing within thirty days after publication in the **Federal Register**, plus "lag time" for transmittal to the **Federal Register** and publication.

18. The Federal Communications Bar Association (FCBA) approved of the proposal to revise the current cut-off procedures; however, they suggested that a specific cut-off date be specified in the Commission's Public Notice, i.e., 45 days from publication of the Notice of acceptance for filing of the lead application to govern the cut-off date for filing mutually exclusive applications and petitions to deny. They also contended that the Commission should delete the practice of publishing such Notices of Acceptance for Filing in the **Federal Register**, since it was not required by statute and only added a delaying factor. The Association of Independent Television Stations (AITV) also concurred in the proposal, but contended that the proposed time frame for preparation and filing of competing applications was too short, and that the Commission should provide at least 90 days from public notice of the *tender* of the first application for the filing of competing applications.

19. The Commission believes that the shortened cut-off list procedure recommended in the Report will serve to expedite the application processing system. It also agrees that specifying a date certain in the Commission's Public Notice for the filing of mutually exclusive applications and petitions to deny (which, in fact, was contemplated in the Report's recommendation) will be useful in alerting the interested segments of the public, and it will therefore incorporate this feature in the revised regulations. In order to make the modified process more effective and expeditious, the Commission will continue the present practice of periodic publication of notices regarding the tender of new applications and the acceptance of applications for filing, but will publish such lists on a more frequent basis.

20. During the Symposium, the additional suggestion was made by members of the Bar that the Commission consider dropping its current practice, as provided for in §§ 1.571–1.573 of the rules, of additionally publishing in the **Federal Register** the cut-off lists for AM, FM and TV applications. It was contended that the wide distribution of Commission public notices is sufficient to alert potentially interested persons and organizations, without the added delay of publication in the **Federal Register**, since the latter was not required by statute. It is true that our Public Notices are made available at Commission headquarters for distribution to the broadcast industry, the Bar, consulting engineers and the Washington offices of some citizens groups. In addition, our rules require the publication in local newspapers for specified repeated periods of announcements as to the filing of applications for new, modified or renewed broadcast facilities; and, where existing stations are the applicants, for broadcast announcements regarding the applications. These latter rules are obviously designed for the benefit and information of the local communities. The recommendations in the Report regarding expedited cut-off lists did not contemplate abandoning publication in the **Federal Register**, and we have no present information of the extent to which the **Federal Register**, is relied upon by the general public for information on the filing of broadcast applications. Although our Consumer Assistance Office maintains an extensive direct mailing list to citizens groups throughout the Nation on Commission activities and action, broadcast application filings are not part of such releases. Accordingly, and in the present circumstances, we will continue our current practice and will publish in the **Federal Register** the proposed new Public Notices regarding acceptance of applications, with the proposed announcement of a specific cut-off date for filing mutually exclusive applications and petitions to deny. We will leave open for future inquiry the question of the feasibility of deleting from our Rules the requirement for additional publication in the **Federal Register**.

21. *Elimination of "Deficiency Letters"*—The Report found that the existing practice of sending "deficiency letters" to mutually exclusive applicants as part of the processing procedure, as provided in § 1.571(k), was another cause of extensive delay in the ultimate processing of these applications to designation for hearing. It was estimated, on the basis of the information gathered in the Report, that elimination of the need for the staff to send out "deficiency letters" to applicants, and await responses, amendments and further analysis, could save anywhere between 60 and 100 days of processing time. It was also felt that elimination of this practice would discourage the filing of so-called "skeleton" applications, and would eliminate the burden on the staff of having to review such applications and correspond with the applicant on the existence of defects in the applications which require correction. The elimination of the regular sending of deficiency letters, as part of the pre-designation process, would, of course, not preclude the Commission or the staff from requiring the applicant to submit additional information where necessary, as prescribed by Section 308 of the Communications Act and § 1.514(b) of the rules. The Report also referred to the present practice of sending letters out on uncontested applications where further information was required or where the applications, as filed, were incomplete or insufficient, in order to permit these applicants to amend or cure the problem by further submissions. It was proposed that the Commission's present policy and practice in these types of unopposed applications be continued, in the discretion of the staff, so as to assist the applicant in obtaining a grant and instituting a new or expanded service in the community, where there is no opposition or conflict.

22. These proposals regarding the elimination of deficiency letters were strongly endorsed by FCBA in their written comments and in the Public Symposium; however, they stated that their position was based on the assumption that Commission requirements would be spelled out with clarity so that applicants would have sufficient information to file complete and adequate applications. There were further comments in the Symposium by one participant that the Commission should provide for at least one letter notice to the applicant as to the deficiencies in his proposal, but that thereafter he should be bound by his submissions.

23. The Commission will adopt the proposal as recommended in the Report, since we agree that elimination of the deficiency letters will not only discourage the filing of less than optimum applications, once the industry realizes that the staff will no longer be required to point out errors in the application, but it will also serve to

expedite the process. We are convinced from the contents of the Contractor's Report that the deficiency letters have been the cause of much delay, and their elimination should serve to expedite the application processing considerably. Accordingly, the rules will be amended to eliminate for the future the sending of deficiency letters in contested application situations. The staff will be given discretion to continue their present practices with regard to unopposed applications, where the circumstances appear to warrant such efforts.

24. *Revision of Application Amendment Procedures Pre-Designation and Post-Designation*—The Report detailed the reasons for the long delays experienced under the current amendment procedures, due to the back-logs, the extended time lags between cut-off and designation for hearing and the provisions of the rules (§ 1.522) allowing amendments prior to designation for hearing. It was found that, during the protracted period while the applications were pending, involving as much as a year or two, the applicants filed numerous amendments, due to changes in circumstances or to respond to opponents' issue petitions alleging defects in their applications. This then necessitated repetitive processing by the staff to re-examine the amended application to determine whether new matters were raised requiring additional deficiency letters or the specification of issues for hearing. Opposing applicants were likewise then required to scrutinize carefully the amended application to re-assess the competitive posture. In the latter situation, the amendments were sometimes followed by new petitions requesting additional issues on alleged defects in their opponent's amended cases, and this then led to a new cycle of cross pleadings, again requiring further consideration and evaluation by the staff. Even though these subsequent pleadings were not authorized by the rules, there appeared, in the early experience under the new procedures, to be no way to cut them off, short of Commission action designating the matter for hearing, particularly when the pleadings were usually accompanied by requests for waiver of the rules, which had to be entertained.

25. Another problem involved in the Commission's liberal amendment policy in mutually exclusive broadcast cases was expressed in terms of presenting a conflict of two public interest objectives—i.e., on the one hand, the Commission's desire to have a choice among applicants whose qualifications represented the optimum in ultimate service to the public; but, conversely, the liberal allowance of amendments encourages the filing initially of "skeleton applications" and constantly changes "the litigation facts," thus interfering with an early stabilization of the comparative factual situation which must ultimately go to hearing. The inevitable result of "the system" was to create more and more delay.

26. In the face of these circumstances, the Report recommended a substantial change in the voluntary amendment procedure. It recommended that the § 1.522 procedures for amendments to applications prior to hearing be revised to permit "amendments as of right" in only two situation—first, within a specified period (approximately 30–45 days) after public notice in the **Federal Register** of the acceptance for filing of the last-filed mutually exclusive application (i.e., pre-designation); and, second, within a similar specified period after publication in the **Federal Register** of the Order of Designation for Hearing (i.e., post-designation). The Report proposed that, with regard to pre-designation amendments, the Public Notice of Acceptance for Filing of applications mutually exclusive with the first filed applicants would have until a date certain and stated to file amendments as of right to their respective applications. With regard to post-designation amendments, the Report proposed that the Designation Order would specify a date of which the parties could file amendments to respond to hearing issued raised in the Order, that date being similarly between 30–45 days after publication in the **Federal Register**. The resolution of such issues would then be handled, as at present, by the Administrative Law Judge by way of motion for summary decision or other appropriate procedure. All other amendments were to be submitted to the presiding Administrative Law Judge, by petition for leave to amend, showing good cause.

27. It was also proposed in the Report that amendments required by § 1.65, to update an application, will be allowed at times other than those specified above, provided that no comparative advantage is claimed thereby; and, further, that amendments ordered by the Commission, pursuant to § 1.514(b), were not to be affected by these proposals. The objective of these restricted amendment rights was to discourage the filing of minimally acceptable applications and to eliminate the burden on the staff of having to review and analyze the applications repeatedly, each time they were amended, to see whether they raised new issues.

28. In their written comments to the Report, the Federal Communications Bar Association agreed in principle with the need for restricting voluntary amendments to pending applications, but disagreed with the proposal for a fixed period allowing amendments as of right following designation and allowing amendments as of right after the cut-off date. The Bar Association asserted that amendments should be allowed in both instances only for good cause shown, it being of the view that the "as of right" phrase might encourage post-designation amendments beyond those necessary to address matters of basic qualifications *first* raised in the designation order. A further comment by a member of the Bar in his written filing recommended that all amendments pertaining to basic qualifications should be permitted as of right until 30 days after designation. During the Symposium, a member of the Bar urged that amendments be allowed prior to designation, after advice from the staff in a deficiency letter, but that the applicant not be permitted to offer amendments regarding his basic qualifications after the matter was designation for hearing.

29. We have considered the proposals in the Report regarding pre-designation and post-designation amendments, and we propose to adopt the Report's recommendations regarding the restriction of amendments during the pre-designation phase of the pendency of the application. As is indicated in the Report in some detail, there is an urgent need, in the interests of expedition, to have a "stable application situation" for the staff to be able to work on the application as early as possible.[3] Likewise, we agree with the position taken in the Report as to the need to discourage the filing of "skeleton applications" and the need to avoid having the staff repeatedly review constantly amended applications. On the other hand, the proposal to allow one opportunity for amendment to any of the applications after the deadline for filing petitions against any *later* filed application[s] represents an effort to give the first filed applicant at least a fair opportunity to amend his application, after the filing by the competitor, but still to limit the filing of repeated amendments. We also agree

[3] In this connection, and because of past abuses, as also indicated in the Report, we are authorizing the staff hereafter to return without consideration unauthorized amendments and other pleadings not authorized by our Rules. Any late filed pre-designation amendment will be considered only upon a showing of good cause.

that, in the circumstances, the current requirements of §§ 1.65 and 1.514 of our rules will still apply in order to have the applicants keep their applications updated in accordance with then prevailing circumstances.

30. With regard to the proposals for revision in the post-designation procedures, the current system, which allows amendments of applications within 15 days after publication of the hearing order, is designed to eliminate the necessity for evidentiary hearings on designated issues which can be cured by amendments. On the other hand, as is indicated in the Report, there is also a need to secure a stable situation as soon as possible, so that the parties and the staff can proceed with the hearing on the remaining and necessary issues. We are inclined, however, to agree with the comments of FCBA that the Report's original proposal of automatic amendments after issuance of a hearing order, standing along, might still encourage the parties to file amendments on matters other than those first raised in the designation order. It would seem that this would also serve to defeat the efforts in the other proposals to encourage the initial filing of the best possible and most complete application. Nevertheless, we would want to accelerate and expedite the hearing process, and it is our view that setting a time limit after the designation order is issued for filing such amendments would enhance and expedite the process.

31. We will therefore adopt a modification of the Report's original proposal regarding the allowance of amendments post-designation—i.e., amendments will be allowed after the issuance of the designation order but must be filed within 30 days after publication of the order in the **Federal Register**, or a date certain to be specified in the order. A petition for leave to file an amendment which is not limited to an attempt to resolve an issue first raised in the designation order must be based on a showing of good cause. As is currently the practice, the petition for leave to amend, after designation, would be presented to the Administrative Law Judge for action; thereafter, an appropriate motion for summary decision or deletion of the issue after allowance of the amendment would be in order.

B. *Revision of Procedures for Handling Hearing Issues*

32. The Report describes in considerable detail how the 1976 procedures providing for pre-designation cross pleading on issues actually functioned in operation, the delay problems which were experienced, the inordinate level of litigiousness which the procedures seemed to encourage, the lack of decisional significance of many of the issues parties attempted to raise against their opponents, and the virtual defeat of the objectives originally intended of expediting the process. The Report also refers to the Commission's own ultimate realization of the abuses to which the new pre-designation issued pleading process had been put when, in the *Indianapolis* multi-party designation Order (In re *Peoples Broadcasting Corporation*, et. al., BC Docket Nos. 78–243–247), the Commission felt compelled to admonish the parties regarding the filing of petitions in the proceeding which were:

> * * * characterized by large numbers of unsupported requests for issues as well as numerous requests which can only be described as frivolous. Though totally without merit, these requests must be answered by opposing counsel, analyzed by our staff and ultimately considered by us. The time and energy wasted in this process in large part defeat the very aims which our new procedures seek to achieve * * *. (*Peoples Broadcasting, supra*, FCC 78–511, at para. 36; 68 FCC 2d——).

33. The Report pointed out the particularly adverse effect of these new procedures on those applicants with a high level of public interest qualifications (as traditionally recognized by the Commission and the Courts) but with limited resources. The opinion was expressed by practitioners that the pre-designation pleading procedures lent themselves to potential abuse by allowing one party, with substantial resources at his disposal, to "plead the others to death"; and that the process itself, in a hotly contested multi-party case, could force the withdrawal of the small, locally-owned and integrated, non-media applicant, or others who had ownership by minorities seeking entry into the field, even before the process had served its ultimate purpose of selection of the applicant who would best serve the public interest, based upon an adjudicatory record.

34. The Report accordingly recommended that the existing procedures for pre-designation pleadings and cross-pleadings to specify issues against opponents in mutually-exclusive and contested broadcast application cases (§§ 1.584 and 1.229) be repealed. To the limited extent that petitions to deny or motions to dismiss were filed against opponents' applications, they would be handled by the staff in the course of processing the applications upon the issues to be designated for hearing. The Report recommended that all pleadings relating to motions to enlarge, modify, or delete issues are then to be presented, after designation, to the presiding Administrative Law Judge, in accordance with § 1.243(K) of the rules.

35. The comments, with one exception, strongly endorsed the proposal to repeal the existing procedures regarding pre-designation issue pleading, contending that the current system contributed to extensive delays. The Comments also supported the recommendations that the presiding officers, who had familiarity with, and control of the case should handle the issues problem, and that the more significant ALJ rulings on such matters should be published in the manner and for the reasons described in the Report. The sole objection (by the Association of Independent Television Stations) was based on their contention that parties should have the opportunity, through the adversary process, to challenge defects in an opponent's case.

36. The Commission is persuaded by the Report and the comments that the pre-designation issue pleading process has not only not accomplished its original purposes—of expediting cases, simplifying issues and encouraging settlements—but has had the opposite effect. As the Report points out, the first two contested cases to go through the entire process from filing to designation under the new procedures (Vancouver and Indianapolis) [4] took two years for processing and involved a voluminous proliferation of pleadings on contested issues, amendments, etc. But when the Commission came to consider the cases on designation, the hearing Order rejected all but a handful of the issues requested by the parties as not being decisionally significant.

37. Accordingly, we accept the Report's recommendation and the urgings of the comments, and will direct the deletion of the pre-designation issue pleading procedures in all pending cases and in all future cases.[5] The rules will be revised as required. Parties will have an opportunity to renew requests for issues, where warranted, to the Administrative Law Judge, after designation, as indicated below. We would expect, however, that such requests would be limited to matters of substantial decisional significance. Petitions to deny

[4] In re *Rose Broadcasting Company*, et al., BC Docket Nos. 78–209, 211–212 (Vancouver); and *Peoples Broadcasting Corporation*, et al., BC Docket Nos. 78–243–247 (Indianapolis).

[5] The actual implementation of the revised procedures in pending cases is set forth below in Section IV of this Report and Order.

and motions to dismiss filed against applications, and other informal objections, will be handled by the staff in the course of application processing, as at present.[6]

38. All pleadings relating to motions to enlarge, modify or delete hearing issues are to be presented, after designation, to the presiding Administrative Law Judge in accordance with the existing § 1.243(k) of the rules, preferably at the pre-hearing conference stage and within 30 days after the designation order has been published in the **Federal Register**. The new procedures regarding post-designation settlement of the hearing issues shall become a part of the pre-hearing procedures methodology, set forth in §§ 1.246–1.251 and 1.291–1.298 (Interlocutory Actions in Hearing Proceedings). No other revisions of the regulations would appear to be required, for the authority presently exists in the Administrative Procedure Act and the Commission's Regulations for the ALJs to handle the hearing issues in the manner proposed.

39. It is contemplated that the Administrative Law Judges, using their existing authority, would make full use of the available and appropriate pre-hearing techniques, such as informal conferences, oral arguments, and submission by the parties of memoranda of law, to dispose expeditiously of all pending pleadings involving issues prior to the commencement of the evidentiary hearing. We would expect that such disposition would not only take cognizance of Commission policy as contained in the *Fidelity* and *Atlantic Broadcasting* cases, referred to more fully below, but would also apply strictly the test of substantial decisional significance to the outcome of the case, in ruling on requests for issues.

40. The Report also made the point, with which we agree, that in order that the effectiveness of the Commission's review process be enhanced, ALJ rulings on decisionally significant matters or complex issues at the interlocutory stage should normally be contained in written orders. However, in the interests of expedition, ALJs should be encouraged to avail themselves, where appropriate, of the discretion afforded by § 1.298(b), which provides that:

> In the discretion of the presiding officer, rulings on interlocutory matters may be made orally at the hearing. The presiding officer may, in his discretion, state his reasons on the record or subsequently issue a written statement of the reasons for his ruling, either separately or as part of the initial decision.

41. The Report also referred to the probable need for an expanded and regularized system of publishing those Memoranda Opinions and Orders by Administrative Law Judges on significant interlocutory matters. It was thought that, with the proposed expansion of consideration of issue pleadings by ALJs, there would be an increase in the number of rulings which might be useful as guides in other cases, both to other presiding officers and to the Bar, although not binding as precedent as such. It was also felt that publication and distribution of the more significant rulings might serve to advance consistency amongst ALJs in ruling on pleadings which involved similar problems.

42. We note that, after the comments and the discussion during the Symposium along these lines, the Office of Administrative Law Judges made arrangements, which were announced in a Public Notice, dated April 23, 1979 (P.N. 16682), to establish a file in the FCC Library for ready inspection containing a copy of each Order and each Memorandum Opinion and Order issued by the Administrative Law Judges. However, we believe that the recommendations in the Report for publication and distribution of significant rulings may better achieve the intended objectives. We will therefore direct the Executive Director, acting in conjunction with the Office of Administrative Law Judges and the Office of Public Affairs, to oversee the establishment of procedures to carry out these purposes in a manner they deem most efficient and cost-effective.

C. Reiteration of Commission Policy on Post-Designation Modification of Hearing Issues

43. The Report pointed out that as a central part of the proposed revised system of handling post-designation hearing issues, it was required that the Commission reiterate the policies expressed in *Fidelity Radio, Inc.*, 1 FCC 2d 661 (1965) and *Atlantic Broadcasting Co.*, 5 FCC 2d 717 (1966). Those cases established the parameters of the authority of the Review Board (and now, presumably, the ALJs) to consider or permit the enlargement, modification or deletion of hearing issues. The Commission there directed that subordinate officials should look to see whether specific reasons were stated for its action or inaction in a designation order; and that if the designation order contained a reasoned analysis of a particular matter, the subordinate officials were to be bound by that analysis, in the absence of additional information on the subject previously unknown to the Commission. However, where the designation order did not contain such reasoned analysis with respect to the merits of the particular matter, the subordinate official was to make such an analysis and rule on the merits of the petition so that the hearing could be conducted in an expeditious manner.

44. The Report recommended that if the Commission should adopt the recommendations for a simplified, streamlined designation process and for allowing the Administrative Law Judges to handle all post-designation petitions seeking to modify the issues designated for hearing, the principles of *Fidelity* and *Atlantic* should be re-emphasized as controlling in the circumstances, so as to preclude unnecessary relitigation of matters dealt with in the hearing Order. It was contemplated that staff review and Commission consideration of the application, its amendments and any pleadings filed, as expressed in the Memorandum Opinion and Order of designation for hearing would, in the interest of expedition, be observed at the further levels of litigation as dispositive, in the absence of demonstrated showings of information or data which were not before the Commission at the time of designation. The Report also recommended that, with the deletion of the pre-designation issue pleadings procedure, the Commission's order designating the applications for hearing could be quite brief and concise, thereby eliminating some of the delay encountered in the preparation of lengthy Memorandum Opinions required under the previous procedures.

45. The comments filed by FCBA and ABA supported the principle of continued emphasis on *Fidelity* and *Atlantic*. However, they were concerned that the additional recommendation for brief designation orders might work at cross purposes with the objectives of *Fidelity* and *Atlantic* to preclude further litigation. They recommended that the Memorandum Opinions and Orders of designation for hearing should continue the practice of "reasoned analysis" so as to serve the original objectives of the *Fidelity* case; and, further, that where there was no reasoned analysis in the designation order, the parties should be permitted to request issues before the Administrative Law Judge.

46. The Commission believes the discussion in the comments to be well taken. It proposes to direct the Broadcast Bureau processing staff to handle the preparation of designation

[6] To discourage needless filings, the rules will also be amended to emphasize that the failure to file an opposition or a reply to a petition or motion will not necessarily be construed as an admission of any fact or argument contained in a pleading.

orders with precision, dealing with the issues presented in a concise manner; but, at the same time, fully discussing the bases and rationale for rejecting an issue requested, for example, in a petition to deny. Likewise, there should be similar treatment of the "reasons then obtaining" for designating an issue for hearing, based on the application and other information before the staff for review. We would expect that a thorough staff review of the application would permit the making of findings indicating those areas where the applicant had made a satisfactory showing of compliance with Commission regulations and policies and so concluding in the designation order. Where an unresolved issue was presented, the reasons for including it as a ground for hearing would similarly be set out in the terms expressed in *Fidelity*. We do not necessarily see any conflict between adhering to the principles of *Fidelity*, where required, and the preparation of succinct findings in a Memorandum Opinion and Order designating a matter for hearing.

D. Revised Procedures for Review of Community Ascertainment Surveys and Financial Qualifications

47. These recommendations of the Report for revised approaches to the handling of ascertainment of community needs and financial qualifications sparked the most intense interest in the written comments and the Public Symposium. It should be noted that the Report prefaced its discussion and recommendations in these areas with a reference to the recent and current discussions and writings, as well as proposed legislation, relating to proposals for "deregulation" of radio broadcast stations in various contexts, including reassessing the need for ascertainment surveys; substantial revision in the comparative hearing process; and other proposals for "modernizing" and improving the regulatory system governing the licensing of broadcast stations. The Report stated that, until such time as the Commission issued revised policy formulations which were upheld by the Courts, or until legislation was passed, there were a number of specific procedural and organizational proposals which could be considered as interim measures designed to expedite the processing system. These measures would deal with the manner in which certain of the qualifying and comparative criteria are reviewed by the staff and litigated by the parties.

48. The Report stated further that its study and experience had shown that a great deal of adversarial time and effort was being spent on certain of the qualification factors which perhaps ought not to be the subject of contention amongst the contesting applicants in a multi-party case. Two of the qualification and comparative factors which the Report contended would lend themselves to new approaches were the community ascertainment surveys and financial qualifications.

49. *Revised Procedure for Review of Community Ascertainment Surveys*—At present, the Commission policies in this area are contained in its Regulations, Application Forms and in its *Primer on Ascertainment of Community Problems by Broadcast Applicants*, published in February 1971 (27 FCC 2d 650) after a rulemaking proceeding.

50. The Report found that, under the existing pre-designation procedures and issue pleading, the ascertainment surveys are often the subject of minute item-by-item attack by opponents as to sufficiency, compliance with Commission requirement and precedent, etc., as well as cross-examination during the hearing. Even after hearing and Initial Decision, questions as to the adequacy of the survey conducted by the Initial Decision grantee and compliance with the requirements of the *Primer* and its interpretations have been the subject of extensive review by the Review Board.

51. The Report therefore suggested that, until the Commission modifies its policies regarding the need for community needs ascertainment by radio and TV broadcast stations, consideration be given to a revision of its procedures so as to remove the community ascertainment survey showing from the adversary arena. Under the suggested revised procedure, applicants would be required to make a threshold showing in their applications of compliance with the basic requirements laid down by the Commission in the *Primer* as to the method of conducting a satisfactory and sufficient ascertainment survey and formulating the program proposal thereon, in the same manner as is presently required, with whatever extensions or modifications the Commission thought necessary in the light of past and recent experience. The applicants' showing in this area would then be examined for acceptability by the staff in its initial processing. If found deficient, an issue on ascertainment would be included in the hearing order; and, if not cured by post-designation amendment, the issue would go to evidentiary hearing. If found, however, to be satisfactory, the ascertainment survey could not then be made the subject of adversary pleading or testimony at the hearing stage, short of a persuasive showing, by motion before the ALJ to enlarge issues, of misrepresentation or gross omission of some decisionally significant area which would make the survey totally unacceptable, on the basis of facts not theretofore known to the Commission or the parties or not apparent on the face of the application. In other words, once an applicant has met the Commission's basic requirements, a competing party should be placed under a heavy burden of demonstrating that an ascertainment issue was critical to a valid decision in the case, before it could be added to the hearing. Any attempt to add a "comparative ascertainment efforts" issue, which has only rarely been done in the past, should likewise be required to demonstrate its vital role in the outcome of the case. The Report asserted that removal of the ascertainment process from the adversarial mode to a situation where only the applicant and the staff are involved would represent a substantial saving in time, money and effort over the existing procedure to the great benefit of the public and the Commission.

52. The written comments filed by FCBA, NAB, ABA and NTIA, and the discussions at the Symposium generally supported the approach and objectives of the Report's recommendation as a laudable effort to remove the ascertainment factor from the adversary arena, in the interests of eliminating delay and expediting the processing of contested broadcast applications. However, the thrust of the reaction from both the Commission staff and outside groups was that a critical element necessary for the success of expedited procedures here was that the Commission should reconsider its policy in *Voice of Dixie, Inc.*[7] In that case, the Commission indicated that it would require strict compliance with the requirements of the *Primer on Ascertainment of Community Problems by Broadcast Applicants*, 27 FCC 2d 650 (1971). The comments stressed that, in order that the community ascertainment showings not be subjected to unnecessary litigation and time consuming delays for even trivial variations, the Commission should indicate that it was reconsidering the *Voice of Dixie* policy; and that it should direct the staff to return to the earlier standard that substantial compliance with the requirements of the primer

[7] *Voice of Dixie, Inc.*, 48 FCC 2d 1027 (1974); reconsideration denied, 47 FCC 2d 828 (1974).

would be the test for examining ascertainment showings to determine satisfactory compliance with Commission policy. It was pointed out that, as indicated in the Report, the ascertainment showings had been the source of much "nitpicking" in competitive multi-party cases, to no decisional avail but with considerable delay as a consequence. Accordingly, the parties urged the Commission to reconsider the policy declared in *Voice of Dixie*.

53. The Commission has given this matter very careful consideration, because of its importance in the efficient conduct of our adjudicatory process. We are likewise cognizant of contemporary efforts, of a related nature, which we have recently been considering in an effort to improve the entire process of the regulation of broadcast licensing. Indeed, on May 8, 1979, the Commission held an extensive open meeting in which it discussed with its staff the various possibilities of looking toward potential elimination of certain regulatory requirements in radio broadcasting.[8]

54. Upon such consideration we are convinced that, in the current circumstances, the regulatory process will, in fact, be improved and enhanced if we adopt the recommendations in the Report regarding the future procedures for the review of community ascertainment surveys, and if we reconsider the impact of some of our past regulatory policies. We will, however, adopt a modification of the criteria referred to in the Report's recommendation, described in para. 51, above. The test to be used regarding the nature of the showing required to reopen the question of the adequacy of the ascertainment survey, by way of a motion to enlarge issues, will be limited to misrepresentation or gross omission of some decisionally significant area which would make the survey totally unacceptable. As to our past regulatory policies, we have determined, from the contents of the Report and the presentations in the comments and the Symposium, that our policy in *Voice of Dixie*, requiring strict compliance with the *Primer* on ascertainment, should no longer be the criterion for passing upon the adequacy of an applicant's showing in this regard. Rather, we will return to the previous body of precedent which identified substantial compliance as being sufficient.[9] These criteria shall be applied at all levels of the adjudicatory process hereafter and to all pending applications and proceedings where the question arises.

55. For the guidance of all concerned, and for their more immediate reference and information, a separate Policy Statement will be issued encompassing these determinations. In light of the broad distribution of the Report and its recommendations in these areas, and the extensive comments by interested parties, we see no need for further notice and comment proceedings before implementing these new criteria. This Report and Order and the Policy Statement will, of course, be published in the **Federal Register**. Should there be any substantial need, the statute and our own procedures provide for the filing of petitions for reconsideration, though we must observe that a persuasive showing will need to be made as to why the matter should be reconsidered in these circumstances.

56. *Revised Procedure for Review of Financial Qualifications*—The Report recommended that a similar approach, as with ascertainment, be considered in the area of financial qualifications. Although the Communications Act provides that the Commission may make an affirmative finding that the applicant is financially qualified to construct the proposed station, the Commission's policies as to what showings are required to meet the basic test of financial qualifications have varied over time.[10]

57. Further, the Report stated that, although the applicant's financial showing is not one of the categories of comparative criteria in multi-party contested cases, the pre-designation issue pleading procedures have permitted some competing parties to attempt to raise questions about their opponent's finances which can only be characterized as litigation over trivia. The Report asserted that, after an applicant had passed the muster of staff review of his financial showing, the minute adversarial examination of his finances by his opponents, whether in the pre-designation stage or at the hearing, had proven not only to be non-productive in most instances, but had prejudiced those applicants who had limited resources to begin with, such as the small aspirants and minority groups. The question was therefore asked: Should not the factor of financial qualifications be a matter solely between the Commission and the applicant, since it is not likely to be a basis for comparative or relative merit, once the basic financial requirements for construction and operation are met. The Report accordingly recommended that financial qualification should not be made the subject of hearing issues as adversarial pleading, unless the initial staff review of the application indicated that the applicant was, in fact, incapable of effectuating his proposal, or if a persuasive and convincing showing to the same effect was made by an opponent after designation.

58. The Report therefore proposed that the Commission consider adopting a procedure similar to that suggested above for ascertainment, whereby the financial qualification showing would be removed from adversary contention, absent the demonstrated existence of defects in the applicant's proposal. In like manner, the mutually-exclusive applicants would be required to make a threshold showing in their applications of compliance with the Commission's requirements, as contained in its application forms and declared policies, of financial capability to construct and operate the proposed station. This showing would then be reviewed by the staff in the course of processing the applications; if found to be satisfactory, the statutory findings to the effect that the applicants are financially qualified would be recited in the designation order, and that would dispose of that qualification factor. If the staff review showed the applicant's financial proposal to be defective, a hearing issue in that regard would be specified, and if not cured by post-designation amendment, the issue would go to evidentiary hearing. Parties would be limited in raising questions about an opponent's financial qualifications to demonstrating in a persuasive and convincing manner, by motions before the ALJ to enlarge issues, that the opponent's proposal could not be realistically effectuated. Such motions would be based primarily on facts not apparent on the face of the application and its supporting documents or not theretofore known to the Commission or the parties. Under such a system, the Report contended, the application process should be far more efficient and expeditious, and, equally if not more important, the community should get its new service instituted more rapidly than at present.

---

[8] See FCC News Release, May 8, 1979 (Mimeo No. 17380) entitled "FCC to Consider Full Range of Deregulation Options for Radio Broadcasting."

[9] *Greenfield Broadcasting Corp.*, 30 FCC 2d 774, 22 RR 2d 497 (1971); *New Broadcasting Corp.*, 37 FCC 2d 662, 25 RR 2d 561 (1972); *Mahoning Valley Broadcasting Corp.*, 39 FCC 2d 52, 25 RR 2d 673 (1972); *The Evening News Association*, 35 FCC 2d 368, 24 RR 2d 667 (1972); *The Outlet Co.*, 36 FCC 2d 355, 25 RR 2d 1077 (1972); and *RadiOhio, Inc.*, 36 FCC 2d 721, 26 RR 2d 327 (1972).

[10] See, e.g. Commission Public Notice, May 11, 1979, FCC 79-298, "New Financial Qualifications Standard For Broadcast Television Applicants," where the Commission changed the financial showing requirement for construction and operating costs from one year without revenues (the *Ultravision* test) to a 90 day requirement for new applicants.

59. The comments, with one exception, likewise supported the Report's recommendation on handling the financial qualifications factor, as did the presentations in the Symposium. We agree with the findings in the Report regarding the problems created by our current procedures in this area, and we will adopt the recommendation to institute the "threshold showings" criterion set forth in the Report.

60. To the extent that parties wish to contest the adequacy or correctness of the staff's initial conclusions as to the applicant's financial capabilities—using the Commission's financial requirements policy test—they will have the opportunity to present their contentions to the Administrative Law Judge by way of petitions to enlarge issues. The test to be used regarding the nature of the showing required to reopen the question of the adequacy of the applicant's finances will be similar to the criterion set forth in para. 54, above, *i.e.*, will be limited to a showing of misrepresentation or gross omission of some decisionally significant item which would render the proposal totally defective.

61. In this regard, some of the comments emphasized the need for the Commission to make substantive changes in its policies and to afford the industry with clearer guidelines, in these and other areas, as a means of enhancing the process. As indicated above, the Commission is currently in the process of re-examining the entire spectrum of its regulatory policies in broadcast licensing. We are of the opinion that any such revisions of substantive policy should await the completion of the Commission's deliberations in these areas. Meanwhile, we believe that a useful first step can be taken by adopting the revised procedures recommended in the Report for limiting the adversarial use of the community ascertainment and financial qualification factors, except in the circumstances indicated.

IV. Implementation of Revised Procedures

62. One remaining problem to be addressed is the manner and extent to which the revised procedures we are adopting are to be applied to pending applications which are already somewhere in the processing "pipeline," and which have been the subject of varying degrees and steps of processing.

63. We believe that the most orderly and equitable transition for the vast majority of applicants will result by applying the new procedures as follows:

(1) If an application has been accepted for filing under the existing procedures but has not yet appeared on a cut-off list, it will be placed on a new "Public Notice of Acceptance for Filing," and the time to file competing applications or petitions to deny will be specified in the Notice.

(2) If an application has already appeared on a cut-off list, and a competing application has been filed and accepted, but there has been no notification under existing §§ 1.522 and 1.584 of the rules of deadlines for filing amendments and issue pleadings, such applicants when reached for processing will be notified on an *ad hoc* basis and be given an opportunity to file amendments but not issue pleadings.

(3) Those mutually exclusive applications as to which deadlines have passed for the filing of amendments and issue pleadings under existing §§ 1.522 and 1.584 of the Rules, will be designated for hearing without further opportunity for pre-designation amendment.

(4) Applications tendered for filing but not yet accepted and all future applications will be fully subject to the new procedures.

64. Any questions concerning the procedural status of any case should be directly addressed to the processing staff of the Broadcast Bureau's Broadcast Facilities Division (tel. no. (202) 632–6485).

65. In addition, it should be noted that those applications filed prior to the effective date of the 1976 adjudicatory re-regulation rules, i.e., July 1, 1976 (as later amended) were to be governed by the prior procedures which, among other things, allowed only 15 days for amendments after designation for hearing. In the interest of uniform treatment, we will provide that *all* pending applications not yet designated for hearing will be afforded the post-designation amendment rights allowed under the new procedures.

66. With the adoption of the categories for implementation suggested above, the transition to the new and improved procedures for processing contested broadcast applications will be hastened.

V. Administrative and Personnel Resource Impact of Revised Procedures

67. In the course of his study, the Contractor presented the Commission with some separate data and recommendations dealing with the problems of staff resources and workload in the Broadcast Facilities Division devoted to application processing, in the Hearing Division and in the Office of Administrative Law Judges.

68. It was pointed out that, with the adoption of the expediting procedures which were recommended, it was likely that many more contested cases would be designated for hearing in a shorter period of time than at present. There was some apprehension expressed that caseloads for the Hearing Division and individual ALJs may be substantially increased when the backlogged applications begin to come through for hearing which might again result in delays, particularly in multi-party cases. The revised procedures on handling hearing issues might have a similar effect. Whether the latter would necessarily result in greater delays is not so certain, since no new responsibilities are being introduced. The Administrative Law Judges and the Hearing Division are already handling a considerable amount of such interlocutory matters as petitions on amendments and issues as part of the hearing process. In addition, we are confident that the proper use by the presiding officer of the available authority and techniques for control and expeditious handling of the hearing will serve to expedite the hearings and prevent undue delays. Likewise, the observance of discipline and restraint in all levels of processing, trial and review in the adjudicatory process—that is, a concentration on matters of substance and issues of vital decisional significance—is essential to the successful operation of these new procedures.

69. Nevertheless, to assure that the process does not again result in extensive delays, we are directing that an interim management oversight mechanism be set up, by the Executive Director working in conjunction with the Broadcast Bureau and the Office of Administrative Law Judges, to monitor the flow of cases being designated for hearing, the individual caseload levels and the phased progress of the hearings at the ALJ stage. Then, if it appears that hearing cases are getting bogged down or unduly delayed at certain stages because either the Hearing Division or the ALJs are becoming overburdened by their caseloads, the Commission will be in a position to take prompt steps to remedy the situation. Depending upon the needs shown to exist, such measures might take the form of emergency personnel assistance or more permanent organizational, procedural or personnel undertakings. We will expect the staff to keep us advised periodically of developments in the in the operation of the new procedures.

VI. Conclusion

70. During the Symposium, several of the participants expressed some skepticism as to the possible success of the recommeded procedures in accomplishing their objective of expediting the process. Their opinions were based on what they perceived as an unrealistic reliance on cooperation by the parties and their counsel in implementing the new procedures. Their position was that counsel's duty to his client required him to exhaust every available remedy and procedural device to fully protect the client's interests; thus, efforts to restrict his right to file pleadings on his client's behalf may not be successful.

71. The Report recites at length the consequences of our current procedures which have allowed just such latitude, probably because of concern for the requirements of "due process." Interviewees were quoted as characterizing the resultant delays of two years or more encountered in the processing of contested applications as "unconscionable," as well they might. We feel it incumbent upon us to observe, in response, that underlying all attempts at improvement in procedures, including those recommended in the Report, is the urgent need for the exercise of discipline and restraint by all concerned in the process. As the Report correctly points out, the public is entitled to have the Commission carry out its statutory mandate to "* * * conduct its proceedings in such manner as will best conduce to the proper dispatch of its business and to the ends of justice * * *" (Communications Act, Section 4(j).) To subject applicants and the public to delays of the magnitude shown in the Report, if it results from inefficiencies, inadequacies or defects in the process itself, amounts to an abnegation of the Commission's responsibility to serve the public. We believe that the effective and expeditious dispatch of the Commission's business is, in itself, an integral part of the public interest.

72. In the exigencies of the current situation of backlogs and delays, those who would use the Commission's process must recognize that practices and procedures originating in earlier and less critical eras must sometimes give way to the larger needs of the public interest, particularly at a time when the Commission's resources are burdened almost to the breaking point. The administrative hearing process itself, as well as some of its component parts, have come under attack as no longer serving their original purposes as an efficient method of regulatory decision-making. The time-honored procedures of trial-type evidentiary hearings, with extensive pleadings, discovery, cross-examination, etc., have been criticized as an outmoded mechanism for the resolution of issues presented to administrative agencies. In our 1976 adjudicatory re-regulation revisions, we took a number of steps which were designed to improve the hearing process. But, however that debate may ultimately be settled, by legislation or otherwise, it is clear that our procedures for handling contested broadcast applications can no longer be saddled with a philosophy of "trial by combat."

73. We agree with the Report's admonition that the pressures of current and future backlogs, and the urgency of seeking reforms to expedite the application process, require self-restraint; that the parties' showings and the Commission's consideration of "the record"—in all phases of application processing, hearings and the review stages— should be limited to matters of substance and to issues of fundamental decisional significance. To quote the Report, "What has been referred to as the 'flyspecking' of applications and evidentiary showings and lengthy litigation over frivolities should not be condoned, either by the ALJs, the Review Board or the Commission itself * * *" (Report, p. 40).

74. We would hope and expect that practitioners before the Commission and our staff will, in fact, lend their best efforts to this joint undertaking in our common interest and that of the public. The Commission, for its part, will give its utmost cooperation in attempting to assure the success of these and simular recommendations which will lead to reform and improvements in our procedures. We would welcome the assistance of all interested persons and organizations in a continuing effort to make the Commission's procedures more efficient and effective.

75. For the purposes of this particular proceeding, and to implement the revisions in procedures which the Commission is here adopting, there is attached an Appendix containing the specific amendments to our rules of practice and procedure designed to carry out the determinations of this Report and Order.

76. Authority for adoption of the amendments set out in the attached Appendix below is contained in Section 4(i) and 303(r) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i) and 303(r). Because the amendments are procedural in nature, the prior notice and effective date provisions of 5 U.S.C. 553 are inapplicable.

77. Accordingly, it is ordered, effective June 18, 1979, that Part 1 of the rules is amended as set out in the Appendix below.

(Secs. 4, 303, 48 stat., as amended, 1066, 1082; (47 U.S.C. 154, 303.))

Federal Communications Commission.[1]

William J. Tricarico,

Secretary.

Appendix

Part 1 of Chapter 1 of Title 47 of the Code of Federal Regulations is amended as follows:

1. Section 1.227(b)(1) is revised to read as follows:

§ 1.227 Consolidations.

(a) * * *

* * * * *

(b)(1) In broadcast cases, except as provided in subparagraph (5) of this paragraph, no application will be consolidated for hearing with a previously filed application or applications unless such application, or such application as amended, if amended so as to require a new file number, is substantially complete and tendered for filing by the close of business on the day preceding the day designated by Public Notice published in the **Federal Register** as the day any one of the previously filed applications is available and ready for processing.

* * * * *

2. Section 1.229 (b) and (d) are revised to read as follows:

§ 1.229 Motions to enlarge, change, or delete issues.

(a) * * *

* * * * *

(b) Such motions must be filed within 15 days after the issues in the hearing have been published in the **Federal Register**. In comparative broadcast proceedings (including comparative renewal proceedings), however, such motions shall be filed within 30 days after the designation order has been published in the **Federal Register**. Any person desiring to file a motion to modify the issues after expiration of the above specified periods shall set forth the reason why it was not possible to file the motion within the prescribed period. Except as provided in paragraph (c) of this section, the motion will be granted only if good cause is shown for the delay in filing. Motions for modification of issues which are based on new facts or newly discovered facts

[1] See attached Concurring Statement of Commissioner Brown.

shall be filed within 15 days after such facts are discovered by the moving party.

* * * * *

(d) Such motions, opposition thereto, and replies to oppositions shall contain specific allegations of fact sufficient to support the action requested. Such allegations of fact, except for those of which official notice may be taken, shall be supported by affidavits of a person or persons having personal knowledge thereof. The failure to file an opposition or a reply will not necessarily be construed as an admission of any fact or argument contained in a pleading.

3. In § 1.522, paragraph (a)(2) and paragraph (b)(2) are revised, and Note 1 is added as follows:

§ 1.522 Amendment of applications.

(a) * * *

(2) Subject to the provisions of §§ 1.525, 1.571(j), 1.572(b), 1.573(b), and 1.580, mutually exclusive broadcast applications may be amended as a matter of right by the date specified (not less than 30 days after publication) in the FCC's public notice announcing the acceptance for filing of the last-filed mutually exclusive application. Subsequent amendments prior to designation of the proceeding for hearing will be considered only upon a showing of good cause for late filing or pursuant to § 1.65 or § 1.514. Unauthorized or untimely amendments are subject to return by the FCC's staff without consideration.

(b) * * *

(2) In comparative broadcast cases (including comparative renewal proceedings), amendments relating to issues first raised in the designation order may be filed as a matter of right within 30 days after that Order is published in the **Federal Register**, or by a date certain to be specified in the Order.

* * * * *

Note 1—When two or more broadcast applications are tendered for filing which are mutually exclusive with each other but not in conflict with any previously filed applications which have been accepted for filing, the FCC, where appropriate, will announce acceptance of the earliest tendered application and place the later filed application or applications on a subsequent public notice of acceptance for filing in order to establish a deadline for the filing of amendments as a matter of right for all applicants in the group.

4. Section 1.564(c) is revised to read as follows:

§ 1.564 Acceptance of applications.

* * * * *

(c) At regular intervals the FCC will issue a Public Notice listing all applications and major amendments thereto which have been accepted for filing. Pursuant to §§ 1.571(c), 1.572(c), and 1.573(d), such notice shall be published in the **Federal Register** and shall establish a cut-off date (no less than 30 days from the date of publication) for the filing of mutually exclusive applications and petitions to deny. However, no application will be accepted for filing until a statement establishing compliance with the local notice requirements of § 1.580 has been received by the FCC.

5. In § 1.571, paragraph (a) and subparagraph (a)(1) are revised; subparagraph (a)(3) is deleted; paragraph (c) is revised; and paragraph (d) is deleted and designated [reserved].

§ 1.571 Processing of standard broadcast applications.

(a) Applications for AM broadcast facilities are divided into two groups.

(1) In the first group are applications for new stations or for major changes in the facilities of authorized stations. A major change is any increase in power, or any change in frequency, hours of operation, or station location: Provided, however, That the FCC may, within 15 days after the acceptance for filing of any other application for modification of facilities, advise the applicant that such application is considered to be one for a major change and therefore is subject to the provisions of §§ 1.580 and 1.1111 pertaining to major changes.

* * * * *

(3) [Deleted]

* * * * *

(c) Applications for new stations or for major changes in the facilities of authorized stations are processed as nearly as possible in the order in which they are filed. Such applications will be placed in the processing line in numerical sequence, and are drawn by the staff for study, the lowest file number first. Thus, the file number determines the order in which the staff's work is begun on a particular application or group of conflicting applications. In order that those applications which are entitled to be grouped for processing may be fixed prior to the time processing of the earliest filed application is begun, the Commission will periodically publish in the **Federal Register** a Public Notice listing applications which have been accepted for filing and announcing a date (not less than 30 days after publication) on which the listed applications will be considered available and ready for processing and by which all mutually exclusive applications and petitions to deny the listed applications must be filed.

(d) [Reserved]

* * * * *

6. Section 1.572(c) is revised to read as follows:

§ 1.572 Processing of television broadcast applications.

* * * * *

(c) Applications for television stations will be processed as nearly as possible in the order in which they are filed. Such applications will be placed in the processing line in numerical sequence, and will be drawn by the staff for study, the lowest file number first. In order that those applications which are entitled to be grouped for processing may be fixed prior to the time processing of the earliest filed application is begun, the FCC will periodically publish in the **Federal Register** a Public Notice listing applications which have been accepted for filing and announcing a date (not less than 30 days after publication) on which the listed applications will be considered available and ready for processing and by which all mutually exclusive applications and petitions to deny the listed applications must be filed.

* * * * *

7. Section 1.573(d) is revised to read as follows:

§ 1.573 Processing of FM and noncommercial educational FM broadcast applications.

* * * * *

(d) Applications for FM broadcast stations will be processed as nearly as possible in the order in which they are filed. Such applications will be placed in the processing line in numerical sequence, and will be drawn by the staff for study, the lowest file number first. In order that those applications which are entitled to be grouped for processing may be fixed prior to the time processing of the earliest filed application is begun, the FCC will periodically publish in the **Federal Register** a Public Notice listing applications which have been accepted for filing and announcing a date (not less than 30 days after publication) on which the listed applications will be considered available and ready for processing and by which all mutually exclusive applications and petitions to deny the listed applications must be filed.

* * * * *

8. In § 1.580, the section title is revised and paragraphs (i) and (j) are deleted

and reserved and redesignated as § 1.584 (see item 9 below).

§ 1.580 Local notice of the filing of broadcast applications.

* * * * *

(i) [Reserved]
(j) [Reserved]

* * * * *

9. Section 1.584 is retained as a Section number, but the title "Pleadings to Specify Issues" is deleted. The new title is "Petitions to Deny" and the new rule text reads as follows:

§ 1.584 Petitions to deny.

(a) Any party in interest may file with the Commission a petition to deny any application (whether as originally filed or if amended so as to require a new file number pursuant to §§ 1.571(j), 1.572(b), 1.573(b) or § 1.574(b)) for which local notice pursuant to § 1.580 is required: *Provided,* Such petitions are filed prior to the day such applications are granted or designated for hearing; but where the FCC issues a public notice pursuant to the provisions of §§ 1.571(c), 1.572(c) or § 1.573(d), establishing a "cut-off" date, such petitions must be filed by the date specified. In the case of applications for renewal of license, petitions to deny may be filed at any time up to the last day for filing mutually exclusive applications under § 1.516(e). Requests for extension of time to file petitions to deny applications for new broadcast stations or major changes in the facilities of existing stations or applications for renewal of license will not be granted unless all parties concerned, including the applicant, consent to such requests, or unless a compelling showing can be made that unusual circumstances make the filing of a timely petition impossible and the granting of an extension warranted.

(b) The applicant may file an opposition to any petition to deny, and the petitioner a reply to such opposition in which allegations of fact or denials thereof shall be supported by affidavit of a person or persons with personal knowledge thereof. The times for filing such oppositions and replies shall be those provided in § 1.45 except that as to a petition to deny an application for renewal of license, an opposition thereto may be filed within 30 days after the petition to deny is filed, and the party that filed the petition to deny may reply to the opposition within 20 days after the opposition is due or within 20 days after the opposition is filed, whichever is longer. The failure to file an opposition or a reply will not necessarily be construed as an admission of any fact or argument contained in a pleading.

(c) Untimely petitions to deny, as well as other pleadings in the nature of a petition to deny, and any other pleadings or supplements which do not lie as a matter of law or are otherwise procedurally defective, are subject to return by the FCC's staff without consideration.

10. In § 1.591, Note 1 is deleted, and paragraphs (b) and (c) are revised to read as follows:

§ 1.591 Grants without hearing of authorizations other than licenses pursuant to construction permits.

* * * * *

(b) In making its determinations pursuant to the provisions of paragraph (a) of this section, the FCC will not consider any other application, or any application if amended so as to require a new file number, as being mutually exclusive or in conflict with the application under consideration unless such other application was substantially complete and tendered for filing by: (1) The close of business on the day preceding the day designated by Public Notice published in the Federal Register as the day the listed application is to be available and ready for processing; or (2) the date prescribed in § 1.516(e) in the case of applications which are mutually exclusive with applications for renewal of license of broadcast stations.

(c) If a petition to deny the application has been filed in accordance with § 1.584 and the FCC makes the grant in accordance with paragraph (a) of this section, the FCC will deny the petition and issue a concise statement setting forth the reasons for denial and disposing of all substantial issues raised by the petition.

Concurring Statement of Commissioner Tyrone Brown

Re: Revised Procedures for the Processing of Contested Broadcast Applications; Amendments of Part 73 of the Commission's Rules

I fully support the thrust of the Commission's action in adopting revised rules and procedures to expedite the processing of contested broadcast applications for new facilities. By adopting the recommendations of the Contractor's Report we will, in substance, simplify and shorten the current cut-off list procedures; eliminate the sending of "deficiency letters" as part of the processing procedures, except where the staff needs further information; restrict the pre-designation voluntary amendment of applications; eliminate the current provision for predesignation issue pleadings; and require pleadings affecting issues to be filed with the Administrative Law Judge after designation.

I applaud the efforts and results of the Contractor, Max Paglin, who has performed yeoman's work and has produced a truly important procedural reform embodied in one of the best written documents I have seen in my tenure as a Commissioner. The current procedures encourage delay and waste of Commission and party resources and also have an adverse impact on applicants and petitioners who do not possess deep pockets. The procedural changes the Contractor recommends can be expected to ameliorate these problems and make a substantial dent in our current backlog of applications for new broadcast facilities. I endorse this part of the "Paglin Report" without reservation.

The second portion of the Contractor's Report causes me some concern and is the impetus for this concurring statement. Under the revised "procedures" adopted today, the Commission changes the groundrules for handling the review of applicants' community ascertainment and financial qualifications showings. Under the new procedures, applicants need only make a threshold showing of substantial compliance with FCC policies and rules to pass initial Commission muster.

Several points are worth emphasizing. First, the procedures and polices we have adopted today apply only to applications for *new* broadcast facilities against which mutually-exclusive applications or petitions to deny are filed. Except to the extent certain filing deadlines are conformed, no changes are intended in the procedures or policies applied to renewal applications.

Second, the requirement of a threshold showing of "substantial compliance" for *financial* showings causes me little concern because the adequacy of such showings is fairly easy to determine and we have been applying a "substantial compliance" test. However, the same is not the case with ascertainment.

At least since the decision in *Voice of Dixie, Inc.* 45 FCC 2d 1027, *recon. denied,* 47 FCC 2d 526 (1974), the Commission has applied a "strict compliance" test to measure the adequacy of ascertainment showings submitted by applicants for new facilities. The procedures adopted today purport to return to the pre-*Voice of Dixie* "substantial compliance" test as a measure of the adequacy of an applicant's ascertainment showing. Based upon the comments made on the Paglin proposals and my understanding of the standards applied before the *Voice of Dixie* case, I would have no problem with reversing that case and returning to a policy of "substantial compliance." In my opinion, the real purpose of ascertainment is to require that broadcasters have contact and dialogue with their communities. The mechanistic approach to ascertainment, and therefore the nit-picking approach to challenging ascertainment, serve no real purpose. Thus substantial compliance with the purpose of ascertainment should be all that we need require.

However, we must make clear what we mean by substantial compliance. There may be some confusion about the standard to be applied by our staff and in the adjudicative process in determining whether there has been substantial compliance. This is so because, while the test is intended to be that

applied before the *Voice of Dixie* decision, the Report and Order adopted today suggests otherwise in at least one passage. In adopting the Contractor's recommendation (with minor modifications) we noted that:

"The test to be used regarding the showing required to reopen the question of the adequacy of the ascertainment survey, by way of motion to enlarge issues, will be limited to *misrepresentation* or *gross omission* of some *decisionally significant* area which would make the survey *totally unacceptable*." (Par. 54; emphasis added).

My initial opinion was that this standard for *review* of the staff's action was one which would permit acceptance of ascertainment showings only minimally complying with the *Primer* and other Commission policies. For if the staff determined that the application substantially complied with our policies (a determination in which "only the applicant and the staff are involved") even if it did not, it seemed to me that a review standard requiring a showing of "misrepresentation or gross omission of some decisionally significant area which would make the survey totally unacceptable" in most instances precluded any further examination of the showing.

However, to the extent that that language suggested a standard other than that which existed prior to *Voice of Dixie*, it is not so intended by the Commission. In discussion at the meeting at which we adopted this Report the staff assured us that the review standard permitted an ALJ to enlarge issues if a showing was made that the applicant's ascertainment survey did not substantially comply with our policies. And the tests for substantial compliance are those applied before the *Voice of Dixie case*. (See *Report and Order*, note 9). Also reassuring are subsequent passages in the Report and Order at paragraph 54: "(W)e will return to the previous body of precedent which identified substantial compliance as being sufficient. These criteria shall be applied *at all levels of the adjudicative process* * * *" (emphasis added).

I am also concerned that insufficient notice was given to interested parties about the change in the Commission's policy regarding the acceptability of ascertainment showings. The focus of the Report and the discussions both outside and within the Commission have been on the procedural aspects of the Report and the efforts to ameliorate the backlog in applications for new broadcast facilities. Since the procedural changes as well as the Commission's reversal of the *Voice of Dixie* policy apply to petitions to deny new applications, I considered urging the Commission to submit the Report for further public comment with a special emphasis put on the ascertainment issue.

I am persuaded, however, that the backlog situation in processing our new applications compels us to move as quickly as possible and that we have technically complied with all notice and comment requirements. Moreover, those interested groups which have not commented in this proceeding but might have done so if it were clear that a change in the ascertainment compliance standard was intended, still have an opportunity to comment by filing for reconsideration of the Commission's action.

One final point. The changes made today are procedural in nature and are not intended to eliminate the substantive ascertainment requirements or the procedural requirements of the *Primer*. *Primer on Ascertainment of Community Problems by Broadcast Applicants*, 27 FCC 2d 650 (1971). Nor are they intended to denigrate the requirement of substantial compliance with the *Primer*. Finally they are not intended to affect the ascertainment showings required of renewal applicants who are subject to the renewal *Primer*. *Ascertainment of Community Problems by Renewal Applicants*, 57 FCC 2d 248 (1975), *recon. granted in part*, 61 FCC 2d 1 (1976). The Commission is looking into the substance of ascertainment and the *Primer* requirements in another proceeding. I am sure the Commission intends the staff to apply the existing rules in the interim, and interested parties should be guided accordingly.

BILLING CODE 6712-01-M

DEPARTMENT OF TRANSPORTATION

Materials Transportation Bureau

General Information, Regulations, and Definitions; Matter Incorporated by Reference

[Docket No. HM-22; Amdt. No. 171-48]

49 CFR Part 171

AGENCY: Materials Transportation Bureau (MTB), Research and Special Programs Administration, DOT.

ACTION: Final rule.

SUMMARY: The purpose of this amendment is to update the reference in 49 CFR 171.7(d)(1) to the ASME Boiler and Pressure Vessel Code in order to recognize the 1977 edition of the ASME Code and the addenda thereto through December 31, 1978.

EFFECTIVE DATE: July 18, 1979.

FOR FURTHER INFORMATION CONTACT: Delmer F. Billings, Standards Division, Office of Hazardous Materials Regulation, Department of Transportation, 2100 Second Street, S.W., Washington, D.C., 20590, telephone 202-755-4902.

SUPPLEMENTARY INFORMATION: On April 23, 1979, the MTB published a notice of proposed rulemaking in the **Federal Register** (44 FR 23880), proposing to update the ASME code reference in § 171.7(d). The basis for this proposal was a petition from the Compressed Gas Association requesting that the reference be updated to reflect current improvements in the standard. The MTB has reviewed the complete standard and concurs with the improvements except for the provisions on ultrasonic testing of welds (paragraph UW-11(a)(7)).

Since publication of this notice, the MTB has not received any comments on this docket. Therefore, the ASME code through 1977 and the addenda published thereto through December 31, 1978, will be referenced in § 171.7(d) with the exception of paragraph UW-11(a)(7) as proposed by the notice.

In consideration of the foregoing, Title 49, Code of Federal Regulations, § 171.7(d)(1) is revised to read as follows:

§ 171.7 Matter incorporated by reference.

* * * * *

(d) * * *

(1) ASME Code means section VIII (Division 1) and IX of the 1977 edition of the "American Society of Mechanical Engineers Boiler and Pressure Vessel Code," and addenda thereto through December 31, 1978, except paragraph UW-11(a)(7) of the code does not apply.

* * * * *

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53 and App. A to Part 1)

Note.—The Materials Transportation Bureau has determined that this final rule will not result in a major economic impact under the terms of Executive Order 12044 and DOT implementing procedures (44 FR 11034), nor an environmental impact statement under the National Environmental Policy Act (49 U.S.C. 4321 et seq.). A regulatory evaluation is available in the docket.

Issued in Washington, D. C. On June 7, 1979.

L. D. Santman,
Director, Materials Transportation Bureau.

[FR Doc. 79-18882 Filed 6-15-79; 8:45 am]
BILLING CODE 4910-60-M

Federal Highway Administration

49 CFR Part 395

[BMCS Docket No. MC-86; Amdt. No. 78-6]

Drivers Declared Out of Service

AGENCY: Federal Highway Administration, DOT.

ACTION: Final rule.

SUMMARY: The Federal Motor Carrier Safety Regulations (FMCSR) are being amended by changing the criteria by which a driver may be placed out of service. With some exceptions, upon detection, a driver will be declared out of service for 8 consecutive hours for not having drivers' logs current on the day of examination and the prior 7 consecutive days. In the past, drivers who complied with the request to produce a log and who were found to be

in violation of the hours of service rule were removed from service, while drivers who failed to produce a log were usually given a citation since no out of service criteria were violated. Thus, these drivers were allowed to continue highway operations in a possibly fatigued state. With this change, drivers failing to produce current logs will be placed out of service and not be allowed to continue driving on the highways.

EFFECTIVE DATE: June 18, 1979.

FOR FURTHER INFORMATION CONTACT: Mr. Gerald J. Davis, Chief, Driver Requirements Branch, Regulations Division, Bureau of Motor Carrier Safety, [202) 426–9767, or Mr. Gerald M. Tierney, Attorney, Motor Carrier and Highway Safety Law Division, Federal Highway Administration, Department of Transportation, 400 Seventh Street, SW., Washington, D.C. 20590. Office hours are from 7:45 a.m. to 4:15 p.m., Monday through Friday.

SUPPLEMENTARY INFORMATION: A Notice of Proposed Rulemaking (NPRM) was published on March 8, 1979, at 44 FR 12717 setting forth a proposal to declare a driver out of service for 8 consecutive hours for not having produced a driver's log current on the day of examination and the prior 7 consecutive days. An exception was provided in the event that the only failing was not having a log current on the day of examination and the prior day. In those instances, it was proposed that the driver would be given the opportunity to update the logs to the current duty status. Essentially, the earlier proposal is being adopted.

Background

Under prior requirements, drivers who failed to produce logs upon request of a special agent of the Federal Highway Administration (FHWA) were not placed out of service but were merely cited for a violation of the hours of service regulations. Thus, in certain circumstances, the intent of the present hours of service regulations, which are designed to protect the driver and the motoring public by removing fatigued drivers from operating on the highways, was circumvented.

Upon review, several sources indicated that a problem existed in the area relating fatigued drivers, non-current logs and excessive driving times. For instance, the Bureau of Motor Carrier Safety (BMCS) statistics for 1976 and 1977 indicated that a significant percentage of drivers did not have current logs. Of the driver violations found during roadside inspections in the year 1976, 89 percent were categorized as "no log" violations and 11 percent were categorized as "log not current" violations. Similarly, in 1977, 19 percent were categorized as "no log" violations and 13 percent were categorized as "log not current" violations. In addition, it had come to our attention that several States having hours of service requirements also suspected that drivers were exceeding the driving limitations of the States. Moreover, the Department of California Highway Patrol has proposed a statute for introduction regarding drivers' hours of service. The California statute is intended to give a traffic officer authorization to place out of service a driver who does not possess records or who has exceeded the hours of service requirements. The proposed statute which provides for presumption of a violation of driving limits when records are not made available upon demand by authorized personnel should result in placing these drivers out of service for an appropriate rest period.

Comments to the NPRM

Approximately 40 comments were received concerning this proposal. These comments have been carefully considered. Approximately 60 percent of the respondents were in favor of the proposal indicating that this action would improve consistent enforcement of the FMCSR.

The Director believes, on the basis of information provided in this rulemaking, that there is a strong possibility that drivers who do not prepare the driver's log and violate hours of service requirements pose a threat to other users of the highway. The objective of the logging requirements is to permit drivers, carriers, and responsible Federal and State authorities to monitor the hours of service to ensure that drivers do not work or drive for longer periods than are permitted. The FMCSR limit the number of hours a driver may work or drive within any specific period. The purpose of the limitation of hours of service is to remove from the highways the risks to safety posed by a fatigued driver and thus help to ensure that people are not needlessly killed or injured in highway accidents caused by fatigued drivers of commercial trucks and buses. Neither a driver nor a carrier can ensure compliance with the hours of service rules unless there is a continuous record of the time the driver spent on the job. The Regulations require drivers to keep a record of their working and driving time in the form of a driver's log.

Some respondents commented that the proposal would discriminate between classes of drivers. For instance it was explained that self-employed drivers could suffer a direct economic penalty when placed out of service for 8 hours, while a driver employed by a carrier under an hourly rate would suffer no economic loss. The purpose of the proposed rule is not, indiscriminately penalize different classes of drivers monetarily or otherwise, but to remove from the highway those drivers that are likely to be operating in a fatigued condition. The Director is aware that various drivers will be affected differently. However, once a self-employed driver has been placed out of service for not having a driver's log, the proposed rule should serve as a deterrent to future noncompliance of the logging requirements.

Many commenters indicated that placing the drivers out of service would delay the freight being transported for an 8-hour period and indicated that such a delay would pose security problems for most commodities transported, and additional problems in the transportation of perishable goods. Questions were also raised concerning the responsibility for delayed claims filed against the motor carrier. At the present time, the FMCSR provide for two basic out of service actions. One involves placing a motor vehicle out of service for being operated in an imminently hazardous condition. The second involves placing drivers out of service for exceeding the hours of service requirements. When vehicles are placed out of service, the vehicle cannot be operated until designated repairs are accomplished. The driver is free to continue driving as long as the driver does not operate the vehicle declared out of service. When a driver has been placed out of service for violation of the driver out of service rules, the driver may not drive until in compliance with the hours of service requirements. However, the vehicle can be driven by another qualified driver to destination or to any point designated by the motor carrier. The only requirement posed by the current proposal is that the driver who is in violation of the logging requirements not drive until 8 hours off duty have accumulated.

Some respondents indicated that the change was unfair to operating motor carriers since the requirement of preparing a driver's log is basically the responsibility of the driver and placing the driver out of service, which delays the freight, places an undue burden upon the operating motor carrier and for this reason, the proposal should not be adopted. This argument is invalid. The present logging requirements found in §§ 395.8 and 395.9 of the FMCSR make it

clear that the preparation of the driver's logs is a dual responsibility involving the driver and the carrier. The Regulation requires a driver to prepare the log. In addition, the motor carrier has the responsibility to ensure that its drivers prepare the required logs. The driver is in many ways an extension of the motor carrier, and to separate the driver's from the carrier's responsibilities in log preparation is unreasonable. Failure of drivers to prepare logs or falsification of the entries makes both the carrier and the driver liable to prosecution. Affirmative action is required by the motor carrier to ensure that its employees follow the required regulations.

Concern was expressed by some commenters about drivers who do not have their log book with them at the time of the inspection because they are not required to prepare a log or because they may have lost their log book on the current trip. The proposed requirement that a driver be placed out of service for not having a log would only apply to drivers who are required to prepare logs. There are currently exemptions contained in the Safety Regulations for preparation of the driver's log and they are not affected by this change. For example, logs are not required for regularly employed drivers operating within a 50-mile radius of there terminal where they report for work, for certain drivers of lightweight vehicles or for drivers operating in the State of Hawaii. Also, drivers who are used for the first time or intermittently are not required to have logs available for the preceeding 7 days. A driver would not be placed out of service for failure to prepare the log if in one of the exempt categories. A driver who is required to prepare a log and fails to produce one, for any reason, including that the log was lost will be placed out of service.

A driver failing to have a log current on the day of examination and the prior day, but who has completed logs up to that time, will not be placed out of service but will be given the opportunity to prepare the logs to current status prior to continued examination. Several commenters stated for a shorter exception period. One commenter states this exception seemed to minimize the importance of current logs. Another added "If the log examination is made later in the day, the driver could be nearly 48 hours behind. Since the purpose of the log is to monitor actively and remove fatigued drivers from highways, this grant of an exemption period would not be stringent enought to prohibit a driver from failing to keep the log current." In an effort to determine if these comments have merit, it is the BMCS intention to evaluate the effects of this out of service criteria change during the summer months of 1979. If the results of the data so indicate, further rulemaking action will be considered.

One commenter indicated that a driver could be placed in double jeopardy, if the driver did not have logs and was placed out of service first by a Federal agent and then by State authorities which have adopted the FMCSR. This should not happen. Once a driver has been declared out of service by Federal authorities for failure to prepare the log, the driver may not reenter service until having been off duty for 8 consecutive hours and is in compliance with the logging requirements.

It has been requested that further consideration be given to placing drivers out of service who are transporting passengers. A bus driver who is on an extended charter or special operation and is placed out of service will cause undue hardships on passengers by causing a delay in transportation and could create serious problems concerning other factors such as hotel reservations and similar services. When a bus driver is placed out of service, consideration is usually given to the passengers. Bus inspections are normally performed at terminals or other locations where rest facilities are usually available to the passengers. The transportation of passengers, by its very nature, should impose upon the motor carrier and its driver a strong obligation to ensure that its operation is in full compliance. The consequences involving bus accidents cannot be minimized by providing an exemption in this rule by arguing that it may cause inconvenience to passengers. In addition, in 1977, only 6 drivers were cited for failing to prepare a daily log while transporting passengers.

Commenters addressed notification of the carriers in certain instances and questioned whether our policy in this matter has changed. It has not. The authority to declare drivers out of service as specified in § 395.13 authorizes the appropriate representatives of the Federal Highway Administration to notify motor carriers that drivers have been placed out of service. This does not imply that when drivers are placed out of service that the motor carrier will be contacted in each and every instance. It has been the policy of this Administration to notify carriers when their vehicles or drivers have been declared out of service only in specific cases. These instances involved vehicles transporting hazardous materials requiring the vehicle to be attended, vehicles transporting perishable commodities, tank vehicles transporting commodities requiring temperature control, vehicles transporting livestock, and instances which prevent the driver from returning to driving duties during the same day after having been placed out of service.

The majority of comments to this docket support the proposed change. Several drivers were in favor of this rule change. As one driver pointed out, an injustice is done to the conscientious driver who keeps an up-to-date log, if we continue to let other drivers continue in highway operations when only a citation is issued for no log. Another driver commented that this change would eventually eliminate no log drivers or cheaters and would help to remove fatigued drivers from the highway. Also, many carriers strongly supported the changes and indicated that they felt it will help them maintain the type of control necessary to keep operations legal and fatigued drivers off the road. The International Brotherhood of Teamsters applauded the effort and indicated that since we are not changing the basic hours of service requirements there will be no undue burden placed upon carriers or drivers. Also, the American Trucking Association, Inc., supported the change.

Rule Discussion

The FHWA is amending the FMCSR, with respect to the out of service criteria, to declare a driver out of service for failing to have a driver's log current on the day of examination and for the prior 7 consecutive days. An exception will be provided to the above in the event that the only failure is not having a log current on the day of examination and the prior day. In these instances the driver will be given the opportunity to prepare the logs to current status. Provided the driver does not refuse to prepare current logs and no other out of service criteria are violated, the driver may continue to drive.

A driver placed out of service would not be allowed to remain on duty. To the contrary, the driver would be required to be off duty for 8 consecutive hours to have the opportunity to obtain adequate rest before again operating a heavy commercial vehicle on our highways. When applicable, the consecutive 8 hour off duty period may include sleeper berth time.

An exception to this procedure would be invoked, and is provided in the rule change, for drivers transporting hazardous materials subject to § 397.5,

which requires the vehicle to be attended.

To determine the exact nature of the out of service violation, it is required that the driver explain the reason for being placed out of service in the remarks section of the log as provided in § 395.8(o).

This Final Rule is intended to further encourage drivers to maintain current logs and provide the FHWA with a more consistent rule designed to remove the potentially unsafe and fatigued driver from the public highway. A copy of the Final Regulatory Evaluation accompanying this rule, which examines the need for this regulatory action and assesses its potential impacts, is available in the public docket for review. As indicated later in this document, the FHWA has determined that the economic consequences of the Final Rule are not significant.

Accordingly, the Federal Motor Carrier Safety Regulations are amended as follows:

1. 49 CFR 395.13 is revised to read:

§ 395.13 Drivers declared out of service.

(a) Authority to declare drivers Out of Service. Every special agent of the Federal Highway Administration (as defined in Appendix B to this subchapter) is authorized to declare a driver out of service and to notify the motor carrier of that declaration, upon finding at the time and place of examination that the driver has violated the out of service criteria as set forth in paragraph (b) of this section.

(b) *Out of Service critieria.* (1) No driver shall drive or remain on duty in excess of the maximum periods permitted in this part.

(2) No driver, if required to have a driver's log under §§ 395.8 and 395.9, shall fail to have a log current on the day of examination and for the prior 7 consecutive days. Exception: A driver failing only to have possession of a log current on the day of examination and the prior day, but has completed logs up to that time, will be given the opportunity to prepare logs to current status.

(c) *Responsibilities of the motor carrier.* (1) No motor carrier shall:

(i) Require or permit a driver who has been declared out of service to operate a motor vehicle until that driver may lawfully do so under the rules in this part.

(ii) Require a driver who has been declared out of service for failure to prepare a daily log to operate a motor vehicle until that driver has been off duty for 8 consecutive hours and is in compliance with §§ 395.8 and 395.9. The consecutive 8-hour off-duty period may include sleeper berth time.

(2) A motor carrier shall complete the appropriate portion of the form provided and deliver the copy of the form either personally or by mail to the Director, Regional Motor Carrier Safety Office, Federal Highway Administration, at the address specified upon the form within 15 days following the date of examination. If a motor carrier sends the form to the Director by mail, delivery is made upon the date when it, or the envelope containing it, is postmarked.

(d) *Responsibilities of the driver.* (1) No driver who has been declared out of service shall operate a motor vehicle until that driver may lawfully do so under the rules in this Part.

(2) No driver who has been declared out of service, for failing to prepare a driver's log, shall operate a motor vehicle until having been off duty for 8 consecutive hours and is in compliance with §§ 395.8 and 395.9.

(3) A driver to whom a form has been tendered declaring the driver out of service shall within 24 hours thereafter deliver or mail the copy to a person or place designated by motor carrier to receive it.

(4) Section 395.13 does not alter the hazardous materials requirements prescribed in § 397.5 pertaining to attendance and surveillance of motor vehicles.

2. 49 CFR 395.8(o) is amended by adding the following sentence at the end of the present rule:

§ 395.8 Remarks.

(o) * * * Explain the reason for being placed out of service, pursuant to § 395.13.

Note.—The Federal Highway Administration has determined that this document does not contain a significant proposal according to the criteria established by the Department of Transportation pursuant to Executive Order 12044. A regulatory evaluation is available for inspection in the public docket and may be obtained by contacting Mr. Gerald J. Davis of the program office at the address specified above.

(49 U.S.C. 304, 1655(e); 49 CFR 1.48 and 301.60.)

Issued on: June 8, 1979.

Howard L. Anderson,

Associate Administrator for Safety.

BILLING CODE 4910-22-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 216

Taking of Marine Mammals Incidental to Commercial Fishing Operations—Permits, Etc.

AGENCY: National Marine Fisheries Service, National Oceanic and Atmospheric Administration, Department of Commerce.

ACTION: Interim final regulation.

SUMMARY: The intent of the amendment is to clarify the period during which observers remain aboard tuna purse seiners by defining the term "completed vessel trip" in regulations governing the taking of marine mammals incidental to tuna purse seine fishing in the eastern tropical Pacific Ocean during 1978, 1979, and 1980.

DATES: This regulation is effective June 18, 1979. Written comments may be submitted on or before July 18, 1979. Requests for a public hearing and justification for such a request must be received by July 9, 1979.

ADDRESSES: Submit comments and hearing requests to the Assistant Administrator for Fisheries, National Marine Fisheries Service, National Oceanic and Atmospheric Administration, 3300 Whitehaven Street NW., Washington, D.C. 20235.

FOR FURTHER INFORMATION CONTACT: William P. Jensen, Marine Mammal Program Manager, National Marine Fisheries Service, 3300 Whitehaven Street NW., Washington, D.C. 20235, telephone 202-634-7461.

SUPPLEMENTARY INFORMATION: Regulations governing the taking of marine mammals incidental to tuna purse seine fishing in the eastern tropical Pacific Ocean during 1978, 1979, and 1980 limit the incidental mortality of marine mammals permitted under the general permit. Annual mortality is estimated in accordance with methodology published in the Federal Register on October 4, 1976, March 11, 1977, and May 4, 1977 (41FR43723, 42FR13574, and 42FR22573), respectively.

This methodology utilizes kill-per-trip data for completed trips carrying NMFS observers and kill-per-day data reported by radio from observed vessels at sea.

The placement of observers on tuna vessels is designed to obtain a statistically valid sample for estimating total porpoise mortality. One hundred thirty completed trips annually is

considered a valid sample, however, a trip has not been defined for purposes of establishing when a trip is complete. Because of the importance of establishing what constitutes a completed trip, a clarifying definition is being promulgated which obligates a vessel certificate holder to carry an observer until the vessel returns to port and unloads more than 400 tons of any species of tuna or unloads an amount of any species of tuna equivalent to one-half of the vessels carrying capacity or has spent 40 days or more at sea from the date of departure. The regulations also provide that the NMFS regional director may give exemptions to the requirements for good cause.

The clarifying definition is being promulgated to be effective immediately to prevent any misunderstandings that may arise concerning fulfillment of the obligation to carry an observer. The efficient operation of the observer program is critical for monitoring the porpoise quotas. Good cause for waiver of the normal 30 day period between publication and the effective data therefore exists. However, public comment on the regulation will be accepted for 30 days after publication of the definition.

Under Executive Order 12044 (43FR23170) and Department of Commerce Administrative Order 218-7 (44FR2082), the Assistant Administrator for Fisheries has made an initial determination that this is not a significant regulation.

The primary author of this rulemaking is Mr. William P. Jensen, Office of Marine Mammals and Endangered Species, National Marine Fisheries Service, (202) 634-7461.

Regulation Promulgation

Accordingly, 50 CFR Chapter II, Part 216 is amended by revising § 216.24(d)(2)(iii)(A) to read as follows:

§ 216.24 Taking and related acts incidental to commercial fishing operations.

* * * * *

(d) * * *
(2) * * *
(iii) * * *

(A) The vessel certificate holder of each certificated vessel, who has been notified via certified letter from the National Marine Fisheries Service that he is required to carry an observer, shall notify the field office, Southwest Region, National Marine Fisheries Service, San Diego, California, telephone 714-293-6540 at least five days in advance of the vessel's departure on a fishing voyage to allow for observer placement. After a fishing voyage is initiated, the vessel certificate holder is obligated to carry an observer until the vessel returns to port and unloads more than 400 tons of any species of tuna or unloads an amount of any species of tuna equivalent to one-half of the vessel's carrying capacity; or has spent 40 days or more at sea from the date of departure. Further, the Regional Director, Southwest Region, may consider special circumstances for exemptions to this definition, provided written requests clearly describing the circumstances are received at least ten (10) days prior to the termination or the initiation of a fishing voyage. A response to the written request will be made by the Regional Director within five (5) days after receipt of the request. A vessel whose vessel certificate holder has failed to comply with the provisions of this section may not engage in fishing operations for which a general permit is required.

Proposed Rules

Federal Register
Vol. 44, No. 118
Monday, June 18, 1979

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF ENERGY

[10 CFR Part 490]

[Docket No. CAS-RM-79-110]

Emergency Building Temperature Restrictions: Notice of Intent Regarding Delegation of Implementation Authority to the States and Allocation of Federal Funds To Meet State Costs

AGENCY: Department of Energy.

ACTION: Notice of Intent.

SUMMARY: On June 1, 1979, the Department of Energy (DOE) published proposed regulations in the Federal Register (44 F.R. 31922) in connection with implementation of the President's "Standby Conservation Plan No. 2, Emergency Building Temperature Restrictions." In that notice DOE stated its intention to delegate to each state governor who requests such delegation a substantial portion of its authority under the Plan. This notice is intended to provide information as to the authorities and functions which DOE proposes to delegate to those states requesting delegation, and the formula by which Federal funds will be provided to the states to which delegation is made to meet the costs of State implementation activities.

DATES: Written comments must be received on or befor June 29, 1979, 4:30 p.m.

ADDRESS: Send comments to Docket Number [CAS-RM-79-110] Margaret Sibley, Conservation and Solar Applications, Department of Energy, 20 Massachusetts Avenue, N.W., Washington, D.C. 20585.

FOR FURTHER INFORMATION CONTACT:

Henry G. Bartholomew, Office of Buildings and Community Systems, Office of Conservation and Solar Applications, Department of Energy, 20 Massachusetts Avenue, N.W., Room 2221C, Washington, D.C. 20585, (202) 376-4470.

Mary Doyle, Office of General Counsel, 20 Massachusetts Avenue, N.W., Room 2221C, Washington, D.C. 20585, (202) 376-4100.

SUPPLEMENTARY INFORMATION: DOE hereby gives notice of its intent regarding delegation of implementation authority and allocation of Federal funds to the states and territories pursuant to Section 9(c) of "Standby Conservation Plan No. 2, Emergency Building Temperature Restrictions" (the Plan). On June 1, 1979, DOE published in the Federal Register (44 FR 31922) a Notice of Proposed Rulemaking and Public Hearings, containing proposed regulations in connection with implementation of the Plan. In that notice DOE stated its intention to delegate to each state Governor who requests such a delegation and through the states to local governments a substantial portion of its authority under the Plan.

DOE will enter into agreements with each state or territory whose Governor requests delegation of implementation authority. Under these agreements, the Governors will accept delegation of all of the following authorities and functions: (1) public education and outreach to inform all affected building owners and operators of their obligations under DOE regulations implementing the Plan; (2) distribution to building owners and operators of forms and instructions prepared by DOE; (3) response to questions from the public on compliance requirements and use of the forms; (4) selective inspection of buildings for compliance; and (5) compliance inspections in response to complaints of violations received from the public. The agreements may provide that the Governors may redelegate to units of local government some or all of the enumerated authorities and functions.

Requests for delegation of implementation authority may be submitted by letter from the Governor of a state or territory or his delegatee addressed to:

Secretary, Department of Energy, 1000 Independence Avenue, N.W., Washington, D.C. 20585, Attention: Emergency Building Temperature Restrictions Program, Office of Conservation and Solar Applications.

Federal funds in the amount of $6.7 million will be available for distribution to those states and territories to which delegation is made to meet the costs of state and local government activities under the agreements. The formula for allocation of these funds is as follows:

25 percent of the funds will be distributed in equal shares to states requesting delegation and 75 percent of the funds will be apportioned to the states and territories in shares which reflect each state's or territory's population in relation to the total population of the United States. Federal funds will be distributed to the States and territories in the following amounts:

BILLING CODE 6450-01-M

BILLING CODE 6450-01-C

If any state or territory does not request delegation of implementation authority, that state's or territory's share of Federal funds will be retained by DOE to meet the cost of Federal implementation and enforcement in that jurisdiction.

Comment is invited on this Notice of Intent regarding delegation of authority and allocation of Federal funds to the states. Interested parties may submit written comments with respect to the proposed action to: Docket Number CAS–RM–79–110, Margaret Sibley, Office of Conservation and Solar Applications, Department of Energy, 20 Massachusetts Avenue, NW., Room 2221C, Washington, D.C. 20585. Comments should be identified on the outside envelope and on the documents submitted with the designation: "Emergency Building Temperature Restrictions: State Delegation." Fifteen copies should be submitted.

All comments received by DOE will be retained by DOE and made available for public inspection in the DOE Reading Room, Room GA–152, Forrestal Building, 1000 Independence Avenue, SW., Washington, D.C., between the hours of 8 a.m. and 4:30 p.m. Monday through Friday. Comments should be received by June 29, 1979, 4:30 p.m., in order to be considered.

This notice of intent concerns a discretionary activity of DOE and is not a regulatory action for purpose of the notice and comment requirements of the Administration Procedure Act (5 U.S.C. 551) and the Department of Energy Organization Act (42 U.S.C. 7101).

Issued in Washington, D.C. on June 14, 1979.

Kelly C. Sandy III,

Acting Deputy Assistant Secretary, Conservation and Solar Applications.

BILLING CODE 6450–01–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[14 CFR Part 71]

[Airspace Docket No. 79–CE–14]

Transition Area—Kearney, Nebr.; Proposed Alteration

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Proposed Rule Making (NPRM).

SUMMARY: This Notice proposes to alter the 700-foot transition area at Kearney, Nebraska, to provide additional airspace for aircraft executing a new instrument approach procedure to the Kearney, Nebraska Municipal Airport which is based on a Non-Directional Radio Beacon (NDB), a navigational aid being installed 5.13 miles south of the airport by the City of Kearney, Nebraska.

DATES: Comments must be received on or before July 21, 1979.

ADDRESSES: Send comments on the proposal to: Federal Aviation Administration, Chief, Operations, Procedures and Airspace Branch, Air Traffic Division, ACE–530, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 374–3408.

The official docket may be examined at the Office of the Regional Counsel, Central Region, Federal Aviation Administration, Room 1558, 601 East 12th Street, Kansas City, Missouri.

An informal docket may be examined at the Office of the Chief, Operations, Procedures and Airspace Branch, Air Traffic Division.

FOR FURTHER INFORMATION CONTACT: Benny J. Kirk, Airspace Specialist, Operations, Procedures, and Airspace Branch, Air Traffic Division, ACE–538, FAA, Central Region, 601 East 12th Street, Kansas City, Missouri 64106, Telephone (816) 374–3408.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons may participate in the proposed rule making by submitting such written data, views or arguments as they may desire. Communications should identify the airspace docket number, and be submitted in duplicate to the Operations, Procedures and Airspace Branch, Air Traffic Division, Federal Aviation Administration, 601 East 12th Street, Kansas City, Missouri 64106. All communications received on or before July 21, 1979, will be considered before action is taken on the proposed amendment. The proposal contained in this Notice may be changed in light of the comments received. All comments received will be available both before and after the closing date for comments in the Rules Docket for examination by interested persons.

Availability of NPRM

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, Operations, Procedures and Airspace Branch, 601 East 12th Street, Kansas City, Missouri 64106 or by calling (816) 374–3408. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for further NPRMs should also request a copy of Advisory Circular No. 11–2 which describes the application procedure.

The Proposal

The FAA is considering an amendment to Subpart C, § 71.181 of the Federal Aviation Regulations (14 CFR 71.181) by altering the 700-foot transition area at Kearney, Nebraska. To enhance airport usage, a new instrument approach procedure is being developed for the Kearney, Nebraska Municipal Airport utilizing an NDB being installed 5.13 miles south of the airport by the City of Kearney, Nebraska. The establishment of an instrument approach procedure based on this navigational aid entails alteration of the transition area at Kearney, Nebraska, at and above 700 feet above ground level (AGL) within which aircraft are provided additional air traffic control service. The intended effect of this action is to ensure segregation of aircraft using the new approach procedure under Instrument Flight Rules (IFR) and other aircraft operating under Visual Flight Rules (VFR).

Accordingly, Federal Aviation Administration proposes to amend Subpart C, § 71.181 of the Federal Aviation Regulations (14 CFR 71.181) as republished on January 2, 1979, (44 FR 442) by altering the following transition area:

Kearney, Nebraska

That airspace extending upward from 700 feet above the surface within a 9.5 mile radius of Kearney Municipal Airport (latitude 40°43'37"N, longitude 99°00'04"W.)

(Sec. 307(a), Federal Aviation Act of 1958 as amended (49 U.S.C. 1348); sec. 6(c), Department of transportation Act (49 U.S.C. 1655(c)); sec. 11.65 of the Federal Aviation Regulations (14 CFR 11.65).)

Note.—The FAA has determined that this document involves a proposed regulation which is not significant under Executive Order 12044, as implemented by DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979). Since this regulatory action involves an established body of technical requirements for which frequent and routine amendments are necessary to keep them operationally current and promote safe flight operations, the anticipated impact is so minimal that this action does not warrant preparation of a regulatory evaluation.

Issued in Kansas City, Missouri, on June 6, 1979.

C. R. Melugin, Jr.,

Director, Central Region.

FR Doc. 79–18067 Filed 6–15–79; 8:45 am]

BILLING CODE 4910–13–M

CONSUMER PRODUCT SAFETY COMMISSION

[16 CFR Part 1700]

Human Prescription Drugs in Oral Dosage Forms; Proposed Exemption of Potassium Supplements in Effervescent Tablet Form Containing Not More Than 50 Milliequivalents of Potassium

AGENCY: Consumer Product Safety Commission.

ACTION: Proposed rule.

SUMMARY: The Commission proposes for public comment an exemption from child-protection packaging requirements for potassium supplements in the form of individually packaged effervescent tablets each containing not more than 50 milliequivalents of potassium. An exemption for effervescent potassium tablets containing not more than 25 milliequivalents of potassium is currently in effect. The Commission believes that child-protection packaging for the larger dose tablets is unnecessary to protect children from serious illness or injury, based on the absence of past adverse experience with effervescent potassium tablets and on test data indicating that their effervescence inhibits ingestion in dangerous amounts. Mead-Johnson Laboratories petitioned the Commission to take this action.

DATES: Comments, preferably in five copies, on this proposed exemption should be submitted on or before August 17, 1979. Comments and other relevant material received after this date will be considered only to the extent practicable.

If the Commission issues a final regulation concerning the exemption, the Commission proposes that the exemption become effective on the date the final regulation is published in the **Federal Register.**

ADDRESS: Comments should be addressed to the Office of the Secretary, Consumer Product Safety Commission, 1111 18th Street, N.W., Third floor, Washington, D.C. 20207. Copies may be examined in the Office of the Secretary as soon as they are received.

FOR FURTHER INFORMATION CONTACT: Dr. Fred Marozzi, Division of Safety Packaging and Scientific Coordination, Directorate for Engineering and Science, Consumer Product Safety Commission, Washington, D.C. 20207, telephone 301–492–6477.

SUPPLEMENTARY INFORMATION On November 23, 1977, the Consumer Product Safety Commission received a petition (PP 78–1) from Mead-Johnson Laboratories, Evansville, Indiana, requesting an exemption from child-protection packaging requirements for "K-Lyte" double strength tablets. "K-Lyte" double strength is a potassium supplement in effervescent tablet form, each tablet containing 50 milliequivalents (mEq) of potassium. Potassium supplements are generally used to counter potassium deficiencies in the body, caused by use of diuretics, diet deficiencies, or other causes. Overdosages of potassium may result in listlessness, mental confusion, or muscle weakness in the extremities; severe overdosages can result in cardiac arrest.

Potassium supplements containing over 25 mEq of potassium are presently subject to the Commission's child-protection packaging requirements, set forth at 16 CFR 1700.14(a)(10). Potassium supplements such as "K-Lyte" single strength (25 mEq) tablets are currently exempted from these requirements at 16 CFR 1700.14(a)(10)(vi).[1] For the reasons stated below, the Commission has decided to propose an exemption for potassium supplements in individually packaged effervescent tablet form, containing no more than 50 mEq of potassium per tablet. The Commission, therefore, proposes to revise the existing exemption for potassium supplements to set a higher exemption level.

Grounds for Exemption

Mead-Johnson contends that the same grounds which justified an exemption for the "K-Lyte" single strength tablets support the current request. The company bases its petition on studies involving 302 young children exposed to the three flavors of "K-Lyte" single-strength, indicating that the tablet and/or effervescent characteristics of the products are repulsive to children. The company points out that the effervescent formulation is the same in the double strength tablets as it is in the single strength product. Additionally, the company bases its petition on the low acute toxicity of the drug and the absence of any recorded incidents of accidental overdosage of "K-Lyte" single strength by a child during twelve-and-one-half years of marketing experience.

The Mead-Johnson findings as to the lack of past adverse experience with "K-Lyte" single strength tablets have been largely confirmed by the Commission staff. A search of the data sources available to the Commission staff, including the National Electronic Injury Surveillance System; Department of Health, Education, and Welfare (DHEW) Poison Control Statistics, National Clearinghouse for Poison Control Centers; in-depth investigations; and death certificates and consumer complaints on file with the Commission revealed only 2 cases where "K-Lyte" or similar tablets containing potassium salts were ingested. No hospitalizations or symptoms were reported in either of the 2 cases.

The Commission staff also conducted a toxicological evaluation of "K-Lyte" double strength. The staff used the Mead-Johnson data showing that no child among 302 children ingested more than one-half tablet of the single-strength "K-Lyte" (most ingested considerably less) and Dorsey Laboratories data on testing of 200 children where only 1 child ingested more than 1¼ of their 20 mEq potassium tablets (an amount equal to approximately half of a double strength "K-Lyte" tablet). The use of these data is appropriate since "K-Lyte" double strength does not differ from the lower strength supplements in effervescence or taste, the properties which are said to inhibit ingestion. Based upon extrapolations from adult overdosage cases where prominent symptomatology was exhibited (i.e., the ability of the kidney to maintain normal potassium levels had been exceeded), the staff estimated that approximately 10% of an ingested dose of the drug had an additive effect upon the amount of potassium normally maintained in the blood plasma. In other than extreme overdosage situations in which the drug is consumed rapidly, the normally functioning kidney would prevent excess blood potassium levels from developing. Assuming that 10% of any ingested dose would have an additive blood level effect even in the absence of kidney overload, the staff concluded that if accidental ingestion by a child of one-half tablet of "K-Lyte" double strength should occur (i.e., approximately the equivalent of one single-strength tablet), the plasma concentration would not reach a level which would be hazardous.

Furthermore, based upon staff calculations, a 10 Kg child (22 lbs) would have to ingest a minimum of two double strength tablets before physiological effects such as listlessness and muscular

[1] On February 11, 1974, the Commission published a notice in the **Federal Register** (39 FR 5197) suspending the effective date of the child-protection packaging requirements for oral prescription drugs as they applied to potassium supplements which are individually packaged effervescent tablets, each containing not more than 25 milliequivalents of potassium. Elsewhere in this issue of the **Federal Register** the Commission issues a final rule exempting potassium supplements containing not more than 25 mEq of potassium from the child-protection packaging requirements.

weakness of extremities might be expected under these criteria. However, as noted earlier, no child ingested more than the equivalent of ½ double strength tablet, and only 4% of 500 children ingested more than the equivalent of a quarter tablet.

The staff calculations provide for a wide margin of safety since they are based upon a worst case analysis and do not take into consideration the fact that the kidney will rapidly eliminate excess potassium unless there is severe renal insufficiency or an extremely large dose has been ingested very rapidly.

The Commission also solicited the opinion of the Food and Drug Administration (FDA) on the exemption request. Based on the lack of adverse human experience and the deterrent qualities of the effervescence, FDA concluded that the exemption should be granted.

The Commission also solicited comments from the Technical Advisory Committee on Poison Prevention Packaging. Of the 7 members that commented on the petition, 5 recommended granting the exemption and 2 recommended denial, expressing concern for the toxic potential of potassium salts. The five members who recommended granting the petition pointed to the evidence showing children's distaste for the product and the lack of adverse effects reported on the lower strength potassium supplements.

Finding

Based on the lack of adverse human experience reported on the lower strength potassium supplements and the test data indicating that the effervescence of the drug inhibits child ingestion, the Commission finds that this drug in the dosage and form specified does not pose a risk of serious personal illness or injury to children. The Commission notes that while the available potassium is double that of the single strength product, the effervescent properties of the tablets are the same. The Commission emphasizes that this proposed exemption is limited to potassium supplements in individually packaged effervescent tablets, containing not more than 50 mEq of potassium and containing no other substance subject to the requirements for special packaging under 16 CFR 1700.14(a)(10). The applicability of the requirement of special packaging at 16 CFR 1700.14(a)(10) is not affected by this proposal. Products within the scope of this proposal must continue to be in special packaging until the effective date of any final regulation.

Environmental Considerations

The Commission's interim rules for carrying out its responsibilities under the National Environmental Policy Act (see 16 CFR Part 1021; 42 FR 25494) provide that exemptions to an existing standard that do not alter the principal purpose or effect of the standard normally have no potential for affecting the environment and environmental review of exemptions from regulations is, therefore, generally not required (§ 1021.5(b)(1)). The rules also state that environmental review of rules requiring poison prevention packaging is generally not required (1021.5(b)(3)).

With respect to this exemption of potassium supplements in effervescent tablet form from poison prevention packaging, the Commission finds that the rule will have no significant effect on the human environment and that no environmental review is necessary.

Conclusion and Promulgation

Having considered the petition, the studies of child behavior submitted by the petitioner, Poison Control Statistics from the DHEW National Clearinghouse for Poison Control Centers, and other human experience data and medical and scientific literature, and having consulted, pursuant to section 3 of the Poison Prevention Packaging Act (PPPA) of 1970, with the Technical Advisory Committee on Poison Prevention Packaging established in accordance with section 6 of the act, the Consumer Product Safety Commission concludes that an exemption from the special packaging requirements for potassium supplements in effervescent tablet form each containing not more than 50 mEq of potassium should be proposed as set forth below. Accordingly, pursuant to the provisions of the Poison Prevention Packaging Act of 1970 (Pub. L. 91–601, secs. 2(4), 3, 5; 84 Stat. 1670–72; 15 U.S.C. 1471(4), 1472, 1474) and under authority vested in the Commission by the Consumer Product Safety Act (Pub. L. 92–572, sec. 30(a); 86 Stat. 1231; 15 U.S.C. 2079(a)), the Commission proposes that 16 CFR 1700.14 be amended by revising paragraph (a)(10)(vi), as follows (the introductory portion of paragraph (a)(10), although unchanged, is included for context):

§ 1700.14 Substances requiring special packaging.

(a) * * *

(10) *Prescription Drugs.* Any drug for human use that is in a dosage form intended for oral administration and that is required by Federal Law to be dispensed only by or upon an oral or written prescription of a practitioner licensed by law to administer such drug shall be packaged in accordance with the provisions of § 1700.15(a)(b), and (c) except for the following:

(vi) Potassium supplements in individually-packaged effervescent tablet form, each tablet of which contains not more than 50 milliequivalents of potassium.

Dated: June 13, 1979.

Sadye E. Dunn,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355-01-M

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[18 CFR Part 271]

[Docket RM79-44]

Ceiling Prices; High-Cost Natural Gas

AGENCY: Federal Energy Regulatory Commission.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: The Federal Energy Regulatory Commission (Commission) issued a notice of proposed rulemaking setting forth proposed definitions for natural gas produced from geopressured brine, from coal seams, and from Devonian shale.

DATES: Comments should be filed by July 16, 1979.

ADDRESSES: All findings should reference Docket No. RM79–44 and should be addressed to: Office of the Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426.

FOR FURTHER INFORMATION CONTACT: Philip Yates, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, (202) 275–4212.

On December 1, 1978, the Federal Energy Regulatory Commission issued Interim Regulations in Docket No. RM79–3 implementing the Natural Gas Policy Act of 1978 (NGPA) (43 F.R. 56448). Subpart G of Part 271 set forth regulations implementing section 107(a) of the NGPA, to provide incentive prices for deep, high-cost natural gas.

Section 107(b)(2)–(4) also authorized the Commission to establish incentive prices for gas from geopressured brine, occluded natural gas produced from coal seams, gas from Devonian shale, as well as gas produced from other conditions which have been determined by the Commission to present extraordinary

risks or costs. However, due to statutory deadlines imposed by the NGPA, the Commission did not promulgate regulations to implement section 107(b).

The Commission believes that precise definitions for Section 107(c)(2) through (4) are required; i.e., natural gas "produced from geopressurized brine," "from coal seams," and "from Devonian shale." Pursuant to section 121(b) of the NGPA, these categories will no longer be subject to price regulation after the effective date of the incremental pricing rule required by section 201 of the Act. This proposed rule suggests definitions for these categories which would be used to implement the deregulation provisions as well as for pricing determinations if incentive prices for these categories are established. We specifically invite comments on these definitions.

The procedures to be used to determine whether or not gas is subject to the deregulation provisions of section 121(b) of the NGPA will be similar to those now governing determinations of eligibility for prices under sections 102, 103, 107, and 108 of the NGPA. More specifically, applicants will make filings with the appropriate jurisdictional agency for a determination which will be subject to Commission review. Accordingly, notice is hereby given that the Commission intends to prescribe filing requirements similar to those established for other categories in Subpart B of Part 274. Comments are solicited on the specific documents, oath statements, etc. which should be submitted to support an application for determination for the categories covered by this proposal. The Commission will review these submissions and promulgate the filing requirements together with the appropriate definitions.

Interested persons are invited to submit written comments on the proposed regulations to the Office of the Secretary, Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426. Comments should reference Docket No. RM79–44 on the outside of the envelope and on all documents submitted to the Commission.

Fifteen (15) copies should be submitted. All comments and related information recevied by the Commission by July 16, 1979, will be considered prior to the promulgation of the final regulations.

(Natural Gas Act, as amended, 15 U.S.C. 717, *et seq.* Public Utility Regulatory Policies Act of 1978, P.L. 95–617, Natural Gas Policy Act of 1978, P.L. 95–621, Department of Energy Organization Act, P.L. 95–91, E.O. 12009, 43 FR 46267).

In consideration of the foregoing, it is proposed to amend Part 271 of subchapter H, Chapter I, Title 18, Code of Federal Regulations, as set forth below.

1. Subpart G of Part 271 is amended by adding the following sections:

§ 271.710 Definition of "natural gas produced from geopressured brine."

Natural gas produced from geopressured brine" means: natural gas dissolved insubsurface brine aquifers with reservoir geopressures substantially in excess of normal saltwater hydrostatic pressures, such geopressures being due, in part, to the formation waters bearing a portion of the weight of the sedimentary over overburden.

§ 271.720 Definition of "occluded natural gas produced from coal seams."

"Occluded natural gas produced from coal seams" means: natural gas released during a mechanical degradation process from entrapment between the seams and in the micropores of beds of coal.

§ 271.730 Definition of "natural gas produced from Devonian shale."

Natural gas "produced from Devonian shale" means: natural gas produced from the fractures, micropores and bedding planes of shales deposited during the Paleozoic Devonian Period as generally found in the subsurface of the Applachian Basin and in surface outcrops around its periphery. For the purpose of this definition, Devonian shale is defined as that shale stratigraphic interval that lies between the base on the Mississippian Berea Sand or, if absent, the base of the Osage Series, and the top of the Onondaga limestone formation or its chert equivalent, the top of the Hunton group of carbonates.

By direction of the Commission.

Kenneth F. Plumb,

Secretary.

BILLING CODE 6450-01-M

[Docket No. RM79–40]

[18 CFR Part 281]

Procedures for Evaluating the Economic Practicability and Reasonable Availability of Alternative Boiler Fuel for Larger Boiler Facilities

AGENCY: Federal Energy Regulatory Commission, DOE.

ACTION: Clarification.

SUMMARY: In the Federal Register of May 8, 1979 (44 FR 26894), the Federal Energy Regulatory Commission published a proposed rule (18 CFR Part 281, Subpart C) for determining when alternative boiler fuel is available for essential agricultural users. That proposal included a proposed deadline of June 15, 1979, by which users would be required to file petitions for rulemaking. In response to several inquiries about the June 15 deadline, the Commission wishes to emphasize that the requirement to file petitions for rulemaking by June 15 is nothing more than a proposal at this point. Therefore, these petitions need not be filed. In addition, the provision in final regulations published in the Federal Register of May 8, 1979 (44 FR 26855), which refers to this same requirement, has no present effect since Subpart C of Part 281 has not been issued as a final rule.

FOR FURTHER INFORMATION CONTACT: Mary Jane Reynolds, Office of the General Counsel, Federal Energy Regulatory Commission, 825 North Capitol Street NE., Room 8000, Washington, D.C., 20426, (202) 275–4283.

June 8, 1979.

SUPPLEMENTARY INFORMATION: The Commission has had inquiries concerning the proposed filing requirements contained in its proposed rule for determining when alternative boiler fuel is available for essential agricultural users (Docket No. RM79–40). It is emphasized that the proposed deadline of June 15, 1979, by which users would be required to file petitions for rulemaking, is nothing more than a proposal at this point. All of the provisions of the proposed rule, including all filing dates, are subject to reevaluation by the Commission prior to the issuance of a final rule. No such final rule has been issued to date.

The Commission also has had a number of inquiries concerning the filing requirements of § 281.211(b)(1)(ii)(D) of its Final Regulation for the Implementation of Section 401 of the Natural Gas Policy Act (Order No. 29, Docket No. RM79–15, May 2, 1979).[1] That section would require an essential agricultural user "to which Subpart C applies" to file a copy of its petition for alternative fuel determination along with a request for classification of its
